THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 309—No. 1. TUESDAY, APRIL 3, 1923. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

ADJUDICATED PATENTS.

(U. S. D. C. Pa.) Jost patent. 771,018, for improved oil-burning lamp, valid and infringed. *Jost* v. *Borden Stove Co.*, 285 Fed. Rep., 626.

(U. S. C. C. A. Pa.) Patent 1,296,610, claims 12 and 13, for balancing machine, *Held* not infringed. *Akimoff* v. *Dynamic Balancing Mach. Co.*, 285 Fed. Rep., 480.

(U. S. C. C. A. Pa.) Patent 1,296,610, claims 15 and 16, and 1,296,606, claims 21, 22, 23, 26, 29, for balancing machine, *Held* void as unduly broad, indefinite or unverified amendments. *Akimoff* v. *Dynamic Balancing Mach. Co.*, 285 Fed. Rep., 480.

(U. S. D. C. N. Y.) De Simone patent, 1,318,135, for mechanism adapted for controlling a series of registers or indicators, not infringed. *New York Calculating Mach. Co.* v. *International Money Mach. Co.*, 285 Fed. Rep., 635.

ADVERSE DECISIONS IN INTERFERENCE.

Pat. 1,420,551, Working-barrel tube, has been involved in an interference and a decision rendered February 24, 1923, that the patentee is not the first inventor of the subject matter covered by claims 1, 2, and 3 of said patent, and no appeal having been taken such decision has become final.

Important Information.

In ordering manuscript copies much time will be saved if the order states specifically what is desired, viz:

Application as originally filed. (Petition, specification, oath, and drawings as received.) Application as amended. (Petition, specification, oath, and drawings with amendments entered.)

Application as allowed. (Petition, specification, oath, and drawings as passed by the Examiner for issue.)

Original application. (Facsimile petition, specification, oath, and drawings at present time.)

Specification as originally filed. (As received in Office.)

Specification as amended. (With amendments entered.)

Specification as allowed. (As passed by the Examiner for issue.)

Original specification. (Facsimile at present time.)

File-wrapper. (File-wrapper only.)

File-wrapper and contents. (File-wrapper, contents of record, including photoprints of any tracings or of prints within file-wrapper. In patented cases, printed copy of the specification and drawings of the patent is furnished.)

File-wrapper, contents, and drawings. (File-wrapper and all of the contents of record, including photoprints of any tracings, exhibits, or prints within the file-wrapper. In pending cases, photoprints of the pending drawings only, omitting any canceled. If patented, copy of the specification and drawings of the patent being furnished, photoprints are not made of the original drawings unless specially ordered. If canceled drawings are wanted, they must also be specially ordered.)

Assignment. (Give the liber and page of the record as well as the name of the inventor.)

Printed publications in possession of the Office. (Give title and date of publication, also page and exact portion to be copied.)

Orders for copies of any other records not mentioned above must state specifically the exact paper to be copied.

Drawings.

RULE 38.

38. When there are drawings, the description will refer to the different views by figures and to the different parts by letters or numerals, (preferably the latter.)

RULE 52—EXTRACT.

(f) The different views should be consecutively numbered. Letters and figures of reference must be carefully formed. They should, if possible, measure at least one-eighth of an inch in height, so that they may bear reduction to one twenty-fourth of an inch; and they may be much larger when there is sufficient room. They must be so placed in the close and complex parts of drawings as not to interfere with a thorough comprehension of the same, and therefore should rarely cross or mingle with the lines. When necessarily grouped around a certain part, they should be placed at a little distance, where there is available space, and connected by short lines with the parts to which they refer and by short broken lines when the number or letters refers to parts shown in dotted lines. They should not be placed upon shaded surfaces, and when it is difficult to avoid this, a blank space must be left in the shading where the letter occurs, so that it shall appear perfectly distinct and separate from the work. If the same part of an invention appear in more than one view of the drawing it must always be represented by the same character, and the same character must never be used to designate different parts.

It is suggested that numerals or letters be used without exponents.

Condition of Applications Under Examination at Close of Business March 23, 1923

(Total number of applications awaiting action, excluding Trade-Mark Division, 74,312; Trade-Mark Division, 4,155. Oldest now case, Feb. 1, 1922; oldest amended, Feb. 23, 1922. The dates given below are 1922 except where * indicates 1923.)

Room No.	Divisions, Examiners, and subjects of inventions.	Oldest new application and oldest action by applicant awaiting office action.		No. of applications awaiting action.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Court of Appeals of the District of Columbia.

DROITCOUR *v.* KELLY.

No. 1,533. Decided January 2, 1923.

INTERFERENCE—REDUCTION TO PRACTICE—ABANDONED EXPERIMENT.

Where a machine was built by D. and operated for a time and then scrapped, and for more than a year thereafter he did nothing more relative to this particular invention, but did devise another and different machine upon which a patent was granted, *Held* that the scrapped machine was nothing more than an abandoned experiment, bearing in mind that the machine must operate with accuracy and certainty.

Mr. A. E. Doweell for Droitcour.
Mr. C. S. Grindle and *Mr. Jas. A. Watson* for Kelly.

ROBB, *J.*:

Appeal from a Patent Office decision in an interference proceeding in which priority was awarded the senior party Kelly. The single count of the issue reads as follows:

In a printing press, a cylinder, a feed table, mechanical means for advancing sheets to cylinder picking-up position on said table, said means comprising separately hinged upper and lower sections to permit the sections to have raising movements from operative position and one of said sections carrying the feed board.

As will be understood from this count, the invention is an improvement in an automatic feeder device in a printing press adapted to separate sheets from a supply stack and carry them to a position where they are picked up by the impression cylinder. Owing to the necessity for accuracy in the registration of each sheet, suitable registering mechanism must be associated with the feeder devices. By making the feeder device in two sections, superimposed when in operative position but adapted to be swung upwardly and backwardly, it is possible to gain free access to the mechanism thereunder. This is one of the advantages of the invention.

It is in evidence that early in 1912 a machine was built for Droitcour which, it is contended, embodied this invention. But Kelly insists that this machine had no advancing means made up of two sections, within the meaning of the claim, and hence did not respond to the issue. The view we take of the case, however, renders it unnecessary to determine this question. The machine was operated for a time and then scrapped, and for more than a year thereafter Droitcour did nothing more relative to this particular invention. He did devise another and different machine, however, upon which he applied for a patent on January 8, 1912. This patent was later allowed. Meanwhile Kelly had entered the field and, on September 20, 1913, a machine embodying the invention was publicly exhibited.

Having in mind the degree of accuracy with which such a machine must operate, and the circumstances surrounding this case, we are convinced that the Droitcour machine of 1912 did not amount to a reduction to practice of this invention but, on the contrary, was nothing more than an abandoned experiment. This is another case where actions speak louder than words, and it is inconceivable that this machine, had it been successful, would have been scrapped, another machine devised and a patent application filed thereon, without any claim being made covering the claimed novel features of the earlier device. Upon this point the Examiner of Interferences said:

Droitcour when asked in question 25, page 43, if his 1912 structure operated satisfactorily, failed to assert that it so operated. Malvig (Q. 20, p. 33) states that the sheets did not come through straight. Lane testified (Q. 30, p. 25) that it was necessary to rig up a cable with a weight to lift the upper movable section. Considering the accuracy and certainty required in feeding sheets to a printing press and the necessity of easy and quick manipulation of parts thereof, such testimony clearly indicates an unsuccessful device. Later it seems the feeder was taken off the press and the latter sold without the feeder. All the above witnesses agree that the feeder was destroyed or scrapped. * * * The company never built any others like it, nor does the record show that Droitcour later desired or attempted to build a similar device.

The Examiners in Chief, while convinced that—

the construction of the 1912 machine was not a desirable one from a commercial point of view,

nevertheless ruled that this machine amounted to a reduction to practice. These tribunals, however, in our view, failed to give sufficient weight to what followed the alleged successful operation of the machine. The Board conceded that if its ruling—

of an actual reduction to practice by Droitcour in 1912 were not sustained, he would fail through lack of diligence and Kelly would be held to be the first inventor.

The Assistant Commissioner concurred in this view but placed his decision upon the ground that the 1912 machine did not respond to the issue.

We deem it unnecessary to review the evidence further, and affirm the decision upon the ground that the early efforts of Droitcour were abortive and that he was lacking in diligence when Kelly entered the field.

Affirmed.

Court of Appeals of the District of Columbia.

LEWIS *v.* STROM.

No. 1,513. Decided January 2, 1923.

1. INTERFERENCE—ORIGINALITY OF INVENTION—EMPLOYER AND EMPLOYEE.

Where the proof fails to show that an employer conceived the general principle or the plan of an invention, or, if he did, that he communicated it to the employee, he is not entitled to the benefit of the other's invention, although the first machine embodying the invention was built by the employee in the employer's factory and material in the factory was used.

Mr. Theo. K. Bryant, *Mr. Wm. E. Warland*, and *Mr. Fred H. Bowersox* for Lewis.
Mr. Eric O. Strom pro se.

SMYTH, *C. J.*:

An interference was declared between the respective applications of Lewis and Strom. It concerns a machine for individually wrapping articles, such as cigars, in tissue paper. There are eleven counts in the interference, which are sufficiently illustrated, so far as our purpose is concerned, by count 1. It reads as follows:

A device for individually wrapping articles, comprising a combination, a pair of supporting rolls, a coacting presser roll thereabove, a belt running with constant tension and contact over all of said rolls, a driving roll for imparting continuous motion to said belt, and means for yieldably suspending said presser roll so as to enable it to recede from said supporting rolls by the insertion therebetween of an article with its wrapper and the retraction of the wrapped article therefrom.

The question involved is one of originality and depends for its solution on matters of fact. The burden of proof is on Lewis, he being the junior party. Each of the three tribunals of the Office held that he had failed to sustain it, and they decided in favor of Strom.

Lewis, at the time of the invention, was a cigar manufacturer. It is conceded in his brief that he was not a skilled mechanic or a machinist in any sense of the words, although it is claimed for him that his forty odd years of experience as a cigar manufacturer had familiarized him, to a greater or lesser extent, with the machines used in his business.

Strom was an employee of Lewis's, having entered his service as a simple mechanic. After some time, on account of his fitness, he was advanced to the position of foreman over other mechanics who had been longer in Lewis's employ. He had attended a vocational school, knew drafting and the designing of machines and machine parts. Shortly after the structure in question was invented, he invented a stogie-washing machine, and some four years later a dust collector. This tends to show that he possessed in some degree the inventive faculty.

Lewis does not claim to have imparted to Strom directly the concept of the invention, but says that he disclosed it to his superintendent, Pearson, who in turn communicated it to Strom. The only conversation relative to it which he says he had with Strom before the invention was perfected concerned the shifting of a roller, and as to this he is not corroborated. Pearson testified that he and Lewis commenced to talk about the invention in September, 1913, and fixes the time by reason of the fact that he attended a machinists' convention in the same month of that year. Before that he had not heard of such a machine. When asked to state what Strom had to do with the machine, he said, in substance, that it was his duty to carry out his, Pearson's, instructions; that he told him to use certain material in the factory for side plates, and that he explained "on that piece of paper how" he wanted it made. But the paper was not identified by him. He claims to have made certain suggestions of his own which tend to indicate a belief on his part that he, as well as Lewis, contributed to the result. To a slight extent his testimony is corroborated by employees of Lewis. They say that Pearson and Strom worked together over drawings which they believed related to the machine. Suppose they did, it would not establish that Lewis, either directly or through Pearson, disclosed to Strom the specific means which he was to employ in working out the invention.

On the other hand, Strom testified that Pearson stated to him in September, 1913, at the supper table in Strom's house, where Pearson was a boarder, and while Strom's family was present, that Lewis wanted a machine made for wrapping cigars in tissue paper; that he gave him no particulars whatever; that he said their present method of wrapping cigars was slow and tedious; that the operators wore out their finger tips in twisting the loose ends of the wrapper between their fingers, and he asked—

> if I (Strom) could make a machine to do the thing they wanted, and I told him that I could make a machine but that I had to have the time to study it up and see what I could do in that respect. * * * He told me to go ahead and see what I could do.

This testimony of Strom's is corroborated in part by one witness and wholly by two witnesses, one of whom was entirely disinterested. She was at the time of the conversation a high-school student, and when giving her testimony was employed as a bookkeeper. She was candid, intelligent, and positive. We can not refuse her testimony credence. The story she related is entirely inconsistent with Lewis's theory, namely, that he, through Pearson, conveyed the inventive concept to Strom. Pearson does not deny the conversation related by her. True, he says that he gave his first instructions to Strom in the machine shop. In so far as this is inconsistent with her statement, it may be regarded as a denial, but we do not think that as such it is entitled to much weight. He does not say what the instructions were. They may have been in complete harmony with what he said to Strom at the supper table.

Following Pearson's direction to him to go ahead, Strom says he developed the invention at his home in his spare time, made sketches of it, showed them to Pearson, and discussed them with him. The first machine embodying the invention was built by him in the Lewis factory, work having been commenced on it about two months after Pearson's request to undertake the work. In the meantime, as we have just stated, he was studying the problem.

Strom's fourth witness gave testimony touching his work on the machine which tends to support his right. When Strom asserted to Lewis that the invention was his, Lewis testified that he was surprised, but did not deny Strom's claim. A board containing a layout was submitted in evidence. Strom says that the layout was his, and Lewis does not deny it.

We do not doubt that Lewis and Pearson discussed the necessity of a machine which would do what was then being done by hand in the wrapping of cigars, but we do not believe that Lewis had any definite notion as to how such a machine should be organized.

Counsel for Lewis cite cases to the effect that where one employs another to perfect the details of an invention of which he has conceived the general principle or plan, he is entitled to the benefit of the other's work. We do not deny the principle, but it is not applicable. The proof here fails to show that Lewis, the employer, had conceived the general principle or the plan, or, if he did, that he communicated it to Strom.

The invention is Strom's and he is entitled to it. Consequently, the decision of the commissioner is affirmed.

Affirmed.

PATENT SUITS.

[Notices under section 4921, Revised Statutes, as amended February 18, 1922.]

813,120, J. B. Tate, Stay bolt; 844,421, B. E. D. Stafford, Flexible stay bolt; 984,863, same, Flexible stay bolt for boilers, suit filed Jan. 22, 1923, U. S. D. C., W. D. Pa., Doc. 866, *Flannery Bolt Co.* v. *American Locomotive Co. and others.*

Changes in Classification.

(ORDER NO. 2,805.)

U. S. PATENT OFFICE, *Washington, Mar. 17, 1923.*

The following changes in the classification of inventions are hereby directed, to take effect immediately:

In class 131, Tobacco (Division II), abolish subclasses:

Tobacco cutters—
33. Pivoted knife,
34. Reciprocating knife,
35. Rotating knife.

The patents formerly contained in these subclasses have been placed for the most part in class 146, Vegetable and Meat Cutters and Comminutors, hereinafter established.

In class 17, Butchering (Division XXV), abolish subclasses:

9. **Chopping blocks.**
14. **Meat clamps.**
Meat cutters—
16. Cracklings,
17. Crank mechanism,
18. Cube,
19. Cylinder and block,
20. Cylinder and concave,
21. Double cylinder,
22. Hand,
23. Rocking knife,
24. Slicers,
25. Trip mechanism.

The patents formerly contained in these subclasses have been placed for the most part in class 146, Vegetable and Meat Cutters and Comminutors, hereinafter established.

In class 17, Butchering (Division XXV), abolish the remaining subclasses and establish in lieu thereof the following subclasses and definitions:

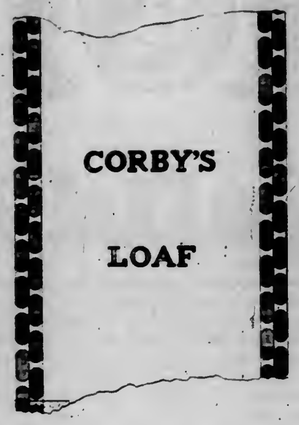
In class 146, Vegetable Cutters and Crushers (Division XXV), change the title of the class to read *146, Vegetable and Meat Cutters and Comminutors*, abolish the existing subclasses, and establish in lieu thereof the following subclasses and definitions:

146.—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS.
1. **Miscellaneous.**
2. **Egg cutters and separators.**
3. **Citrus fruit.**
4. **Green-corn shellers.**
5. **Banana.**
6. **Pineapple.**
7. **Coconut.**
- **Nutcrackers—**
8. Power operated—
9. Centrifugal impact,
10. Cutters,
11. Rotary crusher,
12. Reciprocating jaw,
13. Hand operated—
14. With receptacle,
15. Reciprocating hammer,
16. Reciprocating jaw.
17. **Seeders and stoners—**
18. Cherry—
19. Punch,
20. Rotary disk,
21. Hand tool.
22. Raisin—
23. Coacting roll or belt,
24. Punch,
25. Squeezer,
26. Hand tool,
27. Olive punch,
28. Peach—
29. Tray spreader,
30. Stationary knife,
31. Hand tool.
32. **Nut skinners or blanchers.**
33. **Parer, corer, and segmenter—**
34. With doffer.
35. **Parer, corer, and slicer—**
36. With doffer.
37. **Parer and slicer.**
38. **Parer and corer—**
39. With doffer.
40. **Corer and segmenter—**
41. Hand tool.
42. **Corer and slicer.**
43. **Peeler or parer—**
44. Peach,
45. With doffer,
46. Conveying roaster,
47. Conveying washer or scalder—
48. Vacuum skinner,
49. Abrader—
50. Washer,
51. Feeders.
52. **Corer—**
53. Hand tool.
54. **Berry huller, hand.**
55. **Fruit stemmer.**
56. **Fruit pricker.**
- **Potato-planter type—**
57. Rotary cutter,
58. Reciprocating cutter,
59. Stationary cutter.
- **Dispenser—**
60. Stationary cutter or comminutor,
61. Rotary cutter or comminutor,
62. Reciprocating cutter or comminutor,
63. Pivoted cutter or comminutor.
64. **Tub or block—**
65. Trip-action cutter,
66. Rocking cutter,
- Rotary cutter—
67. Horizontal axis,
68. Vertical axis,
69. Vertical reciprocating cutter.
70. **Haystack.**
71. **Coracob splitter.**
72. **Halving cutter—**
73. Rotary knife.
74. **Rotary cutter or comminutor and sheller—**
75. Ear separator or husker.
76. **Disintegrator and separator.**
77. **Combined knife and saw.**
78. **Cutters in series.**
79. **Cutter and comminutor in series.**
80. **Rotary cutter and grater.**
81. **End cutters—**
82. Bunching,
83. Onion,
84. Ear corn,
85. Beet,
86. Bean pod,
87. **Endless cutter—**
88. Band.
- **Rotary hollow drum cutter or comminutor—**
89. Horizontal axis—
90. Internal feed,
91. Hopper—
92. Follower feed,
93. Vertical axis.
- **Rotary knife—**
94. Slice arranger,
95. Horizontal axis—
96. Spaced knives,
97. Screw penetrator, hand.
- **Rotary disk cutter—**
- Transverse axis—
98. Spaced cutters,
99. Plural, angled axes,
- Longitudinal axis—
100. Rind remover,
101. Rotary cutter carrier,
102. Reciprocating carriage,
103. Swinging cutter carrier,
104. Reciprocating cutter carrier,
105. Vertical axis.
106. **Rotary cutter or comminutor—**
107. Fan conveyer,
- Longitudinal axis—
108. Belt and roller feed,
109. Belt feed,
110. Rake feed,
111. Roller feed,
112. Follower feed,
113. Hopper—
114. Follower feed,
115. Without feed,
- Transverse axis—
116. Belt and roller feed,
117. Belt feed,
118. Roller feed,
119. Without feed,
- Hopper—
120. Plural rotary comminutors,
121. Single rotary comminutor,
- Vertical axis—
122. Follower feed,
123. Cone comminutor,
124. Diagonal axis,
125. Hand supported.
126. **Cutters—**
127. Rind removers,
- Compound movement—
128. Belt and roller feed,
129. Belt feed,
130. Rake feed,
131. Roller feed,
132. Bed feed,
133. Follower feed,
- Without feed—
134. Plural spaced knives.
135. **Swinging cutter, single pivot—**
136. Transverse pivot,
137. Rake feed,
138. Roller feed,
139. Bed feed,
140. Follower feed,
- Without feed—
141. Plural spaced knives.
- **Transversely-reciprocating cutter in vertical plane—**
142. Diagonal cutter,
143. Without feed—
144. Knife guides.
145. **Transversely-reciprocating cutter in horizontal plane.**
146. **Inclined reciprocating cutter.**
- **Vertical reciprocating cutter—**
147. Spaced blades,
154. Belt and roller feed,
155. Belt feed,
156. Rake feed,
157. Roller feed,
158. Follower feed,
159. Without feed—
160. Plural cutter.
- **Diagonal reciprocating cutter—**
161. Without feed.
162. **Stationary cutter—**
163. Endless plunger;
- Rotary plunger—
164. Horizontal axis,
165. Vertical axis,
- Rotary holder—
166. Horizontal axis,
167. Vertical axis,
168. Reciprocating carrier,
169. Reciprocating or swinging plunger,
170. Without feed—
171. Slicer.
- **Strainer—**
172. Agitating plunger—
173. Oscillating on horizontal axis,
174. Rotating on horizontal axis,
175. Rotating on vertical axis,
176. Reciprocating or swinging.
177. **Graters—**
178. Reciprocating comminutor,
- Stationary—
179. Reciprocating holder,
180. Without operating mechanism.
- **Rotary grinder or comminutor—**
181. Separately-movable comminutor and feed,
182. Horizontal axis—
183. Twin comminutors,
184. Coacting comminutor and casing projections,
- Screw—
185. Perforated discharge cone,
186. Perforated discharge disk—
187. Rotary cutters in series,
188. Rotary cutter outside,
189. Rotary cutter inside,
190. Annular discharge—
191. Rotary cutter outside,
192. Vertical axis.
193. **Cleaner and assorter.**
194. **Conveying washer or scalder.**
- **Washer or scalder—**
- Tanks in series—
195. Dipper,
- Tank—
196. Dipper,
197. Agitator.
198. **Egg washer.**
- **Washer—**
199. Conveying brush,
- Tank—
200. Brush.
201. **Conveying brush.**
202. **Hand tools—**
203. Compound,
204. Gougers,
205. Cutters—
206. Power operated,
207. Circular or spiral,
208. Radiating blade,
209. Parallel blade,
210. Rotary disk,
211. Cleavers,
212. Mashers.
213. Work tables.
214. **Cutting blocks and boards.**
215. **Clamps—**
216. For slicing machines,
217. Stationary.
218. **Processes.**
219.

THOMAS E. ROBERTSON, *Commissioner.*

TRADE-MARKS

OFFICIAL GAZETTE, APRIL 3, 1923.



[VOL. 309. No. 1.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 94,532. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE CORBY BAKING COMPANY, Washington, D. C. Filed Apr. 19, 1916.

No claim is made to the words "Corby's Loaf" or to the characters "10¢" apart from the mark shown in the drawing and above described. The lining shown in the drawing represents the colors red and blue.

Particular description of goods.—Bread.

Claims use since Mar. 31, 1916.

Ser. No. 132,052. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) SAMUEL KIRK & SONS, LIMITED, Bradford, England. Filed May. 5, 1920.

Particular description of goods.—Piece Goods Composed of an Admixture of Wool and Cotton.

Claims use since July 12, 1922.

Ser. No. 134,969. (CLASS 32. FURNITURE AND UPHOLSTERY.) WILLIAM LAWRENCE & CO., LIMITED, Colwick, England. Filed July 14, 1920.

Particular description of goods.—Furniture and Upholstery—Namely, Bedsteads, Bedroom Suites, Cabinets, Hall Stands, Settees, Overstuffed Furniture, Chesterfield Settees, Easy Chairs, Bookcases, Household Chairs, Music Stools, Painted and Enameled Household Furniture, Sideboards, Household Tables.

Claims use since Nov. 5, 1919.

Ser. No. 139,632. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE SUN DRUG COMPANY, Los Angeles, Calif. Filed Nov. 13, 1920.

Particular description of goods.—Olive Oil, Caraway Seed, Celery Seed, Cocoa Butter, Curry Powder, Cuttlefish Bone, Vanilla Extract for Food Products, Mustard Powder, Rice Flour, and Rock Candy.

Claims use since Oct. 21, 1901.

Ser. No. 140,917. (CLASS 48. MALT BEVERAGES, EXTRACTS, AND LIQUORS.) COLEMAN AND COMPANY, LIMITED, Norwich, England. Filed Dec. 11, 1920.

WINCARNIS

Particular description of goods.—A Liquor or Liquid Preparation Containing Malt.
Claims use since Feb. 15, 1890.

Ser. No. 141,348. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) JUAN BAUTISTA BLANCAFORT S. EN C., La Garriga, Spain. Filed Dec. 21, 1920.

VICTORIA

Particular description of goods.—Perforated Music Rolls for Automatic Pianos.
Claims use since October, 1912.

Ser. No. 142,775. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) COLBY STEEL AND ENGINEERING CO., Seattle, Wash. Filed Jan. 26, 1921.

MODERN-METHOD

Particular description of goods.—Industrial Trucks and Trailers of the Class Used Around Warehouses, Etc., and Are Adapted for Being Drawn by Hand or Behind Small Industrial Tractors.
Claims use since Nov. 20, 1920.

Ser. No. 145,597. (CLASS 37. PAPER AND STATIONERY.) SUPREME ORIENT O. O. H. & P., Schenectady, N. Y. Filed Apr. 1, 1921.

Particular description of goods.—Letterheads, Envelopes, Report Blanks, Billheads, Receipt Books.
Claims use since about September, 1907.

Ser. No. 145,864. (CLASS 31. FILTERS AND REFRIGERATORS.) WINTER MACHINE COMPANY, Pawtucket, R. I. Filed Apr. 7, 1921.

CHILRITE

Particular description of goods.—Refrigerating and Ice-Making Apparatus.
Claims use since June 20, 1920.

Ser. No. 145,933. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE BEREA MILLING CO., Berea, Ohio. Filed Apr. 9, 1921.

No claim is made to the words "Pastry Flour" apart from the mark shown.
Particular description of goods.—Milling Products—To Wit, Wheat Flour, Pastry Flour, Graham Flour, and Corn Meal.
Claims use since Feb. 1, 1919.

Ser. No. 146,216. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) H. P. HOOD & SONS, INC., Boston, Mass. Filed Apr. 15, 1921.

NUTFIELD

The word "Nutfield."
Particular description of goods.—Butter, Dried Beans, Bread, Buttermilk, Cereal Breakfast Foods, Coffee, Cocoa, Candy, Condensed Milk, Cheese, Cornstarch, Cake, Cookies, Crackers, Cream, Shredded Coconut, Doughnuts, Dried Fruits, French Dressing, Mayonnaise Dressing, Salad Dressing, Dates; Eggs, Fresh and Preserved; Evaporated Milk, Evaporated Cream, Extracts and Essences for Food-Flavoring Purposes, Flavors and Fruit Sirups for Use in Preparing Foods, Canned Fruits, Canned Vegetables, Canned Fish, Wheat Flour, Potato Flour, Prepared Flour, Figs, Gelatin, Ice Cream, Jelly Powders, and Tablets, Jams, Catchup, Lard, Marmalade, Milk, Milk Powder, Modified Milk, Molasses, Mustard, Rye Meal, Corn Meal, Wheat Meal, Margarines, Mincemeat, Nuts, Salad Oil, Cooking Oil, Olive Oil, Corn, Potato Chips, Fruit Preserves, Pickles, Chili Sauce, Horse-Radish, Rice, Spices; Granulated, Powdered, and Cube Sugar; Maple Sugar, Maple Sirup, Honey, Canned Soups, Beef Cubes, Tapioca, Tea, and Vinegar.
Claims use since 1909 on cream, since 1910 on coffee, 1911 on tea, 1912 on cocoa, 1917 on evaporated milk, 1914 on canned vegetables, 1920 on candy, and since Mar. 1, 1921, on the remainder of the products.

Ser. No. 148,973. (CLASS 39. CLOTHING.) THE COLLEGIAN, Minneapolis, Minn. Filed June 11, 1921.

Collegian

Particular description of goods.—Neckties, Cravats, and Scarfs, Hats, and Caps.
Claims use since on or about Dec. 1, 1916.

Ser. No. 172,880. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) JOANNES BROS. CO., Green Bay, Wis. Filed Dec. 4, 1922.

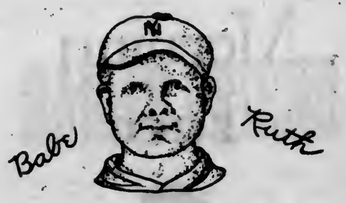
MARTHA WASHINGTON

The picture in the drawing being that of Martha Washington, deceased.
Particular description of goods.—Jar Rubbers.
Claims use since 1913.

Ser. No. 172,929. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) BALTIMORE OPTICAL COMPANY, Baltimore, Md. Filed Dec. 5, 1922.

Worthmore

Hy-Rex



Particular description of goods.—Lenses and Frames for Eyeglasses and Spectacles.
Claims use since June 1, 1919.

Ser. No. 172,936. (CLASS 2. RECEPTACLES.) FRANCIS X. EBERLE, Los Angeles, Calif. Filed Dec. 5, 1922.

LABELOK

Particular description of goods.—Containers Made of Wood or Metal for Merchandise.
Claims use since Dec. 1, 1921.

Ser. No. 172,944. (CLASS 39. CLOTHING.) HARRIS SUSPENDER COMPANY, New York, N. Y. Filed Dec. 5, 1922.

The trade-mark consists of a portrait of "Babe" Ruth and his facsimile signature.
Particular description of goods.—Apparel Belts.
Claims use since May 18, 1922.

Ser. No. 172,986. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE GRASSELLI CHEMICAL COMPANY, Cleveland, Ohio. Filed Dec. 6, 1922.

CHROMOXANE

Particular description of goods.—Dyes and Dyestuffs.
Claims use since about November, 1909.

Ser. No. 173,010. (CLASS 2. RECEPTACLES.) BERTIE S. SCHWED, Far Rockaway, N. Y. Filed Dec. 6, 1922.

JUST SEW

Particular description of goods.—Sewing Case.
Claims use since Jan. 1, 1922.

Ser. No. 173,072. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) CHAPLIN CLASSICS INC., New York, N. Y. Filed Dec. 8, 1922.

Particular description of goods.—Motion Pictures.
Claims use since October, 1919.

Ser. No. 173,101. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MOSER & CO., INC., New York, N. Y. Filed Dec. 8, 1922.

PANCREON

Particular description of goods.—Bating Material Used in Tanning Leather.
Claims use since Aug. 1, 1921.

Ser. No. 173,201. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) THE MURALO COMPANY, New York and New Brighton, N. Y. Filed Dec. 11, 1922.

MURALO

Particular description of goods.—Wall Size in Dry Powder Form.
Claims use since July 1, 1919.

Ser. No. 173,269. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) THE BARRETT COMPANY, New York, N. Y. Filed Dec. 13, 1922.

Everjet

Particular description of goods.—Ready-Mixed Paint and Paint Thinner.
Claims use since about 1910.

Ser. No. 173,311. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) GEORGE H. WEYER, St. Joseph, Mo. Filed Dec. 13, 1922.

POM-PO-LAY

Particular description of goods.—Chemical Preparation Suitable for the Treatment of Hair.
Claims use since Oct. 16, 1922.

Ser. No. 173,345. (CLASS 12. CONSTRUCTION MATERIALS.) THE BARRETT COMPANY, New York, N. Y. Filed Dec. 15, 1922.

BLACK SHIELD

Particular description of goods.—Insulating Paper.
Claims use since about 1911.

Ser. No. 173,368. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SHERWOOD PETROLEUM COMPANY, INC., Brooklyn, N. Y. Filed Dec. 15, 1922.

KREMOL

Particular description of goods.—White Mineral Oil for Medicinal Purposes.
Claims use since Nov. 1, 1922.

Ser. No. 173,369. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SHERWOOD PETROLEUM COMPANY, INC., Brooklyn, N. Y. Filed Dec. 15, 1922.

MEDICOL

Particular description of goods.—White Mineral Oil for Medicinal Purposes.
Claims use since Nov. 1, 1922.

Ser. No. 173,392. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) AMERICAN PLATINUM WORKS, Newark, N. J. Filed Dec. 16, 1922.

ALBADOR

Particular description of goods.—Certain Gold, Platinum, Palladium, and Silver Metals and Solder, and Gold, Platinum, Palladium, and Silver Rolled Sheets and Plates.
Claims use since July 5, 1922.

Ser. No. 173,393. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) IMA AULD, Dinuba, Calif. Filed Dec. 16, 1922.

Morning Face

Particular description of goods.—Face Lotions.
Claims use since Sept. 28, 1922.

Ser. No. 173,394. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) BARNARD MANUFACTURING COMPANY, Superior, Nebr. Filed Dec. 16, 1922.

STOPS IT

Particular description of goods.—Toothache Medicine.
Claims use since Dec. 1, 1922.

Ser. No. 173,400. (CLASS 12. CONSTRUCTION MATERIALS.) J. H. BURTON & SONS CO. INC., New York, N. Y. Filed Dec. 16, 1922.

Madrosada

Particular description of goods.—Lumber.
Claims use since about May 20, 1922.

Ser. No. 173,422. (CLASS 48. MALT BEVERAGES, EXTRACTS, AND LIQUORS.) HENNING WENNERSTEN INCORPORATED, Chicago, Ill. Filed Dec. 16, 1922.

RADIO

The word "Brand" is disclaimed apart from the mark shown.
Particular description of goods.—Malt Extracts.
Claims use since Nov. 15, 1922.

Ser. No. 173,426. (CLASS 39. CLOTHING.) LEWIS L. KANN, doing business as Kann Manufacturing Co., New York, N. Y. Filed Dec. 16, 1922.

BABIES FRIEND

Particular description of goods.—Shoes Made of Leather and Fabric and a Combination of Said Materials.
Claims use since about July 1, 1915.

Ser. No. 173,427. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ALFRED J. KRANK, St. Paul, Minn. Filed Dec. 16, 1922.

Particular description of goods.—Hair Dressing and Dandruff Remedy.
Claims use since Nov. 23, 1922.

Ser. No. 173,428. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ALFRED J. KRANK, St. Paul, Minn. Filed Dec. 16, 1922.

FIX-A-GLOSS

Particular description of goods.—Hair Dressing and Dandruff Remedy.
Claims use since Nov. 23, 1922.

Ser. No. 173,434. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) H. A. METZ LABORATORIES, INC., New York, N. Y. Filed Dec. 16, 1922.

ALUMNOL

Particular description of goods.—Astringents and Mild Antiseptics.
Claims use since 1905.

Ser. No. 173,460. (CLASS 39. CLOTHING.) T. D. BARRY COMPANY, Brockton, Mass. Filed Dec. 18, 1922.

POS-TIV-EZE

Particular description of goods.—Shoes Made Wholly or in Part of Leather.
Claims use since Oct. 19, 1922.

Ser. No. 173,463. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) CAPITOLA TONIC COMB CO., New York, N. Y. Filed Dec. 18, 1922.

Capitola

Particular description of goods.—Fountain Combs Capable of Containing a Liquid for Passage Through the Hair.
Claims use since February, 1912.

Ser. No. 173,480. (CLASS 39. CLOTHING.) FIEBRICH-FOX-HILKER SHOE COMPANY, Racine, Wis. Filed Dec. 18, 1922.

Stantest

Particular description of goods.—Shoes Made Wholly or in Part of Leather.
Claims use since Aug. 18, 1922.

Ser. No. 173,481. (CLASS 39. CLOTHING.) FIEBRICH-FOX-HILKER SHOE COMPANY, Racine, Wis. Filed Dec. 18, 1922.

LAKE SHORE

Particular description of goods.—Shoes Made Wholly or in Part of Leather.
Claims use since Aug. 18, 1922.

Ser. No. 173,520. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) MIAMI MANUFACTURING CO., Miami, Fla. Filed Dec. 18, 1922.

Miamadjuster.

Particular description of goods.—Casement-Window Adjusters.
Claims use since July 1, 1922.

Ser. No. 173,521. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) AUGUST MICHEL, Elberta, Ala. Filed Dec. 18, 1922.

MICHLINA

Particular description of goods.—Healing Salve to Relieve Sore and Calloused Feet.
Claims use since May 15, 1920.

Ser. No. 173,539. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) SNAPPY SALES CO., St. Louis, Mo. Filed Dec. 18, 1922.

SNAPPY SALES CO. C S H ST. LOUIS, MO.

No claim is made to the exclusive use of the representation of the goods nor the words "St. Louis, Mo." apart from the trade-mark shown.
Particular description of goods.—Supports for Telephone Cords, Electric-Iron Cords, and the Like.
Claims use since about Dec. 9, 1922.

Ser. No. 173,554. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JACOB W. BEHRENDT, San Francisco, Calif. Filed Dec. 19, 1922.

BEHRENDTS FORMA-ZINCOL

Particular description of goods.—Solution for the Treatment of Inflamed, Tender, or Bleeding Gums, Pyorrhea, and as a Hygienic Daily Mouth Wash and Gargle.
Claims use since 1902.

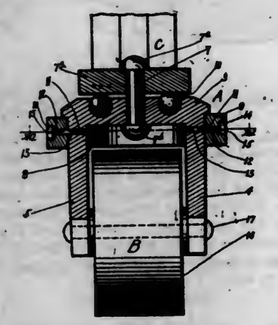
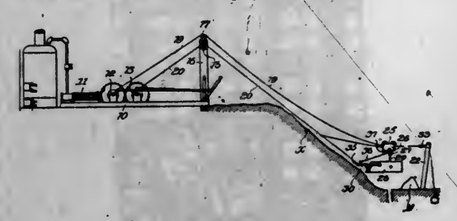
15,568. AUTOMATIC VALVE AND RIM. HARRY B. EADS, Port Arthur, Tex., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed May 10, 1922. Serial No. 559,878. Original No. 1,300,935, dated Apr. 15, 1919, Serial No. 221,185, filed Mar. 8, 1918. 7 Claims. (Cl. 251—144.)



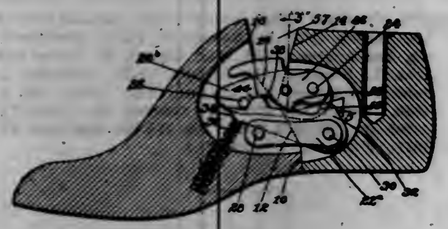
1. A device of the character described including a casing formed with outer and inner valve seats and a rim seat, a valve body for engagement with said valve seats, a rim for cooperating with the rim seat and for protecting the valve body, and resilient means for yieldingly and normally holding the valve body and rim on their seats.

15,569. LATCH. LEON OTTINGER, New York, N. Y. Filed Dec. 5, 1922. Serial No. 605,093. Original No. 1,386,422, dated Aug. 2, 1921, Serial No. 354,960, filed Jan. 29, 1920. 5 Claims. (Cl. 292—173.)



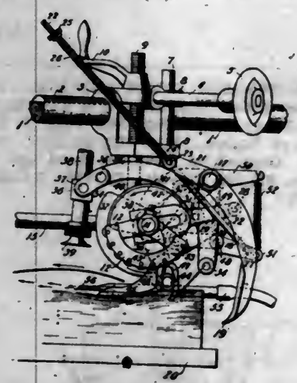
1. In a latch, a rectilinearly movable latch bolt, means for retracting said bolt including independently operable members each adapted to effect retraction of the bolt, and a single means for preventing retraction of the bolt by the actuation of either of said members but permitting, when in its effective position, of the retraction movement of the bolt by pressure directly applied to one end of the bolt.

15,570. CASTER. JOHN SIMON YOUNG, deceased, late of Los Angeles, Calif., by Edward W. Young, administrator, Los Angeles, Calif., and Edward W. Young and John L. Schecher, Los Angeles, Calif., assignors to John L. Schecher, Los Angeles, Calif. Filed July 1, 1920. Serial No. 393,452. Original No. 1,301,777, dated Apr. 22, 1919, Serial No. 157,758, filed Mar. 27, 1917. 3 Claims. (Cl. 16—21.)



1. A caster including a yoke member formed with annular side walls and a top having an annular raceway therein, antifriction balls loose within the raceway, a pivot pin extending upwardly from the top at the center of the raceway, integral furcations projecting downwardly from opposite sides of the yoke, a roller journaled between the furcations, and a buffer ring extending around the annular side walls of the yoke and projecting on three sides beyond the roller and yoke.

15,571. EXCAVATING MACHINE. MILTON S. LONGNAKER, Pleasant Hill, Ohio, assignor, by mesne assignments, to John W. Page, Chicago, Ill. Filed Jan. 24, 1922. Serial No. 531,461. Original No. 877,578, dated Jan. 28, 1908, Serial No. 366,615, filed Apr. 5, 1907. 4 Claims. (Cl. 37—117.)

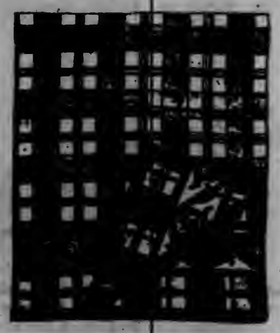


1. In apparatus of the class described, an inclined cable or support, means for slackening and drawing the cable taut to alter its degree of inclination, a movable carriage arranged to travel on the inclined cable and movable thereon in one direction by gravity, a pivotally hung load conveying device suspended from said carriage for free pivotal movement, and an operating cable connected to said conveying device and arranged to haul the same in the opposite direction.

15,572. LAST. GEORGE G. SCHELTER, Rochester, N. Y., assignor, by mesne assignments, to United Last Company, Auburn, Me., a Corporation of Maine. Filed June 30, 1921. Serial No. 481,711. Original No. 1,372,779, dated Mar. 29, 1921, Serial No. 316,219, filed Aug. 8, 1919. 42 Claims. (Cl. 12—136.)

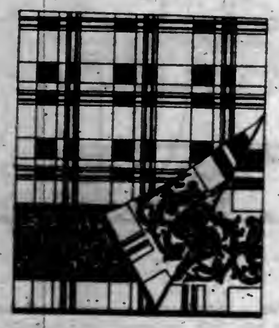
1. In a last, separate fore and heel parts, bonding mechanism joining said parts constructed and arranged to permit the collapse of the last, a locking member movable on one of said last parts to engage the other last part in two relations prior to any substantial collapsing movement, to hold the last rigidly extended and impositively locked, respectively, and a member independent of the locking member actuatable to change one of said relations to the other at will.

15,573. SHEET-FEEDING MACHINE. CARL E. CHRISTOPHEL, Pearl River, N. Y., assignor to Dexter Folder Company, Pearl River, N. Y., a Corporation of New York. Filed May 18, 1922. Serial No. 562,082. Original No. 1,382,952, dated June 28, 1921, Serial No. 288,753, filed Apr. 9 1919. 28 Claims. (Cl. 271—22.)



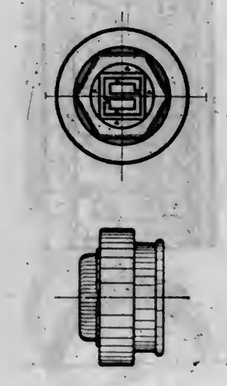
1. In a sheet feeding machine, a sheet gripping instrumentality, means for supporting a pile of sheets and holding one portion of said pile displaced relatively to other portions of saide pile, and means operating upon the top sheet of said pile in a direction away from said sheet gripping instrumentality for moving said top sheet into position to be engaged by said sheet gripping instrumentality.

DESIGNS.



APRIL 3, 1923.

62,161. BLANKET OR SIMILAR ARTICLE. FREDERICK A. ANDREWS, Pequannock, N. J., assignor to The Esmond Mills, New York, N. Y., a Corporation of Massachusetts. Filed Aug. 21, 1922. Serial No. 3,501. Term of patent, 7 years.

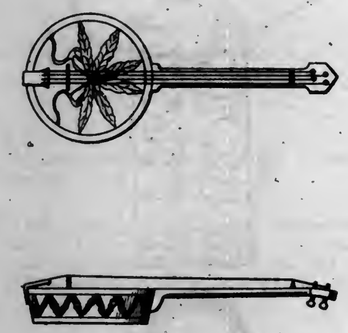


The ornamental design for a blanket or similar article substantially as shown.

62,162. BLANKET OR SIMILAR ARTICLE. FREDERICK A. ANDREWS, Pequannock, N. J., assignor to The Esmond Mills, New York, N. Y., a Corporation of Massachusetts. Filed Aug. 21, 1922. Serial No. 3,502. Term of patent 7 years.

The ornamental design for a blanket or similar article substantially as shown.

62,163. HUB CAP. JOSEPH H. BOURGON, Detroit, Mich., assignor to Studebaker Corporation, a Corporation of New Jersey. Filed Aug. 12, 1922. Serial No. 3,866. Term of patent 7 years.



The ornamental design for a hub cap substantially as shown.

62,164. VEHICLE TIRE. FREDRICK S. DICKINSON, New York, N. Y. Filed July 7, 1922. Serial No. 2,982. Term of patent 3½ years.

The ornamental design for a vehicle tire.

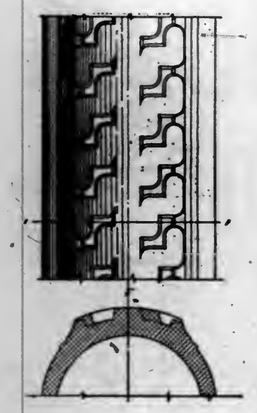
62,165. GUITAR. FRANK F. GEBL, Milwaukee, Wis. Filed July 3, 1922. Serial No. 2,941. Term of patent 7 years.

The ornamental design for a guitar as shown.

62,166. SHAVING-BRUSH HOLDER. MEYER GREENBURG, Kearney, N. J. Filed Oct. 10, 1922. Serial No. 3,925. Term of patent 3½ years.

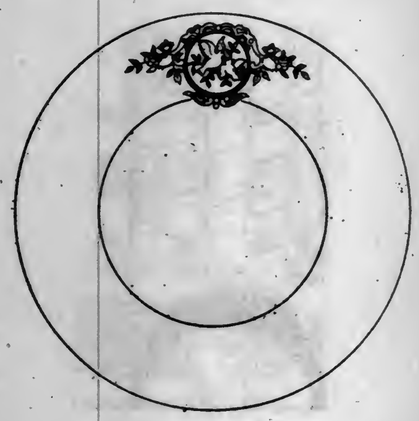
The ornamental design for a shaving brush holder, as shown.

62,167. TIRE TREAD. JAMES N. GUNN, New York, N. Y., assignor to Morgan & Wright, a Corporation of Michigan. Filed June 30, 1922. Serial No. 2,899. Term of patent 14 years.



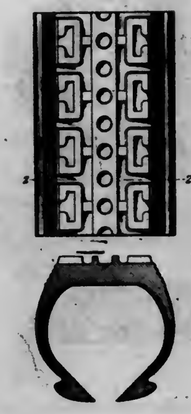
The ornamental design for a tire tread, as shown.

62,168. TIRE TREAD. JAMES N. GUNN, New York, N. Y., assignor to Morgan & Wright, a Corporation of Michigan. Filed June 30, 1922. Serial No. 2,900. Term of patent 14 years.



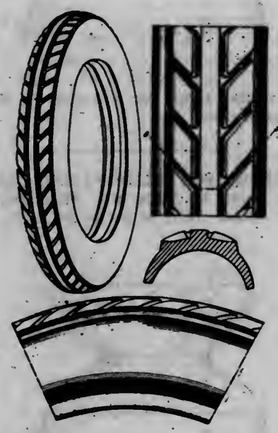
The ornamental design for a tire tread, as shown.

62,169. TIRE TREAD. EARL A. HECHT, Mansfield, Ohio. Filed June 24, 1922. Serial No. 2,812. Term of patent 14 years.



The ornamental design for a tire tread as shown.

62,170. PLATE OR SIMILAR ARTICLE. PERCY JENNER, New York, N. Y., assignor to The Palm Brothers Company, New York, N. Y. Filed Feb. 28, 1922. Serial No. 940. Term of patent 3½ years.

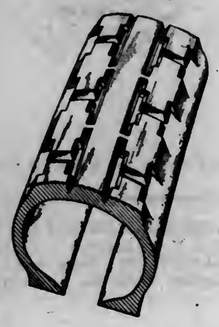


The ornamental design for a plate or similar article, as shown.

62,171. TIRE TREAD. DARRELL E. PATTON, Los Angeles, Calif., assignor to National Airless Tire Company, Los Angeles, Calif., a Corporation of Nevada. Filed June 19, 1922. Serial No. 2,727. Term of patent 7 years.

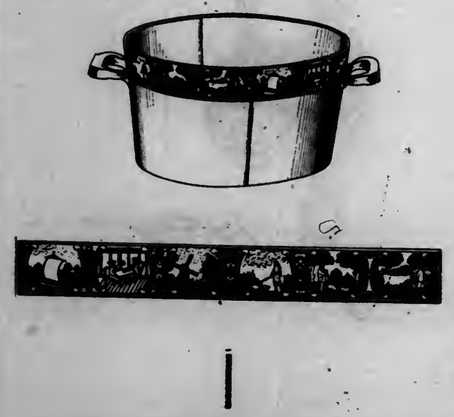
The ornamental design for a tire tread, substantially as shown.

62,172. TIRE TREAD. WALLACE HENRY PAULL, Birmingham, England, assignor to The Dunlop Rubber Company, Limited, London, England. Filed July 25, 1921. Serial No. 487,552. Term of patent 14 years.



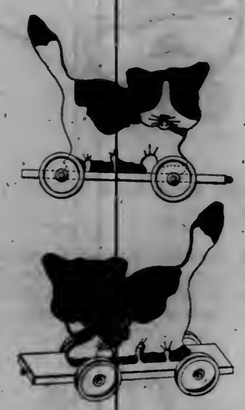
The ornamental design for a tire tread as shown.

62,173. CHILD'S VEHICLE. EMIL L. PEARSON, Chicago, Ill. Filed Jan. 3, 1922. Serial No. 24. Term of patent 7 years.



The ornamental design for a body for a child's vehicle as shown.

62,174. TIRE CASING. HARLAN S. RECTOR, Chicago, Ill., assignor to The Beckley-Ralston Co., Chicago, Ill., a Corporation of Illinois. Filed Dec. 15, 1921. Serial No. 522,712. Term of patent 3½ years.



The ornamental design for a tire casing, as shown.

62,175. BOWL OR THE LIKE. LOUIS W. RICE, New York, N. Y. Filed Mar. 29, 1922. Serial No. 1,447. Term of patent 7 years.

The ornamental design for a bowl or the like, as shown.

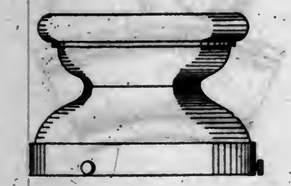
62,176. TOY. ELLEN R. WEBB, Denver, Colo. Filed Dec. 2, 1921. Serial No. 519,521. Term of patent 7 years.

The ornamental design for a toy, as shown.

62,177. CAST ARM FOR LIGHTING FIXTURES. KARL NACKE, Brooklyn, N. Y., assignor to United Metal Spinning Co., Brooklyn, N. Y., a Corporation of New York. Filed May 19, 1922. Serial No. 2,312. Term of patent 3½ years.

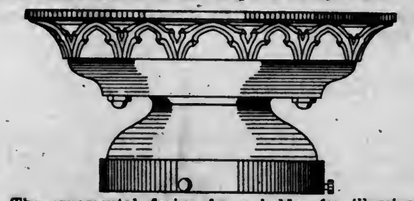
The ornamental design for a cast arm for lighting fixtures, as shown.

62,178. HUSK FOR BALL-LAMP-SOCKET COVER FOR LIGHTING FIXTURES. KARL NACKE, Brooklyn, N. Y., assignor to United Metal Spinning Co., Brooklyn, N. Y., a Corporation of New York. Filed May 19, 1922. Serial No. 2,313. Term of patent 3½ years.



The ornamental design for a husk for ball lamp socket cover for lighting fixtures, as shown.

62,179. HOLDER FOR ILLUMINATING GLASSWARE. HARRY C. ADAM, St. Louis, Mo. Filed May 13, 1922. Serial No. 2,222. Term of patent 14 years.

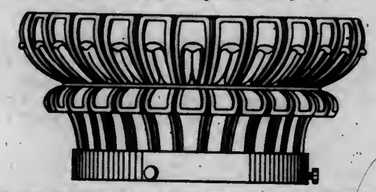


The ornamental design for a holder for illuminating glassware, as shown.

62,180. HOLDER FOR ILLUMINATING GLASSWARE. HARRY C. ADAM, St. Louis, Mo. Filed May 13, 1922. Serial No. 2,224. Term of patent 14 years.

The ornamental design for a holder for illuminating glassware, as shown.

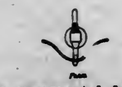
62,181. HOLDER FOR ILLUMINATING GLASSWARE. HARRY C. ADAM, St. Louis, Mo. Filed May 13, 1922. Serial No. 2,226. Term of patent 14 years.



The ornamental design for a holder for illuminating glassware as shown.

62,182. HOLDER FOR ILLUMINATING GLASSWARE. HARRY C. ADAM, St. Louis, Mo. Filed May 13, 1922. Serial No. 2,228. Term of patent 14 years.

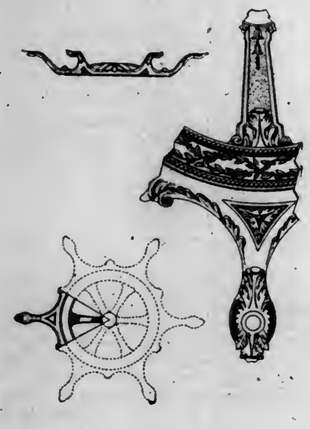
The ornamental design for a holder for illuminating glassware, as shown.



62,183. HOLDER FOR ILLUMINATING GLASSWARE. HARRY C. ADAM, St. Louis, Mo. Filed May 13, 1922. Serial No. 2,229. Term of patent 14 years.

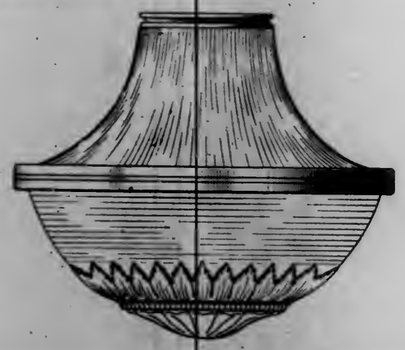
The ornamental design for a holder for illuminating glassware, as shown.

62,184. ARM FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed Apr. 20, 1922. Serial No. 1,862. Term of patent 3½ years.



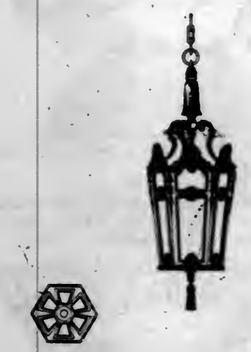
The ornamental design for an arm for lighting fixture, as shown.

62,185. CEILING FIXTURE FOR LIGHTING FIXTURES. THURE E. DAHL, New York, N. Y. Filed July 21, 1921. Serial No. 486,591. Term of patent 3½ years.



The ornamental design for a ceiling fixture for lighting fixtures, as shown.

62,186. RING FOR LIGHTING FIXTURES. THURE E. DAHL, New York, N. Y. Filed July 21, 1921. Serial No. 486,579. Term of patent 3½ years.



The ornamental design for a ring for lighting fixtures, as shown.

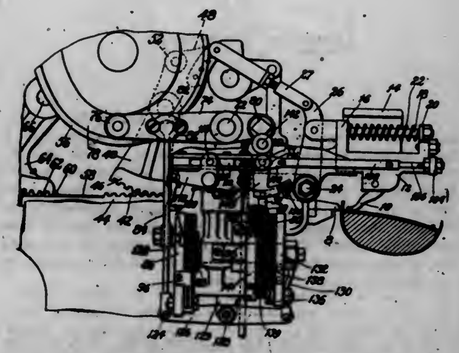
62,187. PRISMATIC GLASS GLOBE. WILLIAM A. DOREY, Newark, Ohio, assignor to Holophane Glass Co. Inc., New York, N. Y., a Corporation of New Jersey. Filed July 6, 1921. Serial No. 482,851. Term of patent 14 years.

The ornamental design for a prismatic glass globe, as shown.

62,188. HANGING LAMP. CURTIS A. SMITH, New Rochelle, N. Y., assignor to Robert Findlay Manufacturing Co., New York, N. Y., a Corporation of New York. Filed Mar. 28, 1921. Serial No. 456,495. Term of patent 7 years.

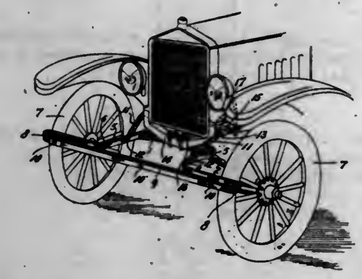
The ornamental design for a hanging lamp, as shown.

PATENTS



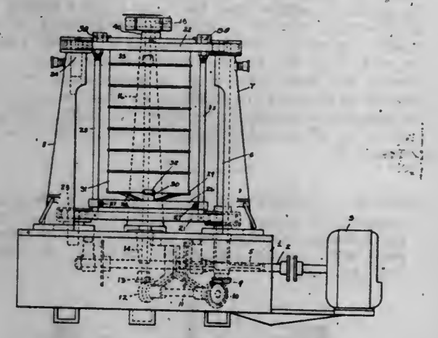
GRANTED APRIL 3, 1923.

1,450,163. HEAVY-TRUCK-TIRE FLAP. ADRIAN O. ABBOTT, Jr., Detroit, Mich., assignor to Morgan & Wright, a Corporation of Michigan. Filed Oct. 4, 1920. Serial No. 414,495. 4 Claims. (Cl. 152—20.)



4. A pneumatic tire flap consisting of a strip of rubber composition having a base portion with a flat rim-engaging face adapted to be seated on a wheel-rim and fill the space between the beaded portions of a casing, upstanding flanges of increasing flexibility towards their free edges and of a length and thickness adapted to relieve the side walls of a casing from abrupt shearing stress in the region of the rim flanges, and overlapping ends reduced in thickness on their outside and inside respectively, said flap having a curved tube-engaging face which defines with the inside of a casing a tube-receiving cavity of nearly circular cross-section.

1,450,164. FASTENING-INSERTING MACHINE. ARTHUR BATES, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,262. 39 Claims. (Cl. 1—20.)

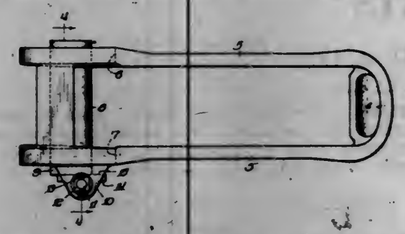


1. In a machine of the character described, a work rest, an anvil movable toward and from the work rest to clamp the work thereagainst thus measuring the work, fastening forming and driving devices comprising means for feeding wire stock and for cutting the same into lengths suitable for fastenings, a member secured to the anvil to be movable therewith and provided with operating abutments, a bell crank for adjusting the cutting means, and a second bell crank for adjusting the wire feeding means both arranged to be operated from said abutments.

1,450,165. AUTOMOBILE BUMPER. JOHN F. BEANS, Canton, Ohio, assignor to The Beans Spring Company, Massillon, Ohio, a Corporation of Ohio. Filed Nov. 4, 1922. Serial No. 599,021. 3 Claims. (Cl. 293—55.)

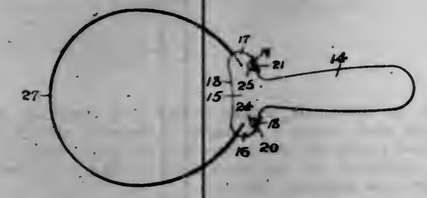
1. An automobile bumper formed of a single bar of spring steel having a U-shaped, rearwardly extending, central portion for engagement with the front spring of an automobile, the end portions of the bar being overlapped and connected together.

1,450,166. SIFTING TESTING MACHINE. WILLARD J. BELL, Newaygo, Mich. Filed July 5, 1919. Serial No. 308,811. 2 Claims. (Cl. 83—38.)



1. In a sifting testing machine, the combination of spaced shaking plates adapted to receive testing sieves therebetween, a series of connected resilient sieve-engaging arms interposed between said sieves and one of said plates, and a handle on one of said arms adapted to permit such arm to be swung away from said sieves to allow of removal thereof.

1,450,167. DRAWBAR YOKE. FREDERIC H. BENDER, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Aug. 8, 1921. Serial No. 490,493. 6 Claims. (Cl. 213—70.)



1. In combination with a draw bar yoke, a vertically extending key adapted to connect the yoke to a coupler,

said key having a limited horizontal movement relative to the yoke, and a removable supporting bearing for the pin, said bearing comprising a member having a flat

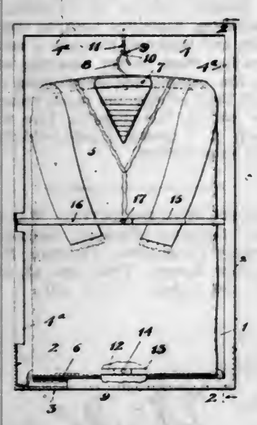
bearing face, and a transversely removable supporting member adapted to support the bearing member in such position that the latter may support the key.

1,450,168. IMPLEMENT FOR REMOVING JAR TOPS. EMIL BEYER, Newark, N. J. Filed July 27, 1920. Serial No. 399,358. 4 Claims. (Cl. 81—3.1.)

1. A tool or implement adapted for use as a separator for the sealing rubber and glass top of a jar, comprising a handle and horns at one end of the handle, said horns extending laterally from the opposite and longitudinally extending marginal edge-portions of the handle, and a thin wire loop attached at its respective ends to said horns, and at points upon the horns located beyond the longitudinally extending marginal edge-portions of said handle, one of said horns serving as a fulcrum against the neck of the jar, and the other horn serving as a pull-member and being adapted to be moved away from the neck of the jar when the handle is operated, so as to force the wire-loop either above or below the sealing rubber to provide an air-induction space for lifting the glass top from the jar.

1,450,169. DESK-STAND BASE. ERNEST A. BOHLMAN, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 9, 1918. Serial No. 216,159. 12 Claims. (Cl. 179—147.)

1. A base plate for a desk stand provided with an annular peripheral groove, a strip of material adapted to fit into said groove, and a plurality of prongs formed integrally with said base plate adapted to be forced outwardly and upwardly to position and hold said strip of material in said groove.

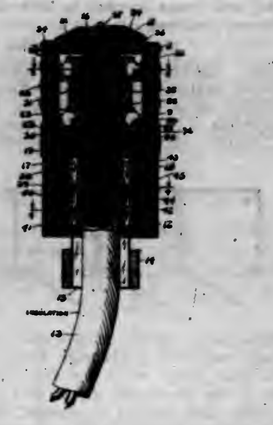


1,450,170. PNEUMATIC-TIRE CASING. PETER J. CLARKE, Chicago, Ill. Filed May 11, 1922. Serial No. 560,213. 19 Claims. (Cl. 152—8.)

14. A puncture proof tire casing comprising circular frames having oppositely disposed lateral flanges on their outer edges, a plurality of separate plates secured to said frames to form the side walls of said casing; and a cir-

cumferential tread member secured between said frames and adapted to rest on said flanges.

1,450,171. BOX FOR GARMENTS. ROBERT F. CUTHBERT, New York, N. Y., assignor to Theo. Tiedemann & Sons, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 5, 1921. Serial No. 458,682. 2 Claims. (Cl. 206—7.)



1. A device of the class described comprising a garment box having a strip extending about its upper edge, a hook secured in said strip at one end of the box and extending inwardly towards the bottom of the box, a garment-holding member adapted to engage a garment at one of its ends, a hook on said member adapted to resiliently interengage with the hook on the box, a tape extending across the garment intermediate of its ends and a tape engaging the garment at its end opposite to the garment supporting member.

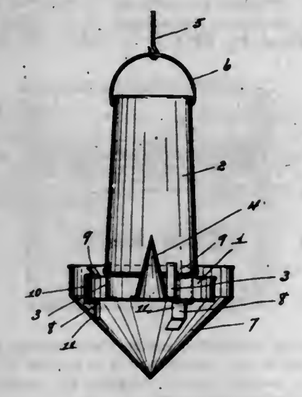
1,450,172. SWIVEL-PLUG CONNECTOR. EDWARD DEWALD, Sr., Cincinnati, Ohio, assignor of one-half to Edward Dewald, jr., Cincinnati, Ohio. Filed Mar. 8, 1920. Serial No. 364,315. 1 Claim. (Cl. 173—359.)

In a swivel plug connector, a body, a spindle within the body, a ball race within the body for the positive pole and a ball race within the body for the negative pole of a source of current supply, each of said races having a ball contacting surface to support the bottom surfaces of balls located therein, a ball race on the spindle for each ball race in the body, each of said races having a surface to contact the top surfaces of balls located therein, balls within the races establishing electrical connection between the races for the positive and between the races for the negative poles of current supply, electrical con-

ductors attached to and extending from the body ball races through the body to one end thereof, electrical conductors attached to and extending from the spindle ball

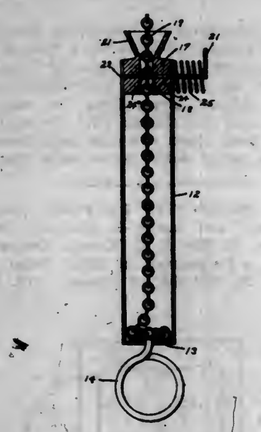
races through the spindle to one end thereof away from the body conductors, and means at the body end and at the spindle end of the connector adapted to connect wires thereto.

1,450,173. ADJUSTABLE MULTIPLE DISK AND SHREDDING HAMMER. EDWARD H. FRICKEY, St. Louis, Mo. Filed July 30, 1919, Serial No. 314,244. Renewed Jan. 30, 1922. Serial No. 532,860. 5 Claims. (Cl. 83—11.)



2. A device of the character described having a pivoted hammer consisting of a flat bar with its opposite edges having staggered recesses and its outer end being bent to one side and having an inclined surface between its opposite edges.

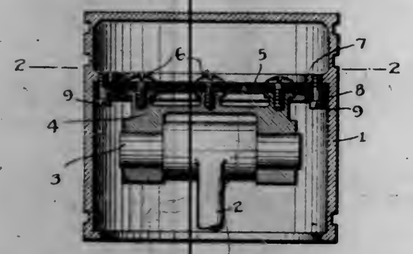
1,450,174. NICKELIFEROUS CATALYZERS AND PROCESS OF MANUFACTURING THE SAME. ALBERT GRANICHSTADTEN and EMIL SITTIG, Vienna, Austria. Filed Aug. 12, 1921. Serial No. 491,840. 4 Claims. (Cl. 23—28.)



1. A process for manufacturing a nickeliferous catalyzer which consists in preparing a mixture of an aqueous solution of a nickel salt and of a magnesium salt, adding thereto an aqueous solution of water glass, whereby both the nickel and the magnesium are precipitated simultaneously in the form of a colloidal double silicate and in then washing, drying and grinding the precipitate and heating it in a current of hydrogen and permitting it to cool in hydrogen.

1,450,175. POULTRY FEEDER. WILLIAM E. HONSINGER, Round Lake, N. Y. Filed Apr. 7, 1921, Serial No. 459,434. Renewed Feb. 23, 1923. 1 Claim. (Cl. 119—52.)

A poultry-feeder having in combination an exteriorly accessible feed-tray; a feed-magazine leading to the feed-tray and mounted thereupon; a waste-tray circumferentially surrounding and extending beneath the feed-tray; and members permanently attached to the waste-tray having spring-hooks releasably engageable with the feed-tray.

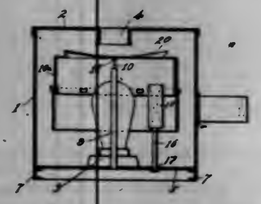


1,450,176. SUSPENDING ELEMENT. ALFRED HOPKINS, Boston, Mass., assignor to Hopkins Manufacturing Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 17, 1922. Serial No. 554,086. 3 Claims. (Cl. 288—3.)

1. A suspending element adapted to cooperate with an elongated chain suspended from an overhead support, said element comprising an elongated receptacle, open at one end to receive a chain, and closed at its opposite end to support a loose portion of the chain, a clutch at the open end of the receptacle, adapted to automatically grip

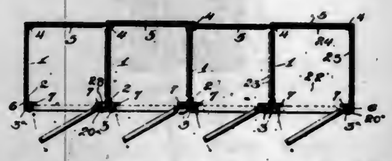
the chain at various distances from its support, said clutch having means whereby it may be rendered inoperative, to permit vertical adjustment of the receptacle on the chain, and a coupling part at the lower end of the receptacle, adapted to engage a suspended article, the arrangement being such that a portion of the chain depends loosely from the clutch, and is confined in the receptacle by the closed end of the latter.

1,450,177. INTERNAL-COMBUSTION-ENGINE PISTON. HENRI J. HOUPERT, Mamaroneck, N. Y. Filed Jan. 11, 1922. Serial No. 528,474. 1 Claim. (Cl. 74—108.)



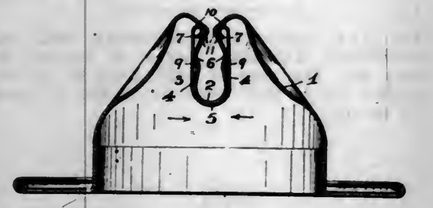
An internal combustion engine piston having a body, a bridge to which the connecting-rod is pivoted by a wrist-pin, and a flexible member forming the connection between said bridge and body.

1,450,178. SUPERHEATER FOR LOCOMOTIVES. HOWARD L. INGERSOLL, White Plains, and THOMAS L. BURTON, New York, N. Y. Filed June 19, 1919. Serial No. 305,223. 1 Claim. (Cl. 122—480.)



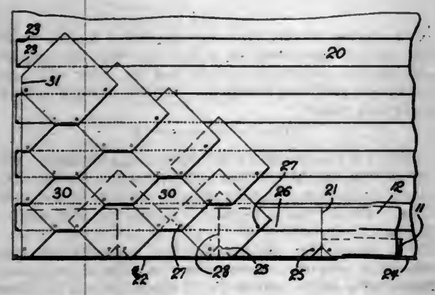
A superheater apparatus for locomotives comprising in combination, an auxiliary superheater, a damper for said auxiliary superheater, a steam operated supplemental power device on the locomotive, and means under the control of the exhaust steam from the supplemental power device to open said damper when the supplemental power device is using steam and close said damper when the supplemental power device is not using steam.

1,450,179. PROJECTING LANTERN. BERNHARDT BISCHOF ISAACS and JAMES E. MARQUA, Cincinnati, Ohio, assignors to The J. E. Marqua Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Apr. 12, 1922. Serial No. 551,995. 5 Claims. (Cl. 88—24.)



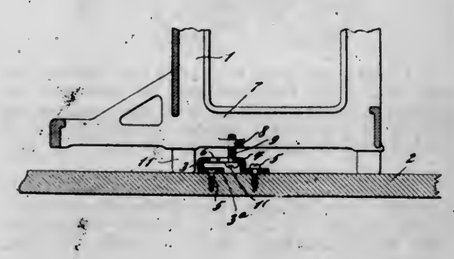
1. In a projection machine, the combination with a source of light and a projection lens, of a linear member formed with an object comprising a series of transparent letters to provide a text message through which the light will pass and thence through the lens to project an image of said object, and means for mounting said linear member in a circle about said light, and means for revolving the linear member in said circular form, for the purpose described.

1,450,180. CABINET CONSTRUCTION. CHARLES R. JAMISON, Canton, Ohio, assignor, by mesne assignments, to United Alloy Steel Corporation, Canton, Ohio, a Corporation of New York. Filed Sept. 1, 1916. Serial No. 118,032. 10 Claims. (Cl. 45—37.)



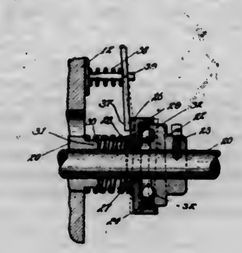
2. Sheet metal cabinet construction including a partition wall having a rectangular flange along one edge and an offset flange along the other edge, a back wall secured to the rectangular flange, and a U-shaped sheet metal door jamb having a straight flange secured to said offset flange coplanar with the partition wall.

1,450,181. CREASE-RETAINING DEVICE FOR HATS. JOSEPH KORN, Newark, N. J. Filed July 29, 1920. Serial No. 399,689. 3 Claims. (Cl. 2—108.)



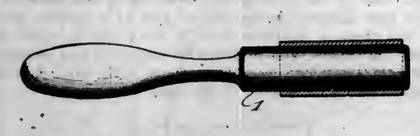
1. A crease-retaining device for hats comprising a pair of wings joined by a central portion, said device being substantially U-shaped in cross-section so as to be adapted to embrace the crease of a hat, the edge-portion of each wing being bent around in the form of a roll, said rolls providing oppositely located and longitudinally extending marginal beads.

1,450,182. ROOF STRUCTURE. ANTHONY LAMM, Brooklyn, and JOHN F. SCHROEDER, Middle Village, N. Y. Filed Apr. 7, 1921. Serial No. 459,349. 1 Claim. (Cl. 108—9.)



In a roof structure the combination with a foundation, of starter shingles laid thereon at the edge of the roof, said starter shingles consisting of an upper portion and a lower portion bent back beneath the upper portion, a spacing wire secured to said foundation and passing through all of said starter shingles between the upper and lower portions thereof, said starter shingles having the lower corners of their upper portions cut away to expose a portion of the said spacing wire therebetween, lattice shingles having means for engaging the said exposed portions of the wire passing through the starter shingles to cover the joints therebetween to form a first row of shingles, other lattice shingles similar to the lattice shingles aforesaid and adapted to be laid in successive rows to cover the said foundation and other spacing wires adapted to engage the said other lattice shingles to align the same in regular rows.

1,450,183. TYPEWRITER CLAMP. ELMER CLYDE MOON, Sheepshead Bay, N. Y. Filed Oct. 26, 1921. Serial No. 510,610. 3 Claims. (Cl. 45—52.)

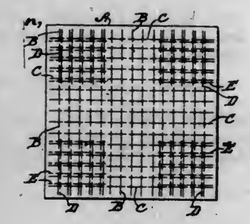


3. A device for securing a typewriting machine to a support, comprising a member attachable to the upper surface of the support and having a portion spaced from said surface, said spaced portion having therein a key-hole shaped aperture, a hook bar adapted to hook over a side frame bar of the machine, and a headed bolt threaded into the under face of the lower end of the bar, whereby when the bolt is passed head first through the larger end of the aperture, the shifting of the hook bar parallel with the surface of the support will carry the shank of the bolt into the narrow end of the aperture to lock the typewriter to the support.

1,450,184. MECHANICAL MOVEMENT. JAMES DUDLEY MOORE, North Wilkesboro, N. C. Filed Aug. 29, 1919. Serial No. 320,719. 7 Claims. (Cl. 74—14.)

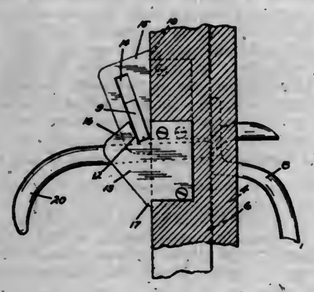
2. In a mechanical movement, a driving member, a driven member, one of said members being provided with an end surface inclined with respect to a plane perpendicular to the axis of rotation of said member, a plurality of balls disposed between said members and resilient means for maintaining said other member in contact with said balls.

1,450,185. GAUGE PLUG. CHARLES E. MYERS, Canton, Ohio. Filed Aug. 20, 1920. Serial No. 404,936. 4 Claims. (Cl. 33—178.)



1. A gauge plug made of metal with diamond dust embedded in its working surface and smoothed to exact size.

1,450,186. METAL MOLD. HUBERT A. MYERS, Toledo, Ohio, assignor to The Hubert A. Myers Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 14, 1922. Serial No. 529,381. 31 Claims. (Cl. 22—188.)



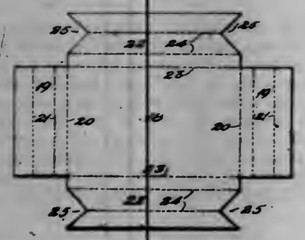
1. A mold for casting metals containing nickel and iron in alloyed relation.

1,450,187. REENFORCED FLOOR CONSTRUCTION. KARL R. SCHUSTER, Brooklyn, N. Y. Filed Jan. 16, 1919. Serial No. 271,358. 7 Claims. (Cl. 72—71.)

4. A floor construction wherein a composite plate tends to develop lines of fracture extending diagonally from the corners to the middle region of the plate, embodying two series of main rods extending substantially throughout the entire area of said plate, with the rods of one series crossing the rods of the other series, and shorter rods within the plate and in the areas thereof extending substantially from the middle region to the diagonal corners of said plate, said shorter rods crossing the undeveloped diagonal lines of fracture.

1,450,188. DOOR LATCH. EDWARD T. SHERMAN, Minneapolis, Minn. Filed July 27, 1920. Serial No. 399,366. 5 Claims. (Cl. 292—236.)

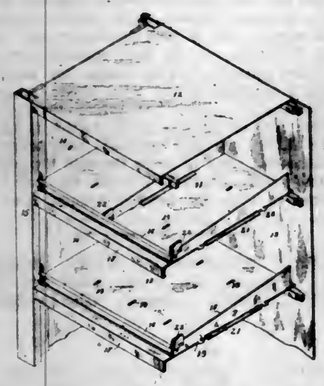
1. The combination with a door frame and a door hinged thereto, of a latch bar pivoted to the door and



mounted to move in a pane that is oblique to the plane of the door, and a latch plate on the door frame having a lock shoulder with which said latch bar is engageable, the said lock shoulder being oblique and at a greater angle to the plane of the door than is the plane in which the latch bar moves, and a means of elevating and dropping the said latch bar into engagement with said shoulder under closing movement of the door.

1,450,189. FEED COLLET AND METHOD OF MAKING THE SAME. OSCAR A. SMITH, East Cleveland, Ohio, assignor to The National Acme Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 23, 1922. Serial No. 531,089. 26 Claims. (Cl. 29—156.)

1. A feed collet having a resilient gripping portion for the work and an expansible and contractible gripping portion for attachment to its support.



1,450,190. PICTURE-CARD FRAME. FREDERICK SONN, Woodmere, Long Island, N. Y. Filed June 9, 1922. Serial No. 567,020. 2 Claims. (Cl. 40—154.)

1. A frame formed from a single sheet of foldable material having a central body portion, and peripheral flaps each defined from the body portion by a fold line and each having a plurality of spaced fold lines parallel to the fold line defining the flap from the body, each of said flaps being bent on its fold lines to form a tube, said tube being folded over on the body, the ends of two opposite tubular members being provided with angularly cut portions, the ends of the remaining two tubular members being cut square and tucked into the ends of the tubular members having the angularly cut portions.

1,450,191. SHEET-METAL SHELVING. JOSEPH STURM, Canton, Ohio, assignor to United Alloy Steel Corporation, Canton, Ohio, a Corporation of New York. Filed Sept. 1, 1922. Serial No. 585,686. 8 Claims. (Cl. 211—27.)

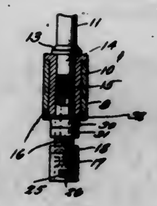
1. A shelf having a bin front and a back wall and provided with spaced transverse slots, a bin partition having hooks on its lower edge engaging the shelf in the slots, and a movable extension on its end acting to lock the partition endwise in place.

2. A shelf having a bin front and a back wall and provided with spaced transverse slots, an abbreviated bin partition having hooks on its lower edge engaging the shelf in the slots, and a movable extension on its end acting to lock the partition endwise in place.

1,450,192. ATTACHMENT FOR AUTOMOBILE GASOLINE TANKS. LAWRENCE M. TAYLOR, Philadelphia, Pa. Filed Apr. 6, 1922. Serial No. 550,221. 1 Claim. (Cl. 158—46.5.)

The combination with a liquid containing tank having openings in the upper and lower walls thereof, a tube insertible through said openings and having on its upper end an indicia carrying plate, another tube mounted in said first mentioned tube and extending therethrough with its upper end bent at right angles and flattened to form a pointed actuating handle to overlie the indicia carrying plate, said inner tube being rotatable, and each of said tubes having longitudinally spaced apertures, the apertures in one tube being designed to be brought into register with those in the other on the turning of said pointer a predetermined distance.

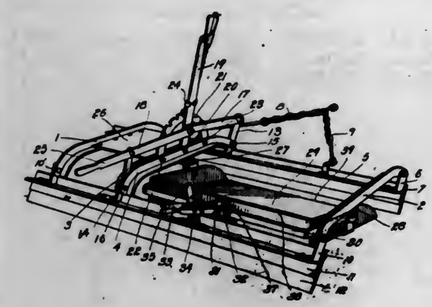
1,450,193. FOLDING PUSH CAR. GEORGE THOMAS, Chelsea, England. Filed Dec. 27, 1921. Serial No. 525,187. 11 Claims. (Cl. 280—37.)



1. A folding push car comprising a bridge-like frame, a pair of brackets mounted so as to rotate in bearings on each side of said frame, wheels carried by each of said brackets so as to permit the same to fold into said frame, a pair of side members pivoted to said frame so as to support a folding back, a second pair of side members also

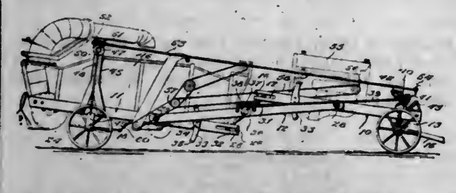
pivoted to said frame and adapted to support a seat and arms, means for securing said back, seat and arms in

erected position on said frame, and means for securing said wheels and their supporting brackets in their extended position.



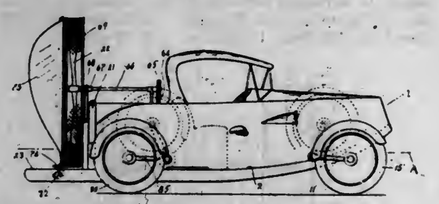
1,450,194. DIRIGIBLE HEADLIGHT. WILLIAM H. WALKER and HOBART GOFF, Parsons, Tenn. Filed July 11, 1921. Serial No. 483,863. 1 Claim. (Cl. 240—62.)

In combination with the connecting rod connecting the front wheels of a motor vehicle, a dirigible head lamp comprising a bracket, a tubular bearing positioned in the bracket, a hollow shaft having a threaded portion, a coupling in the lower end of the shaft and having an opening, a rod extending through the opening for operating the hollow shaft within the bracket member, a lamp supporting arm having a threaded extension adapted to be positioned in the threaded portion of the hollow shaft, said lamp supporting arm having a flange adapted to rest on the upper end of the bearing member to hold the lamp supporting arm against movement vertically, and means for connecting the rod and connecting rod, whereby movement of the connecting rod will result in a relative movement of the lamp supporting arm.



1,450,195. ROAD DRAG AND SCRAPER. EDWARD B. WINTERS, Coffeyville, Kans., assignor, by mesne assignments, to The Wichita Scraper Drag Company, Sedgwick County, Kans. Filed Mar. 3, 1921. Serial No. 449,462. 5 Claims. (Cl. 37—175.)

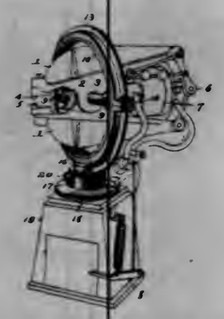
1. A road drag having spaced front and rear transverse blades and a pivoted shovel between them, the shovel being mounted for complete rotation about the axis of its pivots, means for engaging the rear portion of the shovel to hold it in operative position so that the normal bottom face of



the blade of the shovel will serve as a platform, and means for releasably holding the first named means.

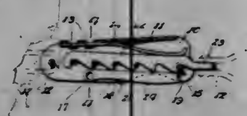
1,450,196. PORTABLE LEVELING APPARATUS FOR MOUNTED MACHINERY. WILLIAM HENRY WYLIE, Jennings, Kans. Filed Nov. 7, 1922. Serial No. 599,548. 10 Claims. (Cl. 280—6.)

1. A leveling apparatus of the class described comprising a front frame having a front axle and a rear frame having a rear axle, each frame being mounted to oscillate on its respective axle; connecting members for said frames, said members being journaled at their ends in the respective frames, and means carried by said members for altering the relative position of said frames.



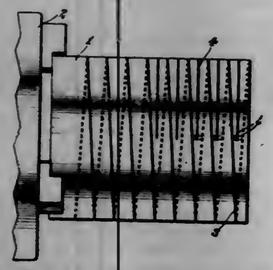
1,450,197. SPORT CAR. CLIFFORD J. ZWICKEY, North St. Paul, Minn. Filed July 11, 1921. Serial No. 483,799. 4 Claims. (Cl. 115—1.)

1. A sport car of the class described, comprising a body formed to float, means including a power unit for propelling said body, supporting wheels for supporting said body on land pivotally mounted to be swingable bodily upward when the body is afloat to a position above the water line, and to swing bodily downward by gravity to a predetermined degree when the body is afloat, releasable locking means including releasing means therefor, extending into engagement with a part of the pivotal mounting of said wheels to check upward movement of the latter



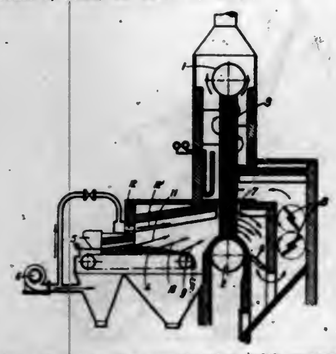
and render said releasing means inoperable, said releasing means being rendered operable by the downward swinging movement of said wheels.

1,450,198. RIVETING MACHINE. JOSEPH OSWELL BAILEY, Atlanta, Ga. Filed Oct. 26, 1921. Serial No. 510,518. 10 Claims. (Cl. 78—48.)



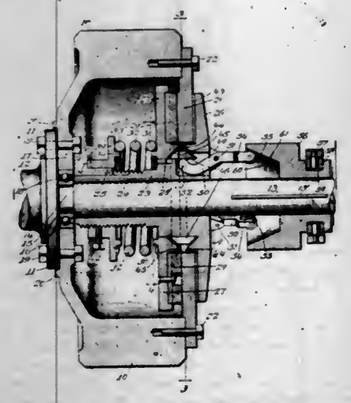
1. A riveting machine comprising in combination, complemental power actuated riveting elements, and supporting means adjustable about vertical and horizontal axes for effecting universal adjustment of the said elements.

1,450,199. LATCH DEVICE FOR SKID CHAINS AND THE LIKE. JAMES T. BARBEE, Brooklyn, N. Y. Filed Mar. 22, 1922. Serial No. 545,738. 5 Claims. (Cl. 24—206.)



1. A skid chain fastener including a channel shaped body member, a cross pin extending between the sides of said member, a latch adapted to fit between said sides engaging the pin, and a trip member pivoted between the sides and operable to ride the latch out of engagement with the pin.

1,450,200. METHOD OF MAKING PISTON RINGS. JOHN H. BRUNINGA, St. Louis, Mo., assignor, by mesne assignments, to Spyroseal Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Mar. 13, 1919. Serial No. 282,294. 16 Claims. (Cl. 29—156.6)



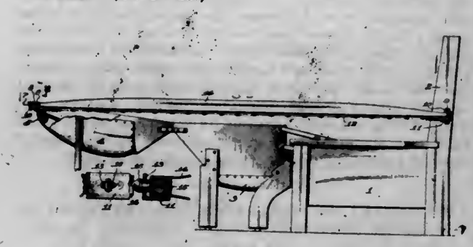
1. The method of making piston rings, comprising, cutting a body blank to form the side faces of a series of connected inverted ring blanks, cutting the body blank to provide the parting faces of the ring blanks, separating the ring blanks, and inverting the ends of the ring blanks.

1,450,201. MEANS FOR INSURING COMPLETE COMBUSTION OF COAL IN HEATING BOILERS. RODOLPHE WILLIAM BURCKHARDT, Mulhouse, France. Filed Aug. 10, 1920. Serial No. 402,731. 2 Claims. (Cl. 110—72.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a furnace, the combination with means for regulating the quantity of coal fed thereto and the volume of air blown in, of a first boiler element which abstracts a portion of the heat from the combustion gases, means for thereafter effecting a preliminary mixing of said gases, an obstructed passageway for subsequently causing a more thorough mixing of the gases thus cooled, and a second boiler element around which the complete combustion of the mixed gases and the final transfer of the heat to the boiler takes place.

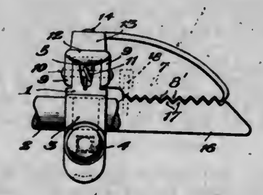
1,450,202. CLUTCH. JOHN W. CROWLEY, Jr., Chicago, Ill. Filed June 25, 1919. Serial No. 306,607. 8 Claims. (Cl. 192—56.)

3. A clutch having in combinative association a flat ring clutch member, tapered transversely to provide a thinner edge and a diametrically opposite thicker edge; another, cooperating, axially movable, tapered clutch member; a spring to normally hold said clutch members in driving relation to transmit a given load and yieldable upon excess load and means to disengage said members.



1,450,203. SCREW DRIVER. PETER DE BROWN, Bay City, Mich. Filed Nov. 25, 1921. Serial No. 517,517. 2 Claims. (Cl. 145—51.)

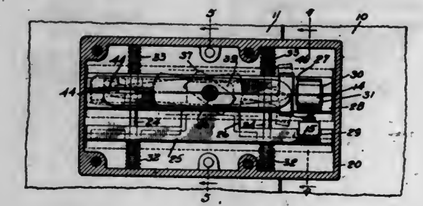
2. In a tool of the class described including a barrel provided with a screw receiving opening, and a plurality of yieldable fingers formed integral with the lower end thereof, said fingers being curved inwardly to form a restricted opening intermediate their length, the ends being flared, a screw driver slidably mounted in the barrel and provided with a shoulder formed on the lower end thereof,



a closure for the upper end of the barrel, a coiled spring interposed between the said shoulder and the top of the casing, and a handle detachably secured to the upper end of the screw driver.

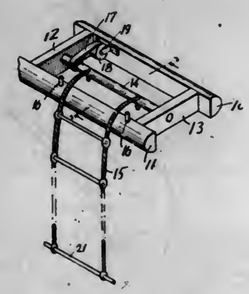
1,450,204. SPRING AND MATTRESS SUPPORTING MEANS. THOMAS B. DRAPER, Toronto, Ontario, Canada. Filed Sept. 7, 1920. Serial No. 408,655. 2 Claims. (Cl. 5—48.)

1. In a folding piece of furniture adapted to be used as a bed and having a foot piece foldable relative to a head piece, angle bars having sockets, mattress supporting bars, and turn buttons carried by said bars to engage in the angle bar sockets.



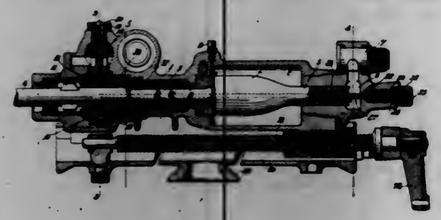
1,450,205. YARN AND THREAD GUIDE. FRED W. EASTON, Pawtucket, R. I., assignor to Easton & Burnham Company, Pawtucket, R. I. Filed Nov. 2, 1922. Serial No. 598,560. 5 Claims. (Cl. 28—71.)

1. In a thread guide, a pair of opposed members each formed with a series of teeth, said teeth intermeshing and



being spaced to receive the thread through the space formed between a tooth of one member and the cooperating tooth on the other member and in a direction at right angles to the pitch circles of said teeth.

1,450,206. LOCK. LOUIS FRIEDMAN, New York, N. Y. Filed Aug. 27, 1921. Serial No. 495,920. 5 Claims. (Cl. 70—74.)



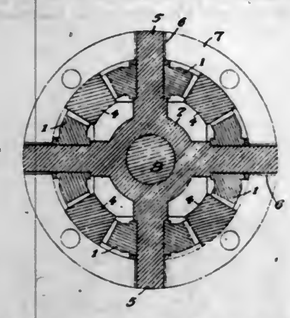
1. A lock comprising a housing, a plurality of sliding latches in said housing, a plurality of parallel rigid dogs, said dogs being adapted to pass between the sliding latches, and one of said dogs being engaged on opposite sides by said sliding latches, the other dog being engaged on one side by one of said sliding latches, and resilient means for maintaining said sliding latches and said dogs in engagement with one another.

1,450,207. WINDOW FIRE ESCAPE. JOZEF FRANK GAKEN, Dunkirk, N. Y., assignor of one-third to Lawrence Kuzdial, Dunkirk, N. Y. Filed Sept. 12, 1921. Serial No. 500,224. 2 Claims. (Cl. 227—22.)

1. A fire escape of the class described comprising a frame composed of pairwise arranged parallel side and end bars, a central roller journaled in said end bars, the inner faces of said side bars extended beyond the said end bars adapted to engage the window frame when the frame is placed on a window sill, a rope ladder secured at one end to said roller, a pair of pins in one of said side bars to limit the lateral movements of said rope ladder when uncoiled for the descent of a person, the last bar of said ladder having ends projecting beyond the lateral ladder ropes and adapted to engage the said pins when the ladder is wound upon said roller, and means for counterbalancing the weight of a person descending with said ladder.

1,450,208. ROCK-DRILLING APPARATUS. JAMES HANSON and RICHARD GREENWOOD HANSON, Stafford, England. Filed Oct. 6, 1920. Serial No. 415,119. 5 Claims. (Cl. 255—42.)

1. In a wave transmission rock drill, a reciprocating hammer member suspended in resonance between liquid columns, and a wave transmission motor operated by connection to the wave transmission line for imparting rotation to the drill steel, substantially as specified.

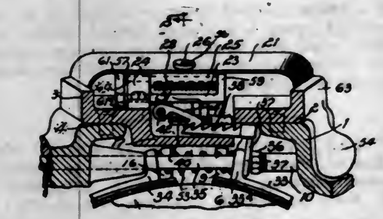


1,450,209. TIRE TOOL. FRED HAYS, Tuckahoe, N. J. Filed Aug. 7, 1922. Serial No. 580,145. 2 Claims. (Cl. 81—3.)

2. A tool for locating and removing foreign substances from tire casings comprising a relatively broad flat plate having a straight inner edge and a curved outer edge, a handle secured to the plate and projecting laterally from the inner straight edge thereof, and a hook formed on one side edge of the plate adjacent to the inner edge of the plate at one side of the curved edge for engaging the substance to be removed from the tire casing.

1,450,210. DIFFERENTIAL GEARING. JOHN A. HAZELTON, Baltimore, Md. Filed Mar. 7, 1922. Serial No. 541,713. 2 Claims. (Cl. 74—99.)

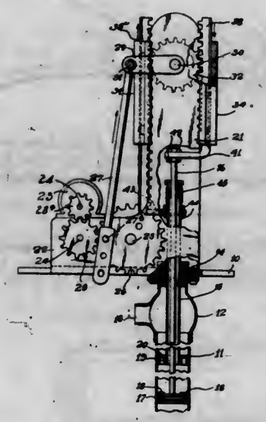
1. A differential gear, comprising bevel gears, secured on the ends of the halves of a divided shaft; bevel pinions meshing with said gears; a spider carrying said pinions; a driving casing, having a lost motion connection



with said spider; and driving lugs, carried by said casing, and acting on the toothed faces of said pinions.

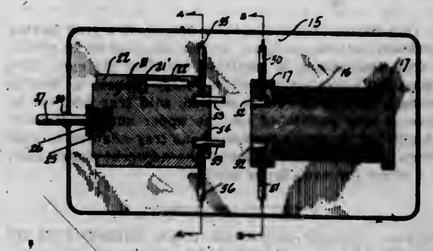
1,450,211. RATCHET PLATE AND DIE. ARLIE E. KOPP, New Middletown, Ind. Filed Oct. 15, 1919. Serial No. 330,725. 1 Claim. (Cl. 10—124.)

A tool of the class described comprising a casing having socket-like sleeves extending radially therefrom, handles mounted in said sleeves and having bores extending longitudinally thereof and communicating with said casing, an annular ratchet wheel mounted in said casing and having an opening therethrough which tapers toward one end, a die having a tapered portion to fit in said opening and a second oppositely tapered portion, said wheel having a groove adjacent its larger end and a small split ring clamp in said groove abutting on said second tapered portion of the die to lock said die in place.



1,450,212. TRANSMISSION LOCK FOR AUTOMOBILES. ALBERT B. LANG, St. Louis, Mo. Filed July 20, 1921. Serial No. 486,132. 14 Claims. (Cl. 70—90.)

10. In an automobile having a casing, a drum and a band within the casing co-operating with the drum, in combination with a rack associated with the band, a pawl normally disposed out of engagement with the rack, and means for setting the pawl in a position to co-operate with the rack whereby the band will be locked against return when the same is tightened upon the drum.



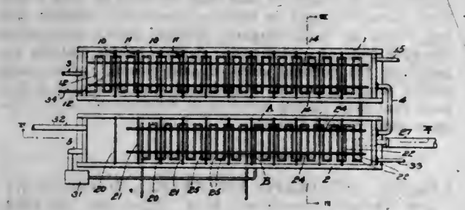
1,450,213. DOUBLE-ACTING DEEP-WELL PUMP. RUSSELL C. LEGO, Beaver Falls, Pa. Filed May 15, 1922. Serial No. 560,980. 3 Claims. (Cl. 103—200.)

1. In a pump, a barrel, a pair of pistons operating therein, a tubular piston rod connected to one of said pistons, a solid piston rod passing through the tubular piston rod and connected to the other piston, a packing gland at the upper end of the tubular piston rod, a supporting structure including oppositely disposed, vertical guides, oppositely disposed, vertically reciprocating rack

bars mounted in said guides and T-shaped in cross section, each of said rack bars being operatively connected to one of the piston rods, an intermediate shaft between said rack bars, a gear wheel engaging said shaft, and means oscillating said shaft.

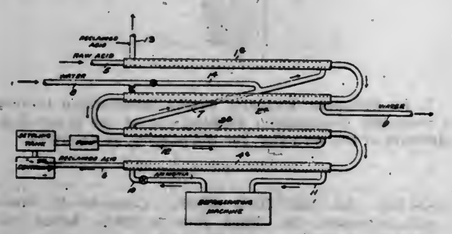
1,450,214. ELECTRICALLY-OPERATED VEHICLE SIGNAL. LEE MCGUIRE, Paint Lick, Ky. Filed Dec. 26, 1919. Serial No. 347,492. 4 Claims. (Cl. 200—87.)

4. In an electrically operated device for vehicle signals, a casing, an electromagnet disposed in the casing adjacent to one end thereof, a guide shell disposed in the casing adjacent to the opposite end thereof and in alignment with the magnet, an armature for the electromagnet reciprocably mounted in the guide shell, the guide shell having a longitudinally extending guide groove formed in the inner face thereof, a stop pin carried by the armature and disposed in the groove, a socket of insulation fitted in the outer end of the armature, and an operating rod fitted in the socket and extending exterior of and supported by the casing.



1,450,215. PUMP. GEORGE B. MAEGLY, Houston, Tex. Filed Jan. 31, 1922. Serial No. 532,965. 14 Claims. (Cl. 103—204.)

1. In a device of the character described, the combination with a pump for removing liquid from a well, of a sand screen for said pump, a pump barrel above said screen and means for flushing said screen through said



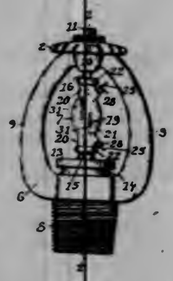
pump barrel from above without removing said pump from the well.

1,450,216. METHOD OF AND APPARATUS FOR RECOVERING SPENT PICKLING SOLUTIONS. HENRY S. MARSH and RALF S. COCHRAN, Youngstown, Ohio. Filed Dec. 24, 1920. Serial No. 432,952. 34 Claims. (Cl. 23—13.)

1. The method herein described of reclaiming spent pickling solution, which consists in causing the solution to flow in a looped circuit, the return branch of the circuit confined within heat-conducting walls being submerged in the outgoing branch, and cooling the stream in the loop of the circuit.

1,450,217. METHOD OF AND APPARATUS FOR RECLAIMING SPENT PICKLING SOLUTION. HENRY S. MARSH and RALF S. COCHRAN, Youngstown, Ohio. Filed Aug. 3, 1921. Serial No. 489,545. 9 Claims. (Cl. 23—13.)

6. In apparatus for unburdening a solvent of its load of salt, a loop formed conduit with branches in heat-ex-



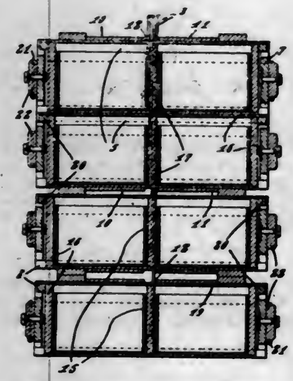
changing relation one to the other, cooling means arranged at a point intermediate the length of the inflowing branch of the conduit, a second cooling means arranged in the loop of the conduit, and separating means arranged in the loop of the conduit beyond the cooling means last mentioned, substantially as described.

1,450,218. PORTABLE AND COLLAPSIBLE SHOWER BATH. CHRIST NENOFF, Pittsburgh, Pa. Filed Sept. 6, 1922. Serial No. 586,432. 1 Claim. (Cl. 4—26.)

A device of the character described comprising a flanged base; a supporting ring; a pliable mantle partially engaging the periphery of said base and ring to form a vertical chamber having an entrance; vertically slidable closing means for said entrance; flexible guides engaged by the open ends of said mantle; flexible guides slidably engaged by the vertical sides of said closing means; said guides being connected to said base and ring and so disposed that said closing means will frictionally engage the open ends of said mantle.

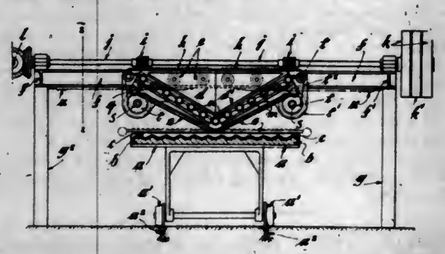
1,450,219. AUTOMATIC SPRINKLER. ROBERT WILKINSON NEWTON, Providence, R. I. Filed Dec. 19, 1921. Serial No. 523,494. 7 Claims. (Cl. 169—38.)

1. An automatic sprinkler having incorporated therein a reversible thermometer forming one of the controlling elements of the sprinkler, for the purpose as described.



1,450,220. SAW-SETTING TOOL. CHARLES P. NIESMAN, Freeport, Ill. Filed June 3, 1921. Serial No. 474,658. 5 Claims. (Cl. 76—64.)

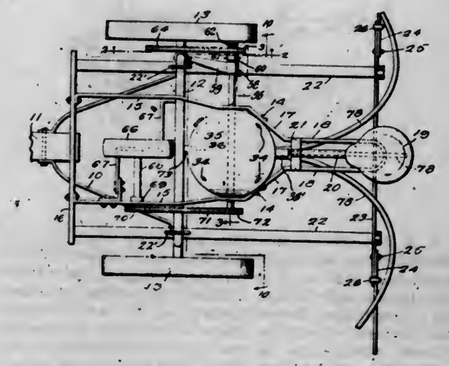
3. A saw setting tool comprising a body, an anvil formed on the body, a pair of operating handles carried by the body, a die pivotally secured intermediate its ends and operatively connected to one of said handles, upper and lower angle tooth setting gauges pivotally carried by the body and arranged for movement toward and away from



the inner face of the anvil, and a sliding toothed gauge mounted upon the body inwardly of the first mentioned gauges and arranged for movement longitudinally of the anvil.

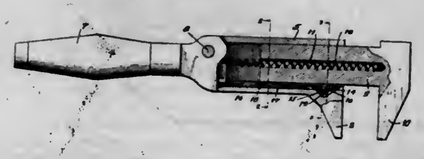
1,450,221. BERRY-PICKER OUTFIT. GEORGE HARWOOD OWENS, Addison, N. Y. Filed Nov. 15, 1921. Serial No. 515,316. 3 Claims. (Cl. 217—13.)

1. In a device of the character described, a tray having a sectional bottom, an inner section adapted to fit within the tray and having a partition dividing the same into compartments to accommodate berry boxes, a handle forming a part of the inner section, said tray adapted to receive a tray positioned on the upper surface thereof, the handle of the inner section of one tray adapted to pass between the sectional bottom of the adjacent upper tray, and a cover for each inner section.



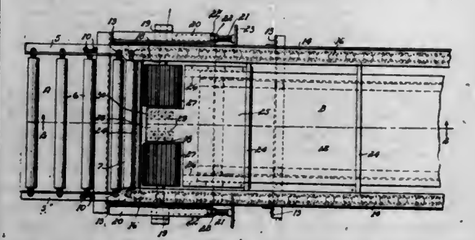
1,450,222. CORRUGATING OR LIKE TREATMENT OF SHEET PLASTIC MATERIALS. WILLIAM PATTISON, Widnes, England. Filed May 29, 1920. Serial No. 385,353. 4 Claims. (Cl. 154—30.)

1. In the method of corrugating or shaping asbestos-cement and like sheet plastic materials progressively from a point central to the width of the sheet towards



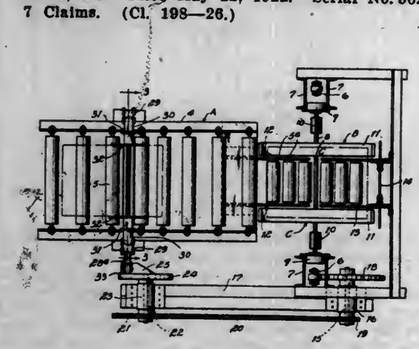
each side edge by upper and lower formers, supporting the sheet clear of the lower former and upon inclined travelling supports, whereby the upper formers as they act on the material are relieved of the dead weight resistance and a considerable part of the friction of the uncorrugated parts of the sheet substantially as herein set forth.

1,450,223. POWDER-DUSTING ATTACHMENT. ELBERT B. RALEY, Mart, Tex. Filed July 6, 1920. Serial No. 394,119. 3 Claims. (Cl. 43—148.)



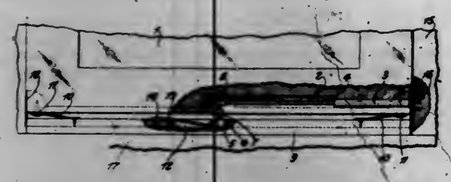
1. In an attachment for a cultivator or the like including an arched axle, an inner longitudinally extending attaching frame disposed above and contacting with the arched portion of the axle, a blower arranged upon the forward side of the arched axle and connected with the attaching frame to be supported thereby, a hopper arranged upon the rear side of the arched axle and connected with the attaching frame to be supported thereby, a pressure chamber for receiving material from the hopper and connected with the blower to receive air under pressure therefrom, means to drive the blower, an outer supporting frame extending longitudinally beneath the arched portion of the axle and suspended therefrom, means connecting the forward end of the attaching frame with the forward end of the outer supporting frame, a transverse supporting bar connected with the rear end of the outer supporting frame, and a plurality of conduits connected with the pressure receptacle and adapted to be supported by the supporting bar.

1,450,224. WRENCH. FRANK S. RATCLIFFE, Milwaukee, Wis.; Ira M. Jones, administrator of said Frank S. Ratcliffe, deceased, assignor to Emily Ratcliffe, Milwaukee, Wis. Filed June 5, 1920. Serial No. 386,907. 8 Claims. (Cl. 81—154.)



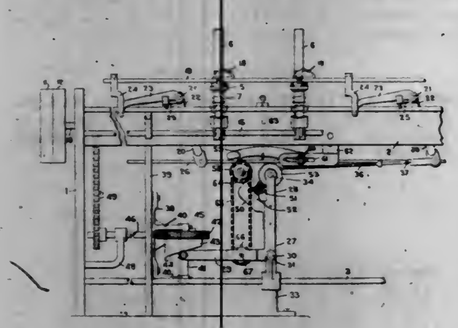
1. A wrench comprising a pair of slidably connected shanks, work engaging jaws carried by said shanks, a handle pivotally connected with one of the shanks, means operable by pivotal movement of the handle in one direction for locking the shanks against relative movement, said means being releasable by movement of the handle in the opposite direction, cooperating means on the hande and one shank for limiting the pivotal movement of the handle, and means for normally urging the jaws of the said shanks together.

1,450,225. CONVEYER. AUGUST J. REBSTOCK, St. Louis, Mo., assignor to Alvey Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed July 11, 1921. Serial No. 483,752. 15 Claims. (Cl. 198—168.)



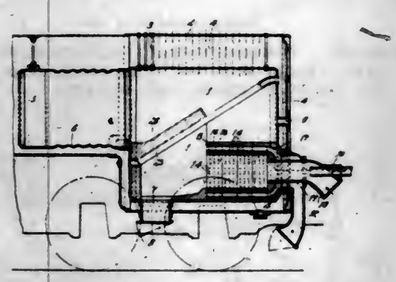
1. In a conveyer comprising a package way and spaced traveling devices for propelling packages along the same, a feeding device operatively connected with said traveling devices and projecting above said way, said devices passing above and below said way and upwardly around the receiving end of said way and said feeding device, the receiving end of said way having a stop rigid therewith and located inside of the path of the traveling devices, and means for feeding a package against said stop, whereby said package will be engaged by an upwardly moving traveling device and lifted clear of said stop and deposited upon said feeding device which feeds said package upon said bed in a position to be engaged at its rear end by a succeeding traveling device.

1,450,226. CONVEYER. AUGUST J. REBSTOCK, St. Louis, Mo., assignor to Alvey Manufacturing Company, St. Louis, Mo. Filed May 22, 1922. Serial No. 562,694. 7 Claims. (Cl. 198—26.)



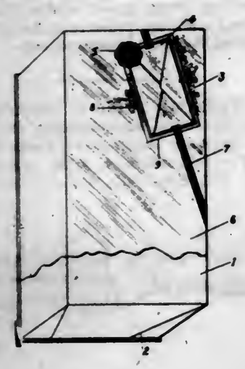
1. The combination with a traveling package conveyer and a stationary package way communicating with said conveyer, of package engaging devices disposed on opposite sides of said way and arranged for joint movement towards and away from each other into and out of a line of packages on the way, and means operating in timed relation to said traveling conveyer for moving said package engaging devices away from each other to permit a package to pass therebetween.

1,450,227. ATTACHMENT FOR DOORS. GEORGE EDWARD REED, Greenville, Miss., assignor of one-half to J. A. Mann, Greenville, Miss. Filed Feb. 4, 1922. Serial No. 534,142. 4 Claims. (Cl. 20—68.)



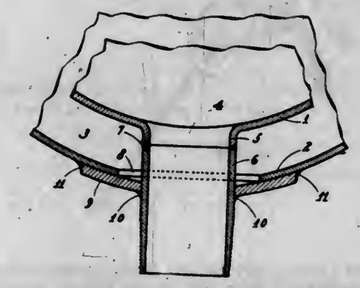
1. The combination of a door frame, a door hinged in the frame, a strip removably secured to each side of the lower end of the door, a number of springs supported for sliding movement by the lower end of the door between said strips, a transverse strip supported by said springs between said metallic strips and having a recess in its upper side between said springs, an additional spring supported by said transverse strip and arranged to operate in said recess, a lever supported by the door above said additional spring and said recess, and means for actuating said lever as an incident to the closing of the door to cause said additional spring to move said transverse strip downwardly toward the lower part of the door frame in opposition to said first named springs.

1,450,228. WINDING MACHINE. ALONZO E. RHOADES, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed May 22, 1922. Serial No. 562,606. 2 Claims. (Cl. 242—43.5.)



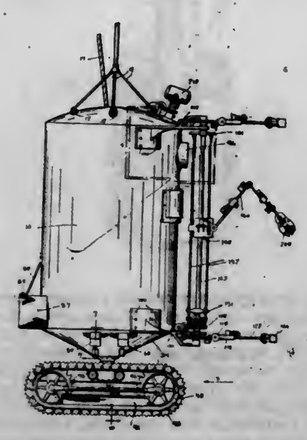
1. A winding machine comprising a frame, a series of yarn receivers and means for rotating them, a series of yarn carriers, a traverse rod provided with guides through which the yarn passes from the respective yarn carriers to the corresponding yarn receivers, lifting means for the traverse rod, a bell crank lever fulcrumed on the frame, a drum journalled on one end of the bell crank lever, a flexible connector connected to the drum and to the traverse rod lifting mechanism, a cam acting on the other end of the bell crank lever, means for rotating the cams to rock the bell crank lever and thereby effect a filling traverse of fixed length, and a pick motion mechanism mounted on the bell crank lever, actuated upon the rocking of the bell crank lever to give a partial winding rotation to the drum and thereby effect a progressive shift of the zone of traverse during the winding operation, whereby the yarn is wound onto the receivers with a filling wind.

1,450,229. FURNACE OF LOCOMOTIVES. JOHN GEORGE ROBINSON, Fairfield, England. Filed June 9, 1920. Serial No. 387,746. 2 Claims. (Cl. 110—22.)



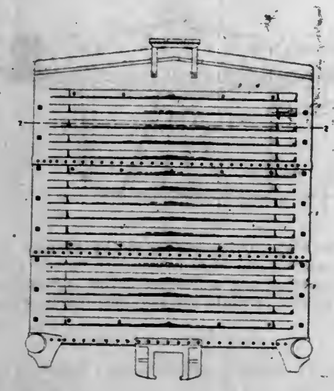
1. A furnace for a steam generator, comprising in combination, a shell, a firebox disposed in spaced relation within said shell so as to form a continuous water space surrounding said firebox, a cylindrical combustion chamber of refractory material located in the lower part of said furnace, an annular space around said combustion chamber which space is open to the atmosphere at its outer end, a plurality of perforations in said combustion chamber effecting communication between the interior of the same and said annular space, means for projecting liquid fuel into the interior of said combustion chamber, and a cylindrical corrugated extension of said firebox which extends rearwardly from the usual brick arch of the furnace and terminates in a tube plate which effects closure of the inner end of said corrugated extension.

1,450,230. WRAPPER FOR CANDY-BOX COVERS. JAMES H. ROOK, Chicago, Ill. Filed Sept. 1, 1920. Serial No. 407,484. 1 Claim. (Cl. 229—87.5.)



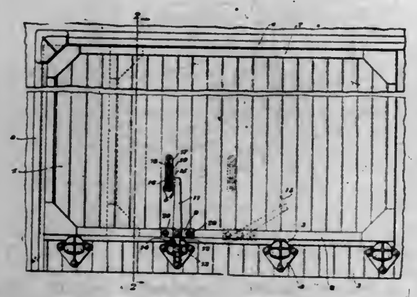
A wrapper for box covers having a pocket in the form of an envelope attached thereto and a piece of transparent paper surrounding the wrapper, said transparent material being slit and perforated adjacent said pocket.

1,450,231. METHOD OF MAKING STEAM-JACKETED KETTLE OUTLETS. ROBERT FLOYD SALISBURY, New Kensington, Pa., assignor to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 20, 1922. Serial No. 545,390. 10 Claims. (Cl. 113—112.)



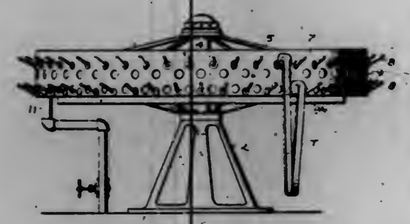
1. The method of forming an outlet for steam jacketed kettles comprising spaced metallic walls which consists in hermetically joining a tubular metal body to one of said walls and permitting the same to extend through and beyond an aperture in the other wall, embracing the body with a close fitting apertured disk, welding the disk to the body, cooling the disk, and welding the disk to the second named wall.

1,450,232. SUBMARINE SALVAGE VESSEL. JOHN C. SETLOW, Spokane, Wash. Filed Mar. 6, 1920. Serial No. 363,653. 15 Claims. (Cl. 61—69.)



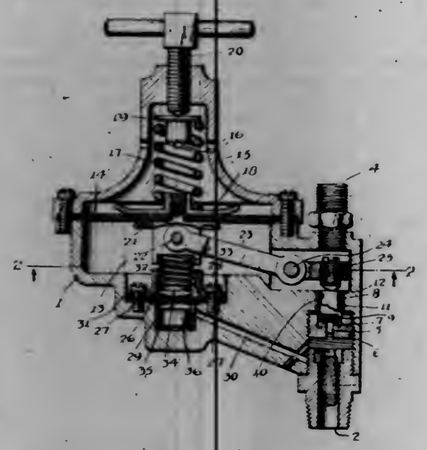
1. In a submarine salvage vessel, a water tight shell, tractor devices positioned beneath said shell for maneuvering said vessel while resting on bottom, a universal joint connecting said tractor devices to said shell to enable said shell to remain upright in the water when said tractor devices are resting on uneven bottom, electric motors operatively connected to said tractors to drive same, means for conveying electricity to said motors, and means positioned within said shell for controlling the flow of electricity to said motors.

1,450,233. CORRUGATED-METAL END FOR FREIGHT CARS. VINTON E. SISSON, Chicago, Ill., assignor to Walter P. Murphy, Chicago, Ill. Filed Oct. 1, 1920. Serial No. 414,057. 17 Claims. (Cl. 105—410.)



1. A metal panel for car ends having a plurality of corrugations therein formed with arcuate contours which merge into substantially rectangular contours.

1,450,234. COMBINED DOOR CLOSER, STARTER, AND LOCK. ARTHUR E. SMALL, Chicago, Ill., assignor to Walter P. Murphy, Chicago, Ill. Filed May 16, 1921. Serial No. 470,080. 2 Claims. (Cl. 292—205.)



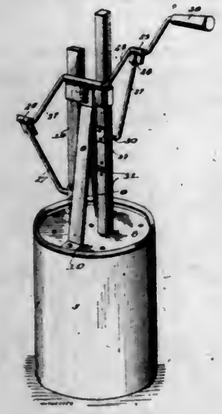
1. A freight car side door closer and starter comprising a lever having a perforated boss pivotally mounted therethrough to the door adjacent its bottom edge, said lever comprising an operating handle extending upwardly from said boss and spaced apart from the door surface and a portion depending from the boss in line with the handle and adjacent the door surface, and a stationary engaging member secured to the car side comprising a bracket having an extension provided with an aperture adapted to receive the free end of the depending portion of the lever with the side walls of the aperture acting as a fulcrum for the lever when the lever is moved about its pivot.

1,450,235. MACHINE FOR USE IN MANUFACTURING TIRE TUBES. HARRY W. SMOLK, Cleveland, Ohio. Filed June 29, 1920. Serial No. 392,667. 10 Claims. (Cl. 34—12.)

1. A traveling carrier having means adapted to suspend the splicing end of a divided tire tube in slip connection thereupon and a heating device paralleling said traveling carrier opposite the said suspensory means for said tire.

1,450,236. PRESSURE REGULATOR. JAMES L. ANDERSON, Bayonne, and STUART PLUMLEY, Westfield, N. J., assignors, by mesne assignments, to Air Reduction Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 7, 1918. Serial No. 257,138. 11 Claims. (Cl. 50—26.)

1. A pressure-regulator comprising a suitable casing having inlet and outlet portions and a connecting passage commanded by a valve, a diaphragm subject to the outlet pressure, a regulating spring acting upon said diaphragm in opposition to the outlet pressure, and an operative connection between the diaphragm and the valve, combined with an auxiliary diaphragm subject to the inlet pressure, and a resilient interconnection between the auxiliary diaphragm and the valve.

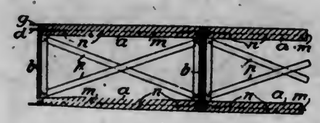


1,450,237. ANIMAL POKE. DEE AYERS and HAL DEE FOSSETT, Mount Vernon, Mo. Filed Mar. 21, 1922. Serial No. 545,439. 4 Claims. (Cl. 119—141.)

1. An animal poke comprising a stem provided with forwardly extending spikes, forks at the upper end of the stem, devices attached to said forks for securing the latter to a halter at opposite sides of the jaws of an animal to which the halter is applied, a curved wire member carried by said forks in position to span the nose of the

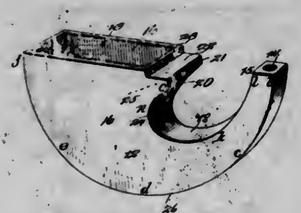
animal, and a similar wire member carried by the forks in position to span the lower jaw of the animal, whereby the poke is reversible.

1,450,238. CHURN. DEE AYERS and HAL DEE FOSSETT, Mount Vernon, Mo. Filed May 29, 1922. Serial No. 564,507. 1 Claim. (Cl. 259—113.)



A churn comprising a receptacle, a closure carried thereby, a frame mounted on said closure and inclusive of a pair of converging standards, a bearing member formed from a single length of metal bent intermediate its ends to provide a transverse bearing opening and a pair of attaching plates, said attaching plates being arranged flatly in contact with each other and being confined between the upper portions of said standards, a crank shaft extending through said transverse bearing opening and having oppositely arranged cranks, a guide strip having its intermediate portion confined between the upper portions of said standards and having its end portions arranged in U-shaped formation and co-operating with said bearing member in defining a pair of vertical guide openings, dasher rods movable through said vertical guide openings and through said closure and guided thereby, pitman rods connected to said dasher rods and said crank shaft, and fastening devices extending through the upper portions of said converging standards, the intermediate portions of said guide strip and the attaching plates of said first named bearing member.

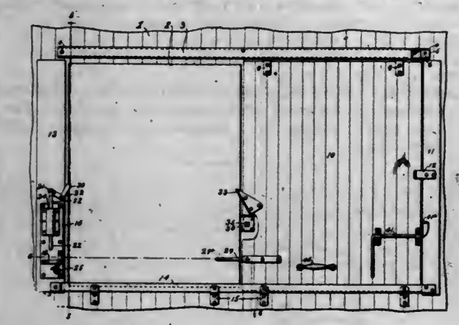
1,450,239. HAIRPIN. WILLIAM S. BECHTOLD, Newark, N. J. Filed May 26, 1922. Serial No. 563,750. 8 Claims. (Cl. 132—52.)



1. In a hair pin, in combination, a back, a plurality of superimposed legs and a retaining member carried by the back and extending between the legs.

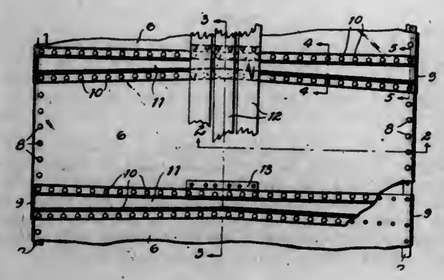
1,450,240. BUILDING UNIT. HANS BEIERBACH, Mannheim, Germany. Filed June 24, 1922. Serial No. 570,699. 6 Claims. (Cl. 72—44.)

1. A building unit comprising a pair of concrete slabs spaced apart, metal strips let in the side edges of said slabs and having apertures therein, projections from the side edges of said slabs extending through said apertures and struts having apertures at each end for engaging said projections, said struts connecting the slabs together.



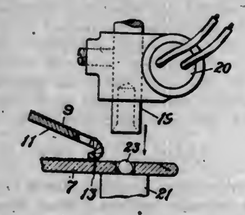
1,450,241. AMPLIFIER FOR TALKING MACHINES. JOSEPH F. BIGGS, Richmond, Va. Filed Aug. 12, 1920. Serial No. 403,177. 10 Claims. (Cl. 181—27.)

2. A sound amplifier comprising an upper arcuate form wall for transmission of vibrations, an opposite wall of arcuate form constructed on a greater radius than the upper wall, sound vibrating side walls disposed in diverging directions from the smaller end of the amplifier to the outlet end thereof and connecting said opposed arcuate walls, and means constructed, in the upper arcuate wall adjacent the outlet end for retarding and synchronizing the vibrations with those which are transmitted along the arcuate wall of greater radius, whereby all vibrations may reach the outlet end of the amplifier simultaneously.



1,450,242. CAR-DOOR FASTENER. JOSEPH E. BLALOCK, Salisbury, N. C. Filed June 2, 1921. Serial No. 474,538. 4 Claims. (Cl. 292—182.)

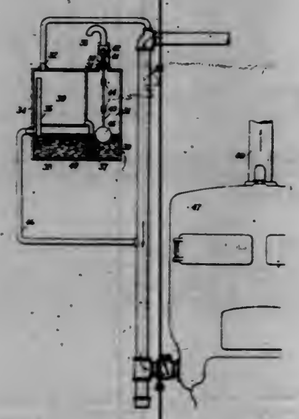
1. The combination of a door, an apertured keeper therefor, a sealing mechanism adjacent to the door opening and including a plunger movable through said keeper, said sealing mechanism being formed with an opening through which said keeper projects when the door is closed, a holder for a sealing strip, and means on the



door to actuate said plunger and cause it to co-act with said holder for looping and locking the sealing strip through said keeper.

1,450,243. CAR ROOF. CHARLES DAVID BONSALL, Pittsburgh, Pa., assignor to P. H. Murphy Company, New Kensington, Pa., a Corporation of Pennsylvania. Filed May 24, 1922. Serial No. 563,225. 14 Claims. (Cl. 108—5.4.)

1. A car roof comprising a series of roof sheets connected along their side margins by hollow box-girder seams, one wall of a seam extending in a straight line transversely of the car substantially at right angles to the eaves ends of the sheets, and the opposite wall of said seam diverging from said transversely extending straight wall on opposite sides of the ridge.



1,450,244. ART OF FINISHING THE EDGES OF PERFORATIONS. JAMES A. BROGAN, Lawrence, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 26, 1919. Serial No. 340,706. 12 Claims. (Cl. 12—146.)

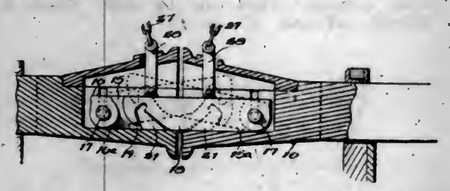
1. That improvement in the art of finishing a perforation in a piece of material which comprises applying

simultaneously at all points around the perforation on one side of the material a shrinking agent to cause the edge of the perforation to curl from the opposite side toward the side to which the shrinking agent is applied.

1,450,245. ELASTIC-FLUID-CONTROLLING DEVICE. ALFRED L. BROWNE, East Orange, N. J. Filed Feb. 18, 1921. Serial No. 446,030. 14 Claims. (Cl. 137—122.)

1. In combination, means forming a chamber, means forming a second chamber at all times in communication with said first chamber through a liquid seal, an elastic fluid conduit connected to one of said chambers, an elastic fluid conduit connected to the other of said chambers, and liquid-level-controlled means for opening and closing communication between said conduits.

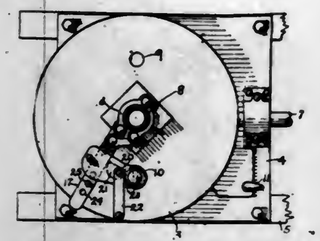
1,450,246. PIEZO-ELECTRIC RESONATOR. WALTER G. CADY, Middletown, Conn. Filed Jan. 28, 1920. Serial No. 354,359. 6 Claims. (Cl. 179—171.)



1. The combination with an alternating current circuit of high frequency, of a means for reducing the flow of current therein at any particular frequency comprising a body of piezo-electric character with conductive coatings over the regions thereof which exhibit opposite electrification, and connected with the alternating current circuit, the said body being so designed that its natural frequency of vibration will be in mechanical resonance with the said particular frequency of the alternating current.

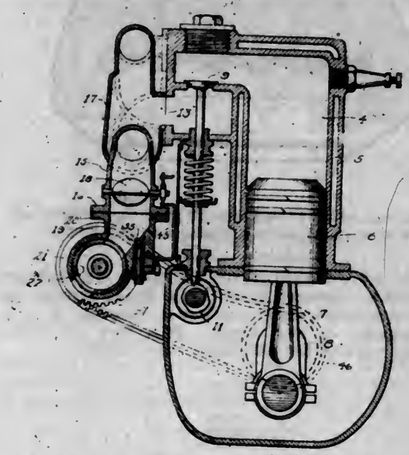
1,450,247. ATTACHMENT FOR HENS. CHESTER E. CARPENTER, Aberdeen, S. Dak. Filed Sept. 12, 1922. Serial No. 587,844. 5 Claims. (Cl. 119—97.)

1. An attachment for hens including a member to be received on one leg of the hen, a poke pivoted thereto and normally disposed in a position parallel to the member, and means operated by the hen's toes upon assuming a setting position to swing the poke at right angles to the member.



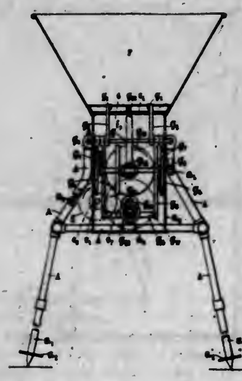
1,450,248. COUPLING FOR RAILWAY CARS. MELVIN K. CARR, Bremerton, Wash. Filed June 16, 1921. Serial No. 477,988. 3 Claims. (Cl. 213—89.)

3. In a coupling of the character described, a housing having a chamber, a swinging coupling bar pivoted to said housing within the chamber and projecting therefrom a hook carried by the outer end of the coupling and having a bill provided with a curved face, said coupling bar having a seat formed therein adjacent said hook, and a lock lug carried by the coupling bar having a cam face and an inclined shoulder at the upper end thereof.



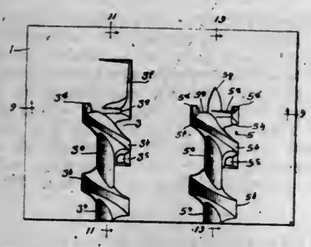
1,450,249. BACKOUT DEVICE FOR DRILLING RIGS. WILLIAM L. CHILDS, Houston, Tex., assignor to Hughes Tool Company, Houston, Tex., a Corporation of Texas. Filed Sept. 10, 1921. Serial No. 499,643. 8 Claims. (Cl. 255—23.)

1. In a device of the character described, a rotary table, a backout post secured therein comprising an upright pin, a bracket slidable vertically thereon, a spring on said pin bearing against said table and said bracket, said bracket having a handle receiving slot therein, a cam shaped lever in said slot, and means to swing said lever laterally in said slot.



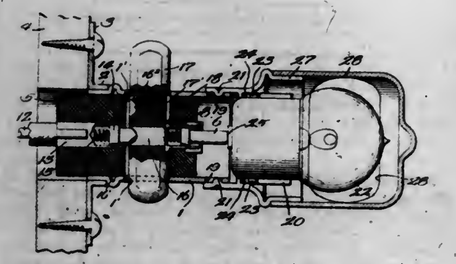
1,450,250. INTERNAL-COMBUSTION ENGINE, METHOD OF AND MEANS FOR FEEDING THE SAME. DON COLN, Chicago, Ill., assignor of one-half to John A. Dienner, Chicago, Ill. Filed Apr. 4, 1919. Serial No. 287,452. 1 Claim. (Cl. 123—119.)

In combination, an engine having the usual main shaft, engine cylinder, piston, cam shaft, intake and exhaust valves, and a cam on said cam shaft for positively actuating said intake valve, an intake manifold extending upwardly along said engine cylinder and communicating with said intake valve, said intake manifold comprising a cylindrical valve chamber at its lower end, said valve chamber having an air port extending longitudinally thereof and opening into the bottom portion of said chamber, a cylindrical rotary intake valve in said valve chamber, said valve having a pair of diametrically opposed slots constituting a passageway therethrough for registration with said air port, a chain for driving said rotary intake valve in synchronism with said main shaft, a fuel nozzle discharging into said intake manifold in close proximity to said rotary intake valve, said fuel nozzle



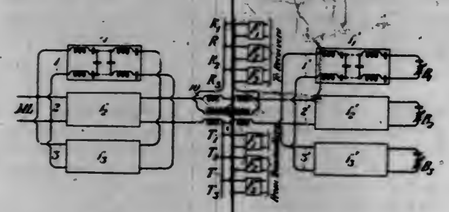
comprising an outer sleeve threading into said manifold and an inner spaced concentric tube extending through said sleeve, the bore in said sleeve and the bore in said tube constituting two separate passages, means for admitting fuel to one of said passages and a restricted volume of air to the other of said passages, said rotary intake valve discharging into said manifold at a point immediately anterior to said nozzle whereby the volume of air admitted through said intake valve is directed into immediate contact with said nozzle in its passage upwardly through said manifold, a restriction in said manifold for accelerating the flow of air past said nozzle, a throttle valve in said manifold, and means operating conjointly with the throttle valve for metering the discharge of fuel from said nozzle.

1,450,251. ABRADING MACHINE. ALFRED EDWIN CULLEY, Burton-upon-Trent, England. Filed Sept. 25, 1922. Serial No. 590,493. 15 Claims. (Cl. 146—14.)



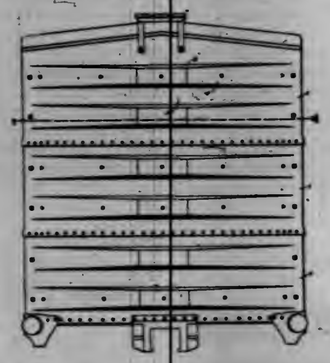
1. In an abrading machine, in combination;—an abrading drum having a toothed cylindrical surface; means for rotating the drum; a fixed feed channel adapted to guide the material to be abraded in an axial direction along the drum; and a series of spiral springs the coiled parts of which are carried by, and within the interior of the drum, said coiled parts having ends which protrude through openings in the surface of the drum, said openings being helically arranged round the surface of the drum, so that as the drum rotates the several ends cross the feed channel at different and uniformly spaced points in its length.

1,450,252. MECHANISM FOR MANUFACTURE OF AUGER BITS. BENJAMIN H. DAULTON and CHARLES B. ROBINSON, Wilmington, Ohio, assignors to The Irwin Auger Bit Company, Wilmington, Ohio, a Corporation of Ohio. Filed Feb. 7, 1921. Serial No. 442,899. 7 Claims. (Cl. 76—92.)



1. In a die for the production of auger bits, the combination, with one die member having core and spiral recesses, a spur recess at one side of the center and a pyramid recess at the other side, and a recess for surplus material, of a second die member having core and spiral recesses and spur and pyramid recesses, and a surplus material recess, the said recesses adapted to coact with the similar recesses in the other die member.

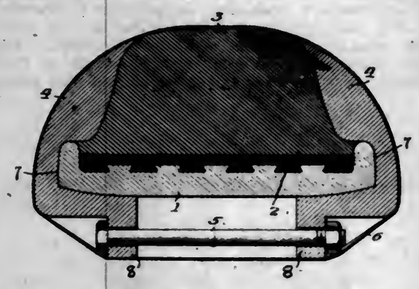
1,450,253. SWITCHING DEVICE. HARRY A. DOUGLAS, Bronson, Mich. Filed Aug. 15, 1918. Serial No. 250,023. 1 Claim. (Cl. 173—355.)



Switching mechanism including a shell; a bar of insulating material passing transversely through the shell and movable transversely and longitudinally of the shell; aligned contacts held within the shell; and a switching contact simultaneously engagable with said aligned contacts and carried by and extending transversely through said bar and movable by the bar into and out of alignment with said aligned contacts to close and open circuit, said bar having a recess formed in one side thereof and elongated lengthwise of the bar and to which recess said switching contact extends and into which recess one of said aligned contacts projects, the other contact being a spring contact constantly pressing the bar toward the first contact to maintain it in said recess thereby to maintain the assembly of the bar and shell.

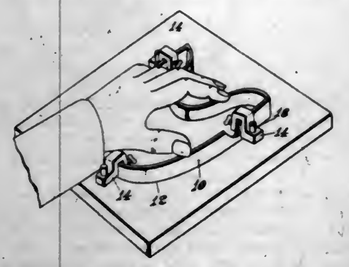
1,450,254. BALANCING ARRANGEMENT FOR MULTIPLEX CARRIER CIRCUITS. LLOYD ESPENSCHIED, Hollis, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 26, 1919. Serial No. 326,520. 10 Claims. (Cl. 179—15.)

1. In a signaling system, a transmission circuit, means whereby a plurality of signals may be simultaneously transmitted over said circuit at a plurality of different frequencies, balancing means for said transmission circuit, comprising separate networks, each simulating the impedance of said transmission line at one of said signaling frequencies, band filters associated with each net work for preventing the transmission to said network of other signaling frequencies and means associated with said transmission circuit for balancing said band filters.



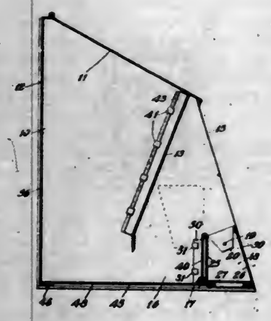
1,450,255. SHEET-METAL END FOR RAILWAY CARS. GARTH G. GILPIN, Riverside, Ill., assignor to Walter P. Murphy, Chicago, Ill. Filed Oct. 1, 1920. Serial No. 413,986. 7 Claims. (Cl. 105—410.

1. A metal panel for car ends having a plurality of ribs formed therein, said ribs having main walls and portions connecting the main walls on alternate sides of the panel, one of said portions maintaining a constant width throughout and other portions maintaining a constant width equidistantly on each side of the center for a short distance and then increasing in width towards the end, said main walls decreasing in width in proportion thereto until said main walls and connecting portions merge into the panel.



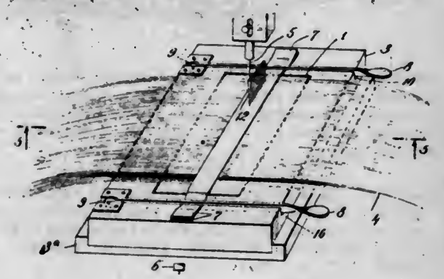
1,450,256. PROCESS AND APPARATUS FOR THE MANUFACTURE OF SOLID TIRES. DANIEL E. GOODENBERGER, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 6, 1919. Serial No. 280,984. 3 Claims. (Cl. 18—42.)

1. The method of manufacturing solid tires, comprising applying to a rim a layer of hard rubber composition, forming the tread portion of the tire from a resilient rubber compound in approximately the shape of the finished tire, applying the tread portion to the hard rubber base, confining the sides of the tire and the edges of the



rim between metallic rings, wrapping the rim, tire and side rings with a spiral cloth wrapping and vulcanizing.

1,450,257. METHOD OF CUTTING SHOE-PART BLANKS. CHESTER HUNT, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 11, 1919. Serial No. 323,165. 10 Claims. (Cl. 33—6.)

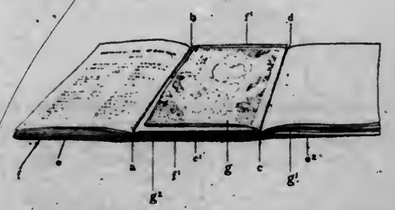


1. That improvement in the art of making shoe part blanks from a skin which consists in placing individual patterns successively upon a skin, outlining each pattern on the skin to mark the location of a blank before another pattern is applied to the skin, repeating the operation until the entire skin is planned, and subsequently cutting the skin according to the plan recorded thereon.

1,450,258. COLLAPSIBLE POULTRY FEEDER. MARTIN R. JACOBUS, Ridgefield, and WILLIAM F. BURDITT, Jr., Hillside, N. J.; said Burditt assignor to said Jacobus. Filed Jan. 9, 1923. Serial No. 611,575. 11 Claims. (Cl. 119—52.)

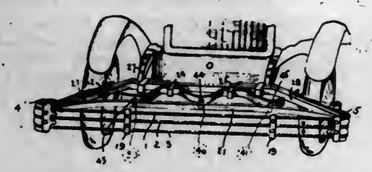
4. A feeder, comprising metal back, bottom and side plates removably connected to one another, a removable metal partition to retain said plates together and to form a hopper therewith, and a collapsible metal waste receptacle removably attached to the bottom plate and movable relatively to the hopper.

1,450,259. ARTIFICIAL EYELASHES AND METHOD OF MAKING SAME. CHARLES NESSLER, New York, N. Y. Filed June 30, 1921. Serial No. 481,696. 22 Claims. (Cl. 132—53.)



1. An artificial eyelash comprising a strip of flexible material having a series of hairs passing through said material and secured to said strip and projecting from a margin of the strip, to form an eyelash.

1,450,260. CLOSURE FOR RECEPTACLES. ISIDOR NEWMAN, New York, N. Y. Filed Feb. 10, 1920. Serial No. 357,755. 5 Claims. (Cl. 220—27.)

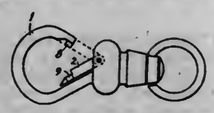


1. A closure for a container comprising an imperforate threaded neck provided with a puncturable outer end, said neck having a laterally disposed web and an outwardly disposed wall spaced from and surrounding the neck, said wall having an outwardly disposed pliable flange, said wall and flange being adapted to receive the out-turned neck of a container therebetween, and a threaded cap to detachably fit said threaded neck.

1,450,261. BOOKBINDING. EDWARD KILBURN ROBINSON, Belmont, Mass. Filed Mar. 20, 1920. Serial No. 367,547. 3 Claims. (Cl. 281—16.)

1. A tracing book consisting of a cover, a set of leaves bound therein containing printed text on the pages lying at one side as the book is opened, and matter to be traced on the opposite pages, and a set of leaves of tracing paper attached to said cover along a line such that any page of the tracing paper can be superimposed over any page of the matter to be traced.

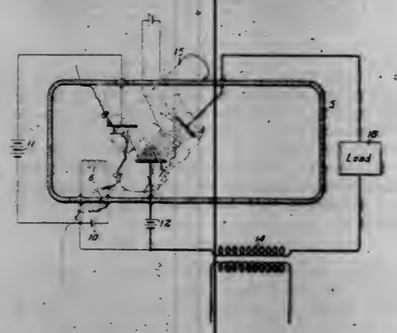
1,450,262. CABLE BUMPER. KARL OSTEN SCHAUMAN, San Francisco, Calif. Filed May 11, 1922. Serial No. 560,083. 18 Claims. (Cl. 293—55.)



3. A cable bumper comprising a flexible nonextensible cable member, supports for each end of said member and means tending to keep the ends separated and means for attaching said spring means to a vehicle and means for adjusting the tension of the spring means and a spring leaf intermediate the spring means and the cable member and substantially in the same plane therewith, and means insulating said leaf from said member and said supports.

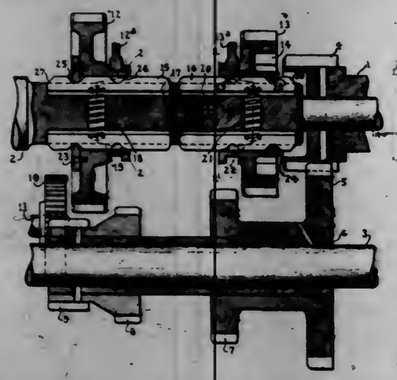
1,450,263. APPARATUS FOR AERIAL PROJECTION. MARIO SCHIESARI, New York, N. Y. Filed Mar. 15, 1921. Serial No. 452,540. 6 Claims. (Cl. 88—24.)

1. The combination of a screen segment, means for attaching the same at one of its ends, means for causing the rotation of said screen segment around its point of support, a frame carrying said screen segment, and means for moving said frame so as to alter the plane of rotation of said segment.



1,450,264. SWIVEL HOOK FOR WATCH CHAINS. HERMAN J. SCHITTERER, San Diego, Calif. Filed Nov. 16, 1921. Serial No. 515,524. 1 Claim. (Cl. 24—240.)

A device of the class described, including a casing, a hook member secured to one end of said casing and provided with an inwardly beveled free end and a lug extending inwardly from said free end with its inner side at a substantial right angle with the outer edge of the hook, and a latch member pivotally mounted at its one end in said casing and having its opposite end bevelled outwardly conforming with the bevelled free end of said hook member and provided with a slot extending from the



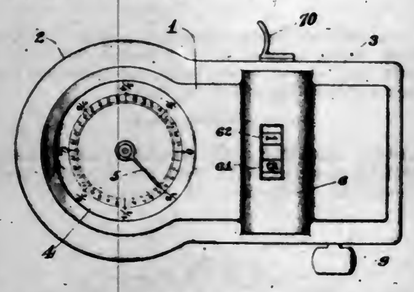
outer to the inner side and spaced from the end thereof conforming substantially with the lug at the free end of said hook member.

1,450,265. HOT-CATHODE TUBE. JOSEPH SLEPIAN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 18, 1919. Serial No. 291,158. 15 Claims. (Cl. 250—27.)

1. In a rectifying device, the combination with means for producing an electron stream, of a circuit including two spaced electrodes, an alternating-current source and a load, and means for deflecting said electron stream upon one of said electrodes whereby it functions as a cathode by secondary emission and by reflection and permits the rectification of current from said source.

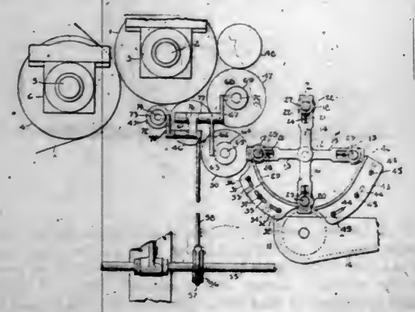
1,450,266. VARIABLE-SPEED GEAR SET. HERMAN J. TAYLOR, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 17, 1922. Serial No. 544,436. 10 Claims. (Cl. 74—58.)

3. In a power transmitting mechanism, the combination with an axially shiftable gear having neutral and operative positions, a shaft therefor, means for locking said gear against rotation with respect to said shaft when the same is in the aforesaid positions and for releasing said gear from said shaft during shifting thereof between said positions.



1,450,267. LOOSE-LEAF BINDER. CLARENCE D. TRUSSELL, Poughkeepsie, N. Y., assignor to Trussell Manufacturing Company, Poughkeepsie, N. Y., a Corporation of New York. Filed Apr. 7, 1920. Serial No. 371,874. 8 Claims. (Cl. 129—24.)

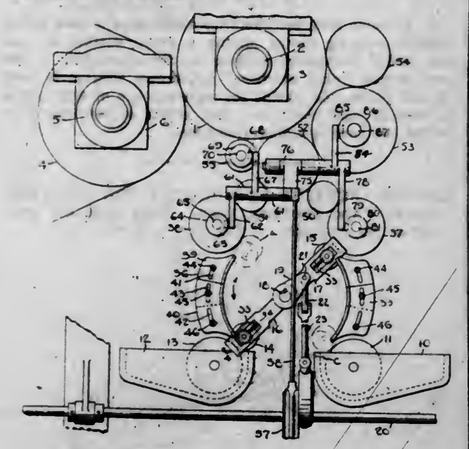
1. A loose-leaf binder comprising opposed related hook plates and hooks, the plates formed with openings to receive the hooks and the hooks having their base portions notched on opposite sides to engage the marginal portions of said openings, the openings being of size to permit the insertion of the base portions of the hooks through the openings, and the hooks and openings related to admit of a



displacement of the base portion of the hooks after such insertion to a final interlocking relation where the parts are in tight engagement, the plates having at the openings marginal portions preventing outward displacement of the hook bases.

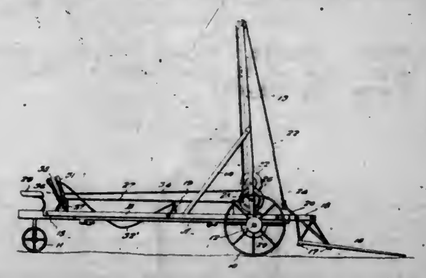
1,450,268. MACHINE FOR MEASURING FABRICS. DOUGLAS TURNER, St. Louis, Mo., assignor to The Measuregraph Company, St. Louis, Mo., a Corporation of Delaware. Filed Nov. 15, 1919. Serial No. 338,231. 7 Claims. (Cl. 33—129.)

1. In a fabric measuring machine, the combination of a measuring roller mounted to be rotated by the goods passed thereover, a dial, a pointer co-operating with the dial for indicating fractions of the unit of measure, said pointer being capable of unlimited rotation, means actuated by said measuring roller for driving the pointer without limit in the forward direction, and a numeral wheel co-operating with the pointer for indicating the number of revolutions made by the pointer in each complete measuring movement.



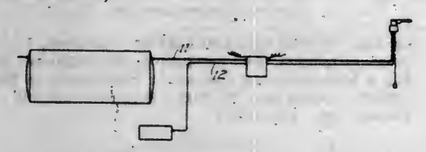
1,450,269. INKING MECHANISM. JOSEPH J. WALSER, Ann Arbor, Mich., and HARLAND FANKBONER, Chicago, Ill., assignors to Goss Printing Press Company, a Corporation of Illinois. Filed Mar. 12, 1920. Serial No. 365,354. 35 Claims. (Cl. 101—350.)

1. A printing press inking mechanism including in combination a fountain roller, an ink drum, a ductor roller



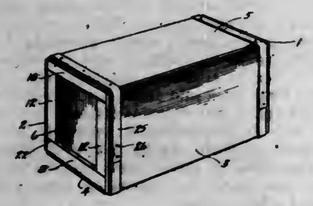
and means for causing the ductor roller to travel along the periphery of both the ink drum and the fountain roller and means for independently varying said peripheral travel of the ductor roller upon the ink drum and upon the fountain roller to control the supply of ink.

1,450,270. INKING MECHANISM. JOSEPH J. WALSER, Ann Arbor, Mich., and HARLAND FANKBONER, Chicago, Ill., assignors to Goss Printing Press Company, a Corporation of Illinois. Filed Mar. 12, 1920. Serial No. 365,355. 28 Claims. (Cl. 101—350.)



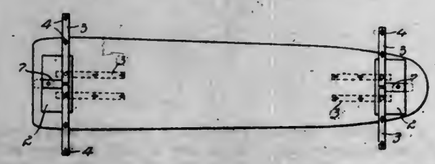
1. A printing press inking mechanism including in combination a fountain roller, an ink drum, and a ductor roller reciprocating between them and adapted to travel along the periphery of each and means for independently varying said travel of the ductor roller along the fountain roller and the ink drum to control the supply of ink.

1,450,271. HAYSTACKER. CHARLES H. WELKERT and HENRY WELKERT, Vesta, Minn. Filed Oct. 5, 1920. Serial No. 414,932. 1 Claim. (Cl. 214—113.)



A hay stacker comprising a pair of interfitting relatively pivoted frames having an opening and closing movement, one of said frames constituting a main stationary frame and the other an auxiliary frame, a rake pivotally supported from the said auxiliary frame, means for swinging the movable frame to a position above the main frame for elevating the said rake, an arm projecting from each side of the rake normally lying parallel with a side of the auxiliary frame, a pivoted trip-element mounted on the auxiliary frame and engaged over the said arms at the rake to hold the latter rigid with respect to the auxiliary frame, and an operator's lever connected with the trip-element for moving the latter to release the said arms.

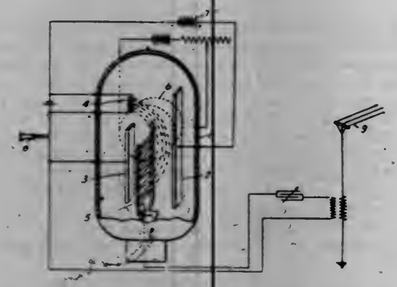
1,450,272. REPAIRMAN'S BRAKE ATTACHMENT FOR AIR BRAKES. FRANK WEST, East San Diego, Calif. Filed Sept. 22, 1919. Serial No. 325,417. 4 Claims. (Cl. 303—51.)



4. An apparatus of the class described, including an air reservoir, a motorman's control valve, a pipe connecting said reservoir with said control valve, an air brake cylinder, a straight air application and release pipe connecting said motorman's control valve with said air brake cylinder, a valve communicating with the reservoir pipe and ported so as to communicate with the brake cylinder pipe through the straight air application and release pipe when in certain position and for exhausting the air when in another position and an electrical switch in connection with the main line wiring for breaking the circuit in said wiring when the valve is so positioned as to communicate with the brake cylinder pipe.

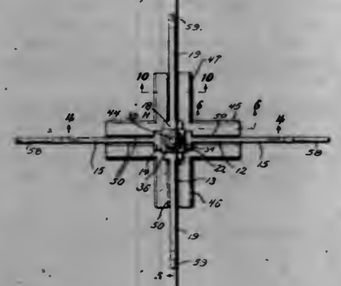
1,450,273. SHIPPING BOX. WILLIAM A. WILCOX, Tacoma, Wash. Filed Aug. 8, 1921. Serial No. 490,640. 3 Claims. (Cl. 217—12.)

1. In a box of the character described, a bottom wall having rails fixed transversely thereto at its opposite ends, opposite side walls having rails fixed at their ends; said latter rails being connected at their lower ends with the end of the rails of the bottom wall, and having tongues at their upper ends provided with upwardly opening slots, end walls for the box, rails fixed across the upper ends of said walls and provided with grooves at their ends for receiving the tongues at the upper ends of the side wall rails and pins extended through the said grooves to be received within the tongue slots for the purpose set forth.



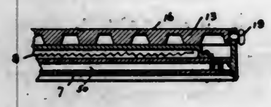
1,450,274. ATTACHMENT FOR IRONING BOARDS. MAHLON M. ZELLERS, Belleville, Ill. Filed Oct. 20, 1921. Serial No. 508,905. 2 Claims. (Cl. 68—10.)

1. An attachment for ironing boards comprising a block adapted to be secured to the under side thereof, arms pivotally secured to said block and adapted to be swung to extend transversely of the ironing board with their ends abutting, a stop secured to said block and



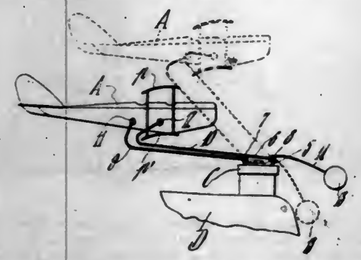
abutting against said arms when they are in extended position, and hooks on said arms adapted to have aprons secured thereto to receive the ends of articles being ironed.

1,450,275. WIRELESS AMPLIFIER. CHESTER T. ALLCUTT, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 31, 1918. Serial No. 269,130. 10 Claims. (Cl. 179—171.)



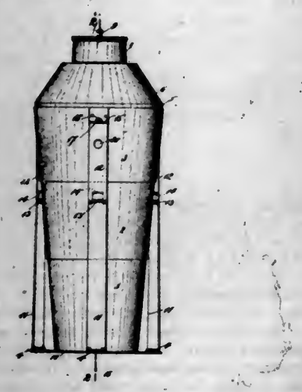
1. In a vacuum-type amplifier, a hot cathode for the production of a stream of electrons, an auxiliary anode disposed adjacent thereto, means for maintaining a difference of potential between said electrodes, whereby substantially all the electrons emitted by said cathode are drawn toward said anode, means producing a magnetic field transverse to the path of said electrons, whereby they are forced to assume a cycloidal path and eventually travel away from said anode, with attendant diminution of velocity, a grid electrode disposed to intercept the electron path at this point of relatively low velocity, a main anode disposed beyond said grid, means responsive to variations in current flow between said cathode and said main anode, and means for varying the potential of said grid electrode.

1,450,276. TROLLEY CROSSING. RICHARD E. ANDREW, Philadelphia, Pa., assignor of one-half to Joseph Andrew, Philadelphia, Pa. Filed Feb. 21, 1922. Serial No. 538,204. 9 Claims. (Cl. 191—37.)



1. A trolley crossing including a crossing body; comprising members having arms, one of said members having a recess into which a portion of the other member extends to form an interlock fit; electrical insulating means for said members having a part within said recess; a bolt extending through said members; insulating means for holding the members together; and trolley wheel crossing means carried by said body; substantially as described.

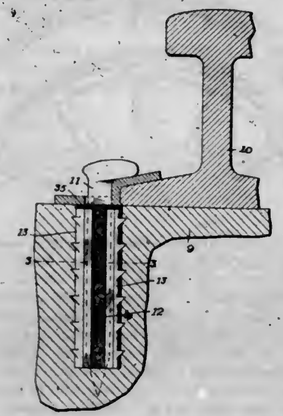
1,450,277. WAFFLE AND HOT-CAKE IRON. EDMUND N. BROWN and ALFRED M. LAMBERT, San Francisco, Calif., assignors to Majestic Electric Development Company, a Corporation of California. Filed Jan. 31, 1922. Serial No. 533,002. 13 Claims. (Cl. 219—19.)



1. A waffle and hotcake iron comprising a pair of reversible cooking plates having a plane surface on one side and a corrugated surface on the other side, a two-part hinged frame, electrical resistances secured in each of said parts, and means for securing one of said plates in each of said parts and with either of said sides adjacent the corresponding resistance.

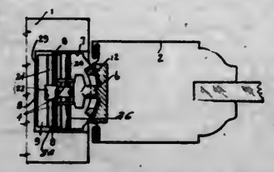
1,450,278. NOVELTY ATTACHMENT FOR VEHICLES. HENRY CAVE, Hartford, Conn. Filed June 30, 1919. Serial No. 307,666. 5 Claims. (Cl. 46—14.)

5. A novelty attachment for vehicles comprising a body portion provided with wings for raising the body relatively to the vehicle when the vehicle is in motion, a link pivotally connected at one end to said body portion and at the opposite end to said vehicle, and means cooperating with said link for maintaining the body portion in the same angular relation to the vehicle as it rises relatively thereto.



1,450,279. SHAKER. WILLIAM C. CHICK, Boston, Mass. Filed Oct. 19, 1922. Serial No. 595,664. 6 Claims. (Cl. 259—72.)

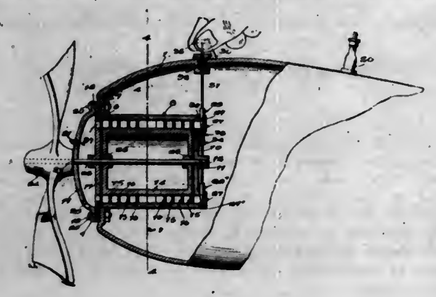
1. A vessel of the kind described comprising a series of sections of graduated size and a plurality of braces,



one end of each brace being connected to a section at one end of the vessel and adapted to engage with a section at the other end of the vessel whereby said sections will be held in extended relation and upon the disengagement of said braces may be collapsed said braces being made in two parts whereby when said sections are in collapsed position said braces may be folded over the free end of the vessel and hold it in collapsed position.

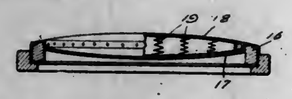
1,450,280. PROTECTOR FOR RAIL TIES. GEORGE B. CUTTINO, Worcester, Mass. Filed May 12, 1919. Serial No. 296,502. 2 Claims. (Cl. 238—371.)

2. A protecting device for a rail tie comprising a plate located in a hole in the tie for the reception of a spike, and a body of pitch poured into the hole extending to the bottom thereof on two sides of the spike and extending over the top of said plate so as to seal the hole, plate and spike.



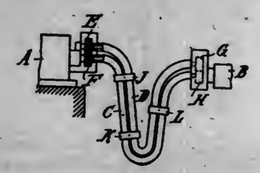
1,450,281. SLIDING AND REVERSING WINDOW. OTTO B. DREUSIKE, San Francisco, Calif. Filed Apr. 6, 1921. Serial No. 459,086. 1 Claim. (Cl. 20—49.)

In a window structure comprising a frame provided with a guideway, and a sash movable therealong; the combination with a stile of said sash of a tracking bar slidable in said guide-way, and having a wall normally in contact with the adjacent wall of said stile, one of said walls having a concave surface and the other a convex surface normally disposed therein; a headed pivot extending from said convex surface into said concave surface and separably uniting said sash and said tracking bar, but permitting said tracking bar to move laterally in said guideway; and vertically sliding means carried by and conforming to said concave wall for straddling said pivot to prevent withdrawal of the same and reinforcing said concave wall adjacent to said pivot.



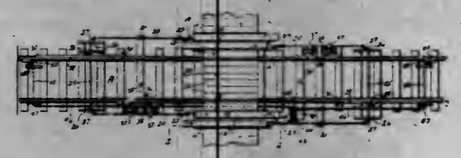
1,450,282. TOY. ESTON F. FOX, Williamsport, Md. Filed Apr. 4, 1922. Serial No. 549,384. 3 Claims. (Cl. 244—14.)

1. In a device of the character described, an elongated hollow body provided with an inlet and with an opening at one end thereof, a normally closed valve controlling the inlet, a turbine closing the opening at the end of the body and partially received within the latter, said turbine being provided with an inlet port at the end thereof received within the body and being provided with an outlet port at its opposite end, whereby said turbine is adapted to be actuated by a pressure fluid introduced into said body through said inlet of the body, a propeller



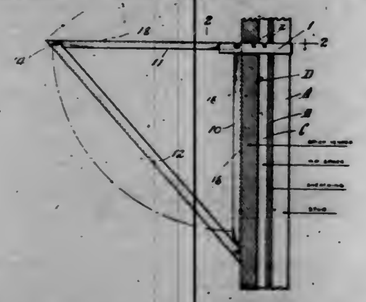
operatively connected with the turbine and arranged to be driven by the latter, and a cover plate for the portion of the body provided with the outlet port, said cover plate being provided with an exhaust opening through the lower part thereof whereby a lifting force is applied to the body as the exhaust pressure fluid passes through the exhaust opening.

1,450,283. SANITARY SEAT. FRANK GALIZIA, Farrell, Pa. Filed Feb. 28, 1922. Serial No. 539,088. 3 Claims. (Cl. 155—183.)



2. A seat construction comprising a frame, a stationary seat mounted within said frame and including a frame portion covered with flexible material downwardly concaved, and a seat cushion removably and reversibly mounted within said stationary seat and convex on both sides whereby one side will conformingly engage within the concave portion and the other side will extend upwardly beyond the frame portion of the stationary seat member, said flexible material being formed with holes for ventilating purposes to permit drying of the previously exposed surface of the removable cushion after the same has been removed and replaced within the stationary portion in reversed position.

1,450,284. FLEXIBLE SHAFTING. RUDOLF GOLDSCHMIDT, Berlin, Germany, assignor to Det Tekniske Forsøgsaktieselskab, Ordrup, Charlottenlund, Denmark, a Company of Denmark. Filed July 16, 1921. Serial No. 485,375. 3 Claims. (Cl. 64—89.)

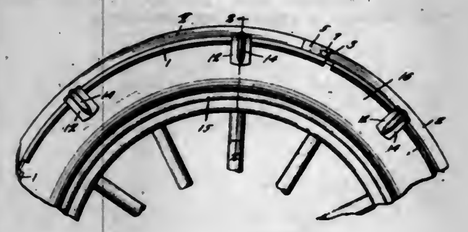


1. High-speed power transmission mechanism comprising a pair of parallel oppositely-rotated flexible shafts, a covering for each of said shafts and means for binding said coverings together to prevent twisting of said shafts.

1,450,285. RAILWAY-CROSSING GATE. ADOLPHUS D. GOODWIN, East Durham, N. C., assignor of thirty per cent to Dock W. Brown, East Durham, N. C., and thirty per cent to Delos W. Sorrell, Durham, N. C. Filed May 3, 1922. Serial No. 558,079. 5 Claims. (Cl. 246—294.)

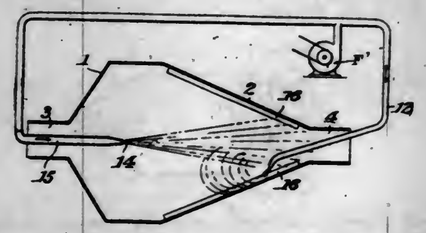
1. In a railway crossing, housings disposed on each side of the crossing below the surface thereof and having their upper ends open to the surface of the crossing, a pair of gates disposed in each housing and vertically movable out of or into the housing, means actuated by the approach of a train in either direction for lifting said gates, and means holding said gates lifted while the train is approaching the crossing and until it has passed the crossing.

1,450,286. SCAFFOLD BRACKET. JOSEPH F. GRAFF, Milwaukee, Wis. Filed Dec. 9, 1920. Serial No. 429,433. 2 Claims. (Cl. 304—33.)



1. A support for scaffolding brackets comprising a U-shaped stirrup having its parallel arms provided with slots extending downward from their upper edges and inclined rearward toward the member connecting said parallel arms.

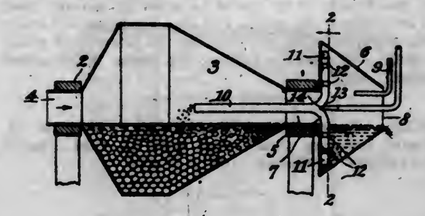
1,450,287. SUBMARINE SIGNALING APPARATUS. WALTER HAHNEMANN, Elitzeberg, near Kiel, Germany, assignor to the Firm Signal Gesellschaft m. b. H., Kiel, Germany. Filed Jan. 5, 1921. Serial No. 435,294. 17 Claims. (Cl. 181—0.5.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In a submarine sound signaling plant, sound signaling apparatus proper, and a wall associated with the said apparatus, an area of the said wall of a radius of at least substantially one quarter of the length of the wave of the sound used for signaling being substantially unyielding to fluctuations of pressure due to the said sound.

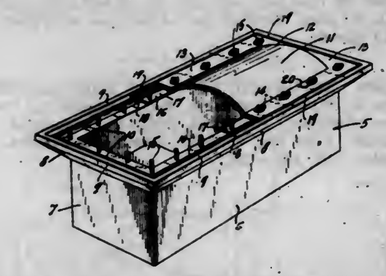
1,450,288. TIRE ARMOR. WILLIAM L. HAMM, Oskaloosa, Iowa. Filed Oct. 22, 1921. Serial No. 509,600. 1 Claim. (Cl. 152—16.)

A device of the class described comprising sections each including a body and an outstanding longitudinal rib; means for connecting the rib of one section to the rib of an adjoining section, and oppositely extended transverse metal clips having their inner ends mounted on the body, the outer ends of the clips being free and projecting beyond the longitudinal edges of the body, the clips being bulged outwardly to form reinforcing ribs disposed transversely with respect to the body and to form, on each side of the rib, plane areas affording places of attachment between the clips and the body.



1,450,289. APPARATUS FOR ENTRAINING AND REMOVING FINES FROM CONICAL MILLS. HARRY W. HARDINGE, New York, N. Y. Filed Apr. 29, 1920. Serial No. 377,439. 1 Claim. (Cl. 83—9.)

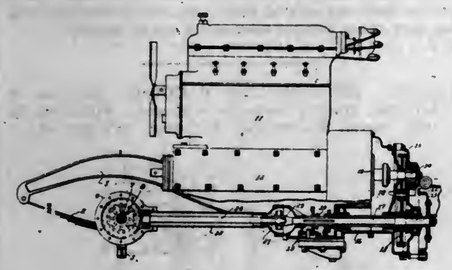
The combination with a conical grinding mill comprising a rotatable drum having a conical outlet portion for automatically classifying material according to size, provided with an outlet opening for discharging the material when ground, of a jet which discharges into said conical outlet portion adjacent the base thereof and directed toward said outlet opening, said jet and conical outlet portion cooperating to form an ejector and means for supplying elastic motive fluid to said jet under pressure.



1,450,290. OVERSIZE RETURN FOR MILLS. HARRY W. HARDINGE, New York, N. Y. Filed June 4, 1920. Serial No. 386,527. 9 Claims. (Cl. 83—9.)

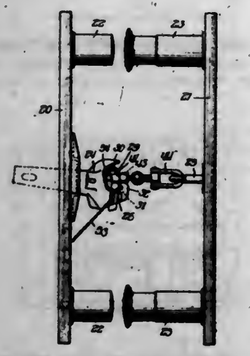
1. A grinding mill comprising in combination, a rotatable grinding drum having a substantially unobstructed overflow conical outlet portion for the classification of material according to size, a classifier into

which said drum discharges, and means for automatically returning oversize material from said classifier to said drum through the end of said conical outlet portion.



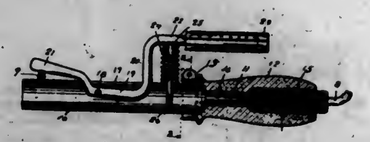
1,450,291. BURIAL VAULT. HARLEY O. HEACOCK, Winslow, Ind. Filed July 15, 1922. Serial No. 575,286. 1 Claim. (Cl. 27—17.)

A burial vault comprising a receptacle having an endless enlarged end portion at its upper edge adapted to form a supporting member, a flange extending upwardly from the outer edge portion of the upper face of the supporting member, said upper face of the supporting member having a longitudinally extending groove disposed in spaced relation to the flange and the inner edge of the supporting member, an endless compressible gasket engaged with the upper face of the supporting member, the outer edge of said gasket being extended upwardly at right angles to the major portion of the gasket to provide a flange, and engaged with the inner face of the flange of the supporting member, that portion of the gasket disposed between the flange thereof and the inner edge portion of the gasket being substantially crimped longitudinally of the gasket and extended into the groove of the supporting member, and a cover having an endless rib depending from the lower face thereof and arranged to enter said crimp and firmly engage the gasket, the outer edges of the cover being adapted to firmly engage the inner face of the flange of the gasket.



1,450,292. MOTOR VEHICLE. EDGAR R. HOLMES, Detroit, Mich., assignor to Hamlin-Holmes Motor Company, a Corporation of Delaware. Filed Jan. 31, 1920. Serial No. 355,386. 2 Claims. (Cl. 180—42.)

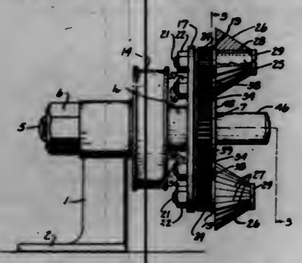
1. In a motor vehicle wherein a chassis frame is supported upon a front axle by supporting springs, a live axle is carried by the front axle for transmitting motion to front supporting and steering wheels, and an engine is supported on the frame rearwardly of the front axle and provided with a downwardly extending crank case; means for transmitting motion from the rear end of the engine forwardly beneath said engine to the front axle including a propeller shaft operatively connected at its rear end with the rear end of the engine crank shaft and at its forward end to said axle, said propeller shaft including a universal joint, and a tubular member enclosing said pro-



peller shaft and rigidly connected to the axle at its front end and having a universal connection at its rear end with the engine crank case to provide a radius member for taking the rearward thrust of the front axle.

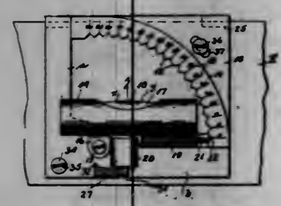
1,450,293. TRANSITIONAL COUPLING ARRANGEMENT. ROBERT E. L. JANNEY, Chicago, Ill. Filed June 16, 1922. Serial No. 568,809. 7 Claims. (Cl. 213—112.)

1. In combination, a plurality of railway cars the adjacent ends of which are provided with cooperating buffers, an automatic coupler connected to one end of one of said cars, a U-shaped member mounted over one portion of the coupler head and having a horn extending toward another portion of the coupler head, and means including a member for hooking around said horn whereby said coupler may be connected to a hook or automatic coupler on said other car regardless of the position of said buffers.



1,450,294. WELDING TOOL. JOHN JERRY, Milwaukee, Wis. Filed Dec. 29, 1920. Serial No. 433,846. 2 Claims. (Cl. 219—14.)

1. A tool of the class described, comprising a handle, a shank member carried by the handle, said shank member

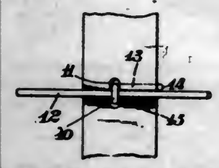


having a slot cut therein, a lever having a medial bend disposed in said shank member slot, means pivotally securing said lever bend in the slot, a clamp member formed on the outer end of said lever, a handle portion formed on the inner end of said lever, and means yieldingly urging said clamp member toward the shank member.

1,450,295. FRUIT-PEELING MACHINE. MAXWELL O. JOHNSON, Waipio, Territory of Hawaii. Filed Oct. 15, 1921. Serial No. 507,954. 8 Claims. (Cl. 146—8.)

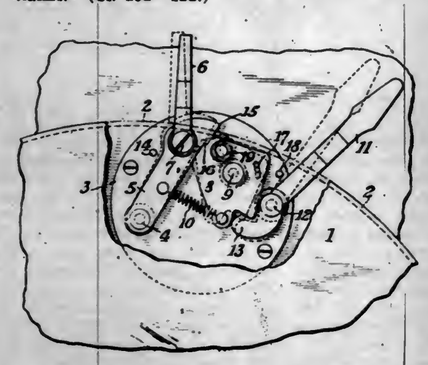
1. A machine for trimming pineapples including in combination a spindle for engaging within and holding a cored pineapple, and a rotating peeling device having simultaneous rotation about its own center and also about said spindle.

1,450,296. LEVEL ATTACHMENT FOR CARPENTERS' SQUARES. STEPHEN J. LUCAS, Chicago, Ill. Filed Feb. 23, 1922. Serial No. 538,436. 2 Claims. (Cl. 33—213.)



1. The combination with a carpenter's square, of a leveling attachment, said attachment comprising a base, brackets extending from the top of said base and having triangular ends, there being beveled notches at the upper edge of the square for receiving said triangular nds, a latch member at the lower end of said base having a triangular end, said square having a beveled notch at its lower edge for receiving said triangular end of the latch member, a spirit level pivoted on said base, and a degree indicating scale on said base with which said level cooperates to indicate angles.

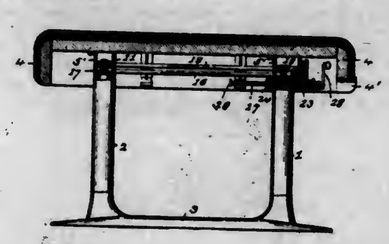
1,450,297. PIPE WRENCH. JAMES M. MARTIN, Knoxville, Tenn. Filed Feb. 1, 1922. Serial No. 533,347. 2 Claims. (Cl. 81—105.)



1. In a wrench, a handle, a jaw formed at one end of the handle, a pivoted frame supported by the handle, a jaw movable through the frame, said jaw including a threaded shank, said shank having key-ways formed in opposite sides thereof, a sleeve having threads cooperating with the threads of the shank to move the movable jaw, keys supported by the frame, and disposed in the key-ways, portions thereof being embraced by the sleeve, and resilient means for normally holding the frame in its active position.

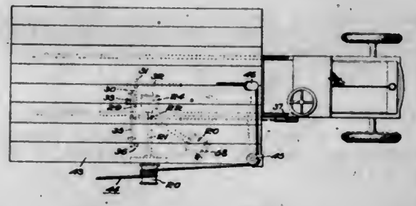
1,450,298. WIRE-FENCE FASTENER. WILLIAM H. MASON, Leesburg, Ohio. Filed Sept. 15, 1921. Serial No. 500,983. 2 Claims. (Cl. 256—48.)

1. As an article of manufacture, a device for fastening a wire to a post having a hole therethrough crossed by the wire, said device consisting of a loop portion having two legs bent off from said loop and one of said legs further bent in the same direction as the loop and substantially parallel thereto.



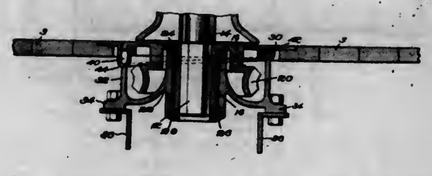
1,450,299. AUTOMATIC STOP FOR PHONOGRAPHS. FRED G. MAYER, Richmond, Ind., assignor to Starr Piano Company, Richmond, Ind., a Corporation of Indiana. Filed Nov. 28, 1921. Serial No. 518,154. 2 Claims. (Cl. 192—122.)

1. A stop mechanism for phonographs comprising in combination, a base plate disposed under the turn table, a trip lever pivoted thereon, a cocking handle pivoted to the plate, a dog intermediate the trip lever and cocking handle, pivoted to the plate, the edge of which is engagd by the cocking handle and adapted thereby to be thrown to bring a shoulder in its edge into locking engagement with the trip lever, a spring for maintaining such engagement, and a brake carried by the pivoted dog and adapted to be thrown by the disengagement of the said trip lever and dog and into operation to arrest the rotation of the turn table.



1,450,300. EXERCISING APPARATUS. PHILIP S. MEDART and FRANK ALBACH, St. Louis, Mo., assignors to Fred Medart Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed May 12, 1921. Serial No. 468,838. 8 Claims. (Cl. 46—69.)

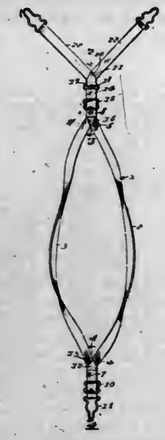
1. In an exercising apparatus, a base, a hollow body supported in a vertically adjustable manner on said base, means for imparting vertical adjustment to said body, a longitudinally arranged housing having operative engagement with said adjusting means, and a non-circular shaft arranged in a longitudinally adjustable manner in said housing and having an operative crank at one end, said



shaft being adapted to be moved from an inactive position in the hollow body into an active position outside said body, said body having a pasage in an end wall for such movement of the shaft.

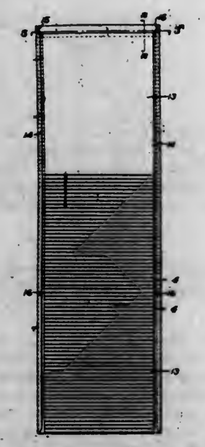
1,450,301. AUTOMOBILE WINCH. ALMON E. NORRIS, Brookline, Mass. Filed Apr. 16, 1919. Serial No. 290,535. 14 Claims. (Cl. 254—166.)

1. In a vehicle, a winch comprising driving gearing, a winch head and driving shaft therefor having a universal joint and permitting said winch head to be shifted into a position inside or outside of the marginal portion of the car body.



1,450,302. AUTOMOBILE WINCH. ALMON E. NORRIS, Brookline, Mass. Filed Aug. 12, 1920. Serial No. 402,946. 11 Claims. (Cl. 254—166.)

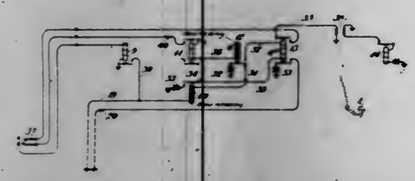
1. The combination with a vehicle having a load-supporting platform, of a winch comprising a support presenting an upright bearing, a driving head journaled in and supported by said bearing and presenting an upright socket, and an upright winch-head supported and driven by said driving head and removable in an upward direction therefrom to render the space normally occupied by said winch-head available for occupation by a load on said platform.



1,450,303. SUSPENDERS. WASHINGTON M. POTTER, Freedom, Pa. Filed Nov. 16, 1921. Serial No. 515,580. 2 Claims. (Cl. 241—12.)

1. A pair of suspenders comprising a pair of elastic straps adapted to engage over the shoulders of a wearer, said straps converging toward and connected together at their opposite forward and rear ends, means connected to the forward ends for operatively connecting the straps to the front of the trousers, shields overlying and secured to the rear ends of the straps, a strap secured between the shields and being folded adjacent its unattached end, a buckle attached to the terminal of the strap beyond

the fold and operatively and adjustably receiving the body of the strap between the fold and where the end of the strap is secured between the shields, and a pair of diverging elastic straps connected together at their converging ends, means connecting the converging ends of the last mentioned straps to the fold, and means attached to the diverging ends of the last mentioned straps for attaching them to the rear of a pair of trousers.



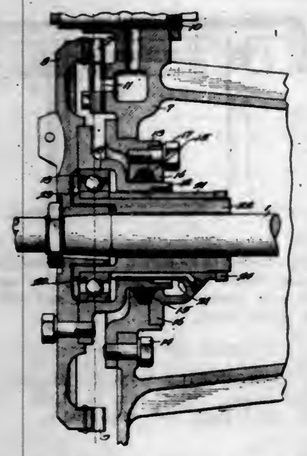
1,450,304. LOOSE-LEAF INDEX FILE. JOHN T. QUIGLEY, Boston, Mass., assignor, by mesne assignments, to Costmeter Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 16, 1914. Serial No. 872,302. 40 Claims. (Cl. 129—16.)

36. In a file, the combination of a series of overlapping sheets, and a series of sheet-supports supporting said sheets, respectively, providing for turning movement of said sheets about parallel axes, and carrying means spac-

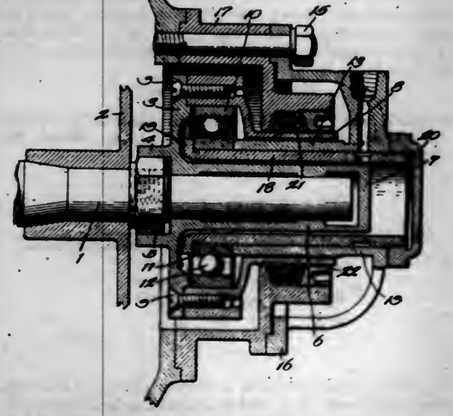
ing said supports transversely of said axes and also defining the positions of said sheets lengthwise of said axes throughout the range of turning movement of said sheets about said axes.

1,450,305. TELEPHONE SIGNALING SYSTEM. WILLIAM A. RHODES, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 25, 1919. Serial No. 333,320. 5 Claims. (Cl. 179—49.)

1. In a telephone system, a trunk circuit, a recording circuit, a cord circuit adapted to be associated with either of said circuits, an indicating circuit adapted to be associated with said trunk circuit or said recording circuit, a differential relay in said indicating circuit, and a plurality of sequentially operated relays in said indicating circuit for intermittently energizing said differential relay whereby a busy indication is produced in the cord circuit upon the association of the trunk circuit with said indicating circuit and whereby a peremptory disconnect signal is produced in said cord circuit upon the association of said recording circuit with said indicating circuit.



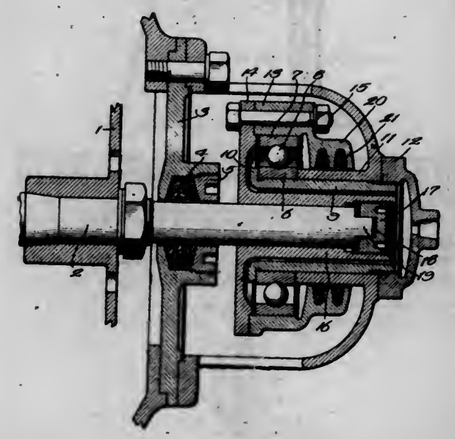
1,450,306. SPRING-SHACKLE CONSTRUCTION. DELMAR G. ROOS, Bridgeport, Conn., assignor, by mesne assignments, to The Locomobile Company, Bridgeport, Conn., a Corporation of Delaware. Filed Mar. 4, 1920. Serial No. 363,165. 11 Claims. (Cl. 267—54.)



2. In a spring shackle construction, the combination of two pivots, a pair of links each provided with openings in which said pivots are received and provided with a slot connecting said openings, and means to vary the size of said openings by varying the width of said slots.

1,450,307. BEARING. MARK A. ROSS, Flossmoor, Ill., assignor of one-half to Harry P. Bayley, Chicago, Ill. Filed Nov. 16, 1921. Serial No. 515,551. 6 Claims. (Cl. 64—36.)

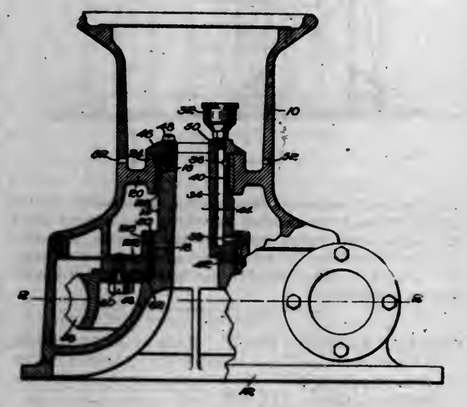
1. In a turbine, the combination with the rotating shaft thereof; of an impact wheel upon the shaft and having a hollow extension surrounding and spaced apart from the shaft; a wall surrounding said hollow extension; a substantially fluid tight packing between said wall and hollow extension; an outer roller bearing raceway upon and within the hollow extension; an inner raceway; rollers between said raceways; a sleeve upon said wall and surrounded by the aforesaid hollow extension of said wheel and having one end engaging one side of the inner raceway; a second sleeve surrounded by and movable longitudinally of the first and surrounding the shaft, this second sleeve engaging the other side of the inner raceway; and a nut in threaded engagement with the second sleeve and abutting against the other end of the first sleeve to hold the inner raceway between said sleeves, said raceways and rollers being between said wheel and packing.



1,450,308. BEARING. MARK A. ROSS, Flossmoor, Ill., assignor of one-half to Harry P. Bayley, Chicago, Ill. Filed Nov. 16, 1921. Serial No. 515,552. 8 Claims. (Cl. 64—36.)

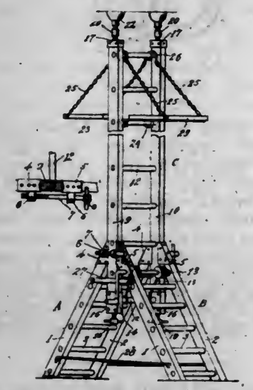
1. In a turbine, the combination with the rotating shaft thereof; of an impact wheel upon the shaft; a bearing member turning with the shaft and formed with a hollow extension into which said shaft projects and in which the shaft terminates, said hollow extension projecting away from the impact wheel and having an end wall opposite the end of the shaft that is in this hollow extension, said bearing member also having a second hollow extension surrounding and spaced apart from the first hollow extension; an outer roller bearing raceway upon and within the second hollow extension; an inner raceway; rollers between said raceways; a sleeve in the space between said hollow extensions and having one end engaging one side of the inner raceway; a second sleeve surrounded by and movable longitudinally of the first and engaging the other side of the inner raceway; a nut in threaded engagement with the second sleeve and abutting against the other end of the first sleeve to hold the inner raceway between said sleeves; a wall surrounding said extensions and sleeves; and a fluid tight packing between said wall and the aforesaid second hollow extension; said raceways and rollers being between the impact wall and the packing.

1,450,309. BEARING. MARK A. ROSS, Flossmoor, Ill., assignor of one-half to Harry P. Bayley, Chicago, Ill. Filed Nov. 16, 1921. Serial No. 515,553. 8 Claims. (Cl. 64—36.)



1. In a turbine, the combination with the impact wheel thereof; of a shaft carrying said wheel; a bearing structure for said shaft and having a wall through which said shaft projects; fluid tight packing between said shaft and wall; inner and outer raceways; rollers between said raceways; a sleeve surrounded by the inner raceway and having a flange engaging one side thereof, said wall being between this sleeve and the impact wheel; a second sleeve surrounding the first and joined with said wall, this second sleeve engaging the other side of said inner raceway; means for effecting relative movement between said sleeves to hold the inner raceway; a carrier for and surrounding the outer raceway; and fluid tight packing between said carrier and the second aforesaid sleeve.

1,450,310. LINING FOR CONDUIT OUTLET BOXES. WILLIAM M. SILLIMAN, Syracuse, N. Y. Filed Oct. 17, 1918. Serial No. 258,586. 3 Claims. (Cl. 247—10.)

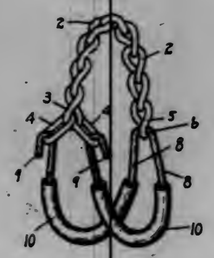


1. A lining for conduit outlet cabinets comprising a body in the form of a sheet having a rectangular opening, the portions of said sheet at opposite sides of the opening being bent downwardly at a right angle to the plane of the sheet, forming flanges constituting two opposing side walls of the lining, and depending flanges separate from the sheet and attached to the inner edges of the sheet at the remaining two sides of said opening, the flanges forming the sides of the lining, substantially as and for the purpose specified.

1,450,311. WINCH. FREDERICK O. SNOW, Jr., Winchester, Mass., assignor to Mead-Morrison Manufacturing Company, East Boston, Mass., a Corporation of Maine. Filed May 3, 1921. Serial No. 466,444. 6 Claims. (Cl. 254—150.)

1. In a winch, the combination of a one-piece base and column presenting inner and outer chambers one about the other, a winch head journaled about said column and about said inner chamber, and gearing within said outer chamber for driving said winch head.

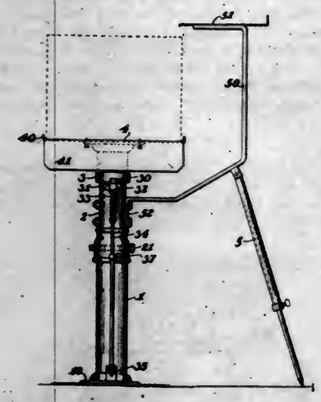
1,450,312. EXTENSION LADDER. RICHARD M. STOLWORTHY, Cincinnati, Ohio. Filed Mar. 16, 1922. Serial No. 544,071. 4 Claims. (Cl. 228—22.)



1. In an extension ladder for interior use, the combination with supporting base sections, of a vertical section, with means for extending and clamping the vertical section upon the supporting base, the side rails of the extension section being provided with vacuum cups to engage the ceiling to secure the ladder in vertical position.

1,450,313. CAR UNLOADER. EDWARD OVERALL TALIAFERRO, Philadelphia, Pa. Filed Dec. 13, 1919. Serial No. 344,570. 8 Claims. (Cl. 198—118.)

1. In a car unloader, fixed guides, an elevator on the guides, means for extensibly adjusting the elevator along the guides, and driving means for the elevator, including a member stationary on the guides and a cooperating member carried by the elevator maintaining a permanent driving connection.



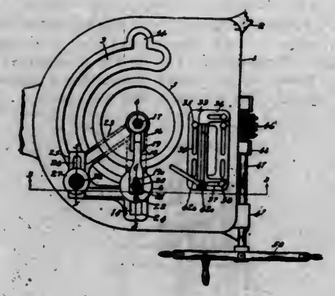
1,450,314. ANTISKID CHAIN. HERBERT E. TWITCHELL, Hamilton, Ohio, assignor of one-half to August Kriegenhofer, Hamilton, Ohio. Filed Sept. 5, 1922. Serial No. 586,365. 1 Claim. (Cl. 152—14.)

An anti-skid device for use with vehicle wheels, composed of a felly engaging element and a tire tread engaging element only, the tire tread engaging element consisting of a single length of chain provided at one end with two links which are connected to a link at one end of the chain, the felly engaging element being substantially V-shaped in plan and having two legs, each leg terminating in a hook, the closed end of said felly engaging element extending through a link at the other end of the chain, and said hooks being interlocked with said two links at the first mentioned end of the chain, said two links diverging from the end of the chain to said hooks.

1,450,315. BOX-STRAPPING BENCH. GEORGE WOOD, Seattle, Wash., assignor to Alec J. Gerrard, Chicago, Ill. Filed Jan. 22, 1920. Serial No. 353,311. 2 Claims. (Cl. 144—288.)

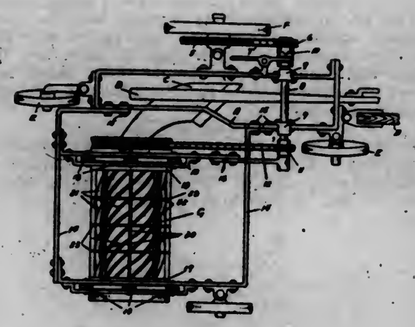
1. A box strapping bench comprising a base, a box holding table carried by the base and vertically adjustable, an arm secured to the base and extending outwardly and upwardly at a distance from the center to clear the box being operated upon, a shelf carried by the upper end of said arm well above the box holding table and laterally

removed therefrom, and an adjustable brace connected with the outer parts of said arm and adapted to reach the floor.



1,450,316. CLUTCH HOLDER. FRANK FREDERICK WUNDER, Valley Falls, Kans. Filed Nov. 2, 1921. Serial No. 512,236. 3 Claims. (Cl. 74—81.)

1. An attachment of the character described comprising a substantially straight body made of a material having spring qualities, a clamping member carried by the body at one end thereof, a catch member consisting of a straight shank portion having an integral hook portion, a releasing member having a straight shank portion and a downwardly inclined portion formed integrally therewith, said second named shank portion being shorter than the shank portion of the catch member, and means for attaching both shank portions to the body adjacent to the end of the latter opposite that provided with the clamping member, and in substantial alinement with the body.

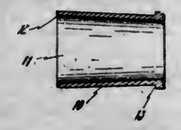


1,450,317. PIPE-BENDING MACHINE. WILLIAM B. BEERS, Portland, Oreg. Filed Oct. 1, 1919. Serial No. 327,631. 14 Claims. (Cl. 153—46.)

1. In a pipe bending machine, the combination of a curved grooved bending body; a grooved bending sheave; a driving wheel having an axis coincident with the axis of the body; a bearing post for the sheave; a sliding mounting on the wheel for the post, said mounting having driving surfaces adapted to drive the post in a circumferential direction with the wheel, said driving surfaces having

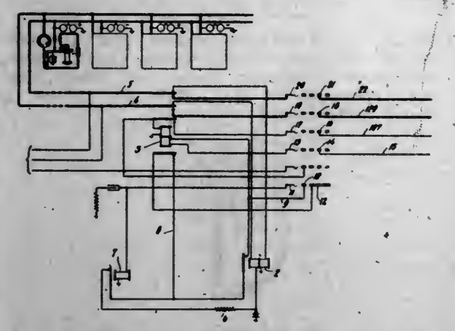
a driving engagement with the post for a greater distance lengthwise of the post than the distance between the top of the driving surfaces and the center of the groove of the sheave; and means for driving the wheel.

1,450,318. PULVERIZER AND QUACK-GRASS DESTROYER. ALBERT A. EICH, Richmond, Minn. Filed May 26, 1921. Serial No. 472,856. 2 Claims. (Cl. 97—10.)



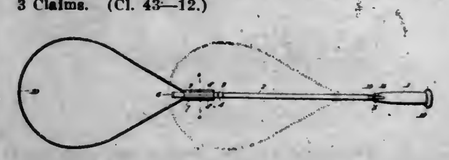
1. The combination with a plow, of a rotatably mounted drum adapted to receive material therefrom at one end, means for rotating the drum, said drum consisting of inner and outer series of alternate spirally arranged spaced bars, longitudinal bars positioned thereabout, and circular members, positioned at intervals throughout the length of the drum, adapted to secure all of said bars together in relatively rigid position.

1,450,319. PROCESS OF MAKING ASBESTOS FRICTION-CLUTCH RINGS. LESTER KIRSCHBRAUN, Chicago, Ill, assignor to The Raybestos Company, Bridgeport, Conn., a Corporation of Connecticut. Filed May 28, 1920, Serial No. 384,901. Renewed Feb. 15, 1923. 4 Claims. (Cl. 91—70.)



4. A process of making a clutch facing, consisting in saturating an unwoven felted asbestos facing in a bath of heated asphaltic base oil, subjecting the facing to a baking operation at an elevated temperature and continuing the baking until the saturation is substantially insoluble in carbon tetrachloride.

1,450,320. TUBE MANUFACTURE. THOMAS P. LITTLE, Chicopee Falls, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed May 1, 1922. Serial No. 557,511. 7 Claims. (Cl. 18—43.)



1. A clamp for use in vulcanizing rubber tubes upon mandrels, having a tapered seamless bore.

1,450,321. PARTY-LINE REVERTIVE RINGING SYSTEM. ALBEN E. LUNDELL, Chicago, Ill., and GEORGE THOMPSON, Mount Vernon, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 4, 1920. Serial No. 386,517. 10 Claims. (Cl. 197—17.)

1. In an automatic telephone exchange system, calling and called subscribers' lines, including party lines, automatic switches for interconnecting said lines, a sending device including a plurality of registering devices for controlling the operation of said switches, means to variably position said registering devices, variably operable ringing apparatus, means to operate said automatic switches to establish an interconnection when the line called is not on the same party line with the subscriber who initiates a call, and means determined solely by the positions assumed by said registering devices to operate said ringing apparatus, to accomplish revertive ringing without operation of said automatic switches when a subscriber on a party line calls another subscriber on the same line.

1,450,322. HAND-OPERATING EXTENSIBLE FISH-LANDING NET AND HANDLE. JOHN W. MCELHANY, Denver, Colo. Filed Apr. 8, 1922. Serial No. 550,716. 3 Claims. (Cl. 43—12.)

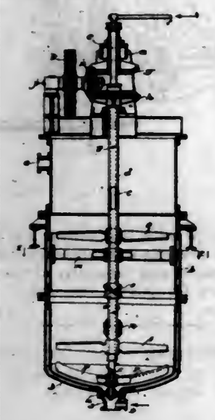
1. In a device of the character described, the combination with a handle having a hollow rod extending

therefrom which is square in cross section and provided with a stop on its outer end; of a sleeve slidably mounted on said rod, having a hole in its upper side, and a ring-like member secured thereto, upon which is secured a fish landing net; a spring actuated lever pivotally mounted on said handle having a hook on its forward end which automatically engages the hole in said sleeve when the same is slid back against the handle, thereby to lock said net supporting ring in an inoperative position, said lever being manually rocked to release said sleeve, whereby the same may slide forward on said rod and against said stop.

1,450,323. SAFETY DEVICE FOR TOOLS. JAMES E. MCGUIRE, Camden, N. J. Filed Mar. 12, 1921. Serial No. 451,726. 5 Claims. (Cl. 145—35.)

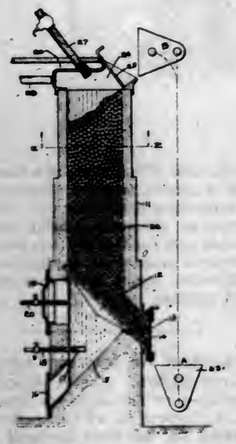
1. The combination with a tool handle having a recess formed therein, of a pivoted spike member mounted in the recess, and yieldable means normally acting to throw said spike member to inoperative position with the upper face thereof flush with the surface of the tool handle.

1,450,324. LIGHTING ACCESSORY FOR AUTOMOBILES. WILLIAM STUART MCKENZIE, Creighton Mine, and ROBERT RICHARDSON, Copper Cliff, Ontario, Canada. Filed Nov. 28, 1921. Serial No. 518,394. 2 Claims. (Cl. 240—7.)



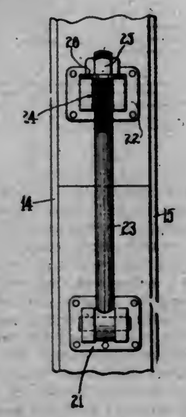
1. A ditch light comprising, in combination with the headlight of an automobile, a T-shaped bracket fastened to the outer side of the head light shell, a lug extending from the bracket and provided with an orifice, a support formed with a cylindrical member carrying a threaded pin within the orifice, means to freely retain the pin within the orifice, a semicircular element on the cylindrical member, a shell mounted on the support provided with a socket, a light in the socket, and wire connections to the socket.

1,450,325. INSTALLATION FOR THE WASHING AND COMBING OF PIGS' BRISTLES. DANIEL MAGNY, Issoudun, France. Filed Apr. 6, 1921. Serial No. 459,142. 4 Claims. (Cl. 19—66.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



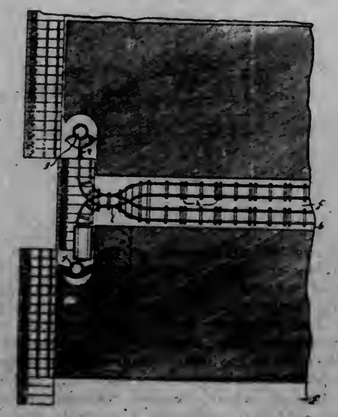
1. An installation for the washing and combing of moistened or scalded pig's bristles comprising in combination a tank, a washing drum therein provided with teeth and bars into which the raw bristles are introduced, a washing receptacle, washing liquid in said receptacle, a mill with radial arms rotating in said receptacle inclined troughs for straightening the bristles delivered by said mill, means for pressing said bristles, means for combing said bristles and means for actuating said drum, mill and pressing means.

1,450,326. APPARATUS FOR TREATING OILS. HAROLD T. MAITLAND, Sharon Hill, Pa., assignor to Sun Oil Company, Philadelphia, Pa., a Corporation of New Jersey. Filed June 21, 1918, Serial No. 241,210. Renewed Aug. 29, 1922. Serial No. 585,080. 10 Claims. (Cl. 259—105.)



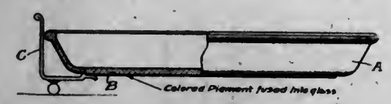
1. A digester and mechanical masticator comprising a vessel, a rotatable upright hollow shaft, a hollow stirrer secured to and communicating interiorly with the shaft, means to introduce fluid into the upper part of the shaft, the same therefore passing through the shaft into the stirrer and thence into the interior of the vessel, and means to introduce washing liquid into the vessel through the bottom thereof.

1,450,327. PROCESS OF DISTILLING BITUMINOUS MATTER. WILLIAM MEISCHKE-SMITH, Boldre Hill, Boldre Hants, England. Filed Apr. 26, 1920. Serial No. 376,844. 2 Claims. (Cl. 196—27.)



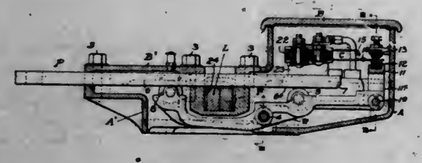
1. A process of distilling bituminous matter which comprises feeding said matter into an enclosed chamber; feeding balls of incombustible material into said chamber; maintaining a combustion zone in a portion of said chamber, said chamber being so formed that the hot gases from said combustion zone pass between the spaces between said balls and reduce said bituminous matter to coke before said balls and bituminous matter reach said combustion zone; and removing said balls after they have passed through said combustion zone so that they may be subsequently fed back into said chamber.

1,450,328. JACKET FOR PRELIMINARY CURE. THOMAS MIDGLEY, Hampden, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Aug. 4, 1920, Serial No. 401,217. Renewed Sept. 7, 1922. Serial No. 586,799. 3 Claims. (Cl. 18—38.)



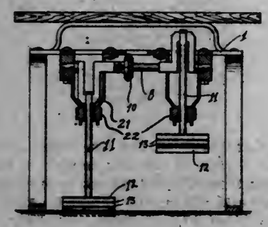
1. A mold for use with tire casings comprising side members, a member extending around the tread of the tire and constructed and arranged to overlap the side members whereby as it is contracted it will press the side members against the sides of the tire, and means for contracting the tread member.

1,450,329. MINE-ROOF-SUPPORTING METHOD AND APPARATUS. EDMUND C. MORGAN, New York, N. Y. Original application filed Jan. 5, 1916, Serial No. 70,341. Divided and this application filed Sept. 9, 1922. Serial No. 587,188. 97 Claims. (Cl. 262—1.)



1. The method of mining which consists in dislodging material from the face of a mine vein, forming an elongated roof support adjacent the working face by a series of individual mine props, each self-sustaining and each adapted to slide over the mine floor while retaining itself in upright position, and gradually shifting the line of roof support in accordance with the advance of mining operations.

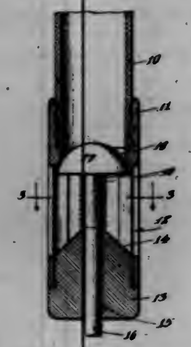
1,450,330. OVENWARE AND HOLDER THEREFOR. HARRY NEGBAUR, New York, N. Y., assignor to E. & J. Bass, Incorporated, a Corporation of New York. Filed Nov. 25, 1921. Serial No. 517,424. 4 Claims. (Cl. 49—92.)



3. A baking dish made of transparent boro-silicate glass having a yellowish tinge and provided with mineral coloring material fused into the glass near one surface, whereby the dish is rendered translucent and colored.

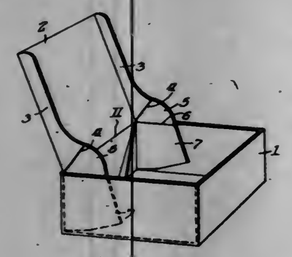
1,450,331. PLUNGER LOCK WITH CIRCUIT CONTROLLER FOR RAILWAY SWITCHES. WALTER P. NEUNERT, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Aug. 29, 1922. Serial No. 585,033. 3 Claims. (Cl. 246—253.)

2. In combination, a casing provided with a rectangular slot, a rectangular plunger mounted to reciprocate in said slot and adapted for co-operation with a railway switch lock rod, said plunger having a recess in its under surface, a rocker arm pivotally mounted beneath said plunger and having two rollers co-operating with the plunger in such manner that when the plunger is projected into locking position one roller occupies said recess and the other roller coacts with an unrecessed point on the under surface of the plunger, whereas when the plunger is retracted to unlocking position the first roller engages an unrecessed point on the under surface of the plunger and the second roller is free from the inner end of the plunger, and a circuit controller located in said casing and operated by said rocker arm.



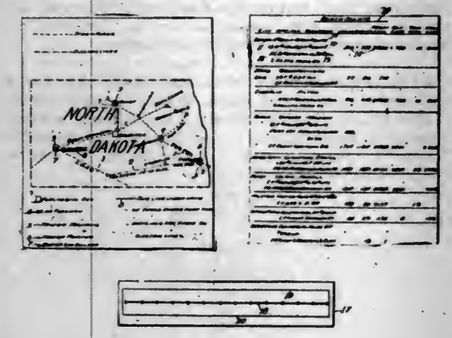
1,450,332. MOTOR-DRIVEN SLED. LUDWIK R. PIETRAS, Joliet, Ill. Filed Mar. 30, 1921. Serial No. 456,826. 1 Claim. (Cl. 180—4.)

A vehicle propelling mechanism comprising a frame, a power driven shaft mounted therein, a pair of cranks on said shaft, casings attached to said frame at the sides of



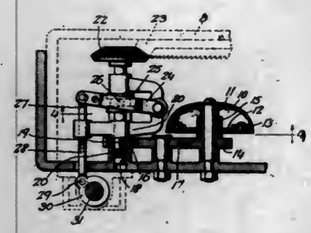
said cranks and extending therebelow, connecting rods engaging said cranks, guide bearings for said rods, said bearings being pivotally carried by adjacent pairs of said casings parallel with said shaft, and curved shoes fixed on the free ends of said rods, said shoes having teeth on their outer convex faces adapted to engage the surface over which the vehicle travels.

1,450,333. PUMP CONSTRUCTION. ANDREW H. REED, Fullerton, Calif. Filed May 24, 1922. Serial No. 563,210. 2 Claims. (Cl. 103—220.)



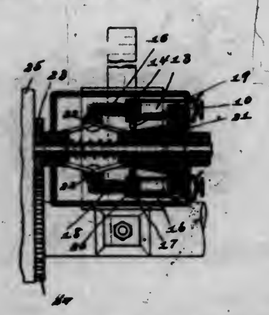
1. In a pump construction, the combination with the standing valve thereof, of a perforated pipe connected with the standing valve, a valve cage connected with the lower end of the perforated pipe and having openings in its side and having a port communicating with the pipe, a valve stem guide connected with the valve cage and having an upwardly tapering portion projecting above the lower ends of the valve cage openings, there being a bore at the axis of the valve stem guide, a valve to close the port and opening downward therefrom and having a stem slidably fitting the bore of the guide, and a spring surrounding the valve stem between the guide and valve.

1,450,334. PASTEBOARD BOX. HANS SCHWENNEKE, Chicago, Ill., assignor to Globe Paper Box Company, Chicago, Ill. Filed Apr. 26, 1921. Serial No. 464,580. 9 Claims. (Cl. 206—44.)



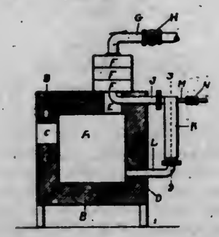
1. In a pasteboard box or the like, a cover singly hinged from a side of the box having a folding pasteboard portion thereof which forms a supplemental hinge for the cover and which will unfold to form a means to limit the gyration of the cover, the limit of gyration being beyond the line of the side of the box to which the cover is hinged, so the angle between the inside face of the cover and the inside face of the hinged side of the box will be more than one hundred and eighty degrees.

1,450,335. TRAVEL AND SALES GUIDE. JOHN H. SHARP, Chicago, Ill. Filed June 27, 1918. Serial No. 242,230. 2 Claims. (Cl. 35—6.)



1. In a travel guide of the kind described and in combination, a geographical chart drawn to scale and provided with symbols designating desired points thereon, a series of symbolic lines connecting said desired points and indicating the detailed character of the travel therebetween, and another series of symbols for visually indicating facts relative to said desired points and intermediate points whereby a travel route may be determined in advance, based upon the facts set forth on the chart, a transparent graduated gage provided with means for indicating distances between points corresponding with the scale to which the chart is drawn and for indicating territory within a predetermined area at each side of the line connecting said desired points, and means provided with minutely detailed information regarding said points.

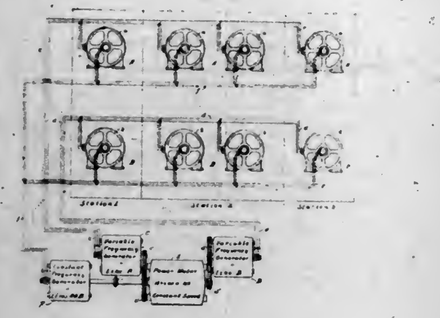
1,450,336. AUTOMOBILE PROTECTIVE DEVICE. JOHN H. SHARP, Chicago, Ill. Filed Nov. 22, 1919. Serial No. 339,906. 5 Claims. (Cl. 116—33.)



3. A vehicle attachment of the character described, comprising an alarm mechanism disposed within the interior of the brake drum housing and carried by the axle housing, actuating means therefor comprising driving gears, a driven shaft, means for driving said shaft comprising intermeshing gears, one being carried by the shaft and the other by the brake drum, means for supporting the shaft for a sliding movement to move said last mentioned gears into or out of operative relation, and means for shifting said gears including a shiftable arm, a bracket supporting the arm, and locking mechanism for maintaining said gears in operative relation to cause an actuation of the arm upon a rotation of the vehicle wheels.

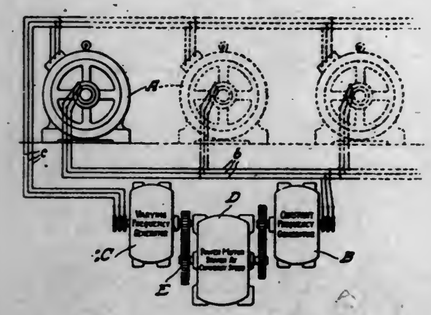
1,450,337. AUTOMOBILE SIGNAL. MYRON D. SHIVERICK, Albany, N. Y., assignor to Sweet & Doyle Foundry and Machine Co., Green Island, N. Y., a Corporation of New York. Filed Mar. 14, 1921. Serial No. 451,958. 6 Claims. (Cl. 175—355.)

1. The combination with a vehicle, of an electric signal included in an electric circuit with two circuit-making-and-breaking members, a centrifugal governor operated in accord with the driving mechanism of the vehicle, means associated with each of said members to close the circuit when the speed of the vehicle is decreased below or increased above a predetermined limit.



1,450,338. APPARATUS FOR PRODUCING GASEOUS FUEL. MAX SKLOVSKY, Moline, Ill., assignor to Deere and Company, Moline, Ill., a Corporation of Illinois. Filed Mar. 13, 1917. Serial No. 154,588. 6 Claims. (Cl. 158—4.5.)

1. An apparatus of the character described, comprising a furnace having a combustion chamber, a vaporizing chamber arranged to discharge into said combustion chamber, means for supplying said vaporizing chamber with air heated to a temperature high enough to substantially wholly vaporize fuel oil and for causing said air to flow through said vaporizing chamber at high velocity, and a fuel oil supply pipe discharging into said vaporizing chamber at a point remote from the outlet therefrom to the combustion chamber, for introducing fuel oil into the stream of air flowing through said vaporizing chamber, whereby the oil will be thoroughly intermixed with the air by the velocity of the latter, and substantially vaporized by the temperature of the heated air during the time it is associated therewith in the vaporizing chamber before discharge into the combustion chamber.

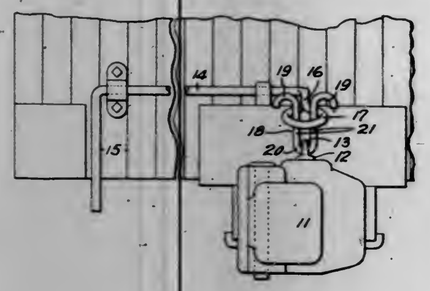


1,450,339. INTERMITTINGLY-OPERATING MOTOR SET. REUBEN STANLEY SMITH and JAMES L. ADAMS, Jr., Milwaukee, Wis., assignors to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Aug. 4, 1919. Serial No. 315,189. 19 Claims. (Cl. 172—237.)

19. In an electric motor drive system, motors separately grouped, and means for supplying a current of constant frequency to one element of the motors of the several groups, in combination with means for supplying

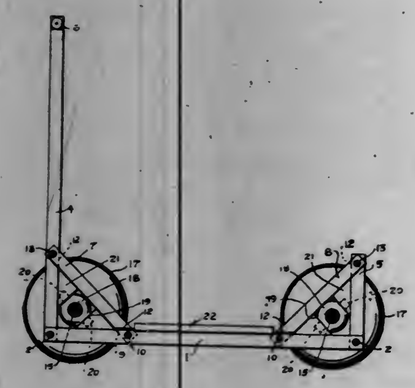
currents of varying frequency to the other element of the motors of the different groups in periods alternating with each other.

1,450,340. INTERMITTINGLY-OPERATING MOTOR SYSTEM. REUBEN STANLEY SMITH and JAMES L. ADAMS, Jr., Milwaukee, Wis., assignors to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Oct. 20, 1919. Serial No. 331,824. 11 Claims. (Cl. 172—237.)



10. The method of driving an electric motor at a varying speed in recurrent periods of rising and falling frequency, said method comprising the generation and delivery of a current of constant frequency to one element of the motor, and the generation and delivery of a current of varying frequency to the other element of the motor, the varying frequency current at its minimum and the constant frequency current being of equal value, the motor making the same total number of revolutions in each of said recurrent periods.

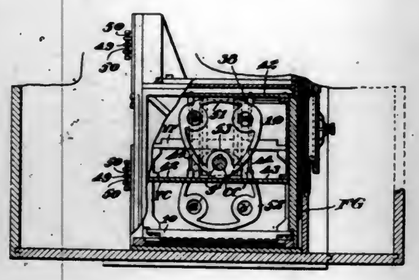
1,450,341. CAR-UNCOUPLING DEVICE. ERNEST R. VIBERG, Montreal, Quebec, Canada, assignor to Sterling H. Campbell, St. Louis, Mo. Filed Oct. 4, 1920. Serial No. 414,579. 5 Claims. (Cl. 213—170.)



3. In an uncoupling device, the combination of a coupler lock pin having an eye at its upper end, an uncoupling lever provided with a vertical eye, a substantially U-shaped link engaging the eye of the pin and having both arms passing through the lever eye, the upper extremities of said arms being turned outwardly to engage with the uncoupling lever to lift the pin and the eye of the un-

coupling lever being large enough to receive the upper end of the lock pin, whereby the parts may be assembled

in operative relation by threading the link through the eye of the pin while the head of said pin extends through the eye of the lever.

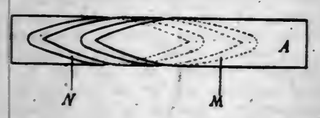


1,450,342. TOY SCOOTER. EDWARD M. WALKER, Detroit, Mich. Filed Aug. 5, 1921. Serial No. 489,945. 5 Claims. (Cl. 280—87.5.)

2. A coasting vehicle comprising a body, uprights at the ends of said body, braces connecting said uprights to said body, bearing blocks mounted between said body, uprights and braces, axles trunnioned between said bearing blocks, and wheels on the ends of said axles.

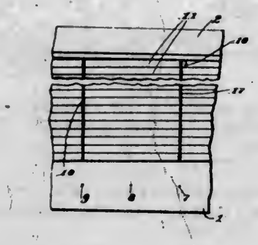
1,450,343. CINEMATOGRAPHIC FILM-FEEDING MECHANISM. WILLIAM BURTON WESCOTT, Wellesley, Mass., assignor, by mesne assignments, to Technicolor Motion Picture Corporation, Boston, Mass., a Corporation of Maine. Original application filed Sept. 11, 1916, Serial No. 119,377. Divided and this application filed Apr. 25, 1921. Serial No. 464,204. 23 Claims. (Cl. 88—18.4.)

1. Motion picture apparatus comprising a reciprocating film-feeding member, one or more counterbalancing reciprocating member or members, and means for reciprocating said members in opposite directions, whereby vibration



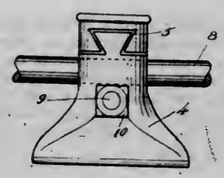
due to the reciprocation of said film-feeding member is prevented.

1,450,344. CUFF BUTTON. EBEN F. WILDE, Attleboro, Mass., assignor to The Baer & Wilde Company, Attleboro, Mass., a Corporation of Massachusetts. Filed July 14, 1922. Serial No. 575,009. 13 Claims. (Cl. 24—162.)



1. A cuff button having male and female members, the male member thereof comprising a body portion having a head at one end and a stud member fixedly embedded in said body portion at its other end and projecting therefrom, said stud member being of drawn sheet steel.

1,450,345. RECIPROCATING POWER AIR PUMP. ROY W. ADAMS, New Britain, Conn. Filed Feb. 20, 1922. Serial No. 538,045. 1 Claim. (Cl. 74—14.)

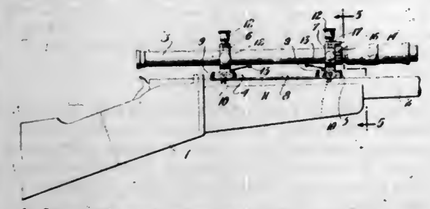


In mechanism of the kind described the combination of a plunger which reciprocates and revolves and which contains two similar endless spiral grooves, a revolving member mounted on the plunger, a means of supporting the plunger on both sides of the revolving member, a member set in the revolving member and engaging one of the grooves in the plunger, a member set in the means of supporting the plunger and engaging the other groove in the plunger, substantially as set forth.

1,450,346. PROCESS OF MAKING RESILIENT SPLIT RINGS. JAMES G. ANDERSON, Needham, Mass., assignor to Pressure Proof Piston Ring Company, Boston, Mass., a Corporation of Massachusetts. Filed Mar. 5, 1921. Serial No. 449,925. 8 Claims. (Cl. 29—156.6.)

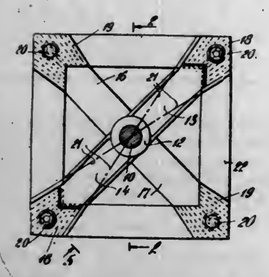
1. That process which comprises removing a short section from a turn of a helical coil of tempered wire by spaced cuts whereby to cause the remainder of such turn to assume the form of an open compressible ring.

1,450,347. TROLLEY AND FEED WIRE CLAMP. LUTHER E. ARMENTROUT, Borderland, W. Va. Filed Jan. 3, 1923. Serial No. 610,508. 1 Claim. (Cl. 191—43.)



A clamp for the purpose specified comprising a shank portion screw threaded to receive the suspension bolt, a depending clamp portion extended laterally with semi-circular grooves to receive the feed wire and the trolley wire and a clamp plate provided with corresponding grooves, and means for clamping the two together, the clamp plate and shank being correspondingly mortised and tenoned to hold the clamp plate during the tightening of the clamp.

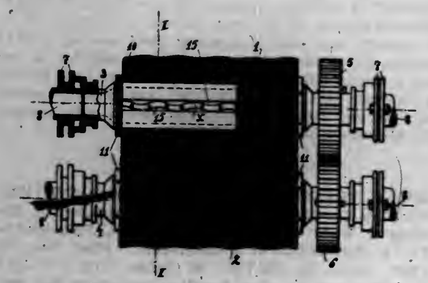
1,450,348. RING TWISTING OR SPINNING DEVICE. HERBERT G. BEEDE, Pawtucket, R. I. Filed Feb. 3, 1922. Serial No. 533,798. 10 Claims. (Cl. 118—56.)



1. A ring spinning or twisting device comprising a ring rotatable about its own axis, and automatic means comprising a yarn engaging element for regulating the speed of rotation of said ring both in normal operation and in stopping.

1,450,349. TELESCOPE RIFLE SIGHT. WARREN S. BELDING, Philipsburg Borough, Pa. Filed Oct. 25, 1921. Serial No. 510,345. 3 Claims. (Cl. 33—50.)

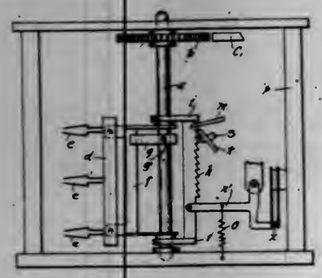
1. In a telescopic rifle sight two mount bases each rigidly attached to the opposite ends of a suitable metallic connecting bar, said bar itself and means whereby each base and each end of the bar may be rigidly attached to a rifle barrel.



1,450,350. UNIVERSAL JOINT. HARVEY W. BELL, Yonkers, N. Y., assignor to The Beloyt Corporation, Dover, Del., a Corporation of Delaware. Filed Jan. 11, 1921. Serial No. 436,434. 2 Claims. (Cl. 64—96.)

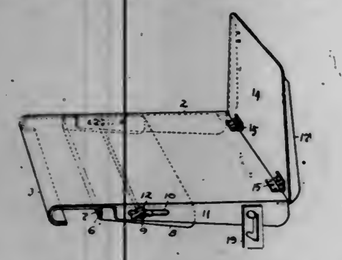
1. In a universal joint, strips of flexible fabric arranged end to end in the form of a polygon, the adjoining ends of the several strips being angled to fit closely together in substantially abutting relation, a coupling member having arms carrying clamps each engaging end portions of two adjoining strips, and a second coupling member having arms carrying clamps each engaging other end portions of adjoining strips.

2. The structure of claim 1 in which the clamps are angled to fit the corners formed by the abutting strips and each extend across the full width of both abutting strips.



1,450,351. ROLLING MILL FOR MANUFACTURING CORRUGATED PASTEBOARD, SHEET METAL, AND THE LIKE. ALBERT BERAN, Hirschwang, Austria. Filed Apr. 22, 1922. Serial No. 556,099. 3 Claims. (Cl. 153—77.)

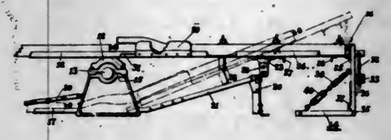
1. A roll for manufacturing corrugated goods having corrugations curved longitudinally comprising a support-



ing shaft, a plurality of disks mounted on such shaft and having projections on their outer circumferences, the said disks being exactly alike each other, a key having a curved portion engaging with the said disks and a portion adapted to be passed into and to engage with a groove in the said supporting shaft, and means for removably holding in position the disks and the key on the supporting shaft.

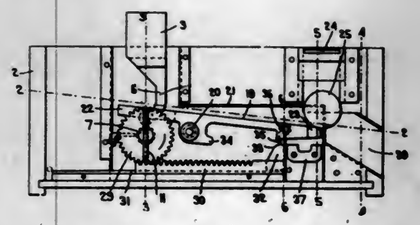
1,450,352. SELECTING SWITCH FOR USE IN TELEPHONE SYSTEMS. KURT BÖHME, Berlin-Siemensstadt, Germany, assignor to Siemens & Halske Aktiengesellschaft, Wernerwerk, Siemensstadt bei Berlin, Germany. Filed Nov. 3, 1922. Serial No. 598,724. 7 Claims. (Cl. 179—27.5.)

1. In an automatic switch, a rotatable shaft, a wiper carriage slidably mounted on said shaft, a toothed rachet for moving said carriage along the shaft, and means slidably supporting said ratchet on the shaft directly opposite the normal position of said carriage.



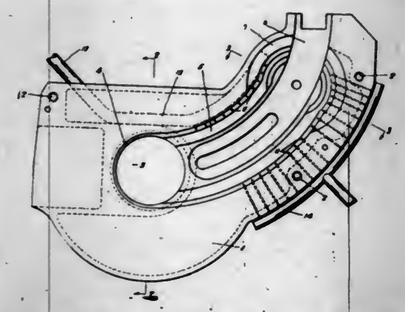
1,450,353. WINDOW SEATING ATTACHMENT. SAMUEL CHAPMAN, Cleveland, Ohio. Filed May 10, 1921. Serial No. 468,291. 3 Claims. (Cl. 304—24.)

1. A window seating attachment, comprising a sheet metal seat having strengthening flanges extending part of its length at each side thereof and provided with a hook-shaped extremity at its front end and a folding back at its opposite end, and a clamping plate having a front clamping flange and side tapering flanges adapted to rest upon a sloping sill, and a tie rod and thumb nuts extending through said side flanges and transversely beneath said seat and clamping plate, and thumb nuts engaged with the ends of said tie rods.



1,450,354. TRANSFER MECHANISM FOR CONVEYERS. WILLIAM H. CLAY, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 12, 1920. Serial No. 423,764. 26 Claims. (Cl. 198—43.)

1. A device of the class described comprising the combination with conveyer mechanism having upper and lower stretches provided with means to engage and move the articles to be carried, of a tilting table pivotally mounted at one end of said conveyer mechanism, and adapted to be

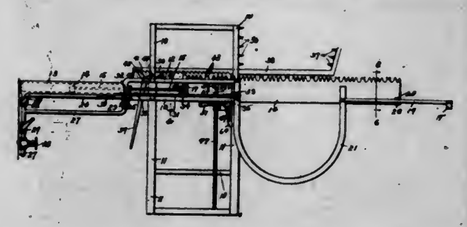


tilted to and fro to bring it into operative relation with the upper and lower stretches, respectively, of said conveyer mechanism.

1,450,355. COIN-CONTROLLED LOCK. MYER COHEN, Revere, Mass. Filed June 1, 1920. Serial No. 385,418. 12 Claims. (Cl. 194—51.)

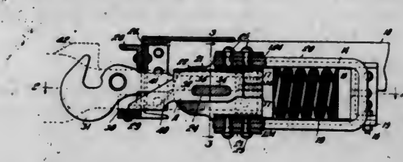
11. In a lock for a drawer or other container, the combination with a key-operated bolt, of a coin slot, and coin-controlled means normally preventing the bolt from being operated to lock the drawer but adapted to permit such operation upon the deposit of a coin in the coin slot, said means again becoming operative to lock the bolt from movement after the bolt has been actuated to unlock and lock the drawer again.

1,450,356. CAP STERILIZER AND CAN-CENTERING PLATE FOR CAN-SEALING MACHINES. ALBERT N. CRAMER, Columbus, Ohio. Filed Mar. 11, 1918. Serial No. 221,786. 7 Claims. (Cl. 113—14.)



7. A centering plate comprising means for sterilizing a cap and then supporting it in position for application to a can.

1,450,357. CROSSCUT SAWING MACHINE. EARL W. CURTIS, Fort Madison, Iowa. Filed July 1, 1920. Serial No. 393,275. 8 Claims. (Cl. 143—68.)



1. In combination, a track; a carriage mounted on the track; a screw shaft mounted on the carriage and having threaded connection with the track; a ratchet wheel on the screw shaft; a reciprocatory member mounted on the

carriage; a rotary member journaled on the screw shaft; a strap wound on the rotary member and connected with said reciprocatory member; a pawl engaging the ratchet

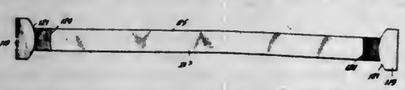
wheel and mounted on the rotary member; a spring connected with the rotary member; and an adjustable stop in the path of the reciprocatory member.

1,450,358. RAILWAY DRAFT RIGGING. CHARLES E. DATH, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Sept. 18, 1920. Serial No. 411,317. 9 Claims. (Cl. 213—69.)

1. In a railway draft rigging, the combination with a hooded yoke; of a coupling having a shank transversely recessed intermediate its ends; an intermediate member disposed within the yoke hood and having a longitudinally extending opening within which said shank is received and provided also with a transversely extending opening; and a key extending through said opeping of said member and engaging said shank within said recess of the latter.

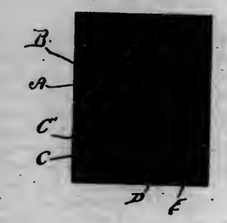
1,450,359. MOUTHPIECE FOR SMOKING TOBACCO. RICARDO DOCAMPO, Buenos Aires, Argentina. Filed Apr. 6, 1918. Serial No. 227,110. 3 Claims. (Cl. 131—22.)

3. In a device of the class described, in combination, a tubular tobacco container closed at both ends and having a lateral opening for replenishing the supply of tobacco, a mouth piece at one end of said tubular container, a passage communicating with said mouth-piece and the opposite end of said tubular container, means including a disk arranged within said tubular container for progressively moving the tobacco therein against the end of said container with which said passage communicates, and a ring connected with said disk through said lateral opening, adapted partially to surround said reservoir and constitute positioning and guiding means for said disk.



1,450,360. SELF-COMPUTING LEVEL ROD. EDWARD P. EFFERTZ, Winona, Minn. Filed Nov. 6, 1920. Serial No. 422,196. 6 Claims. (Cl. 33—74.)

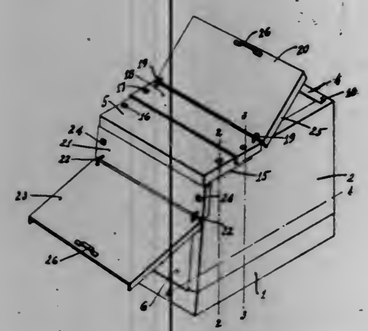
1. A level rod comprising a rod member provided with a scale at each side thereof, said scales reading in opposite direction, a ribbon arranged on said rod to move between said scales, said ribbon having scales on its outer



face adjacent the scales on said rod member, the scales on said ribbon reading in opposite directions to each other.

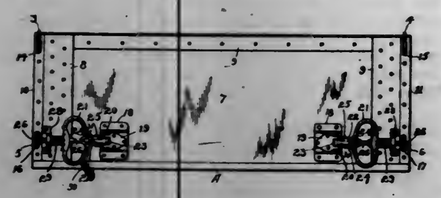
1,450,361. PROCESS OF MANUFACTURING DRAFT-RIGGING YOKES. GEORGE G. FLOYD, Riverside, Ill., assignor to William H. Miner, Chazy, N. Y. Filed July 24, 1919. Serial No. 313,097. 1 Claim. (Cl. 29—167.)

The herein described process of manufacturing an assembled yoke having a hollow head and a substantially U-shaped strap which, when assembled in operative condition, have shouldered engagement with each other, including: providing a hollow head having side, top and bottom walls; providing a substantially U-shaped strap of the finished size and form employed in the operative structure, each of the arms of the strap having spaced shoulders adapted for engagement with portions of said head when the two parts are operatively assembled; temporarily deforming said strap of the finished size and form to an overall height less than the distance between the top and bottom walls of the head to permit the head and strap being telescopically assembled; telescopically assembling the head and temporarily deformed strap; and finally reforming the strap to its finished size and operative form with the shoulders thereof in cooperative relation with the corresponding portions of the head.



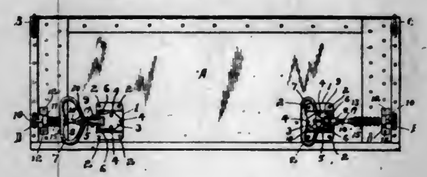
1,450,362. ELECTRIC COIL. PHILIP GILINSON, Lowell, Mass., assignor to Butler Ames, Lowell, Mass. Filed Feb. 10, 1919. Serial No. 276,007. 5 Claims. (Cl. 175—21.)

4. In an electric coil an insulator comprising a pair of superposed ribbons of insulating material, one of the rib-



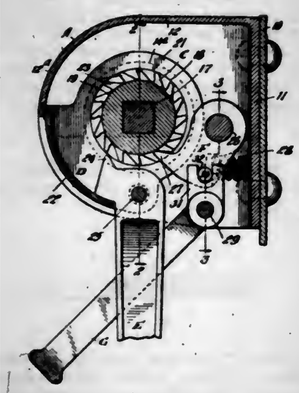
bons being wider than the other and being folded over the other at both sides, and a conductor wound around said insulator upon the narrow ribbon and between the folded over ends of the wider ribbon.

1,450,363. GARBAGE RECEPTACLE. SAMUEL GLENN, Detroit, Mich. Filed Sept. 14, 1921. Serial No. 500,618. 1 Claim. (Cl. 220—22.)



A garbage receptacle comprising a bottom, side and end walls, plates having their ends extended at right angles to the major portion of the plates to provide flanges, one of said plates being engaged with the top of the side walls, the flanges of said plates engaging the edges of said walls to assist in supporting the walls, the remaining plates being engaged with the front ends of the side walls, the flanges of the second mentioned plates engaging the edges of the side walls to assist in supporting said walls, means securing said plates to the walls, and a cover plate hinged to each of said plates remote from the hinged connection of the adjacent plate.

1,450,364. END GATE. JOSEPH M. GRAY, Brownstown, Ind., assignor of one-third to Joseph M. Robertson and one-third to Martin P. Pferrer, both of Brownstown, Ind. Filed Mar. 20, 1922. Serial No. 545,263. 1 Claim. (Cl. 296—53.)

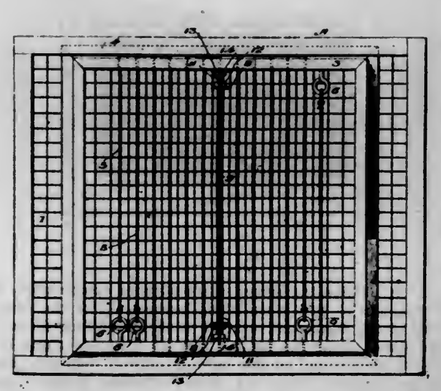


In combination with a vehicle bed adapted to receive an end gate to close the end thereof, flat-hooks extending out and back from the end of the upper portion of the bed, shackles extending out and back from the lower portion of the end of the bed, an end gate having channels at each end to receive the ends of the sides of the bed, there being slots in the bottoms of said channels through which said hooks and shackles project rearward beyond the end gate with the end gate suspended upon said hooks, plungers adapted to enter eyes in said shackles to lock the end gate in operative position, handles for manually operating said plungers, and spring means for positively holding the plungers resiliently in or out of operative position.

1,450,365. END-GATE LATCH. JOSEPH M. GRAY, Brownstown, Ind., assignor of one-third to Joseph M. Robertson and one-third to Martin P. Pferrer, both of Brownstown, Ind. Filed Mar. 20, 1922. Serial No. 545,264. 2 Claims. (Cl. 292—66.)

1. A latch device comprising a shank pivoted at one end, a handle carried by the other end of the shank, a fork striding the central portion of the shank and pivoted thereto, a plunger integral with said fork, a shoulder on said plunger, a guide bracket through which the plunger may operate, a spring surrounding the plunger and pressing upon said shoulder and the guide bracket, and means for limiting the outward swing of the handle, all substantially as shown and described.

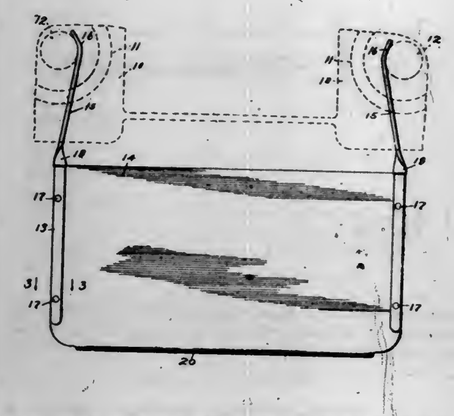
1,450,366. HAND BRAKE. STACY B. HASELTINE, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed May 8, 1922. Serial No. 559,166. 7 Claims. (Cl. 74—118.)



1. In a hand brake mechanism, the combination with a bracket adapted to be secured to a car wall; of a horizontally extending chain-winding member rotatably supported in said bracket; ratchet means for rotating said member step by step in a winding direction; means preventing accidental rotation of said member in an unwinding direction; and means for attaching the end link of the chain to said member including, two elements relatively longitudinally movable lengthwise of said member and having co-operable interlocking parts, one of said parts having a finger extending through the end link to thereby lock the latter between said elements when the elements are assembled.

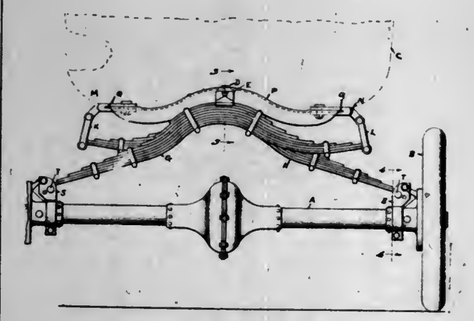
1,450,367. DECORATIVE FABRIC AND METHOD OF MANUFACTURING SAME. WALTER E. HAZELTINE, Stamford, Conn., assignor to Atlas Powder Company, Philadelphia, Pa., a Corporation of Delaware. Filed Jan. 15, 1921. Serial No. 437,406. 4 Claims. (Cl. 91—67.9.)

1. A figured fabric having a coating of transparent material the surface of which is embossed with a fine pebble grain to eliminate gloss.



1,450,368. EGG TRAY. FRANK E. HILT, Lyons, Kans. Filed Oct. 14, 1919. Serial No. 330,568. 2 Claims. (Cl. 99—6.)

1. An egg tray comprising a frame, continuous wires stretching thereacross and extending loosely through holes in opposite sides thereof, means with which the ends of the wires are connected for applying tension thereto, means comprising a rod having plates loosely mounted thereon with which ends of the wires are connected, and means on the rod for moving said plates along the rod to apply tension to the wires connected with said plates.



1,450,369. KEYBOARD SCREEN FOR TYPEWRITERS. OTTO A. HOKANSON, Woodstock, Ill., assignor to Woodstock Typewriter Company, Woodstock, Ill., a Corporation of Illinois. Filed Mar. 24, 1919. Serial No. 284,804. 3 Claims. (Cl. 197—105.)

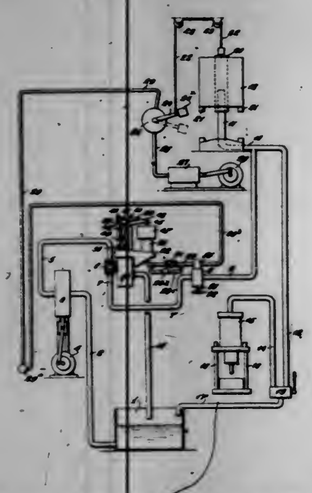
1. A typewriter keyboard screen comprising a plate having a ledge extending along the forward edge thereof and having resilient arms extending rearwardly from the opposite edge thereof, said arms having outwardly bent portions at their ends arranged to be sprung inwardly so that the ends of said bars will pass between upwardly

projecting portions on a typewriter and spring outwardly to resiliently engage said portions and hold said screen in place on said typewriter.

1,450,370. SPRING SUSPENSION FOR VEHICLE BODIES. JULIUS J. HUEBNER, Detroit, Mich. Filed Oct. 26, 1921. Serial No. 510,595. 1 Claim. (Cl. 267—44.)

Means for effecting the resilient suspension of a vehicle body upon its axle, comprising a yoke member and a cross bar member depending from the body, a pair of spring members each having a slidable engagement with said yoke member, and each of said spring members being curved in horizontal and vertical planes, a goose-neck connecting the upper end of each spring member with the cross bar member, and means for connecting the bent lower end of each spring member with that end of the axle on the opposite side of the vehicle from that whereon its corresponding goose-neck connection is located.

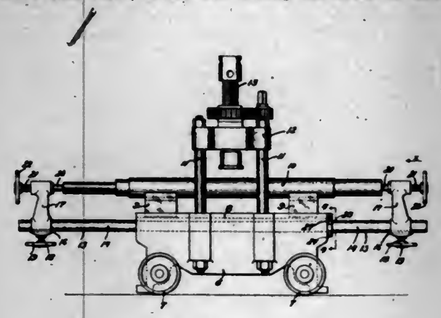
1,450,371. TRUCK CONVEYER. LEONARD E. HURST and JAMES F. MILLER, Detroit, Mich. Filed Dec. 30, 1922. Serial No. 609,870. 5 Claims. (Cl. 104—162.)



2. In a conveyer for trucks, a pair of tracks for the truck wheels, guides between the tracks, a pair of bars slidably mounted in the guides, dogs mounted on the bars and adapted to engage projections on the trucks, and

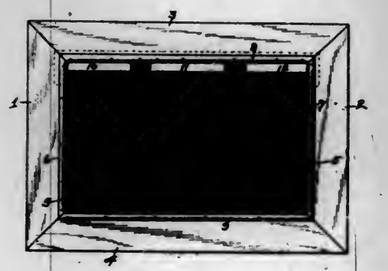
means to move the bars back and forth comprising a worm wheel, a vertical shaft on which said worm wheel is

mounted, means to rotate the worm wheel, a crank pin mounted on the worm wheel and a connecting rod extending from the crank pin to said bars.



1,450,372. FLUID-PRESSURE SYSTEM. WILLIAM E. IRISH, Cleveland, Ohio, assignor to The Hydraulic Pressed Steel Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 16, 1919. Serial No. 290,621. 22 Claims. (Cl. 138—10.)

1. In a system of the character described, the combination with a conduit, of means for forcing fluid thereinto under pressure, a device for temporarily diverting from said conduit a part of the fluid forced thereinto, fluid control means for operating said device, said device being operable to divert said fluid from said conduit by a diminution of pressure in said fluid control.

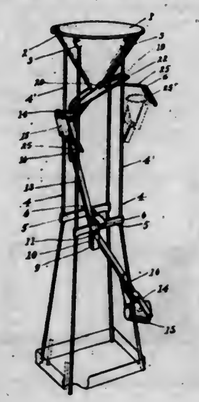


1,450,373. STRAIGHTENING PRESS. FRANK S. JONES, Philadelphia, Pa. Filed May 1, 1920. Serial No. 378,145. 5 Claims. (Cl. 153—53.)

1. A straightening press including a base, straightening means, aligned blocks for supporting an article to be straightened, a shaft rockably mounted upon the base under, and in the same vertical plane with, the centers of the supporting blocks, arms slidably mounted upon the rock shaft and adapted to be moved to extend vertically above said shaft, means for locking the arms in their

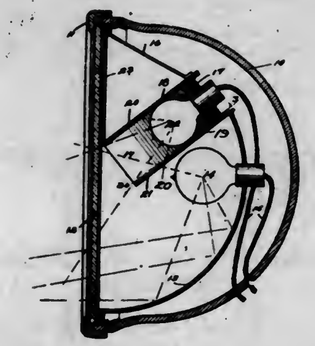
vertical position and centering members carried by the arms and movable into position to support the article above the supporting blocks, substantially as described.

1,450,374. FLY-ELIMINATING SCREEN. JAMES E. JONES, Richmond, Ind. Filed Feb. 28, 1921. Serial No. 448,314. 1 Claim. (Cl. 156—37.)



A fly eliminating screen comprising in combination, a frame, a wire screen extending between all of the members of the frame and secured to the outer face thereof, the screen being cut horizontally at intervals along its upper portion and at the ends of each of said cuts the screen material being cut down vertically a short distance whereby the material between each part of the vertical cuts may be turned outward and downward thereby forming a plurality of slots, a blind which is impervious to light rigidly secured on the inside face of the frame and extending from the upper rail of the frame downward to a point below said slots thereby forming a pocket between the blind and the upper portion of the screen, all substantially as shown and described and for the purposes set forth.

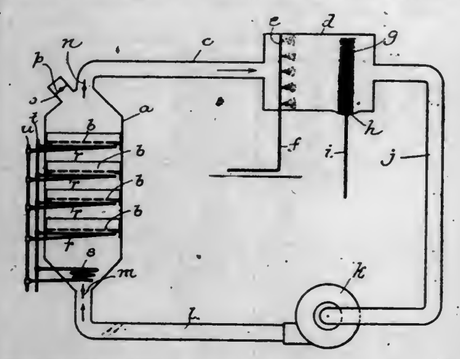
1,450,375. SAND TOY. GEORGE A. KEHL, St. Paul, Minn. Filed Dec. 10, 1921. Serial No. 521,354. 6 Claims. (Cl. 46—37.)



1. In a sand toy of the class described, the combination with the sand container, said container having an opening in the bottom thereof, of a trough open at the ends disposed symmetrically directly beneath said opening and spaced therefrom, tripping arms carried by said trough, horizontally disposed oblong openings, one in each side wall of the trough midway between the ends thereof,

said openings being on a level and aligned at right angles to the trough, a pin supported by the container

and extending through said openings, each of said openings having an arched upper edge for the purpose set forth.

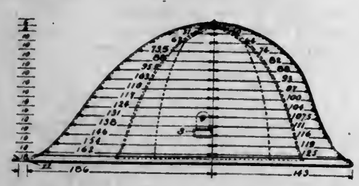


1,450,376. LIGHT-DEFLECTOR. WILLIAM R. MCANALLY, Fort Dodge, Iowa. Filed Nov. 30, 1921. Serial No. 518,817. 1 Claim. (Cl. 240—41.)

In a device of the class described, a casing open at its front, a reflector in the lower part of the casing, a bulb holder at the upper portion of said reflector, a closure member extending across the upper front portion of said casing, a reflector and light ray directing device mounted in the upper part of said casing, having a rear reflecting wall curved from end to end and from one side of the front of the casing to the other, and having flat upper and lower walls, inclined from their rear edges downwardly and forwardly, and a bulb holder at the back of said latter reflector.

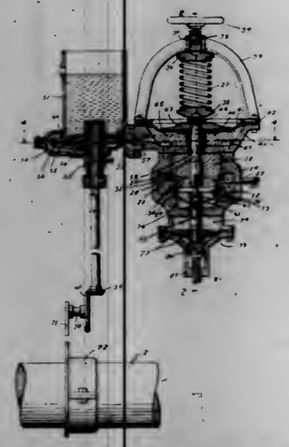
1,450,377. METHOD OF DRYING COLLOIDS. GEORGE PERKINS LUNT, New York, N. Y. Filed Apr. 7, 1916. Serial No. 89,680. 15 Claims. (Cl. 34—24.)

3. The method of drying colloids containing a volatile solvent, which consists in heating the material, passing an inert gas adapted to serve as a vehicle for the vapor of said solvent past and in contact with the heated colloidal material in a closed circuit, whereby the same gas is caused to make contact repeatedly with the material, and constantly removing such vapors from the gas at a rate regulated to maintain the vapor content of the gas at such degree of concentration that the rate of



surface evaporation from the material is substantially equal to the rate of diffusion of the solvent through the mass of the material.

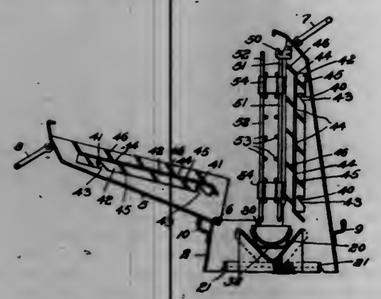
1,450,378. VEHICLE SPRING. WILLIAM D. KELLY, Riverside, Ill. Filed Aug. 5, 1922. Serial No. 579,848. 22 Claims. (Cl. 267—54.)



1. A laminated vehicle spring comprising a plurality of superposed tapered leaves of substantially the same length, spacers between the relatively movable free ends of the leaves, each spacer being rigid with one of the adjacent leaves and in sliding contact with the other, a supporting bracket, and an oscillating member journalled in said bracket and with which the free ends of said leaves are maintained in load-supporting relation with the free end of one leaf in fixed relation thereto.

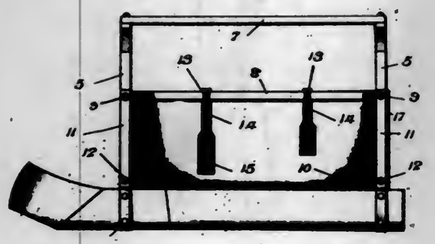
1,450,379. HELMET. JAMES E. MCNARY, Chicago, Ill., assignor to John W. Weeks, Secretary of War of the United States of America. Filed Sept. 7, 1920. Serial No. 408,734. 3 Claims. (Cl. 2—117.) Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. A continuously curved reversible helmet of substantial convex curvature at the top and gradually changing at all points of its circumference from the convex curvature at the top to concave curvature at the rim, the distance from the apex of the helmet to the front extremity of the rim being approximately 20% greater than the distance from the apex to the rear extremity of the rim thereby affording protection to the face and chest, and upon reversal affording protection for the neck and spine.



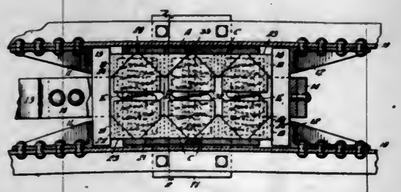
1,450,380. GOVERNOR. ADOLPH F. MEYER, St. Paul, Minn. Filed Mar. 29, 1920. Serial No. 369,604. 17 Claims. (Cl. 303—21.

1. Means for the automatic maintenance of any desired uniform speed of rotation of a driven member working under a friction load produced by fluid pressure including, a pass adapted to supply fluid under pressure, a valve movable to control the pressure under which said fluid is supplied, a rotary element actuated by said driven member, and fluid means co-operable with said element to control valve movement whereby said uniform speed of rotation is automatically maintained.



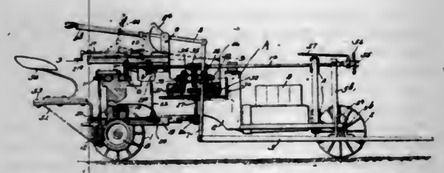
5. Means for the automatic maintenance of any desired uniform speed of rotation of a driven member working under a friction load produced by fluid pressure including, a pass adapted to supply fluid under pressure, a valve movable to control the pressure under which said fluid is supplied, elastic means straining to move said valve in one direction, fluid means straining to move said valve in an opposite direction, a pressure chamber for said fluid means, means on said valve projecting into said pressure chamber whereby variations in the straining effort of said fluid means in said chamber produce valve movement in said opposite direction, and a rotatory element actuated by said driven member and adapted to vary the straining effort of said fluid means in said chamber in proportion to the speed of rotation of said driven member whereby said uniform speed of rotation is automatically maintained.

1,450,381. GRILL. HERBERT C. MIEVILLE, Davenport, Iowa, assignor to Squire Products Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Feb. 14, 1921. Serial No. 444,721. 8 Claims. (Cl. 53—5.)



1. A broiler comprising a sheet metal casing adapted to seat over a burner, the walls of said casing tapering towards each other from the base, means to support a vertically disposed grill intermediate the walls of the broiler, baffle members positioned inside the broiler and adapted to cause heat from the burner to be directed against the said grill.

1,450,382. BOLL-WEEVIL TRAP. LESTER LEE MOORE, Winder, Ga. Filed June 20, 1921. Serial No. 478,869. 2 Claims. (Cl. 43—133.)



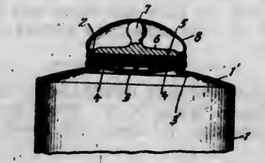
2. A portable trap to be moved over plants comprising spaced longitudinal pans, an arched frame secured at its terminals to the pans and including a transverse rod therein above the pans, weighted pendulums suspended on said rod for independent forward and rearward swinging movement only, and means on the rods for spacing the pendulums apart.

1,450,383. FRICTION SHOCK ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed May 6, 1920. Serial No. 379,327. 6 Claims. (Cl. 213—39.)

1. In a friction shock absorbing mechanism, the combination with a friction shell having a plurality of interior longitudinally extending friction surfaces; of series of friction wedges arranged in tandem formation, each series being disposed in an angle formed by two of the shell friction surfaces and cooperable with the latter; pairs of friction spring caps also arranged in tandem formation and each cooperable with a plurality of said wedges; and a spring resistance between each pair of spring caps.

1,450,384. PUSH-HARVESTER BINDER. SWAN OLSON, Minneapolis, Minn. Filed Feb. 17, 1921. Serial No. 445,839. 11 Claims. (Cl. 180—81.)

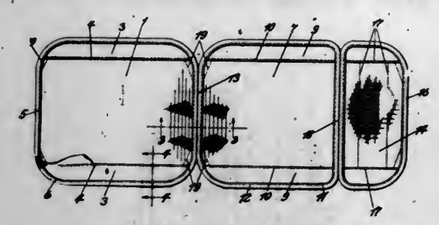
1. The combination with a push harvester and motor driven device for propelling the same, of a driving shaft



on said device, transmission mechanism connecting the same to the driving wheels for propelling said wheels including a clutch member, transmission mechanism for turning said wheels about a central vertical axis adapted to be connected and disconnected from said driving shaft, and means for simultaneously connecting the same to the driving shaft and disengaging said clutch.

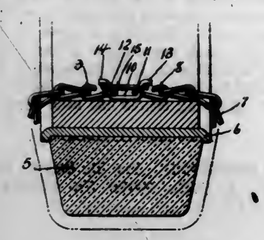
1,450,385. MOTOR PLOW. STEWART V. V. PRINCE, Washington, D. C. Filed Jan. 8, 1919, Serial No. 270,163. Renewed Apr. 13, 1922. Serial No. 552,136. 10 Claims. (Cl. 97—30.)

1. A tillage implement comprising an extended narrow frame, movable supporting means extending substantially throughout the base of the frame, a ground treating element connected to the forward end of said frame for movement therewith in both a longitudinal and transverse direction, and control leverage means extending upwardly from the rear portion of the frame for tilting the frame longitudinally and transversely.



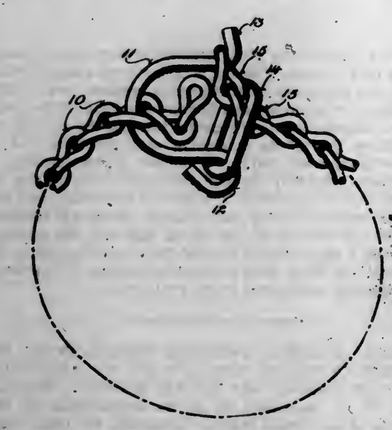
1,450,386. TOILET-POWDER CONTAINER. THOMAS J. REGAN, New York, N. Y. Filed Dec. 18, 1920. Serial No. 431,623. 1 Claim. (Cl. 132—82.)

An article of the kind described comprising a container having a discharge neck formed with a downwardly tapered interior face, a downwardly concaved partition extending across said neck, said partition having a series of apertures formed therein, a powder pad adapted to be carried in the neck of the container above the said partition and spaced from the depressed portion thereof and provide a seal preventing leakage of the powder from the container, and a cap secured upon the neck of the container and bearing against the said pad to hold the same in sealing engagement with its cooperating part.



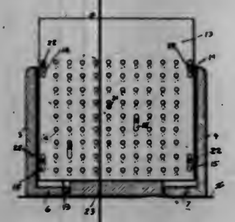
1,450,387. SEAT COVER. JOHN REECE, St. Louis, Mo., assignor to Evr-Klean Seat Pad Co., St. Louis, Mo., a Corporation of Missouri. Filed Mar. 13, 1922. Serial No. 543,298. 3 Claims. (Cl. 155—182.)

1. A seat cover, comprising back and seat members, whose exposed surfaces are composed of straw matting and whose back surfaces are composed of cloth, a marginal reinforcement around each of said members, a pivot connection uniting said members permitting one



to be folded flat against the other, and a drop pivotally united to the forward edge of the seat member and having the warp straws thereof extending laterally.

1,450,388. DETACHABLE CHAIN HOOK. JOHN G. RIEFF, London, Wis. Filed Jan. 24, 1922. Serial No. 531,333. 3 Claims. (Cl. 59—85.)



1. A detachable chain hook comprising a shank having offset oppositely projecting ends insertible through the respective links of a chain, and means removably secured between the offset ends and the respective links to lock the latter to the hook, said means permitting removal of each of said ends of said shank.

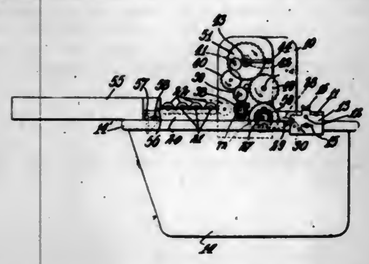
1,450,389. DETACHABLE CHAIN HOOK. JOHN G. RIEFF, London, Wis. Filed June 26, 1922. Serial No. 571,096. 2 Claims. (Cl. 59—93.)

1. The combination of a chain, a hook extending thru one of the links adjacent thereof, a closed loop pivotally secured to said hook, the other end of said chain extending thru said loop, and a finger on said hook extending thru a link on said latter end of the chain.

1,450,390. SEGREGATING APPARATUS. LEO S. ROBINSON, Alameda, Calif. Filed Dec. 30, 1918. Serial No. 268,974. 8 Claims. (Cl. 129—16.1.)

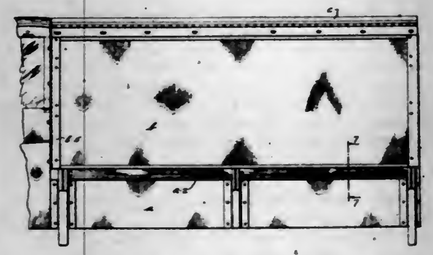
6. A segregating apparatus comprising a tray having removable supporting means therein; units having apertures therein adapted to be arranged in said tray; means for elevating said units with respect to said support means whereby said supporting means may be passed through the apertures in said units when the same are in the elevated position and may suspend the units thereon after the elevating means has been removed.

1,450,391. FASTENER. IRA D. SHAW, Boston, Mass. Filed June 4, 1921. Serial No. 475,054. 3 Claims. (Cl. 24—211.)



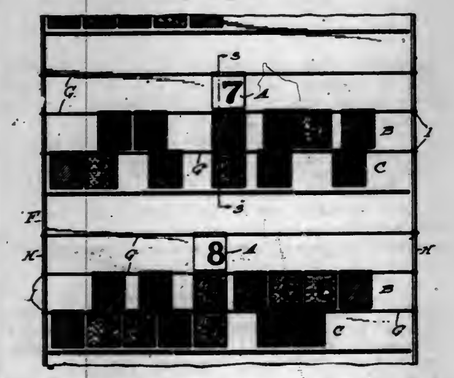
1. In a fastener, a stud member having an attaching head, a socket member having a casing with aligned openings in the top and bottom thereof, a resilient jaw within the casing for receiving and holding the head of the stud member introduced into the casing through the opening in the bottom thereof on combining said members, and a depressible member having a hollow crown forming a thumbpiece extending through the opening in the top of the casing and depressible from outside the casing, said depressible member having also a flange interposed between the jaw and the top of the casing adjacent the opening in it, and a part carried by said flange and operating to open said jaw when said depressible member is depressed by application of pressure to the thumbpiece.

1,450,392. PROCESS FOR THE PURIFICATION OF PROPIONATES BY THE ACTION OF BACTERIA. JAMES M. SHERMAN and EARLE O. WHITTIER, Washington, D. C., dedicated, by mesne assignments, to the people of the United States. Filed Aug. 26, 1922. Ser. No. 584,540. 4 Claims. (Cl. 260—122.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



4. The purification of propionates by bacterial action of *Bacterium alcaligenes* on salts of fermentable organic acids.

1,450,393. WASHING MACHINE. FRANK SIMONYE, New York, N. Y. Filed Sept. 10, 1921. Serial No. 499,800. 2 Claims. (Cl. 68—22.)

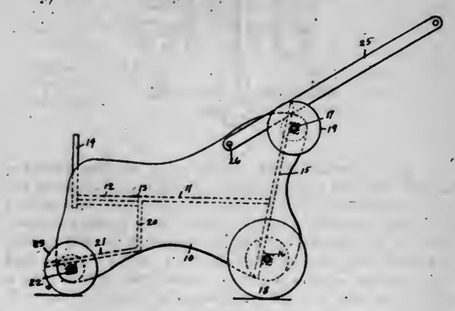


1. In a clothes washing machine, a pair of rotary brushes, a series of rollers adapted to feed the clothes between said brushes, a pair of brackets adapted to be fixed upon a wash-tub, a frame supporting said rollers and brushes, and means pivoting said frame to said brackets.

1,450,394. PANEL ADJUSTMENT FOR INCLOSED MOTOR VEHICLES. HORACE T. THOMAS, Lansing, Mich. Filed Feb. 25, 1921. Serial No. 447,812. 2 Claims. (Cl. 296—28.)

1. A panel having a strip of metal extending along its vertical edge, one-half of said strip being bent inward and secured and the other half being bent inward and then outward at right angles, the latter part being secured in place.

1,450,395. EDUCATIONAL APPLIANCE. NELLIE YORK TROIDL, Niagara Falls, N. Y. Filed Oct. 25, 1922. Serial No. 596,865. 7 Claims. (Cl. 35—2.)

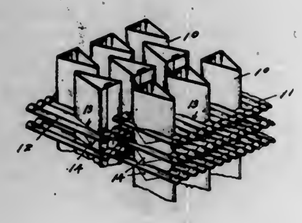


1. In an educational device, the combination of a support having thereon a plurality of sets of movable members, the members comprising a set bearing numerals differing one from another and presenting different appearances, each member of one set having an appearance similar to the appearance of one of the members of each of the other sets, whereby the members of similar appearance in different sets may be readily grouped together, and a master member bearing a number which when grouped with members of like appearance from the several sets completes a problem.

1,450,396. PROTECTOR FOR SHOES. EPHRAIM VIERTELS, New York, N. Y. Filed July 30, 1921. Serial No. 488,590. 1 Claim. (Cl. 36—72.)

A toe protector made of bendable metal comprising a bottom portion having a substantially vertical flange portion, and a turned-over ledge portion, the bottom of said protector and the said flange both having slots extending to said flange portion, whereby the said protector can have its size changed by merely bending the said flange.

1,450,397. CHILD'S VEHICLE. LEONA M. WEBER, now by decree of divorce LEONA M. CASE, Portland, Oreg. Filed Jan. 16, 1922. Serial No. 529,801. 2 Claims. (Cl. 280—47.)

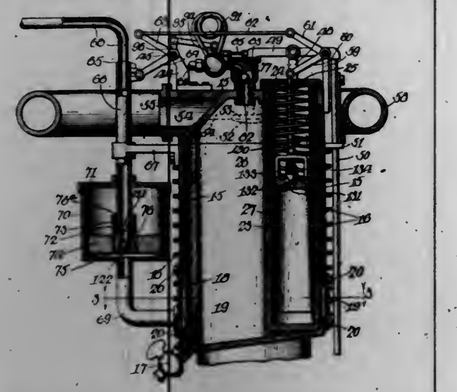


1. In combination, a vehicle having two side frames, a floor between said side frames, a foot board at one end of said floor, a pair of wheels attached to said side frames under said foot board, a head board at the opposite end of said floor, and two pairs of wheels attached to said side frames on the outer side of said head board.

1,450,398. PEN. ARTHUR WINTER, Jersey City, N. J., assignor of one-half to Frank H. La Pierre. Filed Feb. 24, 1919. Serial No. 278,562. Renewed Feb. 23, 1923. 3 Claims. (Cl. 120—42.)

3. In a pen, a fluid chamber, a plug for one end thereof provided with a duct therethrough, an ink chamber closed at one end thereof and rotatably secured to said plug, and provided with a port through the closed end thereof, said port and duct normally out of communication with each other, and so positioned relative to each other, that when said ink chamber is rotated, said duct and port register with each other to establish communication between said chambers.

1,450,399. RADIATOR. MEINHARD WITTE, St. Paul, Minn. Filed Oct. 11, 1920. Serial No. 416,083. 3 Claims. (Cl. 257—129.)



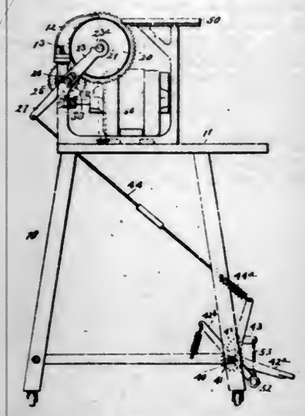
1. An automobile radiator comprising upper and lower tanks and staggered rows of tubes connecting the said tanks, one row of tubes having forwardly converging flat surfaces and the adjacent row of tubes having rearwardly converging flat surfaces, said converging surfaces of the tubes of the one row extending into the diverging spaces between the tubes of the other row, the opposing interlapped surfaces of the two rows of tubes being in parallel arrangement and affording air passages therebetween.

1,450,400. INTERNAL-COMBUSTION ENGINE. AUGUST L. WOLFF, Chicago, Ill. Filed Apr. 21, 1917. Serial No. 163,704. 34 Claims. (Cl. 123—122.)

1. An internal combustion engine including in combination a cylinder, a source of liquid fuel supply, a casing around the cylinder in communication with the cylinder and the source of fuel supply, a float and a valve controlling the fuel level in the casing, a valve controlling the

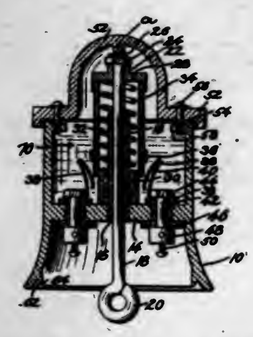
quantity of fuel admitted to the cylinder from the casing and a thermostat actuated by the heat of the cylinder

regulating the valve, to regulate the quantity of fuel admitted into the cylinder from the casing in proportion to the temperature variation of the cylinder.



1,450,401. ANIMAL POKE FOR RESTRAINING STOCK. EDWIN W. WOOD, Lockridge, Okla. Filed Dec. 22, 1922. Serial No. 608,553. 5 Claims. (Cl. 119—137.)

4. An animal poke as described comprising a plurality of longitudinally arranged members similarly formed, composed of wire or other suitable material the ends forming hooks blunt at the beaks, bent outwardly and upwardly, and oppositely each other, said members bent so as to form a link intermediate their ends with two strands of wire side by side at the top and a single strand at the base of said link, the links of said members fitted into each other so that the said two strands fit into the single strand of the link immediately above it, and the two stems with the hooks thereon are depended at right angles with the two stems and hooks immediately above.



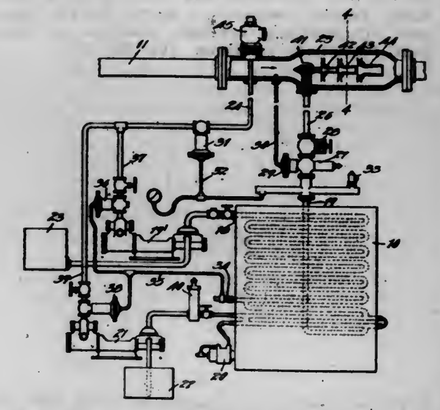
1,450,402. IRONING MACHINE. WILLIAM G. YATES, Cleveland, and GEORGE C. FATSCHER, Lakewood, Ohio, assignors, by direct and mesne assignments, to Barton R. Deming, Cleveland, Ohio. Filed May 9, 1921. Serial No. 468,069. 15 Claims. (Cl. 68—9.)

1. In an ironing machine, the combination of an ironing shoe, a rotatable ironing drum, a rocking frame having arms between which the drum lies and in which it is ro-

tatably mounted, one of said arms being movable out of supporting engagement with the drum.

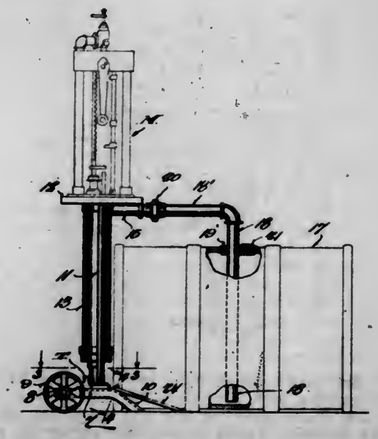
1,450,403. OIL CIRCUIT CLOSER. CHARLES A. YONT, Denver, Colo., assignor to The Flint Electric and Manufacturing Company, Denver, Colo., a Corporation of Colorado. Filed Oct. 13, 1919. Serial No. 330,353. 2 Claims. (Cl. 200—150.)

1. An oil circuit closer comprising a housing having a bottom wall and containing oil, a contact submerged in the oil, a vertically disposed sleeve threaded into said bottom wall and extending above the oil level, a spindle reciprocable in said sleeve, a member connected to said spindle and depending around said sleeve, a spring around said sleeve within said member to elevate the spindle, and a contact on said member to engage the submerged contact.



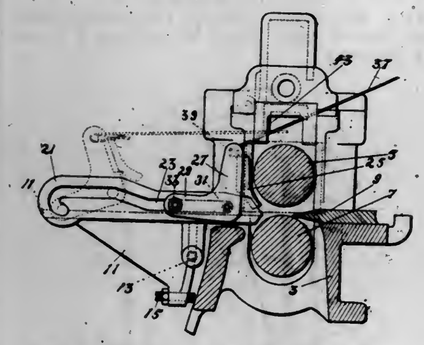
1,450,404. CONCRETE STAIR BLOCK. ANTON ANDERSON, Port Washington, Wis. Filed Sept. 16, 1921. Serial No. 501,070. 1 Claim. (Cl. 72—96.)

A concrete stairway consisting of separately formed stair blocks, each having an arched central portion to



provide an opening in its face, downwardly extending sides provided with recesses in their face to receive the adjacent block, and a pair of longitudinal supporting members positioned under the downwardly extending sides and having nesting engagement therewith, whereby said blocks and supports are held against relative lateral movement.

1,450,405. METHOD OF AND MEANS FOR THE PRODUCTION AND USE OF STEAM. ROBERT W. BARTON, Chicago, Ill. Filed Dec. 11, 1916, Serial No. 136,257. Renewed Mar. 30, 1922. Serial No. 548,149. 6 Claims. (Cl. 60—39.)

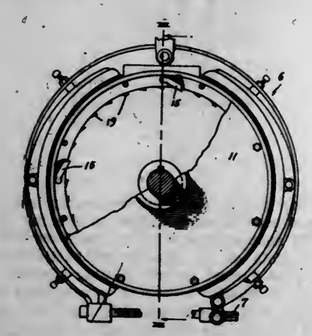


1. The herein described method of combining and mixing saturated steam and steam of high temperature and high pressure which consists in feeding water to a generator and producing high temperature and high pressure steam, causing saturated steam to flow through a conduit, injecting the generated steam into the stream of saturated steam, and controlling the pressure of the generated steam relative to the pressure of the saturated steam.

1,450,406. PORTABLE LIQUID PUMP FOR OIL CONTAINERS. EDGAR A. BIENENSTOK, Milwaukee, Wis., assignor to Milwaukee Tank Works, Milwaukee, Wis. Filed May 2, 1922. Serial No. 557,869. 4 Claims. (Cl. 103—218.)

1. A portable pump for cylindrical containers comprising a portable frame, adjustable members carried by the frame for preventing relative movement of the container, a pump mechanism carried on the frame, and means for operably connecting the pump with the container.

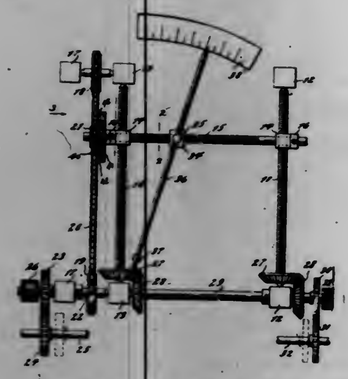
1,450,407. SAFETY DEVICE. CHARLES M. BRADFORD, Boston, and DARIUS W. BUNKER, Brookline, Mass., assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 8, 1919. Serial No. 275,846. 11 Claims. (Cl. 69—13.)



1. The combination with mechanism to which pieces of work are presented by an operator, of a table upon which the pieces are placed and over which they are presented, of a stationary finger guard located in front of the mechanism and spaced from the table to permit the work to pass between the guard and the table, and means whereby the space between the guard and the table may be increased by adjusting the guard over the table in a direction away from the mechanism.

1,450,408. ART OF PRESERVING APPLES. CHARLES BROOKS, Washington, D. C., dedicated, by mesne assignments, to the people of the United States. Filed June 19, 1922. Serial No. 569,383. 1 Claim. (Cl. 99—8.) (Filed under the Act of Mar. 3, 1883, 22 Stat. L., 625.)

A method of treating apples to prevent apple scald which consists in applying a thin coating of a mineral oil, beeswax, paraffin mixture to the apples.



1,450,409. REVERSE-MOVEMENT CONTROL FOR DRIVING AND DRIVEN ELEMENTS. CHARLES PAUL CIRAC, Fallon, Nev. Filed July 19, 1921. Serial No. 485,807. 6 Claims. (Cl. 188—30.)

1. In a reverse movement control for driving or driven elements, a drum mounted with freedom of rotation on said element, a disc housed within the drum and mounted to rotate with said element, means automatically con-

necting the disc in driving relation with the drum upon rotation in one direction, and means for arresting the rotation of the drum in both directions and through it the disc in a reverse direction, said automatic connecting means comprising a plurality of locking dogs pivotally mounted within the drum, notches on the periphery of the disc, means for automatically urging the locking dogs in said notches when the disc is rotated in one direction, and means capable of urging the dogs out of said notches when the disc is rotated in the opposite direction.

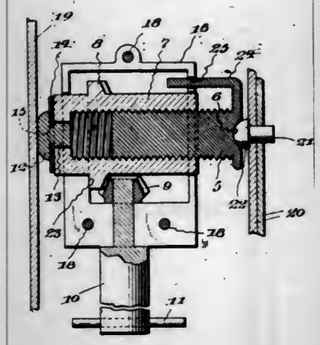
1,450,410. INDICATOR. DAVID C. COX, Pittsfield, Mass. Filed Dec. 20, 1921. Serial No. 523,623. 5 Claims. (Cl. 235—61.)

2. In a device of the class described, a cross screw, a nut thereon, supports for said cross screw at either end thereof and arranged to permit it to turn and to prevent longitudinal motion thereof, clock-actuated mechanism to move said supports in unison continuously in a direction at right-angles to the axis of the cross screw and unit-measuring mechanism connected to the cross screw and arranged to turn it in accordance with the number of units measured.

1,450,411. VEHICLE THEFT-PREVENTING DEVICE. EARNEST V. COY, Excelsior Springs, Mo. Filed Aug. 2, 1922. Serial No. 579,100. 2 Claims. (Cl. 116—33.)

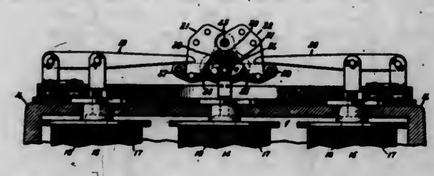
1. A device of the kind described comprising a body member, said body member having an opening extending through said member, means to lock said member to the exhaust manifold of an internal combustion engine, a shaft controlled damper in said opening adapted to close said opening, a whistle connected to said body member, the opening in said whistle extending into the body member opening between the damper and the opening into the exhaust manifold, a piston in said whistle, a connection between said piston and said shaft controlled damper and means to control said damper and said whistle piston to place said device in operative and inoperative position, said means comprising a lock.

1,450,412. PROCESS OF MAKING A COLORED PHOTOGRAPHIC IMAGE. LEON F. DOUGLASS, San Rafael, Calif. Filed Oct. 16, 1919. Serial No. 331,068. 1 Claim. (Cl. 95—88.)



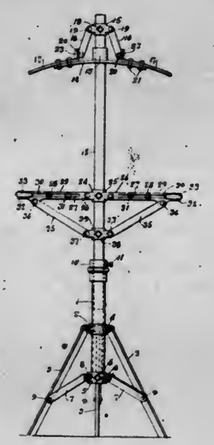
The process of making a colored photographic image from a black silver image, which consists in replacing the black silver image with an iron blue toned image, treating said converted image with a basic dye, and subsequently causing said image to mordant basic dyes by treating it with an alkaline solution.

1,450,413. VACUUM ELECTRIC DISCHARGE DEVICE. HERBERT W. EDMUNDSON and WILLIAM T. MUNRO, Rugby, England, assignors to General Electric Company, a Corporation of New York. Filed Mar. 10, 1919. Serial No. 281,649. 3 Claims. (Cl. 250—27.)



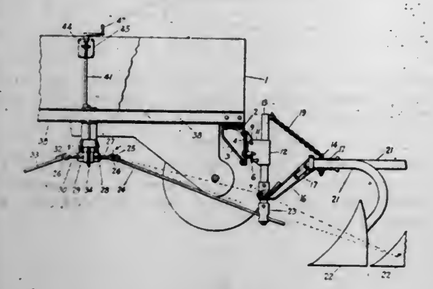
1. The combination in an apparatus of the class described of an evacuated receptacle containing a cathode adapted to be heated to incandescence and an anode adapted to receive electrons from said cathode, leading-in conductors sealed into the walls of said receptacle for supplying current to said cathode and anode, and a shield interposed between said anode and the region where said leading-in conductors are sealed into the walls of the receptacle for intercepting heat radiated from the anode said shield being out of contact with the walls of the receptacle.

1,450,414. RIVET HOLDER. WILLIAM E. FERGUSON, Louisville, Ky. Filed Jan. 30, 1922. Serial No. 532,772. 3 Claims. (Cl. 78—53.5.)



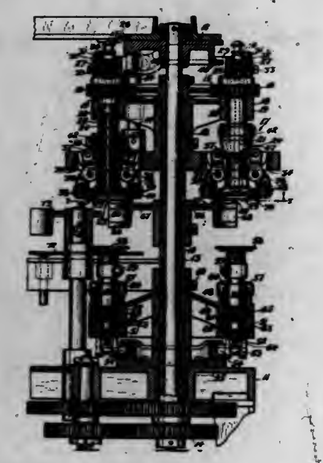
1. A rivet holder comprising a traveling screw having a rivet-engaging part, a non-traveling nut carrying the screw, said screw projecting from one end of the nut, a swiveled foot-piece carried by the other end of the nut, means for operating the nut, and a support for the nut and its operating means.

1,450,415. PROTECTIVE DEVICE. HENRY G. FRENCH, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 26, 1917. Serial No. 183,006. 13 Claims. (Cl. 175—294.)



1. The combination with an electric switch and a polyphase circuit controlled thereby, of a device for controlling said switch comprising independent elements responsive to load conditions in each phase, and means for holding side elements in equilibrium under balanced load conditions but operative to permit one or more of said elements automatically to open said switch on a condition of unbalance arising between any two of said phases beyond a predetermined amount.

1,450,416. GARMENT-FORM SUPPORTER. THOMAS C. FRESHOUR and BERT M. JENNINGS, Troy, Ohio. Filed Dec. 8, 1921. Serial No. 520,929. 3 Claims. (Cl. 211—24.)



1. In a garment form supporter, the combination with a post having a suitable base; of a shoulder rest mounted on the post and including a fixed collar, a lateral plate formed integrally with the collar and extending in opposite directions therefrom at each end, shoulder pieces slidably mounted on the plate at each end thereof and having pin and slot connection therewith, a slidable sleeve mounted on said post, links each having one end connected to the slidable sleeve and the other end connected to a respective shoulder piece; and a hip rest comprising a pair of sleeves slidable on said post and movable independently of each other, radial arms projecting from one of said sleeves, slides each having pin and slot connection with a respective arm, braces each having one end pivoted to a respective slide and the other end pivoted to the remaining sleeve of said pair, hip rests mounted on the outer ends of said slides, and means to hold the several sleeves in adjusted position.

1,450,417. PLOW-DEPTH-ADJUSTING DEVICE. KENT S. GINGERICK, Urbana, Ohio, assignor to Rial T. Parrish, Dayton, Ohio. Filed May 1, 1922. Serial No. 557,525. 4 Claims. (Cl. 97—98.)

1. In a tractor, the combination with a plow, of a supporting member having an annular portion, pivotally secured to said tractor, a column free to move through the annular portion of said supporting member, means for securing said plow to the column, and horizontal means attached to said column for rocking it and moving it vertically through the supporting member to tilt the plow a desired degree.

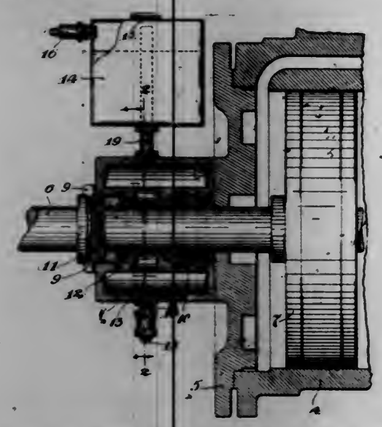
1,450,418. SEAMING HEAD FOR CAN MACHINERY. HENRY L. GUENTHER, Los Angeles, Calif. Filed Dec. 21, 1921. Serial No. 523,823. 10 Claims. (Cl. 113—24.)

10. A seaming head for can capping machines, comprising a can support, a rotary centering member adapted to fit over the mouth of a can and cap, seaming rollers adapted to form a seam between the cap and the can body, and a stripping plate movable vertically independently of the centering member.

1,450,419. DENTAL DEVICE FOR SPREADING TISSUES. JAY A. HEIDBRINK, Minneapolis, Minn. Filed Sept. 25, 1920. Serial No. 412,704. 3 Claims. (Cl. 128—17.)

1. A dental device for spreading tissues comprising a short tubular member provided with a screw-threaded

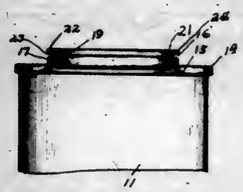
opening at one end, a screw fitting the threads of said opening, said tubular member being provided with two



diametrically opposite slots betwen its ends, and two arms normally stressed apart extending through said slots and having pointed front ends.

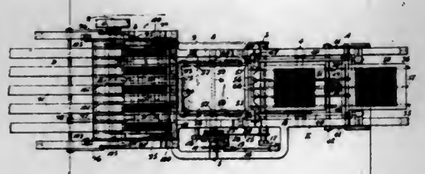
1,450,420. SENSITIZED-FILM HOLDER FOR X-RAY PHOTOGRAPHY. JAY A. HEIDBRINK, Minneapolis, Minn. Filed Apr. 21, 1921. Serial No. 463,420. 3 Claims. (Cl. 250—34.)

1. A sensitized film holder for X-ray photography comprising a block having a resilient surface for engagement by the teeth of a patient, a clamping member, and co-operating screw-threaded members carried by said block and clamping member whereby they may be forced toward each other to clamp the film between them.



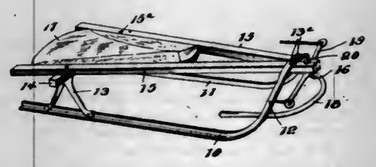
1,450,421. STUFFING BOX AND THE LIKE. EDWARD W. KAVANAUGH and MICHAEL J. KAVANAUGH, Minneapolis, Minn. Filed May 15, 1919. Serial No. 297,313. 3 Claims. (Cl. 286—19.)

1. The combination with a cylinder and a piston, of a stuffing box having inner and outer packings through which the piston rod works, a chamber between said packing open to the piston rod having communication with said cylinder only by leakage through the inner packing and means for keeping said chamber constantly full of water and for condensing steam which escapes into said chamber from said cylinder.



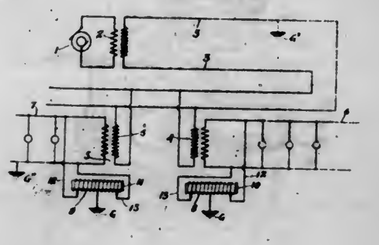
1,450,422. FRICTION-TOP CAN. GEORGE A. LEIGHTON, Roslindale, Mass., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 19, 1920. Serial No. 374,795. 1 Claim. (Cl. 220—42.)

A friction-top can, comprising a body provided at its top with an inwardly extending annulus the outer part of which is united with the upper part of the body, the inner part of said annulus being bent up and formed with an opening and with a friction seat wall surrounding said opening, and a cover formed with a smaller and inner cylindrical part having a friction seat wall adapted to fit the said seat wall of the annulus and form a tight closure therewith, and formed above said smaller cylindrical part with a larger and outer cylin-



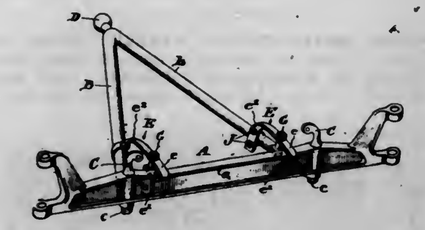
drical part, between which cylindrical parts is a shoulder adapted to engage on top of said annulus when the can is fully closed and thereby limit the insertion of the friction seat wall of the cover within the friction seat wall of the annulus, the cover having an outwardly extending flange which is spaced above the bent-up part of said annulus by means of said shoulder, the said outer cylindrical part being of less diameter than said bent-up part and said flange.

1,450,423. SUGAR-FEEDING MACHINE. CHARLES C. REESE, San Francisco, JOSEPH T. BUZZO, Oakland, and ROBERT S. WOODFORD, Crockett, Calif. Filed Oct. 27, 1920. Serial No. 419,915. 42 Claims. (Cl. 214—1.)



1. In a machine of the character described a sugar receiving frame, a turning frame having upper and lower sugar holding means, means for transferring sugar from the receiving frame to the lower sugar holding means of the turning frame, and means for imparting a turning movement to the turning frame to turn the sugar.

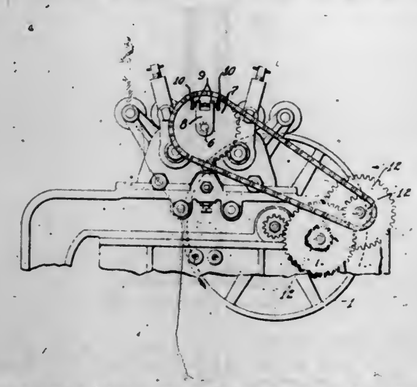
1,450,424. SLED. CHARLES S. BEEBE, Tomahawk, Wis. Filed July 26, 1921. Serial No. 487,657. 6 Claims. (Cl. 280—21.)



1. In a sled, runners formed with an integral arched member extending upwardly therefrom with the sides of said member converged inwardly and extending across the forward ends of said runners, a pair of longitudinal side beams extending from the rear of the sled and converging forwardly a distance beyond said arched member, said side beams supported by and secured to said arched member, and steering means detachably mounted on said side beams forwardly of said arched member.

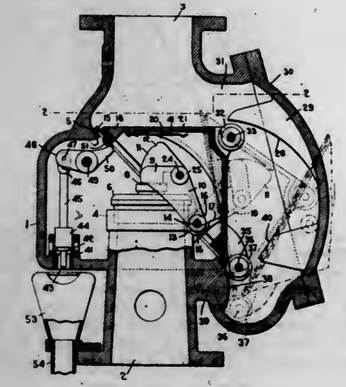
1,450,425. PROTECTION OF ALTERNATING-CURRENT-DISTRIBUTING CIRCUITS. ROBERT V. BINGAY, Pittsburgh, Pa., assignor to Pittsburgh Transformer Company, a Corporation of Pennsylvania. Filed Oct. 17, 1919. Serial No. 331,322. 3 Claims. (Cl. 175—294.)

1. In an alternating current system the combination with a high tension source, of a low tension two-wire distributing circuit, means for transforming energy of the high tension source to the low tension of the distributing circuit, a reactance coil connected across the wires of said distributing circuit, and a ground connection from approximately the neutral point of said reactance coil protecting said low tension circuit against the voltage of the high tension circuit.



1,450,426. BRACE FOR RADIUS RODS. JAMES W. BOND, Columbia, S. C., assignor of one-half to William J. Taylor, Columbia, S. C. Filed June 7, 1922. Serial No. 566,635. 3 Claims. (Cl. 267—66.)

1. The combination with an axle, of converging radius rods, means for connecting the ends of the rods with the axle, and braces for said radius rods, each brace comprising a front portion clamped to the upper side of the axle inside of the point of connection of the radius rod therewith and a portion extending rearwardly and downwardly to the associated radius rod, and means for clamping said portion to the radius rod.



1,450,427. RECORDING MECHANISM AND DISSEMINATION METHOD. WILLIAM H. CANNARD and GLENN A. SHAFFER, Green Bay, Wis., assignors to said Cannard. Filed Feb. 24, 1922. Serial No. 538,992. 20 Claims. (Cl. 93—93.)

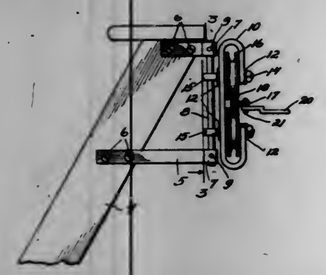
1. A recording instrumentality including a shaft; a sleeve loosely mounted thereon; a resilient connection between the sleeve and shaft; a marker carried by the sleeve; a cam actuated by the shaft; an arm on the

sleeve; and a ratchet mechanism movable into and out of engagement with the arm on the sleeve by the cam.

1,450,428. DRY-PIPE VALVE. EZRA E. CLARK, Newtonville, Mass. Filed June 29, 1921. Serial No. 481,258. 16 Claims. (Cl. 169—22.)

1. A dry pipe valve comprising a casing having a water valve seat and an air valve seat arranged in angular relation to each other, a water valve and an air valve mounted to swing upon opening about a point substantially equidistant from the axes of both of said valves when in seated position so that equal forces acting along the axes of the water valve and the air valve will be balanced.

1,450,429. COMBINED CANDLESTICK AND FLOWER VASE. MARTHA HALOWELL CONNOR, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Apr. 26, 1922. Serial No. 556,627. 5 Claims. (Cl. 67—23.)

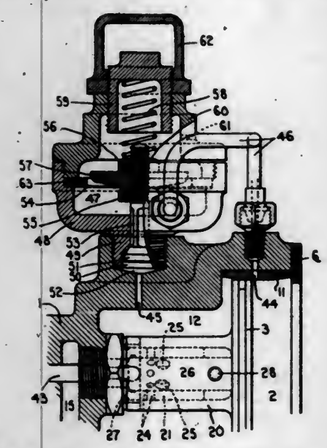


1. As a new article of manufacture, a combined candlestick and vase comprising a base made of sheet metal, a hollow post open at both ends and carried by the base, and a cup frictionally receivable by and selectively in-

sertible in the post at either end thereof, the cup when inserted at the top end of the post functioning as a

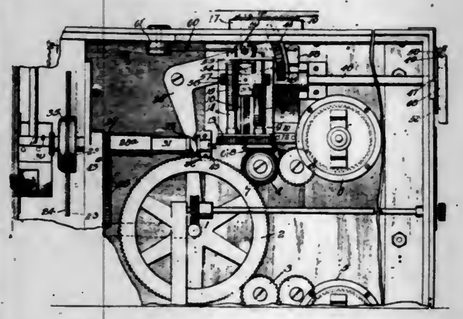
candle holder and when reversely inserted at the bottom end of the post serving as a bottom closure therefor and adapted for supporting a flower or flower holder.

1,450,430. SAFETY HEAD AND TRACK FOR TRAVELING LADDERS. FRED W. CORNELL, St. Joseph, Mo. Filed Aug. 7, 1920. Serial No. 401,905. 1 Claim. (Cl. 228—53.)



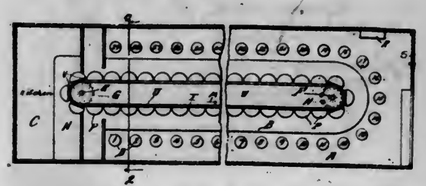
A traveling ladder and track structure comprising a track member provided with upwardly and downwardly projecting track flanges, an inclined ladder provided with a pair of vertical posts fixedly secured to the upper end thereof, a pair of connected bearing frames provided with eyes slidingly engaging said posts, and a pair of grooved rollers journaled in each of said frames in rolling engagement with both of said track flanges.

1,450,431. LANDING INDICATOR FOR AIRCRAFT. ROGER COURTOIS-SUFFIT, Paris, France. Filed Dec. 20, 1918. Serial No. 267,634. 7 Claims. (Cl. 33—1.)



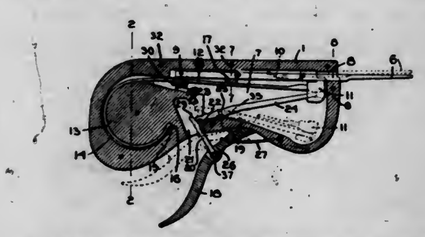
1. The combination, with an air craft of an indicating apparatus, comprising a pair of funnels located at vertically-spaced points on the air craft, and a receiving device with which the funnels are connected and including an indicator adapted to automatically measure the difference of the aero-dynamic pressures to which the funnels are subjected.

1,450,432. FLUID-PRESSURE BRAKING APPARATUS. JAMES WILLIAM CROSS, Surbiton, England. Filed Sept. 18, 1919. Serial No. 324,334. 7 Claims. (Cl. 303—65.)



1. In a fluid pressure brake, the combination, with a triple valve provided with passages for connecting it with a train pipe, a brake cylinder and an auxiliary reservoir, said triple valve having also a cylinder and a piston; of a stationary tubular member arranged in line with the said piston and provided with a lateral air passage and having a valve seat at one end which comunicates with the brake cylinder passage, a tubular stem secured to the said piston and slidable over the tubular member and also provided with a lateral air passage, and a cylindrical plug valve also slidable with the said piston, said plug valve working in the said tubular member and closing its valve seat, the brake cylinder passage being placed in communication with the auxiliary reservoir passage when the piston and the parts connected to it are slid in one direction.

1,450,433. MOTION-PICTURE CAMERA. ERNEST W. DAVIS, Chicago, Ill., assignor to Burke & James, Inc., Chicago, Ill., a Corporation of Delaware. Filed May 24, 1919. Serial No. 299,528. 5 Claims. (Cl. 88—19.3.)



1. In a motion picture camera, the combination with a shutter having an adjustable exposure opening, of mechanism associated with the said shutter and the operating mechanism of the camera for automatically gradually opening or closing the exposure opening of the shutter while operating the camera, means manually operable independently of said automatic means for adjusting said exposure opening, manually operable means controlling the aforesaid automatic mechanism to throw the same into or out of operation, and means associated with said controlling means and said manually operable adjusting means for rendering the latter inoperative when the automatic means are thrown in and vice versa.

1,450,434. SERVING APPARATUS. OTTO H. DOERFLER, Omaha, Nebr. Filed Dec. 5, 1922. Serial No. 604,088. 1 Claim. (Cl. 186—1.)

The combination with a U shaped counter, an endless sprocket chain conveyor horizontally disposed and between the opposite sides of the counter, shelves horizontally disposed and carried by the sprocket chain, said shelves being centrally secured to one of the links of the sprocket chain centrally thereof and springs interposed between the outer ends of the shelves and the adjacent links of the sprocket chain, and forming means for guiding and bracing the shelves as they pass over the sprockets.

1,450,435. IMPACT-PRODUCING IMPLEMENT. ELI EPSTEIN, Dorchester, Mass., assignor to Louis M. Starr, New York, N. Y. Filed Feb. 4, 1922. Serial No. 534,224. 9 Claims. (Cl. 78—25.)

1. In an impact-producing implement, the combination with a body or frame, of an impact-delivering member pivoted thereto, a relatively light spring acting against said member in opposition to its impact-delivering movement, an impact-producing member, spring propelling means associated with said impact-producing member, a pivoted member, and means actuated by said pivoted member to place the spring propelling means under tension and then release it thereby permitting the impact-producing member to strike the impact delivering member a hammer-like blow.

1,450,436. PENCIL. JOHN ROBERT FITTON, Woonsocket, R. I. Filed Apr. 4, 1921. Serial No. 458,423. 6 Claims. (Cl. 120—18.)

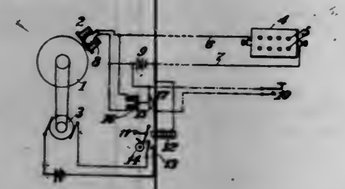
6. In a pencil, a tubular barrel open at its rearward end and tapered at its forward end to a relatively small central opening, an inner tubular member of less diameter than the inner diameter of the barrel and disposed within the latter concentric therewith, said inner tubular member being releasably connected at its forward end to the barrel, and being formed with a slot into its walls extending longitudinally thereof from a point intermediate its length to a point adjacent to its forward end, a plunger disposed within the inner tubular member and arranged with a portion thereof extending through the slot exteriorly of the inner tubular member, said protruding portion being provided with segmental threads, and a sleeve disposed between the inner tubular member

and the outer barrel and threaded interiorly for a part of its length for engagement with the threaded portion of the plunger.

1,450,437. BLOOMERS. WALTER A. GOLDSMITH, Cleveland, Ohio. Filed Apr. 20, 1922. Serial No. 555,715. 4 Claims. (Cl. 2—122.)

3. A closed bloomer-type garment formed of two portions of roughly hexagonal shape, each portion having its two lower sides sewed together to form a garment leg, the two upper sides being sewed together at the front and back downwardly from the waist line, and a diamond shaped crotch insert, comprising two layers of fabric, the upper layer being of undyed sanitary cloth, said insert being sewed between the two portions with its obtuse angled ends at the points of the leg seams, and with its acute angled ends extending upwardly at the front and rear, the rear triangular portion of the crotch piece being longer than the front triangular portion, the crotch piece adding fullness through the crotch and seat.

1,450,438. REVERSIBLE HANDLE SOCKET. DARWIN GILBERT HADSELL, Kansas City, Mo. Filed July 28, 1921. Serial No. 488,252. 1 Claim. (Cl. 15—146.)

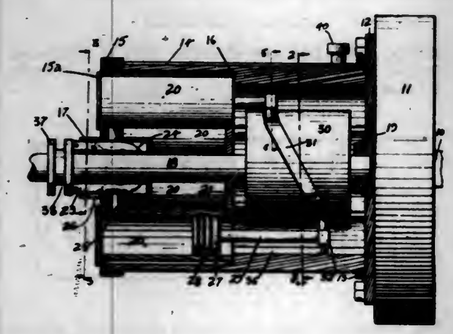


A brush comprising a head embodying a flat-faced bristle carrying member having a recess formed in its upper face midway between the front and rear vertical sides thereof, a socket member in the form of a single casting, said member embodying right angularly disposed extensions to bear against the top and either one of the vertical sides of the aforesaid member, that extension bearing against the top face of the latter being equipped adjacent its free end with a lateral projection received in the aforesaid recess, the remaining extension being formed

with an aperture, the socket portion of the casting being equipped with internal stops against which the inner end of the handle abuts, and a retaining bolt passing

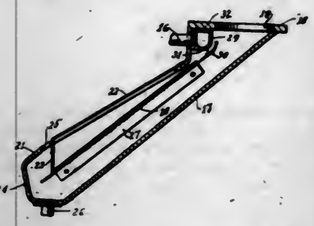
through the aforesaid bristle carrying member and through the apertures in the last named extension, and a binding nut on the free threaded end of said bolt.

1,450,439. RECORDING PHONOGRAPH. RUDOLF HASE, Berlin, Germany, assignor, by mesne assignments, to Naamlooze Vennootschap Finanzieele Mattschapij "Driebergen," Amsterdam, Netherlands, a Company of Netherlands. Filed Feb. 18, 1921. Serial No. 446,202. 2 Claims. (Cl. 179—100.1.)



1. A sound recording apparatus comprising in combination a record surface, a motor driving said surface, electrical means including a switch for putting said motor into and out of action, means for delaying the opening of said switch, an electromagnet closing said switch, a source of power connected with said electromagnet, a hand operated switch in the circuit of said electromagnet, a contact in parallel with said hand operated switch adapted to be closed by sound vibration, and means for receiving sounds and recording them upon said record surface.

1,450,440. RATCHET DEVICE FOR AUGERS. PEARL HUDSON, Burlington, Iowa. Filed Feb. 25, 1922. Serial No. 539,219. 5 Claims. (Cl. 74—54.)



1. The combination with a member to be rotated provided with a plurality of upper and lower radial lugs, of a casing swivelly connected to the upper extremity of said member and provided with means for rotating the same, a pair of diametrically opposite ratchet dogs pivotally mounted in said casing, each having at its ends forks or arms, either set adapted to cooperate with the upper and lower lugs of said member, to rotate the same, tension means to hold one end of each dog normally depressed whereby the extremities of the arms or forks may cooperate with the upper and lower lugs, and means for urging pressure on the opposite ends of the ratchet dogs to tilt the same to permit the other set of forks or arms to cooperate with the lugs.

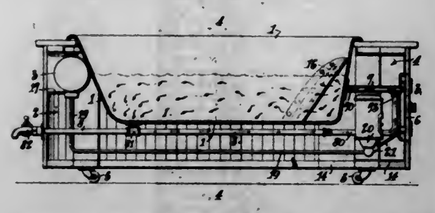
1,450,441. PNEUMATIC CLUTCH. CHARLES E. G. JOHNSON, Des Moines, Iowa. Filed Jan. 2, 1920. Serial No. 349,112. 1 Claim. (Cl. 192—59.)

In a device of the class described; a shaft; a fly wheel thereon; a flanged member formed on said fly wheel and provided with screw-threads; a cylinder having a screw-threaded end screwed into said flange; a screw-threaded cap for the opposite end of said cylinder; a plurality of cylinders mounted in said first cylinder in a series in a circle; a second shaft aligned with said first shaft and extending through said first cylinder; a member on said second shaft having a cam slot in its outer surface; pistons in said second described cylinders; stems on said pistons; and members on said stems received in said cam slot; a valve casing rotatably mounted on said second shaft; valve controlled passages in said valve casing communicating with the respective cylinders; and a valve device for controlling the various valve openings.

1,450,442. COOLING SYSTEM FOR MOTOR VEHICLES. HENRY D. JONES, Galion, Ohio, assignor to The Galion Iron Works & Mfg. Co., Galion, Ohio, a Corporation of Ohio. Filed Oct. 12, 1921. Serial No. 507,277. 2 Claims. (Cl. 261—113.)

1. A water cooling apparatus for internal combustion engines including a downwardly inclined casing having a discharge opening at its bottom and an air inlet opening in its top wall adjacent the lower end of the casing, a water receiving vessel mounted in the upper end of the casing and having discharge openings, a screen extending upward through the casing at an angle to the horizontal and having its upper end disposed below the discharge openings of said vessel, means for drawing air upward through the casing and beneath the screen, and means for preventing air passing upward through the casing above the screen.

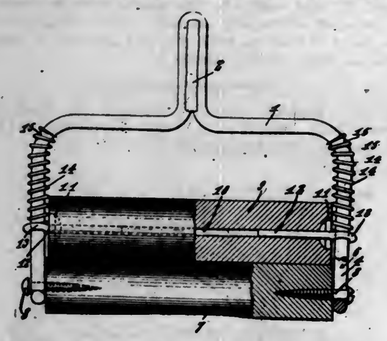
1,450,443. GATE LATCH. MICHAEL H. JUDGE, Greeley, Nebr. Filed Apr. 7, 1921. Serial No. 459,277. 3 Claims. (Cl. 292—40.)



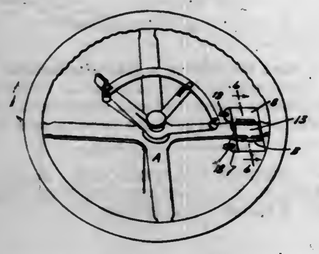
1. The combination with a swinging gate, of a latch for said gate, said latch comprising a plate formed from overlapped vertical sections adjustable in relation to each

other, apertured lugs carried by said plate sections, vertically disposed independent spaced bars slidably mounted in the apertures of said lugs, said bars being provided with enlargements normally engaging the upper face of the lower lug, recesses in the adjacent inner faces of the enlargements, the outer sides of said enlargements being bevelled outwardly and upwardly, the outer portion of the lower lug being bevelled downwardly and outwardly, a projection carried by the gate and adapted

to engage said bevelled surfaces and move one of the vertically movable bars upwardly and pass into the recesses in the adjacent inner faces of the enlargement according to the direction of movement of the gate, lugs carried by the vertically slidable bars and a lever pivoted to the free end of the gate and having its forward end disposed beneath the lugs of the bars and forming means for simultaneously raising said bars.



1,450,444. PORTABLE BATHTUB WITH HEATING APPLIANCE. MICHAEL HENRY MCGUIRE, Clifford, Mich., assignor of one-half to Clayton E. Frederickson, St. Joseph, Mich. Filed Aug. 30, 1922. Serial No. 585,245. 3 Claims. (Cl. 126—350.)



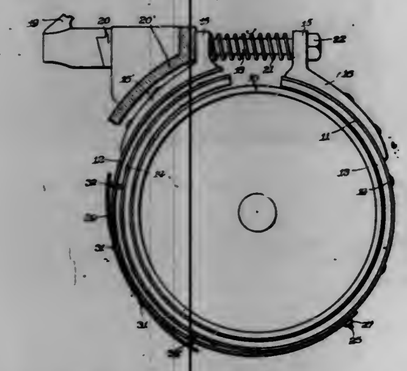
1. A portable bath tub comprising a tub body, an open bottom housing that surrounds the sides and ends of the said body, the said housing having a compartment at one end with means for supporting an oil reservoir, a compartment at the other end, oil burner devices located in the said other end, a feed pipe connecting the said burner devices and the oil reservoir, the burner devices including a control valve, the end of the housing adjacent the heater having an opening for providing access to the burner, a water heating receptacle cooperative with the heater and a pipe connection that joins the said receptacle and the bottom of the tub, the said receptacle haing an apertured end, and means for holding the said apertured end in communication with the inside of the rear end of the tub.

1,450,445. MOP. MABEL P. MCNAUGHTON and JOHN MCNAUGHTON, New York, N. Y. Filed July 15, 1921, Serial No. 485,023. Renewed Sept. 12, 1922. Serial No. 587,850. 8 Claims. (Cl. 15—119.)

1. A mop including a yoke having side arms, rollers mounted between the arms, bearing pins slidably and tiltably mounted on the arms and slidable within one of the rollers, and springs mounted on the arms and engaging the pins to hold the rollers normally pressed together yieldingly.

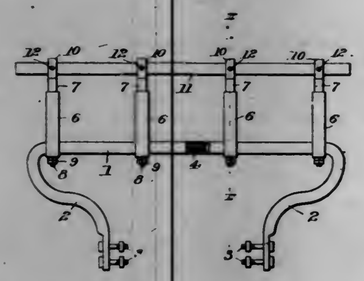
1,450,446. MEMORANDUM ATTACHMENT FOR AUTOMOBILES. HJALMER A. NELSON, Detroit, Minn. Filed June 21, 1920. Serial No. 390,433. 10 Claims. (Cl. 281—9.)

2. A memorandum attachment for automobiles comprising a casing provided with a cover having a sight opening, the bottom of the cover being raised through its entire width at its central portion to afford a table under the sight opening, and a clamp on the bottom of the table for securing the casing to one of the arms of a steering wheel, said table being arranged to support a recording sheet in the casing.



1,450,447. MILLING, DRILLING, AND GRINDING APPLIANCE FOR LATHES. LOUIS NICOLE, London, England. Filed Apr. 2, 1921. Serial No. 458,098. 4 Claims. (Cl. 90—17.)

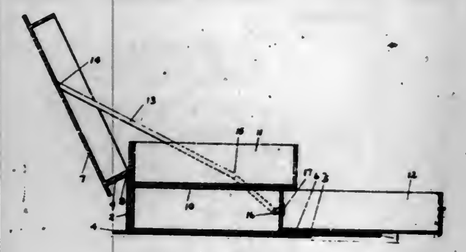
1. A milling, drilling and grinding appliance for lathes comprising a vertical stem carried by a base plate adapted to be clamped to the slide rest of a lathe, a sleeve mounted so as to be angularly adjustable on said stem and slidable thereon, a spindle adapted to carry at its one end a rotating tool and having at its other end means for rotating it, a sleeve provided with bearings



in which the spindle is free to rotate and adjustably attached to the sleeve on the stem, a slotted arm carried by and at right angles to the spindle bearing sleeve, a stud mounted adjustably on said slotted arm, and an index finger carried on said stud and adapted to engage a division plate on the spindle.

1,450,448. BRAKE BAND. WALLACE M. PARKISON, Brook, Ind. Filed Feb. 4, 1922. Serial No. 534,068. 17 Claims. (Cl. 188—249.)

5. In a band for braking a rotatable member, a main band, a supplemental band cooperating therewith, and cushioning means external of said supplemental band for transmitting a resilient pressure between said bands.



1,450,449. FENDER FOR VEHICLES. FRANK PELOSI, New York, N. Y. Filed Mar. 22, 1922. Serial No. 545,673. 3 Claims. (Cl. 293—55.)

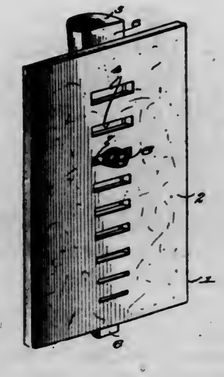
3. In a vehicle fender, the combination with a bumper bar, of a plurality of cushioning members attached at their front ends to said bumper bar, said members having eyes at their rear ends, and a supporting bar arranged parallel to said bumper bar and having integral brackets at its ends for connection to a vehicle, said supporting bar being divided intermediate of its ends and detachably connected by a screw and socket connection for the purpose specified.

1,450,450. DISPLAY BOX. EDWARD WILLIAM POPPE, Kalamazoo, Mich., assignor to Kalamazoo Paper Box Company, Kalamazoo, Mich., a Corporation of Michigan. Filed Oct. 31, 1921. Serial No. 511,614. 5 Claims. (Cl. 206—44.)

1. The combination of a box body comprising front, rear and end walls, a bottom projecting beyond the front wall, the front wall being hinged at its lower edge to collapse upon and be supported by the projecting bottom, said box having a horizontal partition providing a plurality of tray compartments, a cover hinged to the rear of the box body and provided with a flange engaging and supporting the front wall when the box is closed, trays, the bottom tray being slidable in the bottom tray compartment, a tape secured at its ends within the cover flanges, the end walls of said box each having spaced

guide holes therein, one of which is located adjacent the front thereof, the rear wall of the bottom tray having holes adjacent its ends, said tape being rove through said holes in said tray and end walls with the bight portion of the cord within the tray so as to equalize therein and so that when the cover is opened the front wall collapses upon the projecting bottom and the bottom tray is projected over said front wall.

1,450,451. DRAFT REGULATOR AND CHIMNEY CLEANER. DANIEL E. RABER, Perry, Iowa. Filed Sept. 12, 1922. Serial No. 587,663. 1 Claim. (Cl. 126—280.)



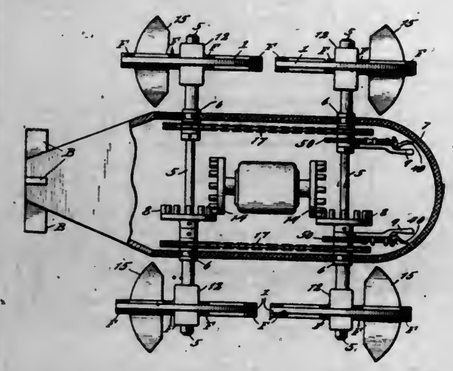
An improved draft regulator and chimney cleaner comprising a frame designed to be inserted in a chimney near the bottom thereof, said frame having upon its outer face a flange extending downwardly and outwardly from the chimney, a door pivoted to the frame about the flange and designed to rest by gravity against the flange to close the opening, and a deflector on the interior of the frame extending downwardly and inwardly to direct air passing through the door opening downwardly toward the bottom of the chimney, for the purposes stated.

1,450,452. SOLDERING BLOCK. SAMUEL EDWARD RANDALL, Junction City, Ark. Filed Mar. 21, 1922. Serial No. 545,623. 6 Claims. (Cl. 113—99.)

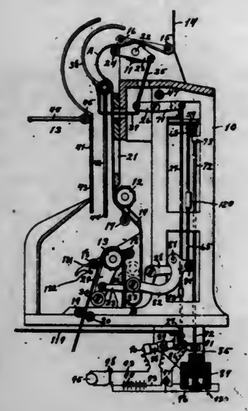
5. A device of the character described comprising a flat block having a series of spaced slots formed therethrough,

and a longitudinal retaining member having a flat side adapted to lie flatwise against the block and to be moved

axially transversely of the respective slots, as and for the purpose described.



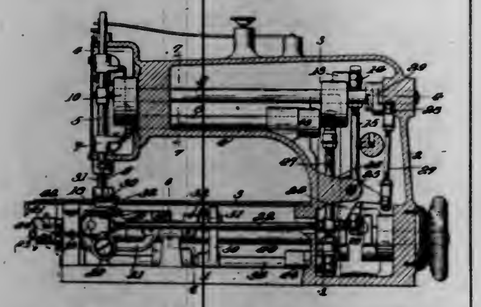
1,450,453. AUTOMOBILE CHAIN FASTENER AND TIGHTENER. HUGO RASCHE, Princeton, Iowa. Filed Apr. 15, 1022. Serial No. 553,243. 1 Claim. (Cl. 24—69.)



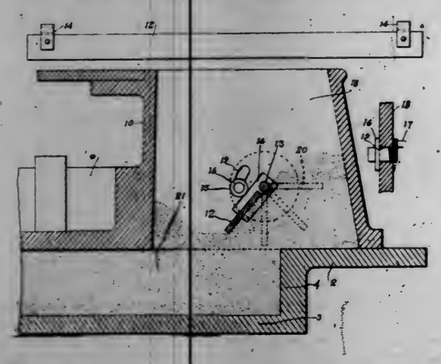
A device of the class described comprising pivotally connected main and auxiliary members which are foldable to lie side by side when the device is closed, said members being provided in their edges with oppositely extended notches which cooperate to form a retaining opening when the device is closed, a latch-shaft mounted to rock in the main member and of unequal transverse dimensions, and a connecting element carried by the shaft and constituting means for rocking the shaft, the auxiliary member being provided with a notch comprising a neck and a seat at the inner end of the neck, the seat being elongated in the direction of the length of the auxiliary member, the latch shaft entering the seat, by way of the neck, when said members are folded to closed position and when the connecting element is disposed at an angle to the main member, the latch-shaft engaging in the seat, to hold said members together, when the connecting element extends in a direction substantially parallel to the length of the device.

1,450,454. LEVER-CONTROLLED PADDLE-ACTION FLYING MACHINE. ALEXANDER B. RONEY, Chicago, Ill. Filed Dec. 8, 1921. Serial No. 521,013. 2 Claims. (Cl. 244—16.)

1. A feathering paddle wheel propeller comprising a frame mounted on a right angle drive shaft rotatably supported in an adjustable sleeve bearing aligned axles on said frame and carrying quartered paddles, gears mounted on said axles and on said sleeve bearing, said gears having a two-to-one-ratio respectively, and a lubricant casing integral with said frame and enclosing said gears.



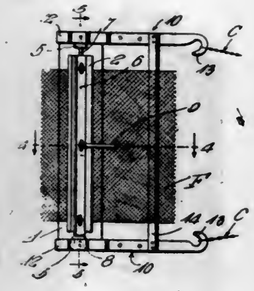
1,450,455. MOVING-PICTURE MACHINE. DELBERT O. SEAMAN, Des Moines, Iowa. Filed Aug. 6, 1920. Serial No. 401,575. 14 Claims. (Cl. 88—17.)



1. In a device of the character described, the combination of a moving picture machine having a light aperture and a mechanism for feeding a film past said aperture, a movable fire shutter adapted in one position to cover said aperture, a support for a source of light spaced from said machine, a movable douser plate mounted between said support and said light aperture, a member adapted to contact a normally taut portion of said film, a spring acting to hold said member in contact with the taut portion of the film and to carry it across the path of such portion when its tautness is released, mechanical means connected with said members for releasing and closing said fire shutter and also said douser plate when said member is spring-pressed through release of the tautness of said film, and electrical means set in motion by the operation of said mechanical means and supplementing the action of said mechanical means in the operation of closing said fire shutter and douser plate.

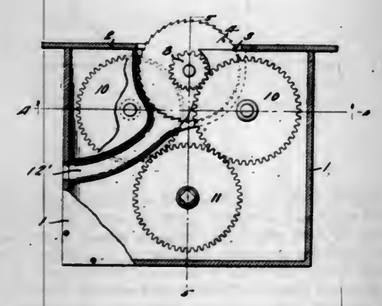
1,450,456. FEEDING MECHANISM FOR SEWING MACHINES. DUDLEY S. SEYMOUR, Chicago, Ill., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 13, 1920. Serial No. 409,842. 4 Claims. (Cl. 112—213.)

4. A sewing machine including, in combination, a feed dog, a feed bar carrying said feed dog, a feed rocker to which said feed bar is pivoted, means for raising and lowering said feed dog, means for oscillating said feed rocker, a needle, a needle bar carrying said needle, a yoke in which said needle bar reciprocates, a looper, means for moving said looper into and out of the needle thread loop, a looper support on which said looper is pivoted, means for oscillating said looper support from said feed rocker and for oscillating said yoke from said feed rocker, whereby said needle is caused to move laterally while in the material to assist in feeding the material and whereby said looper is maintained in proper cooperative relation to the needle.



1,450,457. CAKE FORMER. ORLANDO SHEPPARD, Jr., Atlanta, Ga., assignor to Buckeye Iron & Brass Works, Dayton, Ohio, a Corporation of Ohio. Filed May 2, 1921. Serial No. 466,754. 9 Claims. (Cl. 100—51.)

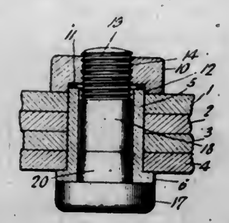
1. In a former, a charging box, a receptacle to be charged, means to move said charging box adjacent to said box to be charged, and means actuated with the charging box for packing the material so deposited.



5. In a former, a charging box, a box to be charged, means for moving said charging box over said box, means in said charging box to uniformly pack and generally level the material deposited in the box by the charging box when traveling in one direction and to ride on the surface of the material so deposited when moving in the other direction, means to limit the movement of the packing and leveling means when the charging box is traveling in its initial direction, and means for adjusting said limiting means to a desired position.

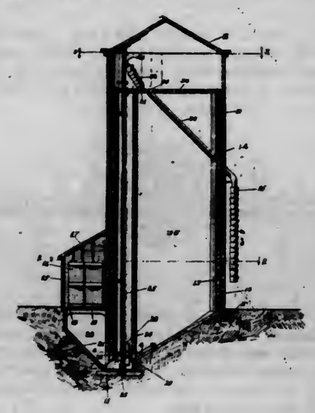
1,450,458. WIRE STRETCHER. OSCAR SIMENSON, Locust, Iowa. Filed Mar. 6, 1922. Serial No. 541,351. 5 Claims. (Cl. 24—248.)

1. A wire stretcher comprising a clamp including a stationary member and a movable member, between which a wire fabric is adapted to be disposed and frictionally held throughout its entire width, frames at the opposite ends of said clamp, said frames including arms extending beyond said clamp and provided at their free ends with hooks to which anchoring chains or the like are adapted to be connected.



1,450,459. PORTABLE ROTARY SAW. CURTIS E. SMITH, St. Joseph, Mo. Filed May 17, 1921. Serial No. 470,333. 4 Claims. (Cl. 143—43.)

1. In a portable saw, a casing, a pair of spaced gears having integrally formed and laterally projecting bosses seated in bearings in the opposite side walls of the casing, an integrally formed sleeve projecting centrally of the inner face of one gear with its end seated within a centrally disposed socket in the inner face of the other gear, means rigidly binding the gears together, a circular saw mounted on the sleeve and spaced midway between the gears by bushings and a plurality of gears, with pairs of said gears meshing with the first-named gears, and means for rotating the gears for causing rotation of the saw.



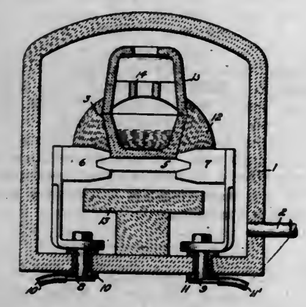
1,450,460. GENERAL UTILITY BOLT. HENRY A. W. SMITH, Danville, Va. Filed Feb. 23, 1922. Serial No. 538,560. 1 Claim. (Cl. 151—2.)

In a device of the class described, a bushing having a finger; a nut provided with a seat receiving the finger, and equipped with a recess adapted to receive the end of the bushing; a bolt in the bushing and threaded into

the nut, the bolt being provided with a head cooperating with the bushing; and means for preventing relative rotation between the bolt and the bushing.

1,450,461. GRAIN ELEVATOR. HALVER R. STRAIGHT, Adel, Iowa. Filed Oct. 8, 1920. Serial No. 415,664. 6 Claims. (Cl. 214—16.)

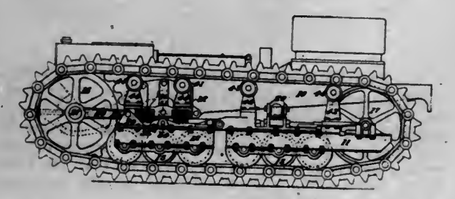
1. In a structure of the class described, the combination of a reinforced circular wall, the said circular wall being provided with a floor having the shape of an inverted truncated cone, the center of the truncated portion of said cone being near the outside of said wall, a semi-circular wall designed to rest on the outer edge of the truncated portion of said floor having its edges formed integral with the first said wall member, the interior of the first said wall being provided with a series of divergent partition walls having their ends radiating from the convex surface of said semi-circular wall and extending across the interior of said first wall, the ends of the partition walls being formed integral with the said walls, door openings near the bottom of said semi-circular walls one communicating with each of the bins formed by said partition walls, and means for opening and closing said door openings.



1,450,462. METHOD OF ACIDIZING RUBBER WASTE. RICHARD A. TERHUNE, Fairhaven, Mass., assignor, by mesne assignments, to Conrad Gaschott, Corona, N. Y. Filed Apr. 23, 1921. Serial No. 463,997. 4 Claims. (Cl. 18—52.)

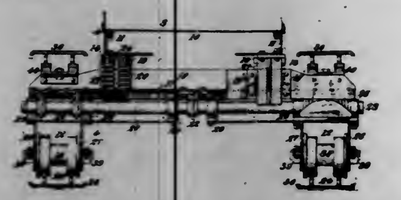
1. In the process of reclaiming rubber waste the steps of treating the waste with an acid adapted to destroy the strength of the fiber and permitting the fiber to be acted on by absorbed acid without subjecting the rubber to a long immersion in the acid.

1,450,463. SULPHURIZED COMPOUND OF PHENOLS. ALFRED THAUSS, Dentz, near Cologne, and ALFRED GÜNTHER, Cologne, Germany, assignors to Farbenfabriken vorm. Friedr. Bayer and Co. in Leverkusen, near Cologne-on-the-Rhine, Germany. Filed Aug. 8, 1921. Serial No. 490,747. 2 Claims. (Cl. 260—20.)



1. The herein-described new sulphurized compounds of phenols which are obtainable by boiling phenols with aqueous caustic alkali and sulfur; which compounds are generally yellowish powders being mordants for fixing basic dyes on cotton, substantially as described.

1,450,464. CRYSTAL FORMATION. ELIHU THOMSON, Swampscott, Mass., assignor to General Electric Company, a Corporation of New York. Filed July 26, 1920. Serial No. 398,965. 4 Claims. (Cl. 204—64.)



1. The process of forming crystals of a refractory material which consists in volatilizing said material in an enclosed space, maintaining the temperature and pressure of said vapor in such relation that the solid and vapor phase are substantially in equilibrium, and bringing said vapor into contact with a solid object which is cooler than said vapor but so nearly approaches the temperature of said vapor that a growth of crystals occurs having sharp angles, a smooth surface, and being substantially free from cavities.

1,450,465. CHAIN-TRACK TRACTOR. WILLIAM TURNBULL, Peoria, Ill., assignor to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Filed May 25, 1918. Serial No. 236,523. 4 Claims. (Cl. 305—9.)

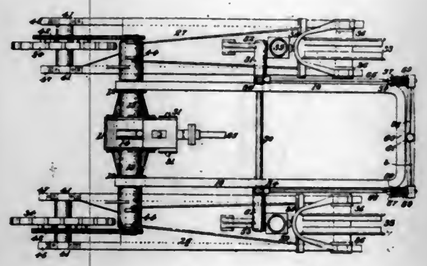
2. In a vehicle, the combination of a main frame and means to support the same, including an endless chain track, a jointed roller truck within the track with a front idler and a rear sprocket in alignment, and a link pivoted on the main frame and loosely connected with the truck to permit the latter to have a limited vertical movement with relation to the frame and capable of sustaining the rear truck section in the event the vehicle bridges a depression and the track drops away from the truck.

1,450,466. CHAIN-TRACK VEHICLE. WILLIAM TURNBULL, Peoria, Ill., assignor to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Filed Jan. 7, 1919. Serial No. 270,039. 4 Claims. (Cl. 305—9.)

1. In a track laying vehicle, a main frame, guide members extending downwardly therebeneath at each side thereof, a transverse load carrying beam slidably mounted between the guide members and extending beyond the same at each end, bearings mounted on the under side of said beam, spring members interposed between said beam and the main frame to afford resiliency in traversing uneven roadways, a roller truck frame at each side of the main frame located beneath the corresponding projecting end of the load carrying beam, bearings complemental to those on the beam located on the truck frames, and a shaft extending through said bearings on the beam and truck frames, respectively, to form a hinge connection, whereby the load on the main frame is transmitted to the truck frames through the beam.

1,450,467. SILICATE CEMENT. HERMANN WEYLAND, Elberfeld, Germany, assignor to Farbenfabriken vorm. Friedr. Bayer and Co. in Leverkusen, near Cologne-on-the-Rhine, Germany. Filed Aug. 11, 1921. Serial No. 491,623. 11 Claims. (Cl. 106—6.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A cement comprising in admixture, an inorganic base, and a solution of a hydrolyzed organic silicon compound.

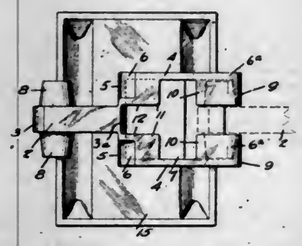


1,450,468. TRACTOR FRAME SUSPENSION. ELMER E. WICKERSHAM, Stockton, Calif., assignor to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Filed Aug. 15, 1918. Serial No. 249,963. 7 Claims. (Cl. 305—9.)

5. In a tractor frame suspension, a main frame, oppositely disposed roller frames at the sides thereof, a transverse shaft rotatably secured beneath the main frame, gears fixed to the opposite ends of said shaft, and connecting means between the gears and the opposite roller frames of the tractor, whereby movement of one roller frame will tend to produce an equal opposite movement of the other roller frame.

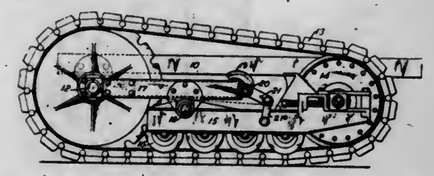
1,450,469. TRACTOR CONSTRUCTION. ELMER E. WICKERSHAM, Stockton, Calif., assignor to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Filed Aug. 22, 1918. Serial No. 250,931. 10 Claims. (Cl. 305—9.)

9. In a tractor construction having separate roller truck frames, and a main frame pivoted at one end thereof, an equalizer mechanism interposed between the forward ends of the roller frames and the main frame comprising a compensating bar centrally pivoted to the main frame, pressure arms carried by the main frame and operatively



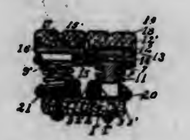
associated with the opposite roller frames, and yieldable connections between said pressure arms and the equalizer bar whereby a swinging movement of one arm will produce a reverse swinging movement of the other.

1,450,470. SINGLE-POINT FRAME SUSPENSION. ELMER E. WICKERSHAM, Stockton, Calif., assignor to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Filed July 30, 1919. Serial No. 314,205. 8 Claims. (Cl. 305—9.)



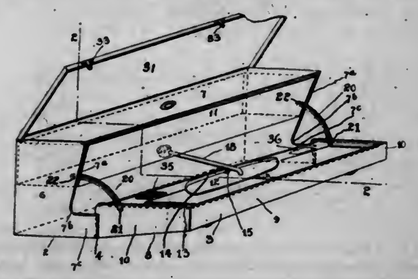
2. In a tractor, a main frame, self-laying track mechanisms disposed at opposite sides thereof, suspension means for the main frame arranged on a single transverse line, and means embodied in said frame suspension for equalizing the load on opposite truck mechanisms and stabilizing the main frame.

1,450,471. TRACTOR TREAD LINK. ELMER E. WICKERSHAM, Stockton, Calif., assignor to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Filed May 26, 1920. Serial No. 384,347. 8 Claims. (Cl. 305—10.)



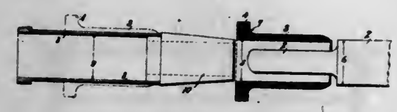
2. A tread-link, for tractor tread-belts, having a link forming body part and a tread plate, the body part having a transverse pivot head, and a pivot head socket for interlock with a companion link, the body part having a medial web or wall with end faces to co-act with a sprocket wheel.

1,450,472. SUSPENSION FOR TRACTORS. ELMER E. WICKERSHAM, Stockton, Calif., assignor to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Filed June 30, 1920. Serial No. 392,950. 4 Claims. (Cl. 305—10.)



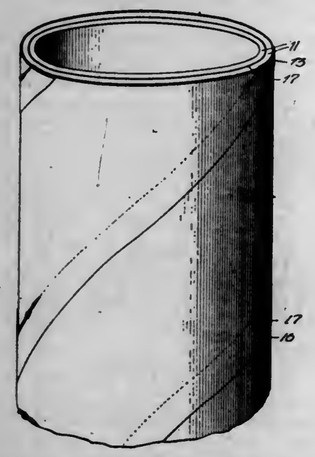
1. In a vehicle of the self-laying track type, a main frame, a truck frame at each side thereof, connecting means between the truck frame and the main frame, permitting said truck frame to rock in a vertical plane, and a load supporting connection between the truck frame and adjacent side of the main frame controlled by the rocking movement of the truck frame to permit the latter to rise without effecting any change in the elevation of the main frame.

1,450,473. RESILIENT TIRE. HENRY A. CARSON, St. Joseph, Mo. Filed May 12, 1921. Serial No. 469,010. 3 Claims. (Cl. 152—8.)



1. In a resilient tire; a plurality of links hinged together forming an annular endless chain around the rim of a vehicle wheel with a space of predetermined depth between said links and rim; springs in said space for pressing said links outward from said rim; guiding and retaining means connected with said links and rim whereby said springs are guided and retained in place and whereby said links are loosely guided through their inward and outward movement; and yieldable resisting means connected with said links and rim for yieldably resisting lateral movement of said rim in relation to said links.

1,450,474. PORTABLE LAVATORY. HERMAN L. WILKENS, Ridgewood, N. J.; Gesine Wilkens administratrix of said Herman L. Wilkens, deceased. Filed Mar. 3, 1921, Serial No. 449,463. Renewed July 25, 1922. Serial No. 577,491. 4 Claims. (Cl. 45—119.)



4. In a portable lavatory, in combination, a casing having an open front, a water tank contained in the upper portion thereof, a closure element hinged to fold against said front, a wash basin carried by said closure element, means for conveying water from said tank to said basin, and a top cover, hinged to said casing and adapted to enclose the top of said closure element, with the top of said casing, when said closure element is folded against said front.

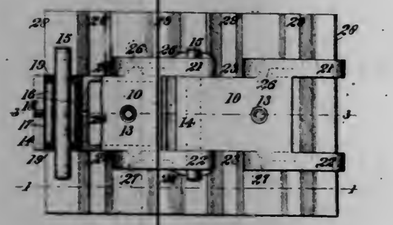
1,450,475. OAR SLEEVE AND COLLAR. WILLSON E. WINTEMUTE, Vancouver, British Columbia, Canada. Filed Dec. 15, 1922. Serial No. 607,180. 4 Claims. (Cl. 9—26.)

1. A rowlock bearing sleeve and collar for an oar, said sleeve being of elastic material such as vulcanized rubber and moulded in one piece without joint or split, the inner dimension of the sleeve being less than that of the oar at its designed position thereon.

1,450,476. MOISTUREPROOF CONTAINER BODY. FREDERICK P. WOOD, New York, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 18, 1919. Serial No. 290,927. 1 Claim. (Cl. 229—3.1.)

A moisture-proof container comprising an inner carcass of fibrous paper-like material, an outer spiral sheet the main portion of the width of which is wound on said carcass and the margins of which extend parallel with said carcass and with each other and are overlapped, and a continuous layer of fused cement compressed between said carcass and outer sheet, said fused cement also extending continuously between the lapped portions of said outer sheet in an interrupted layer exterior to said continuous layer, so as to make the vertical wall of the container impervious throughout.

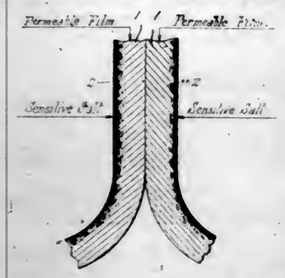
1,450,477. DISPLAY BOX. FRANK E. ALLWORTH, Kalamazoo, Mich., assignor to Kalamazoo Paper Box Company, Kalamazoo, Mich. Filed Feb. 1, 1922. Serial No. 533,378. 5 Claims. (Cl. 229—10.)



1. The combination of a box body comprising bottom, rear and end walls, and a front wall hinged at its lower

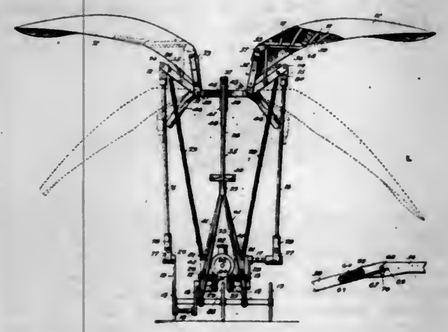
edge with the bottom projecting beyond the front wall to support it when it is collapsed, said box being provided with a horizontal partition providing superimposed tray compartments, said partition having holes at its ends adjacent its front edge, a flanged cover provided with an inner wall having holes adjacent the ends thereof, said cover being hinged at the rear of the box and adapted to support the front wall in closed position, trays for said compartments, the bottom tray being slidable in the bottom compartment and having holes in its

rear wall adjacent its ends, and a tape arranged with its bight between the cover walls and its ends through the openings in the inner wall and passed between the ends of the top tray and the walls of the box and through said holes in said partition plate and said holes in the rear wall of the bottom tray, the ends of the tape being connected so that when the cover is opened the front wall collapses on the bottom and the bottom tray is projected over and supported by the collapsed front wall.



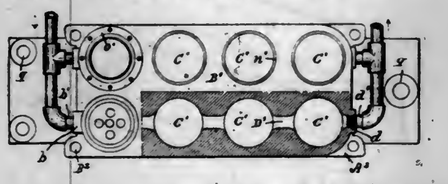
1,450,478. TRACK LINK. GEORGE T. ARTHUR, Stockton, Calif., assignor to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Filed Aug. 15, 1918. Serial No. 249,948. 4 Claims. (Cl. 305—10.)

1. A track link comprising a rectangular body portion, an oil reservoir in one end thereof, a laterally extending bearing through the opposite end thereof and in communication with the reservoir, a pair of longitudinally extending lugs formed at the opposite end of the block providing bearings for the ends of the hinge pin, and engaging pockets for the driving sprockets of the truck, and means for locking the pin against rotation in relation to the extending portions.



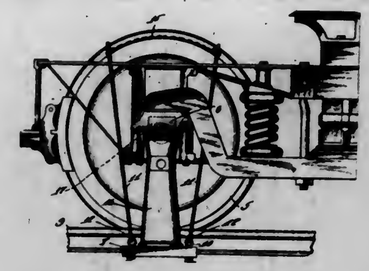
1,450,479. PHOTOGRAPHIC FILM WITH A CARRIER PERMEABLE TO WATER. JAQUES EDWIN BRANDENBERGER, Paris, France, assignor to La Societe La Cellophane, Siège Social, Paris, France. Filed Mar. 7, 1921. Serial No. 450,899. 4 Claims. (Cl. 95—9.)

1. A method of manufacturing photographic films, comprising the steps of moistening a cellulosic carrier permeable to water with a liquid, expressing the surplus liquid from the carrier, and then subjecting one surface



only of the carrier to the action of a different liquid to form a sensitive layer on said surface; substantially as described.

1,450,480. MECHANICAL BIRD. JAMES W. BUCK, New York, N. Y. Filed Oct. 23, 1918, Serial No. 259,333. Renewed Aug. 17, 1922. Serial No. 582,535. 13 Claims. (Cl. 244—20.)

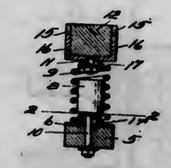


1. In a mechanical bird the combination with a frame, of a transverse course directing bar carried by said frame and universally movable thereon, oscillating wings pivotally mounted upon said course-directing bar at opposite sides of its supporting frame, and means under control of an operator for oscillating said wings.

1,450,481. HEATED MOLD FOR PLASTIC MATERIAL. CHARLES F. BURROUGHS, East Orange, N. J., assignor to Composition Machinery Corporation, Newark, N. J., a Corporation of New Jersey. Filed Jan. 4, 1921. Serial No. 434,966. 9 Claims. (Cl. 18—17.)

1. A holder for press-molds having a cylindrical socket with inlet and outlet upon its sides, and a die having cylindrical body fitted to such socket and having an annular channel upon the exterior of the body connecting with the inlet and outlet, and annular packings at opposite sides of such channel preventing leakage from the socket.

1,450,482. JACK SUPPORT. JOHN M. CHAPPELL and ROBERT E. EDMONDSON, Thornton, Tex. Filed Apr. 22, 1922. Serial No. 556,119. 1 Claim. (Cl. 254—34.)



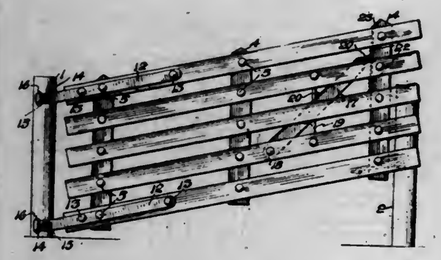
In combination with a car wheel and the rail on which the same is positioned, a support including a base having a cut out portion adjacent to one end thereof and adapted to fit under the rail, a pair of rods secured to the base adjacent to the cut out portion and extending upwardly therefrom, said rods having right angled upper end portions formed with hook members at the free ends thereof, said right angled portions adapted to fit over a wheel, and means connecting the rods for holding them in predetermined spaced relation.

1,450,483. PROCESS OF MAKING BREAD. DAVID CHIDLOW, Ridgefield, Conn., assignor to James F. Strachan and William S. Strachan, both of Montreal, Canada. Filed Dec. 22, 1921. Serial No. 524,274. 3 Claims. (Cl. 99—10.)

1. The process of making bread, which consists in mixing flour and other ingredients to form the bread compound, fermenting the bread compound for a part of the usual period of fermentation for such compound, then adding grain germ to the bread compound between the commencement and completion of the fermentation period, and then baking the bread compound at a period sufficiently proximate to the addition of the germ to prevent substantial destruction of the gluten by the germ.

1,450,484. VEHICLE WHEEL. WALLACE CHILDS, Kansas City, Mo. Filed Feb. 20, 1922. Serial No. 538,091. 1 Claim. (Cl. 152—43.)

A vehicle wheel comprising a felly, a channeled rim secured on said felly, the sides of said channel projecting outwardly and having serrations formed on their edges, and a continuous tread filler in said channel.

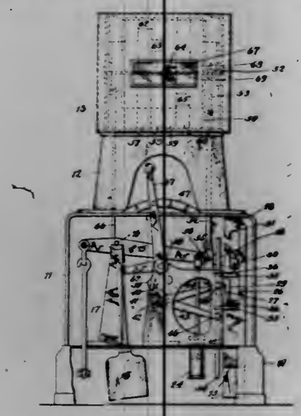


1,450,485. CEMENTING DUMPER. BENJAMIN COUSINS, Slick, Okla. Filed Dec. 8, 1921. Serial No. 521,063. 16 Claims. (Cl. 294—69.)

1. A cementing dumper comprising a tube having a delivery opening at the lower end thereof, a movable bottom for said tube, said bottom being capable of bodily movement in the direction of length of said tube, means detachably connected to said bottom for maintaining the latter in closed relation to said tube, said means being adapted to be suspended from a bailing line and being

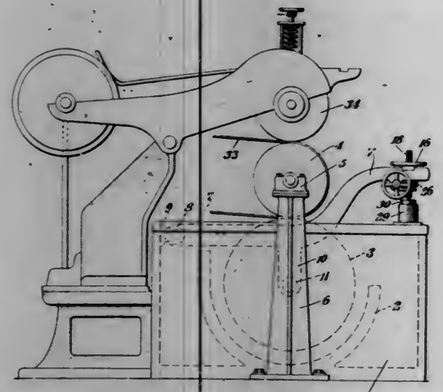
adapted to be operatively detached from said bottom to permit the latter to assume an open position, and means for suspending said bottom from said tube.

1,450,486. GATE. OSCAR L. COX, Memphis, Mo. Filed Nov. 15, 1920. Serial No. 424,371. 1 Claim. (Cl. 30—80.)



In a gate structure, horizontally disposed bars pivotally connected to spacer vertical bars, metallic strips rigidly carried by certain of the horizontal bars and extending rearwardly of the gate, bifurcated hinge members pivoted at one end to said strips transversely of the gate and provided at their opposite ends with vertical sleeve portions for fitting upon L-shaped pintles extending transversely from the gate post, said gate being capable of movement with respect to either of said pivots independent of the other of said pivots.

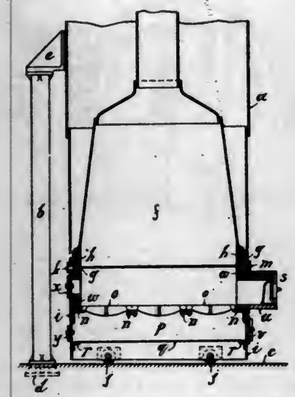
1,450,487. SCALE. ROBERT CRAIG, Dayton, Ohio, assignor to International Scale Company, Dayton, Ohio, a Corporation of Illinois. Filed Jan. 24, 1921. Serial No. 439,334. 11 Claims. (Cl. 265—48.)



1. In a weighing scale, in combination, a scale beam, a load support connected thereto, an automatic counterbalancing means for the applied load, an indicating drum displaced in accordance with the displacement of the beam, capacity weight applying means, and means associated with said capacity weight applying means for ob-

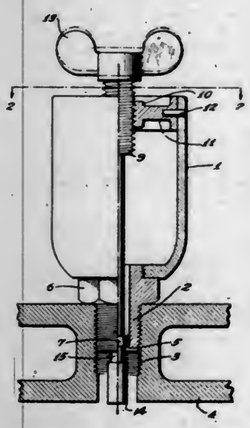
securing certain sections of said drum and rendering other sections thereof visible whereby the total load as counter-

balanced by the automatic counterbalancing means and by the applied capacity weights may be directly read from the said drum.



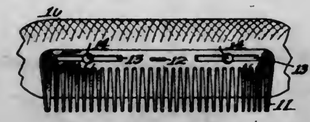
1,450,488. PAPER-MAKING MACHINE. WILLIS S. CRANDELL, Elsmere, N. Y. Filed Apr. 29, 1921. Serial No. 465,391. 17 Claims. (Cl. 92—43.)

1. In a cylinder paper machine, the combination of a cylinder mould and a couch roll, bearings for said cylinder mould and couch roll adapted to permit rotative movement of said parts in surface engagement one with another, adjusting means associated with the bearings of one of said parts providing an adjustment of said part bodily toward or away from the other said part, and like associated but independently operable adjusting means providing a like adjustment of end portions of said part.



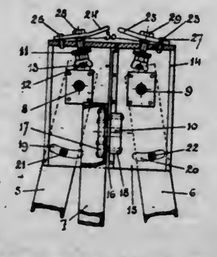
1,450,489. VERTICAL STEAM-GENERATOR FURNACE. HENRY CRUSH, Hyde, England. Filed Feb. 27, 1922. Serial No. 539,499. 1 Claim. (Cl. 110—88.)

The combination, with a foundation; a boiler shell, a vertical firebox open at the bottom and having its lower end secured to the lower portion of the boiler shell, said firebox being provided with a smoke outlet at its upper part, an annular dead plate secured to the boiler shell below the firebox joint, and refractory material upported by the dead plate and protecting the firebox joint; of means for supporting the boiler shell and firebox above the foundation; and a portable furnace open at the top and adapted to be slid upon the foundation under the



boiler shell, said furnace being provided with means for admitting fuel and air to support combustion, and having a ring of refractory material at its upper part arranged to come directly under the said annular dead plate when the furnace is in its working position.

1,450,490. PRIMING DEVICE. EDWARD T. CURRAN, Detroit, Mich. Filed July 2, 1921. Serial No. 482,077. 4 Claims. (Cl. 123—187.5.)

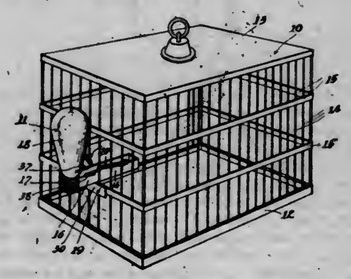


1. A priming device embodying a receptacle provided with a threaded shank adapted to extend for a portion of the distance through the priming passage of an associated engine cylinder, a duct leading from the base of the receptacle through the threaded shank to permit liquid to flow from the cup into the engine cylinder, a valve seat associated with said passage, a valve cooperating with the valve seat, means for seating and unseating the valve, and means carried by the valve and adapted to extend into the passage beyond the end of the threaded shank for the purpose of precluding the clogging of such passage by carbon deposits.

1,450,491. HAIR ROLL OR PUFF. MURRAY C. DAMON, Leominster, Mass., assignor to The Hairlight Company, a Corporation of Massachusetts. Filed Dec. 19, 1921. Serial No. 523,267. 4 Claims. (Cl. 132—55.)

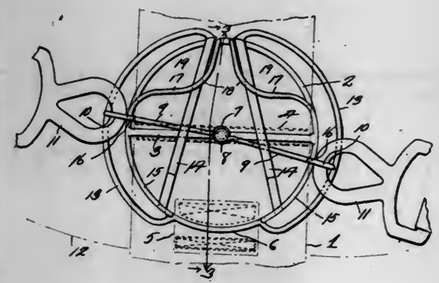
1. As an article of manufacture, a hair roll or puff provided with a comb secured centrally thereof at one point on the concave side, and means on opposite sides of said point for adjustably connecting the comb with the puff and keeping the puff in contact with the back of the comb in all adjusted positions.

1,450,492. DIVISIBLE AND ADJUSTABLE BRIDGE OR CRANE FOR LIFTING, CARRYING, OR SUSTAINING LOADS. FRANÇOIS EMILE MAURICE EIARD, Levallois-Perret, France. Filed Aug. 12, 1920. Serial No. 403,075. 3 Claims. (Cl. 104—126.)



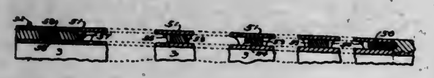
1. Apparatus of the character described comprising in combination two tripods with pivotally attached legs, a beam having flanges, plates on each tripod adapted to engage said flanges and screws for tightening said plates.

1,450,493. KETONE BODY AND PROCESS OF MAKING SAME. CARLETON ELLIS and ALFRED A. WELLS, Montclair, N. J., assignors, by mesne assignments, to Seth B. Hunt, trustee, Mount Kisco, N. Y. Filed Jan. 28, 1918. Serial No. 214,082. 12 Claims. (Cl. 260—134.)



3. The process of producing ketones which comprises exposing alkyl sulphuric acid to an oxidizing agent.

1,450,494. WATERING TROUGH. HENRY EUMMELEN, Santa Ana, Calif. Filed Feb. 26, 1921. Serial No. 448,163. 11 Claims. (Cl. 119—18.)

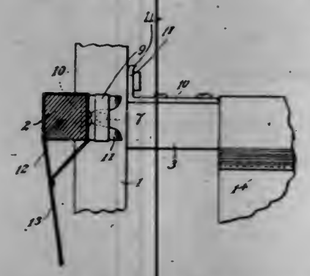


1. A device adapted to be used in combination with a cage having vertical and horizontal bars, including a water trough adapted to extend inwardly between two vertical bars, a reservoir in connection with the outer portion of the trough, a bracket on the trough to engage a horizontal bar, and a bracket pivotally connected with the trough and adapted to be actuated when the trough is in position between the bars to engage the vertical bars at a point removed from where the first mentioned bracket engages the horizontal bar.

1,450,495. TRACE HOLDER. DAVID W. FERGUSON, Harrold, S. Dak. Filed May 10, 1922. Serial No. 559,941. 3 Claims. (Cl. 54—55.)

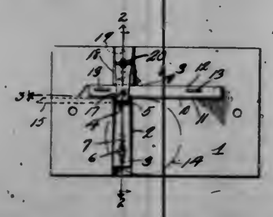
1. A trace holder comprising an annular member, a bar carried by said annular member and adapted to be attached to a support, an outwardly extending headed lug carried by said bar and disposed centrally in relation to the annular member, oppositely extending pivoted arms carried by said headed lug, the outer end of said pivoted arms terminating in hooks for the reception of trace loops, segmentally shaped guide members carried by the opposite sides of the annular member and disposed beneath the hooks, segmentally shaped outwardly offset hook engaging members carried by the opposite sides of the annular member and forming means for preventing displacement of loops on the hooks, the upper ends of said segmentally shaped outwardly offset hook engaging members terminating in inwardly extending portions thereby forming means for allowing easy removal of the loops from the hooks.

1,450,496. SINGLE-BARREL FIREARM OF THE BREAKDOWN TYPE. EMIL F. FLUES, Buffalo, N. Y. Filed Sept. 18, 1919. Serial No. 324,545. 3 Claims. (Cl. 42—41.)



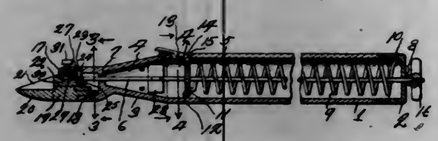
1. In a firearm, the combination of a barrel, a plurality of pillars formed on said barrel and having under-cut edges, a sighting rib provided with flanges adapted to embrace said pillars, and pins fixedly secured in said flanges and adapted to co-act with the under-cut edges of said pillars for seating said rib on said pillars.

1,450,497. BED. THOMAS H. GRIFFITH, Cincinnati, Ohio. Filed Jan. 24, 1922. Serial No. 531,475. 2 Claims. (Cl. 5—98.)



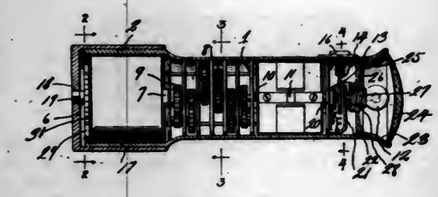
1. A means for mounting a fabric retaining bar in devices of the character described, comprising a bolt in one

member having a nut at one end and a fixed T-shaped head on the other end, and a hook-shaped element on



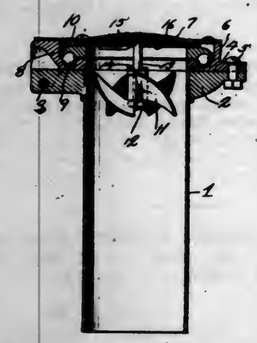
the other member adapted to straddle the bolt shank behind the T-shaped head, for the purpose described.

1,450,498. LACE CUTTER. LEO NICHOLAS GRONER, St. Thomas, Mo. Filed Nov. 1, 1921. Serial No. 512,057. 2 Claims. (Cl. 164—37.)



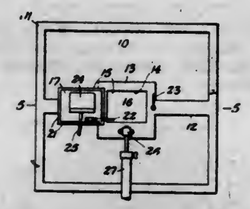
2. A device for forming laces from pieces of material, said device comprising a base, a guide flange carried by said base, an adjustable knife in parallel relation to said guide flange and adjustable in relation to said guide flange and an inwardly and outwardly adjustable guide finger carried by the base and extending through a notch in the guide flange and overlying the space between the guide flange and the knife.

1,450,499. CLIPPING MACHINE. CHARLES W. HARVEY, East Lyme, Conn. Filed June 24, 1921. Serial No. 480,024. 1 Claim. (Cl. 30—1.)



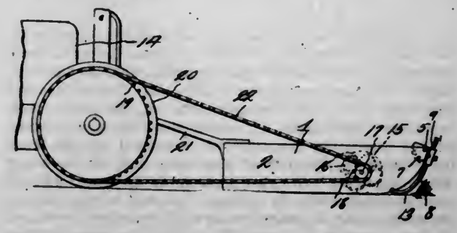
A clipping machine comprising a casing, a finger bar secured to the forward end of the casing, a flange carried by the casing and overlying said finger bar and provided with a transversely disposed slot, a knife blade disposed on the finger bar and having a tongue and groove connection therewith, a transversely disposed rib carried by the knife blade and disposed in the transversely disposed slot of the overlying flange, a drive shaft, a crank pin connection between the shaft and the rear end of the knife blade, a transversely disposed bowed leaf spring disposed in a transversely disposed slot in the knife blade, and an adjusting screw extending through the overlying flange and forming means whereby the frictional engagement of the bowed leaf spring may be varied.

1,450,500. FLASH LIGHT. CHARLES W. HARVEY, New London, Conn. Filed Jan. 17, 1922. Serial No. 529,843. 1 Claim. (Cl. 240—8.5.)



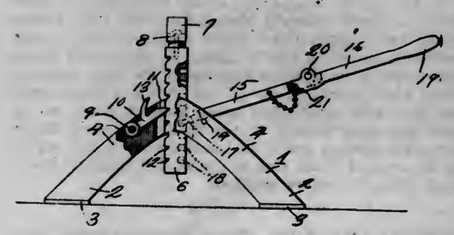
The combination with a flashlight comprising a cylindrical casing having its rear end open, an electric generator within the forward end of said casing, a spring motor in the rear open end of the casing for operating said generator, an electric bulb lighted by said generator, a drive shaft for said spring motor, of means whereby said spring motor may be wound, said means comprising a cylindrical cup shaped housing rotatably mounted on the rear end of the cylindrical casing and having its bottom in close relation to the rear end of the casing, the bottom of the cup shaped cylindrical member being centrally attached to the motor shaft, a ratchet wheel carried by said shaft and located between the motor and the bottom of the cup shaped member and a pawl pivotally connected to the inner periphery of the cylindrical casing adjacent its rear open end and cooperating with the ratchet and forming means for preventing retrograde movement of the spring motor shaft.

1,450,501. SPARK BREAKER. CHARLES E. HULL, Onaway, Mich. Filed Oct. 17, 1922. Serial No. 595,115. 3 Claims. (Cl. 183—64.)



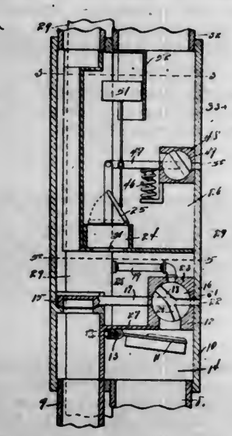
1. The combination with a smoke stack, of a spark breaker therefor, said spark breaker comprising an annular member secured to the upper end of the stack, an annular frame hingedly connected to one side of the annular member and registering therewith, a bearing ring disposed within the annular frame, said bearing ring being supported on anti frictional bearings, a downwardly extending fan carried by the bearing ring and axially disposed within the upper end of the stack, an upwardly extending annular flange carried by the annular frame, a screen carried by the upper side of the annular flange and registering with the stack opening and a screen carried by the upper side of the bearing ring and registering with the stack opening.

1,450,502. DOOR CONSTRUCTION FOR FLASH-LIGHT APPARATUS. EVERARD L. JOHNSON, Patchogue, N. Y. Filed Oct. 22, 1921. Serial No. 509,674. 9 Claims. (Cl. 67—28.)



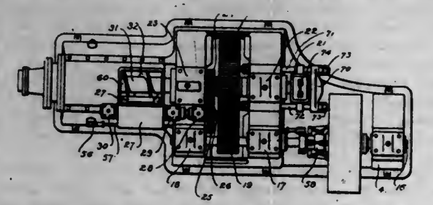
1. A door construction for flashlight apparatus comprising door members, each pivotally secured to the flash bag and co-operating with each other to close the door opening to the flash bag in different positions of said door members.

1,450,503. BOG PULVERIZER. JAY R. KELLER, Elizabeth, Nebr. Filed July 7, 1922. Serial No. 573,320. 1 Claim. (Cl. 97—41.)



A pulverizer and scattering machine comprising a frame, a tooth bar at the forward end of said frame, means whereby said tooth bar may be adjusted in a vertical longitudinal plane, downwardly and rearwardly extending severing knives carried by said tooth bar, means whereby said severing knives may be adjusted upwardly and downwardly, a transversely disposed severing and scattering element located rearwardly of the knives and rotatably mounted in bearings of the frame, and sprocket and chain means whereby said scattering and severing element may be rotated at a high speed.

1,450,504. VEHICLE JACK. IRVING V. LUCAS, Muskogee, Okla. Filed June 30, 1921. Serial No. 481,539. 1 Claim. (Cl. 254—118.)



A vehicle jack comprising a base, said base being upwardly arched and formed from parallel spaced bars, the inner faces of said bars being provided with vertically disposed integral guide ribs, a vertically disposed and movable axle engaging bar slidable between said lugs, a dog pivoted between the spaced parallel bars and cooperating with a plurality of notches in one side of the axle engaging bar, a transversely disposed pin extending the spaced parallel bars on the opposite side of the vertically movable bar from the side on which the dog is disposed, a detachable and removable lever having a fulcrum on the transversely disposed pin, the nose of said lever cooperating with a plurality of apertures in the vertically movable bar, whereby said bar may be intermittently forced upwardly, the ends of the base being disposed a substantial distance outwardly from the pivotal points of the dog and transversely disposed pin.

1,450,505. PNEUMATIC STAGE PUMP. JOE E. MCDOWELL, Fort Worth, Tex. Filed June 17, 1921. Serial No. 478,254. 4 Claims. (Cl. 103—248.)

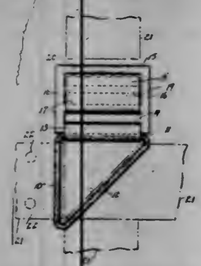
1. A pneumatic stage pump comprising a plurality of units, a gas or air supply pipe common to all the units, each unit having a chamber provided with an intake valve and an air outlet for escape of air from said chamber while liquid is coming in, a liquid discharge pipe, a gas or air starting valve adapted to communicate with said supply pipe and to be automatically opened by the liquid coming in said chamber, a main gas or air valve operatively connected to said supply pipe and to be automatically opened by liquid forced out of said chamber up said discharge pipe whereby gas or air is supplied to said chamber for closing said starting valve and for forcing liquid out of said discharge pipe to the next unit above.

1,450,506. BRICK AND TILE MACHINE. ROY H. MCELROY, JOSEPH D. CITE, and ALBERT G. LANGENKAMP, Dayton, Ohio, assignors to Roy H. McElroy, Dayton, Ohio, receiver for The Bahmann Iron Works Co., Dayton, Ohio, a Corporation of Massachusetts. Filed Aug. 16, 1921. Serial No. 492,671. 11 Claims. (Cl. 25—14.)

1. In a machine for extruding plastic material, a base casting consisting of a base member, an extruding casting member, a gear and shafting supporting member, and an

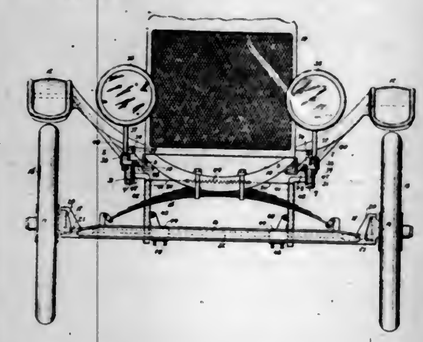
outboard casting member all of said members integral with one another in a single casting, and reinforcing means consisting of dividing walls cast integral with said several members and the base member for maintaining the several parts together as a unit and reinforcing them, and an auger working in said extruding casting.

1,450,507. METHOD OF RECOVERING VANADIUM FROM ITS ORES. PHILIP ALEXANDER MACKAY, London, England. Filed Sept. 28, 1920. Serial No. 413,417. 6 Claims. (Cl. 23—13.)



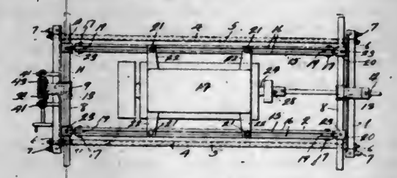
1. A method of recovering vanadium pentoxide from the other oxides combined with it in vanadium ores, particularly lead oxide, by subjecting the ore to the action of oleum at a suitable temperature, reducing the vanadium pentoxide to vanadium tetroxide, in order to obtain vanadyl sulphate, and subsequently diluting the solution with water to precipitate the insoluble constituents of the ore and to leave the vanadium in solution.

1,450,508. FISH-CLEANING MACHINE. DOUGALD MACPHEE, Rivers Inlet, British Columbia, Canada. Filed Mar. 28, 1922. Serial No. 547,528. 16 Claims. (Cl. 17—10.)



3. In a fish cleaning machine, the combination with an endless conveyor, and means for engaging the back of the fish to hold it in a longitudinal position upon the conveyor, of a guiding device between which the body of the fish travels, a knife supported above the conveyor and adapted to engage the open end of the fish to rip the belly longitudinally, means for spreading the side of the fish open against the guiding means as they are severed, a circular member mounted to revolve at each side of the rear portion of the knife and having its periphery revolving closely adjacent to the rear end of the knife body, an open wire construction extending outwardly from the periphery of the circular member and comprising a series of wires curved outwardly from the periphery of each circular member and radially inward towards the centre thereof, and annular holding wires connecting the aforesaid wires together.

1,450,509. STRAP BUCKLE. JULIUS MALTBY, Waterbury, Conn., assignor to Waterbury Buckle Co., Waterbury, Conn., a Corporation. Filed June 6, 1922. Serial No. 566,216. 1 Claim. (Cl. 24—17.)



In a strap buckle, the combination with a rectangular buckle-frame, a strap-gripping means mounted thereupon, a triangular, strap-fastening and strap-deflecting extension, and means made independent of the said buckle-frame and extension for flexibly connecting the same, the said means embracing the inner bar of the frame and one of the short sides of the extension.

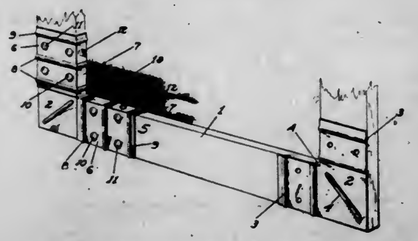
1,450,510. HEADLIGHT INSTALLATION FOR AUTOMOBILES. MALCOLM P. NICHOLS, New Haven, Conn. Filed Jan. 20, 1920. Serial No. 352,833. 1 Claim. (Cl. 240—62.)

A headlight installation for automobiles, comprising two convertor-members pivotally mounted between their ends to the fender-brackets on opposite sides of an automobile; each member having a forwardly projecting and outwardly offset lamp-carrying arm, an inwardly turned stop-finger carrying an adjustable chassis-engaging cushion for regulating the outward movement of the lamp and located to the rear of the pivot, and an inwardly offset depending arm also located to the rear of the pivot and engaged by an actuator mounted on the spindle-connecting rod; the combination with a spring connecting the two members for normally holding the stop-cushions in engagement with the chassis.

1,450,511. ENGINE-SUPPORTING STAND. NIELSEN, Lincoln, Nebr. Filed Feb. 7, 1922. Serial No. 534,718. 4 Claims. (Cl. 29—89.)

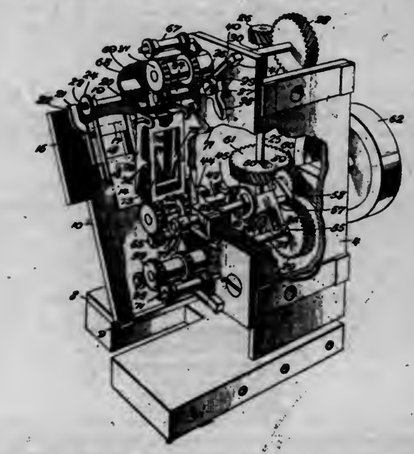
1. An engine supporting stand comprising a rigid frame, a frame pivotally mounted in said rigid frame, means for supporting an engine on the pivoted frame, outwardly extending pintles carried by the pivoted frame and rotatably mounted in bearings of the rigid frame, a worm wheel carried by one of said pintles, a worm meshing with said wheel, said worm being mounted on an operating shaft carried by the rigid frame, and means extending through one of the pintles whereby the engine on the pivoted frame may be operated through its crank shaft when in various positions.

1,450,512. PILE WIRE. RILEY HERBERT PARKER, Winthrop, Mass., assignor to Gillette Safety Razor Company, Boston, Mass., a Corporation of Delaware. Filed Jan. 6, 1922. Serial No. 527,336. 3 Claims. (Cl. 139—63.)



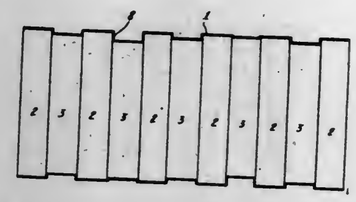
1. A pile wire provided with a blade-receiving recess in its upper edge and with a lateral opening at one end

of the recess, in combination with a flexible cutting blade having a substantially triangular shape with upwardly-converging front and rear edges and located mainly



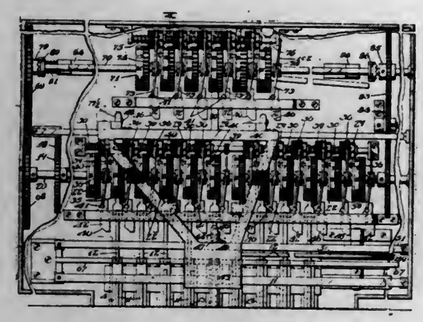
above the top of the wire when seated on the bottom of the recess, and retaining means overhanging the ends of the blade near its lower edge but leaving the blade free to be flexed at one end into said opening.

1,450,513. FRAME BRACE. MILES E. PEARSON and EDWARD TOW, Sacramento, Calif.; said Pearson assignor to said Tow. Filed Dec. 28, 1921. Serial No. 525,293. 4 Claims. (Cl. 20—92.)



1. A frame brace comprising a plate adapted to lie against the sides of a pair of angularly related members of a frame and to project beyond the apex of the angle between said frame members, an additional plate members adapted to lie on the first named plate and to extend therebeyond at each end, securing means for fastening both plate members together and to the frame, and means for insuring positive alinement of said plate members with each other regardless of the securing means.

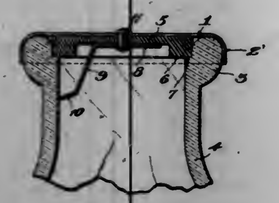
1,450,514. MOTION-PICTURE PROJECTION. CHARLES F. PERHAM, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed May 6, 1921. Serial No. 467,426. 3 Claims. (Cl. 88—17.)



1. In a motion picture projection apparatus, the combination of a film with an aperture plate, a film looping member, a guide member arranged to direct the looped portion of the film toward the aperture plate, and a tension plate actuated to intermittently clamp the film against said aperture plate.

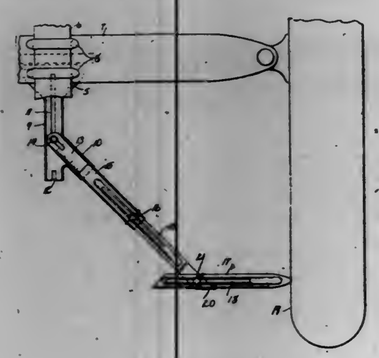
1,450,515. MINERAL CLASSIFYING AND CONCENTRATING APPARATUS. WILLIAM WHITEHEAD RICHARDSON, London, England. Filed Sept. 25, 1920. Serial No. 412,708. 9 Claims. (Cl. 83—86.)

1. In mineral classifying and concentrating apparatus, a rotatable trommel comprising a series of cylindrical spaced drums arranged concentrically to a common axis, and a series of cylindrical drums arranged alternately between the drums of the first mentioned series and each successively angularly displaced eccentrically of said common axis, the drums of the first series being of different diameter to the drums of the second series.



1,450,516. CALCULATING MACHINE. EMANUEL RICHTER, Chicago, Ill., assignor to The Elliott-Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 24, 1906. Serial No. 307,942. 30 Claims. (Cl. 235—63.)

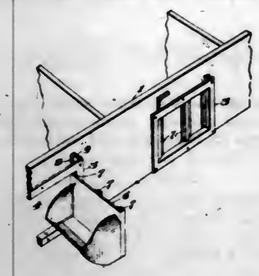
1. In a computing machine, operating keys, a shaft, an intermediate mechanism transmitting the movement of either of the keys to the shaft and rotating the same a distance dependent upon the particular key operated, a second shaft driven by the first, indicator wheels loosely mounted thereon, and clutch mechanism for engaging each of the wheels with the shaft, in combination with a transversely movable carriage arranged to operate the clutch mechanism, and controlling mechanism connecting the carriage with the several keys, whereby the movement of a key will rotate the second shaft a fixed distance and engage an indicator wheel with said shaft.



17. The combination with a plurality of computing devices each including denominational members and carrying means, of a single operating shaft on which said computing devices are carried, an additional computing device, an additional operating member therefor, a movable carriage, means controlled by the carriage for connecting the first named computing devices with the operating shaft, and means also controlled by the carriage for connecting the additional computing device to the additional operating member to be operated thereby in correspondence with each of the computing devices first named.

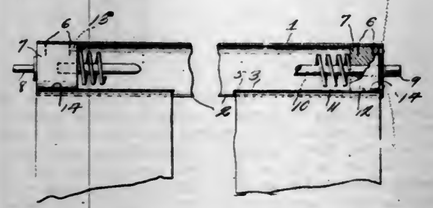
1,450,517. MILK-BOTTLE CAP. THOMAS F. RONEY, Providence, R. I. Filed Sept. 13, 1922. Serial No. 587,958. 2 Claims. (Cl. 215—51.)

1. A milk bottle cap comprising a body having a depending marginal flange, a gasket member having a marginal enlargement and arranged within the flange in spaced relation thereto, a pointed implement seated within the gasket member and having a radially extended arm deflected downwardly below the plane of the flange and terminating in an outwardly directed point, and a single fastening means for securing the body, gasket member and implement together.



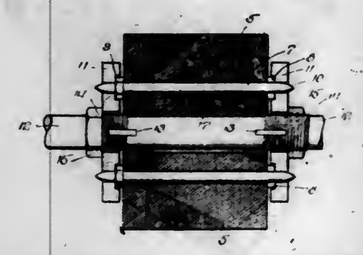
1,450,518. WHEEL-TRUING GAUGE. ISRAEL SCHWARTZ, Danbury, Conn. Filed Jan. 23, 1922. Serial No. 531,129. 1 Claim. (Cl. 33—203.)

A wheel rim truer, comprising a bracket adapted to be secured to a fixed point adjacent to a vehicle wheel and provided with an outwardly-extending main support and a branch support extending at an angle thereto, said main support formed with a longitudinal groove and the branch support with a longitudinal groove intersecting the groove in the main support, a slide adjustably connected with said main support and adapted to rest in either of said grooves, an arm adjustably connected with said slide in a plane parallel therewith, and a finger adjustably connected with said arm in a plane parallel therewith.



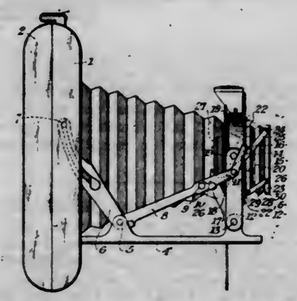
1,450,519. HOG-TROUGH APPARATUS. ALBERT B. SHIVELY, Laurel, Nebr. Filed Dec. 1, 1922. Serial No. 604,329. 5 Claims. (Cl. 119—61.)

5. In an apparatus of the class described, the combination with a support provided with an opening, of an angle frame secured to said support around said opening, a platelike gate closing said opening and positioned within the angle, a frame, a trough secured to one side of said gate, a series of vertical hollow casings secured to the other side of said gate, an operating shaft rotatably mounted in said angle frame and extending through one



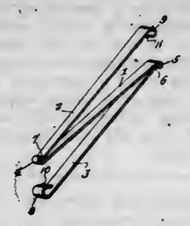
of said casings, and a locking shaft in one of said casings and extending through portions of said angle frame.

1,450,520. SHADE ROLLER. WESLEY F. SMITH, Bandana, Ky. Filed May 5, 1921. Serial No. 466,922. 1 Claim. (Cl. 156—25.)



A shade roller comprising a cylindrical body portion formed from spring sheet metal, said cylindrical body portion being provided with registering overlapping edges substantially concentric with each other, a shade clamped between the adjacent sides of said edges, said shade being folded, longitudinally disposed stitching adjacent the folded edge of the shade, the free edge of said shade beyond the stitching overlying the inner side of the inner edge of the body portion and in conjunction with the stitching forming means for preventing displacement of the shade.

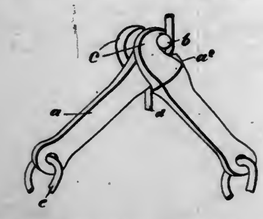
1,450,521. ARMATURE FOR DYNAMO-ELECTRIC MACHINES. ARTHUR STEINBACH, Chicago, Ill., assignor of one-half to Leo Podgorsek, Chicago, Ill. Filed Dec. 31, 1921. Serial No. 526,087. 2 Claims. (Cl. 171—207.)



2. A sectional armatnre providing a shaft and having a core divided on substantially radial lines into a plurality of sections, each section composed of a plurality of lamine; a rod, pointed at both ends, extending thru respective sections with its ends projecting therebeyond at each end of the section; nuts on the rods to hold the laminæ together; a disk slidable on the shaft overlying the nuts to prevent their rotation and having a perforation for each rod, arranged so that all said sections are drawn inwardly into intimate contact when the disks are in ultimate positions and nuts on the shaft to move the disks into and to hold them in positions.

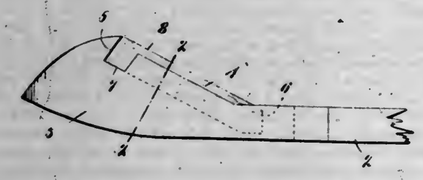
1,450,522. LENS SHADE. RAY L. STINCHFIELD, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Dec. 12, 1921. Serial No. 521,898. 9 Claims. (Cl. 95—40.)

1. A folding camera comprising a camera body, a photographic lens carrier movable to extended and retracted positions relative to said body, a lens shade on said carrier movable into and out of lens-shading position, and means for automatically moving said shade into and out of said shading position upon movement of said lens carrier to said extended and retracted positions.



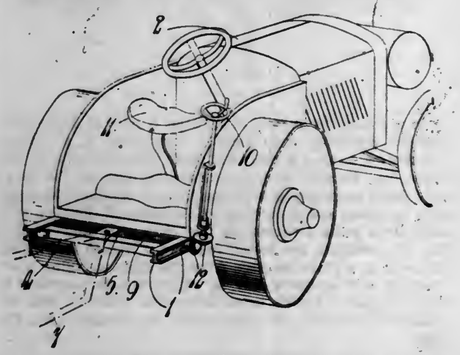
1,450,523. HAIR CURLER. WYNN W. STUMPH, Tulsa, Okla. Filed Mar. 18, 1922. Serial No. 544,744. 1 Claim. (Cl. 132—41.)

A hair curler including a straight central portion terminating in looped portions, resilient arms adapted for transverse movement projecting from the looped portions at points adjacent the opposite sides of the central portion and extending in opposite directions, said arms being bent inwardly to form circular loops and the ends of the loops being spaced from the inner faces of the respective arms a distance equal substantially to the double thickness of the body thereby permitting snug engagement of the loops with the enlarged ends and preventing lateral movement of the arms.



1,450,524. MEANS FOR GRIPPING WIRE OR THE LIKE. WILLIAM SWANN, Walsall, England, assignor to Charles Trawford, Limited, Walsall, England. Filed June 29, 1920. Serial No. 392,769. 1 Claim. (Cl. 24—134.)

A wire gripping device comprising a pair of levers one having a convex face near one end and also having a pair of oppositely extending trunnions at said end, and the other having a concave face opposed to the convex face of the first named lever and also having a pair of spaced hooks arranged on opposite sides and directly at one end of the first named lever, engaging said trunnions, and



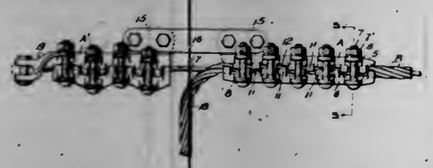
thereby pivotally detachably connecting said levers together, the said convex and concave faces of said levers being spaced apart to receive a wire between them.

1,450,525. PILE WIRE. RALPH E. THOMPSON, Brookline, Mass., assignor to Gillette Safety Razor Company, Boston, Mass., a Corporation of Delaware. Filed Nov. 1, 1920. Serial No. 420,963. 4 Claims. (Cl. 139—63.)

1. A pile wire having a recess adapted to receive a normally-flat flexible blade and an open space at one end of the recess into which one end of the blade may be flexed laterally, the end walls of the recess being shaped to overhang the ends of the flat blade while seated on the bottom of the recess.

1,450,526. COUPLING APPLIANCES FOR TRAILER VEHICLES, TILLING IMPLEMENTS, AND THE LIKE. HAROLD EDGAR TIMMIS, Dublin, Ireland. Filed Feb. 15, 1922. Serial No. 536,822. 2 Claims. (Cl. 280—33.10.)

1. A coupling device for vehicles comprising a transversely disposed screw, rotatably mounted at the rear of the tractor vehicle; means for rotating the said screw; a coupling block having a central portion which is operably mounted upon the said screw and two extending end portions which are adapted to be guided; means carried by the central portion of the block for the attachment of the draw bar of a tractor vehicle; and a pair of channel guides which surround and totally enclose said end

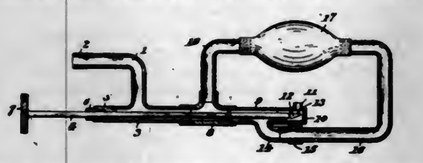


portions of the block, being located one on each side of the screw; whereby all rearwardly extending attachment means are dispensed with.

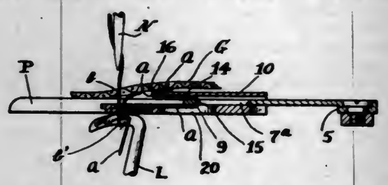
1,450,527. PISTON-RING CLAMP. FARRY TROST, Troy, Ill. Filed Sept. 21, 1921. Serial No. 502,158. 1 Claim. (Cl. 29—86.4.)

A piston ring clamp comprising a pair of crossed handle members, finger receiving loops at one end of said crossed handle members, a loop detachably connected to the end of one of said crossed handle members, a flexible band connected to said loop, a loop carried by the end of the other crossed handle member, the flexible band having one of its ends attached to the detachable loop, the free end of said flexible band being provided with a plurality of apertures, a lug extending outwardly at substantially a right angle from the outer face of one of the crossed handle members adjacent its loop and at a right angle to the loop and forming means for engaging in one of the plurality of apertures in the free end of the flexible band for holding said band during a piston ring clamping and contacting operation.

1,450,528. CLAMP DEVICE FOR ELECTRIC CONDUCTORS. THEODORE VARNEY, Sewickley, Pa., assignor to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 14, 1920. Serial No. 403,455. 13 Claims. (Cl. 24—135.)



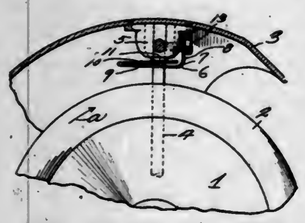
2. A clamp for cables comprising a pair of adjustably opposed members, each member consisting of a central rib portion having a concaved cable engaging seat on the inner face thereof, laterally extending lugs on the members, bolts cooperating with the lugs for holding the members together, and extensions at the sides of the ribs, said extensions being so arranged that they may interfit when the two members are bolted together, the said lugs being disposed in a plane recessed from the cable engaging seats whereby said members may be adjusted close together to engage cables of very small diameters without said extensions limiting such adjustment by contact with the lugs.



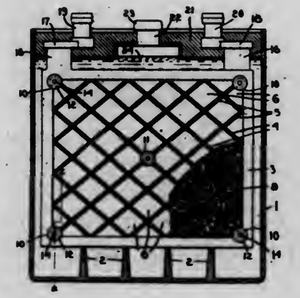
1,450,529. [WITHDRAWN.]

1,450,530. OIL BURNER. JOSEPH B. WATKINS, Willow Springs, Mo., assignor of one-half to Royal D. Rosier, Willow Springs, Mo. Filed Feb. 23, 1922. Serial No. 538,800. 3 Claims. (Cl. 158—63.)

3. A burner comprising an elongated vaporizing chamber, pipes extending from the reduced opposite end of said chamber, a main conducting pipe, an oil supply pipe connected with said main supply pipe near one end thereof, one of the pipes from said vaporizing chamber being connected with the central portion of said main conducting pipe, a burner member mounted on one end of said main conducting pipe between said vaporizing chamber, the remaining pipe extended from said vaporizing chamber being turned and connected with said main conducting pipe near the end carrying the burner member, a valve member pivotally mounted in said burner member, and a valve stem extending through said main conducting pipe and projecting from one end thereof to control said pivoted valve member.

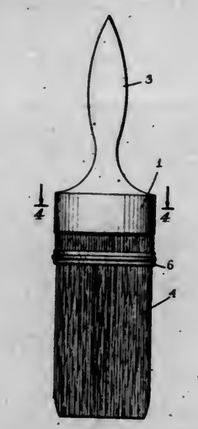


1,450,531. THREAD-BREAKING MECHANISM. JOHN PETER WEIS, Nyack, N. Y., assignor of one-half to Metropolitan Sewing Machine Corporation, Dover, Del., a Corporation of Delaware. Original application filed Oct. 16, 1914, Serial No. 867,005. Renewed Dec. 24, 1919, Serial No. 347,189. Patent No. 1,348,526, dated Aug. 3, 1920. Divided and this application filed Jan. 2, 1919. Serial No. 269,277. 5 Claims. (Cl. 112—252.)



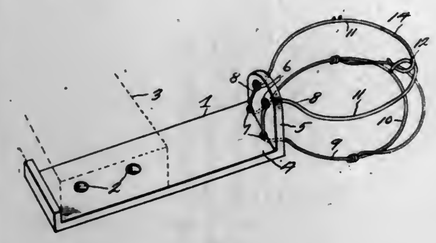
1. The combination in a sewing machine, of stitch-forming instrumentalities, a throat plate, and thread-breaker mechanism carried by the throat plate, said thread breaker mechanism comprising a slide formed with an elongated needle hole; a stationary thread breaker plate located in the path of the looper thread to be broken; and the throat plate having a needle hole with which the needle hole through the slide is registrable; and a thread carrying looper.

1,450,532. AUTOMOBILE FENDER ATTACHMENT. WILLIAM E. WHITE, Citronelle, Ala. Filed Aug. 10, 1922. Serial No. 580,925. 1 Claim. (Cl. 280—153.)



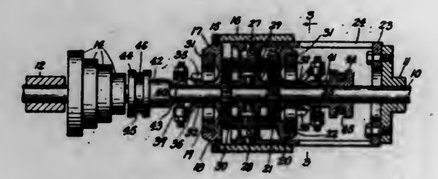
The combination with an automobile fender having a fender iron on the under side thereof, said iron being disposed above an automobile tire carried by a wheel, of a protector for said tire, said protector comprising an angularly shaped member formed from a single piece of material, one flange of said angularly shaped member being substantially vertically disposed and secured to the fender iron at one side thereof, the other flange of said member being spaced from and underlying the fender iron and substantially horizontally disposed and an upwardly and inwardly extending member carried by the outer end of the horizontally disposed flange and engaging the underside of the fender iron, said protector being formed from spring material.

1,450,533. STORAGE BATTERY AND PROCESS OF PRODUCING THE SAME. ALBERT H. WILLIAMS, Worcester, Mass., assignor to Ionite Storage Battery Co., Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 16, 1920. Serial No. 374,360. 7 Claims. (Cl. 204—29.)



1. A storage battery having a negative plate consisting of a supporting grid the interstices of which are filled with electrically refined homogeneous pure fibrous sponge lead united to said grid by a film of pure lead integrally united to said grid and to said sponge lead.

1,450,534. BRUSH. ERNEST B. WRIGHT, Upper Montclair, N. J., assignor to Hanlon & Goodman Company, New York, N. Y., a Corporation of New York. Filed Dec. 9, 1921. Serial No. 521,087. 3 Claims. (Cl. 15—168.)

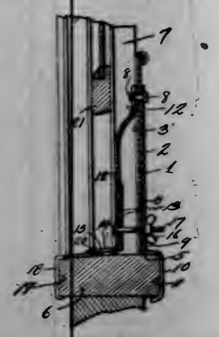


1. In a brush the combination of a ferrule, a bunch of bristles having the upper end portion thereof embedded in hardened cementing material, extending into said ferrule, and a bridle surrounding the bristles and having rearwardly extending arms, said arms having portions thereof extending into the interior of said ferrule and cooperating with the cementing material to fixedly secure the arms to the cemented portion of the bristles.

1,450,535. HAT HOLDER. GULDIN G. YODER, Boyertown, Pa. Filed Apr. 15, 1922. Serial No. 553,088. 2 Claims. (Cl. 45—13.)

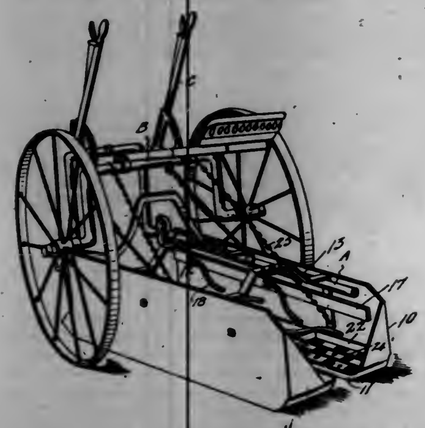
1. A hat holder comprising a bracket, means whereby said bracket may be attached to a support, said bracket terminating in a right angularly disposed portion having spaced apertures adjacent apertures in the bracket, a hat receiving loop formed from a single piece of wire, the ends of said wire extending through the adjacent apertures in the right angled portion and the bracket, said wires terminating in segmentally shaped portions in parallel relation to the hat receiving loop, means whereby the ends of the segmentally shaped portions may be detachably connected, and an outwardly extending looped member carried by the first mentioned loop and forming means for receiving a hat visor.

1,450,536. REVERSING MECHANISM FOR DRIVE SHAFTS. GIORDANO ZILOCCKI, Granton, N. J., assignor of thirty per cent to Nicholas Partenope, West New York, N. J. Filed Nov. 1, 1921. Serial No. 511,980. 6 Claims. (Cl. 74—59.)



1. A reversing mechanism of the class described comprising a drive shaft, a pulley mounted to rotate freely upon said shaft, said pulley being provided at one side thereof with an annular recess, a disk rotatably mounted on said shaft and provided with a corresponding annular recess, a drum extending into said pulley, gears rotatably mounted in said drum and geared in connection with said pulley and said disk and for rotating said disk in an opposite direction to that of said pulley, and clutch devices secured to said shaft and adapted to operate in the recesses of said pulley and disk respectively for controlling the direction of rotation of said shaft.

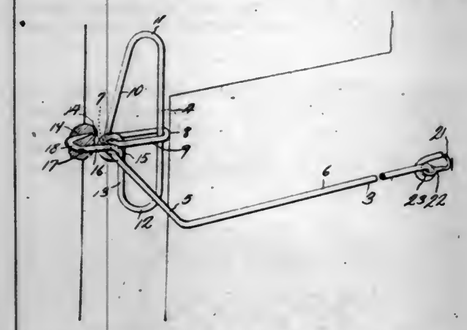
1,450,537. WINDOW BOARD. EDWARD A. ADAMS, Trumansburg, N. Y. Filed Feb. 28, 1922. Serial No. 539,830. 1 Claim. (Cl. 98—31.)



The combination with a window sill, of a window deflector therefor, said deflector comprising slidably engaged vertically disposed deflecting members, each of said deflecting members having secured to its outer face a downwardly extending bracket adapted to engage the inner side of the window sill, downwardly extending spring arms secured to the outer faces of the deflecting members from a point adjacent their upper sides, right angled members connected to the lower ends of said spring arms, right angled sill engaging members adjustably connected to the

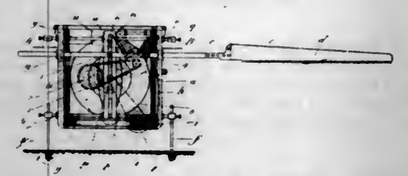
right angled members carried by the spring arms and adapted to engage the outer side of the sill, and clamping screws extending through the spring arms adjacent their

lower ends and through the slidably engaged members and forming means whereby the device may be securely clamped on the sill.



1,450,538. INSECT AND WORM CATCHER. LOUIS E. BAKER, Blum, Tex., assignor of one fourth to A. J. Martin, one-fourth to J. H. Brock, and one-fourth to A. E. Harroun, all of Blum, Tex. Filed July 18, 1922. Serial No. 575,832. 2 Claims. (Cl. 43—133.)

2. In a catcher of the character described, a pair of longitudinally disposed pans, supports connecting and carrying the pans, sides rising from the outer edges of the pans, and horizontal arms carried by said sides and overhanging said pans, said arms being mounted in alternate relation and having their outer ends curved rearwardly, each successive arm rearwardly being longer than its predecessor.

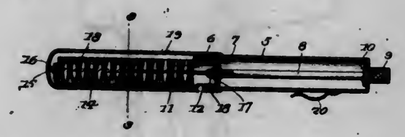


1,450,539. CURTAIN HOLDER. NEWTON J. BISHOP, Washington, D. C. Filed Mar. 8, 1922. Serial No. 542,050. 1 Claim. (Cl. 156—19.)

A curtain bracket formed from a single piece of wire and comprising a curtain supporting portion, the inner end of the curtain supporting portion terminating in an angular portion, an inwardly extending loop carried by the inner end of the angular portion and in parallel relation to the curtain supporting portion, outwardly extending window frame engaging loops carried by the first mentioned loop, the end of one of the frame engaging loops being passed through the inwardly extending loop and bent

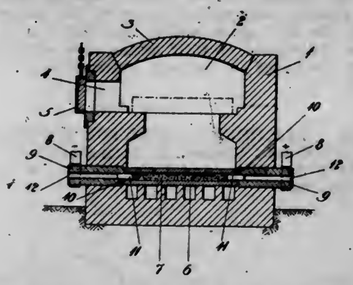
around the angular portion, said end terminating in an offset prong adapted to be embedded in the side of a window frame.

1,450,540. SAW FOR SAWING TREES. HANS BONNER, Madulein, Switzerland. Filed Mar. 16, 1921. Serial No. 452,777. 1 Claim. (Cl. 143—68.)



A drag saw machine comprising a saw and means for reciprocating the same and for feeding it to the work transverse to the reciprocation, such means for reciprocation comprising a guide frame or cross head slotted in the direction of feed of said saw, a rotating part having a pin, and a saw carrying bar having a pin, each engaged in the slotted cross-head so that the rotation of said part reciprocates the cross-head and the second pin travels therein during the feeding of the saw.

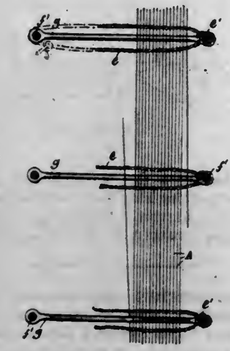
1,450,541. FISHING TOOL. WILLIAM CASEY, Tulsa, Okla. Filed Mar. 16, 1921. Serial No. 452,703. 1 Claim. (Cl. 294—90.)



A fishing tool of the character described, comprising a casing section tapering toward its lower end and longitudinally slotted from its lower end to a point adjacent its upper end, a spade-like point formed on the lower end of the casing having the upper end portion of its edges curved outwardly to form a lip, and a series of circumferentially arranged dogs secured to the interior of the casing adjacent the lower or larger end thereof, each dog consisting in a resilient strip of metal arranged longitudinally of the casing and having its lower end secured to the casing and its upper and free end portion curved inwardly with respect to the longitudinal axis of the casing.

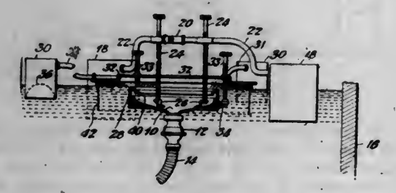
1,450,542. ROTARY TOOTHBRUSH. ROY C. FAUST, Deary, Idaho. Filed Feb. 1, 1921. Serial No. 441,647. 1 Claim. (Cl. 15—25.)

In a rotary brush, a handle element comprising a tube closed at one end and internally threaded at its opposite end, a shell of substantially semi-cylindrical shape throughout a portion of its length, an annular portion at the inner end of said shell having external threads to engage the threads of said handle, a rotatable member disposed centrally and longitudinally within said handle and protruding at one end beyond the closed end of said handle, and a brush stem rotatably mounted in the outer end of said shell and detachably connected at its inner end to said rotatable stem.



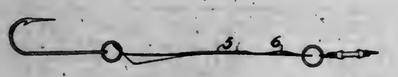
1,450,543. METHOD AND DEVICE FOR THE HEATING OF MATERIAL IN ELECTRIC FURNACES. EUGEN ASSAR ALEXIS GRÖNWALL, Stockholm, Sweden. Filed Sept. 28, 1921. Serial No. 503,792. 8 Claims. (Cl. 204—64.)

4. An electric furnace comprising refractory pipes, auxiliary resistances of carboniferous material disposed in said pipes, a pair of hollow electrodes in contact with said pipes, and an auxiliary electrode in each of said hollow electrodes and extending into said pipes for ensuring a satisfactory transmission of current from the electrode to said auxiliary resistances.



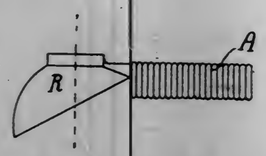
1,450,544. METHOD OF PREPARING WOUND PACKAGES FROM SKEINS. WILLIAM G. HANNAH, Paterson, N. J. Filed June 26, 1922. Serial No. 570,918. 2 Claims. (Cl. 28—21.)

1. The hereindescribed method of preparing a wound package of yarn which consists in first forming a skein of the yarn in which each convolution thereof crosses and recrosses the adjoining neighboring convolutions a given odd number plurality of times, then introducing through the corresponding sheds formed between the crosses flexible attenuated inserts, then placing the skein on a swift adapted to hold the skein distended and attaching each insert to the swift at one side of the skein and then drawing the inserts taut so as to position the convolutions side



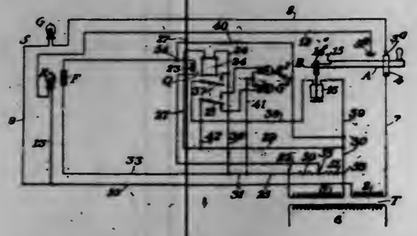
by side from end to end of the yarn, and then, with the skein distended and the inserts still positioned in the skein sheds, forming the wound package while leaving the swift free to rotate.

1,450,545. APPARATUS FOR SEPARATING LIQUIDS OF DIFFERENT DENSITIES. OSCAR E. HANS, Bartlesville, Okla. Filed Apr. 13, 1920. Serial No. 373,589. 16 Claims. (Cl. 210—54.)



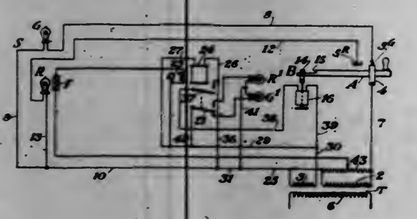
1. An apparatus for separating liquids of different densities, comprising a draw-off tube, means for drawing liquid from the upper portion of a body of liquid into said draw-off tube, and separate means mounted to be maintained adjacent the surface of the body of liquid for preventing an inflow of liquid to said draw-off means when said means reaches a liquid of a definite density.

1,450,546. TROLLING SPOON. JOSEPH HANSEN, Seattle, Wash., assignor to Marine Specialty Manufacturing Company, Seattle, Wash., a Corporation of Washington. Filed May 26, 1921. Serial No. 472,732. 6 Claims. (Cl. 43—45.)



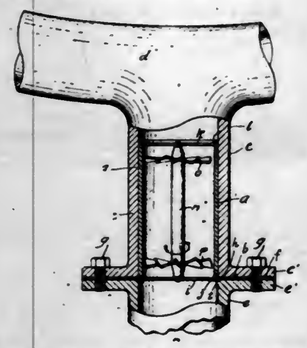
1. A trolling spoon having lateral reaction surfaces at each side of its rear end increasing in width rearwardly and a laterally extending reaction surface connecting the rear ends of said lateral reaction surfaces, the body of the spoon forwardly of said lateral reaction surfaces being bent to give it a slight curvature in a lengthwise direction and also having a trough-like rib extending from between said reaction surfaces forwardly through the central section of its length.

1,450,547. ELASTIC RING-SHAPED HOLDER FOR SMALL LAMPS. FRITZ FERDINAND HEINE, Leipzig, Germany. Filed Feb. 13, 1922. Serial No. 536,322. 1 Claim. (Cl. 240—52.)



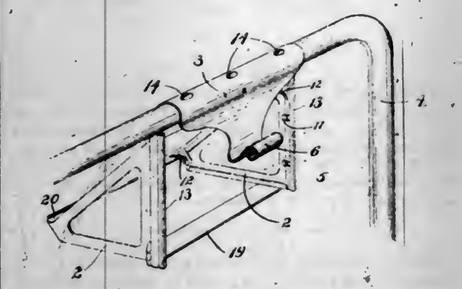
A reflector having a top, a supporting ring attached thereto, said supporting ring being extensible in the plane of its circle and a narrowly wound wire spiral the windings of which are arranged as tangents to the ring circle.

1,450,548. INDICATION MEANS FOR LIGHT SIGNALS. LEMUEL F. HOWARD, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Original application filed Mar. 2, 1921, Serial No. 449,144. Patent No. 1,429,141, dated Sept. 12, 1922. Divided and this application filed Aug. 11, 1922. Serial No. 581,101. 6 Claims. (Cl. 246—138.)



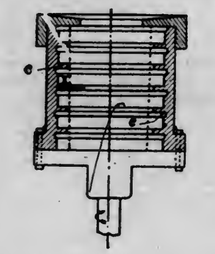
1. In combination, a railway signal comprising a lamp, a cell exposed to the light emitted by said lamp and having the characteristic of varying in electrical resistance with variations in the intensity of light to which it is exposed, a lever for controlling the illumination of said lamp, a lock for governing said lever, a Wheatstone bridge having said cell for one leg, and means included in the bridge member of said bridge for controlling said lever lock.

1,450,549. INDICATION MEANS FOR LIGHT SIGNALS. LEMUEL F. HOWARD, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Original application filed Mar. 2, 1921, Serial No. 449,144. Patent No. 1,429,141, dated Sept. 12, 1922. Divided and this application filed Aug. 11, 1922. Serial No. 581,102. 7 Claims. (Cl. 246—138.)



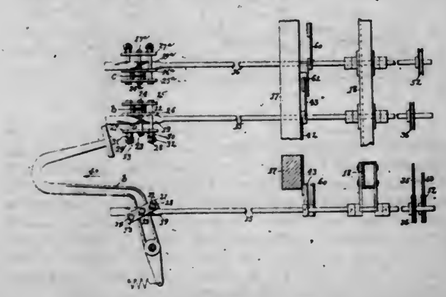
1. In combination, a railway signal comprising a lamp, a cell exposed to the light emitted by said lamp and having the characteristic of varying in electrical resistance with variations in the intensity of light to which it is exposed, a lever for controlling the illumination of said lamp, a lock for governing said lever, a winding for controlling said lock, and a potentiometer circuit network including said cell and said winding.

1,450,550. MIXER FOR GAS ENGINES. GEORGE R. HUDSON, Portland, Oreg. Filed Aug. 11, 1919. Serial No. 316,894. 2 Claims. (Cl. 48—180.)



1. In a gas mixer of the character described, a mixing chamber, a shaft axially journalled in said mixing chamber, a fan rigidly attached at each end of the shaft, said fans being spaced apart a substantial distance, thereby providing a relatively large space between them, the lower fan having a pronounced pitch adapted to cause the shaft to be rotated by the gases drawn into the mixing chamber by the intake stroke of the engine, the upper fan having a lesser pitch than the lower one, and in the opposite direction to the latter, being thereby adapted to retard the passage of the gaseous mixture thru the mixing chamber, also serving to agitate the mixture of gases in the said space, and by the churning of said gases at the instant of their escape from said mixing chamber, producing a thorough intermixture of said gases.

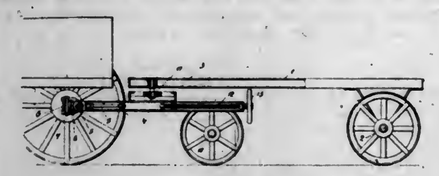
1,450,551. ATTACHMENT SHIELD FOR AUTOMOBILE WINDSHIELDS. HERBERT H. ILLCH, New York, N. Y. Filed Feb. 24, 1922. Serial No. 538,893. 4 Claims. (Cl. 296—95.)



1. In an auxiliary-shield for automobile wind-shields provided with a moisture wiping means, an inclined shielding-panel adapted to be attached to a wind-shield of an automobile, downwardly extending side-panels formed upon the inclined panels, transparent inserts in the side and top panels, resilient members formed upon the edge of the side panel and adapted to engage along the surface of the glass of the wind-shield to remove moisture therefrom, a spring-loop formed upon the inclined panel and providing a means for attaching the device to the upper part of the wind-shield, a handle member to provide a means for sliding same against the surface of the glass of the wind-shield.

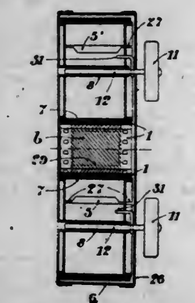
1,450,552. PRODUCTION OF HOLLOW METAL CASTINGS. FÉLIX JOMBART, Paris, France, assignor to La Société d'Etudes et de Constructions Metallurgiques, Paris, France. Filed Mar. 23, 1921. Serial No. 454,834. 6 Claims. (Cl. 22—65.)

1. A substantially-cylindrical, hollow mould for casting hollow metal articles by centrifugal force, mounted to rotate about a vertical axis and having the inner moulding surface of its vertical wall divided into a plurality of separate compartments into which the molten metal is forced by centrifugal action.



1,450,553. SIGNALING APPARATUS FOR MOTOR VEHICLES. LAURENCE J. KILLIAN, Boston, and EUGENE J. PARKER, Lynn, Mass. Filed June 12, 1922. Serial No. 567,527. 6 Claims. (Cl. 116—36.)

1. The combination with a motor vehicle provided with a foot-operated clutch lever and with a foot-operated brake lever, of signaling devices carried by the vehicle and pivoted to be moved into positions for indicating movement of the vehicle of the right and left, rock-shafts extended longitudinally of the vehicle, and provided with twisted portions means for connecting said rock-shafts with said signaling devices, and means for operatively connecting the twisted portions of said rock-shafts with said clutch and brake levers to permit the latter to be moved longitudinally of said shafts to rock the same.



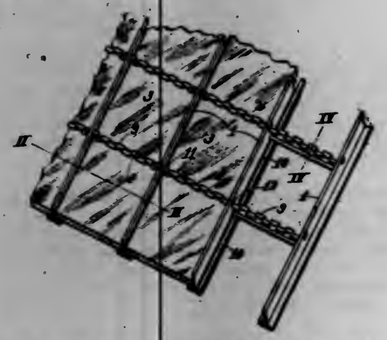
1,450,554. TRAILER. HERMANN OSCAR KREISSLE, Ansbach, Germany, assignor to Ansbacher Motorenfabrik Karl Bachmann Aktiengesellschaft, Ansbach, Germany. Filed Apr. 8, 1921. Serial No. 459,817. 1 Claim. (Cl. 280—33.1.)

Improved device for coupling the trailer with the tractor comprising in combination with the platform of the trailer, a downwardly projecting vertical ball-headed conical bolt, a slidable carriage mounted upon the ball head of said bolt serving as bogie for the platform of the trailer, a supporting frame for connecting said trailer with the tractor, means for hingedly fixing the front end of said frame to the rear axle of the tractor, a horizontal screw spindle in the frame, a hand wheel for operating said spindle, and means for connecting said

bogie with said spindle so that it can be displaced in longitudinal direction upon said supporting frame by the action of the spindle for the purpose to make adjustable the part of the load of the trailer to be transferred upon the driving wheels of the tractor and to enable the trailer to be used as an independent vehicle without auxiliary means.

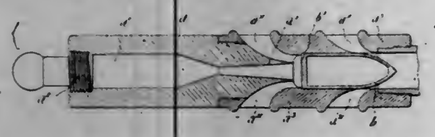
1,450,555. APPARATUS FOR DIRECT OBSERVATION OF PICTURE FILMS. CHARLES LÉPINE, Torino, Italy, assignor to Pathe Cinema, Anciens Etablissements, Pathe Freres, Paris, France. Original application filed Mar. 22, 1921, Serial No. 454,404. Divided and this application filed Mar. 11, 1922. Serial No. 543,068. 3 Claims. (Cl. 46—37.)

1. A toy apparatus for direct observation of the separate images of a picture film, comprising in combination; a casing and a removable cover for the same, an optical device in one side of the casing, the latter having an aperture in the opposite side, each view being observed through the said optical device in the direction of the aperture, two film carrying drums rotatably mounted in the casing, the width and depth of said casing being substantially equaly to the width of the film and to the diameter of the drum carrying the wound film respectively, and means on the casing for rotating said drums from outside.



1,450,556. MOP. WILLIAM J. MCKEEVER, Cambridge, Mass. Filed May 23, 1922. Serial No. 563,013. 3 Claims. (Cl. 15—229.)

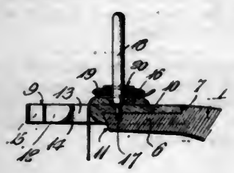
1. A mop comprising a layer of strands folded upon itself, having a flexible reinforce extending over the fold



and on both outer faces of the head for some distance back from the folded edge and on the edges and inner faces of the two layers of the folded portion, said reinforce being secured by stitches extending through said reinforce and the embraced layers of strands, and a clamping band of flexible material extending around the reinforced portion of the head and secured thereto by stitches passing through said clamping band and interposed layers of strands and reinforcing material.

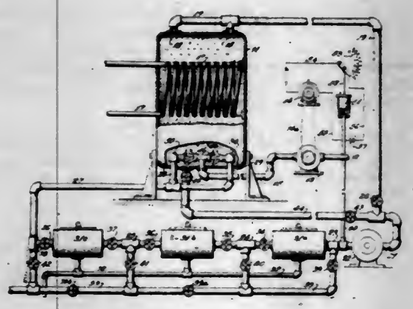
1,450,557. SKYLIGHT. HERBERT E. MARKS, Sewickley, Pa. Filed Nov. 22, 1921. Serial No. 516,924. 7 Claims. (Cl. 108—16.)

1. In a roof structure for sky-lights the combination of a series of spaced longitudinal metallic bars of inverted T-shape in cross section, provided with lateral seat portions and a vertical web, transverse binding strips of similar cross section resting freely at their extremities upon and removably supported by the opposing seat portion of a pair of adjacent longitudinal bars and having channels formed by slitting the web portion at intervals and bending alternate tongues formed thereby in opposite directions embracing the edges of the roof sections, the webs of both said bars and strips facing in the same direction.



1,450,558. GUN. CHARLES ALPHONSE FRANÇOIS MAZE dit DELAMARE MAZE, Paris, France. Filed Mar. 24, 1921. Serial No. 455,169. 4 Claims. (Cl. 89—1.)

1. A cannon having an explosion chamber and a main bore, a nozzle between the said chamber and the main bore, a chamber located behind the rear portion of the projectile when at rest into which the said nozzle opens and an aperture between the said last mentioned chamber and the outside of the gun for the purposes set forth.

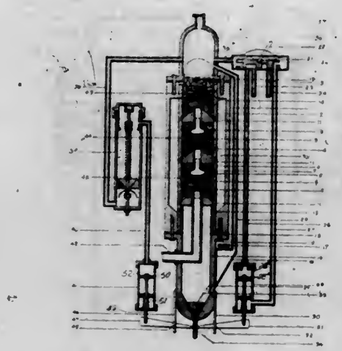


1,450,559. THREAD-TENSIONING DEVICE. EMYGDIO S. MEDEIROS, New Bedford Mass., assignor to New Bedford Tensioning Devices, Inc., New Bedford, Mass., a Corporation. Filed Jan. 9, 1922. Serial No. 527,988. 6 Claims. (Cl. 242—150.)

1. A thread-tensioning device comprising a bifurcated head, between the furcations of which a thread is adapted to pass, said head being formed on its upper face with a raised integral ring-like friction surface against which the thread is drawn, a stationary guide pin rising from the center of said friction surface and having its upper

end directed laterally to form a shoulder, and a weighted annular shoe surrounding said pin for co-action with said friction surface.

1,450,560. SEPARATION AND FILTER SYSTEM AND APPARATUS. CHARLES D. MORTON, New York, N. Y., assignor to Morton Filter Process Co., New York, N. Y., a Corporation of Delaware. Filed Apr. 15, 1920. Serial No. 374,157. 25 Claims. (Cl. 210—183.)



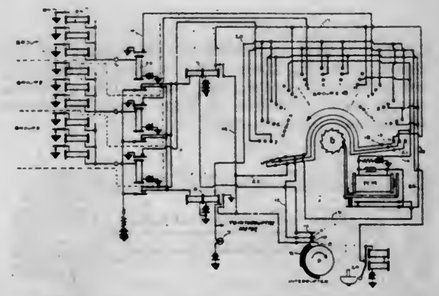
1. The method of treating liquids which consists in producing an intimate mixture of such liquid with an absorptive agent in finely divided form, passing such mixture repeatedly across a filtering medium at velocity sufficient to retain said absorptive agent in suspension and prevent its deposition in substantial quantity on said filtering medium, while allowing clear filtrate to pass through such medium, and progressively adding to the mixture fresh liquid to be treated, at a rate commensurate with the off-flow of filtrate.

6. In a liquid treating system, the combination of a tank; a filter; a circulating system including feed and return passages between said tank and filter, both on the same side of the filtering element thereof; a finely divided solid reagent in said tank, filter and circulating system, adapted to be suspended in and to react upon liquid undergoing treatment therein, a pump serving to circulate said liquid between said tank and filter at a rate sufficient to retain substantially all said finely divided solid in suspension; means serving to subject the liquid in said tank, filter and circulating system to pressure; and means serving to receive filtrate passing through the filtering element of said filter.

1,450,561. MACHINE FOR FILTERING COMPRESSED AIR. CHARLES BERNICE PARKER, Nashville, Tenn. Filed Mar. 13, 1920. Serial No. 365,645. 2 Claims. (Cl. 183—42.)

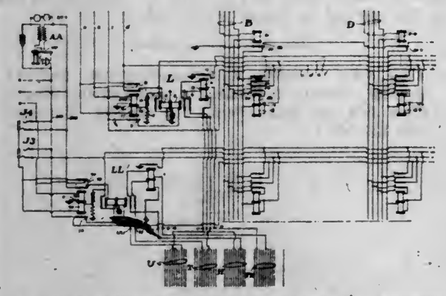
1. An air filter comprising a casing, a cylinder in and spaced from the casing to form a chamber, said cylinder

having ports leading to the said chamber, apertured cones, cages in the cylinder for supporting the cones, netting



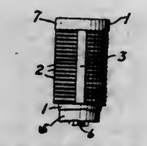
over the cones, means for supplying air to the cones, a collector for foreign substances and means for discharging the foreign substances from the collector.

1,450,562. PROCESS FOR THE TREATMENT OF GASES FROM GAS PRODUCERS. OLIVIER PIETTE, Brussels, Belgium. Filed Feb. 26, 1921. Serial No. 448,196. 7 Claims. (Cl. 23—21.)



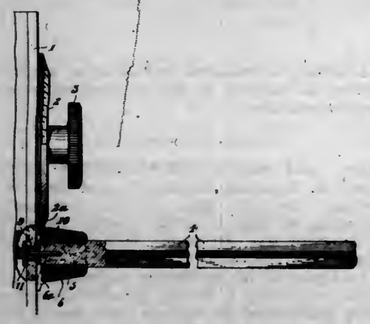
1. A process for the treatment of gases from gas-producers, comprising passing the gases into condensers with spraying water, adjusting the temperature by the circulation of the water in such a manner as to condense only fixed ammoniacal salts and tarry compounds, passing said gases into a closed saturator in which the remaining ammoniacal compounds are converted into ammonium sulphate and the said ammonium sulphate is crystallized, and placing the outlet water from the condensers in contact with air blown under the grate of the gas producer.

1,450,563. TROUBLE-LOCATING DEVICE. WINFRED T. POWELL, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed May 16, 1919. Serial No. 297,578. 10 Claims. (Cl. 179—175.)



1. In a telephone system, a plurality of pieces of apparatus co-operating to complete telephone calls, a device operating to locate faulty conditions in said apparatus, an operating circuit for said device, and a second circuit for completing a shunt path about said operating means to delay the operation thereof.

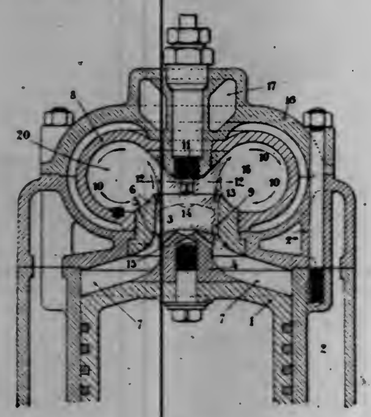
1,450,564. TELEPHONE-EXCHANGE SYSTEM. FRANK M. SLOUGH, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Jan. 24, 1918. Serial No. 213,473. 23 Claims. (Cl. 179—27.)



21. In a telephone system, a plurality of telephone lines, operators' positions, link circuits thereat, each link circuit terminating at one end of a manual switch and terminating at its other end in an automatic switch, a rotary impulse machine common to said lines and arranged to transmit impulses in accordance with the designation of any line when calling, and means for causing an automatic switch to extend a selected link circuit to a calling line in response to selective impulse from said impulse machine.

1,450,565. SECONDARY OR STORAGE BATTERY. EDWARD W. SMITH, Philadelphia, Pa. Filed Jan. 30, 1922. Serial No. 532,727. 1 Claim. (Cl. 204—29.)

In a storage battery plate of tubular type the combination of rubber in the form of a slotted tube and of asbestos in the form of paper arranged inside of and lining said tube with active material and a metallic central supporting core also arranged in the tube, whereby rubber in the form stated is protected by the asbestos in the form set forth from the chemical action of the active material.



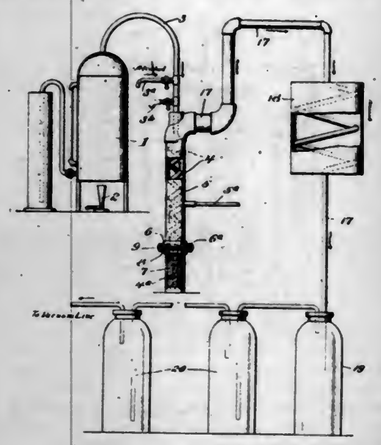
1,450,566. VERNIER ADJUSTER. HARRY T. SMITH, Kansas City, Mo. Filed Dec. 5, 1922. Serial No. 605,130. 2 Claims. (Cl. 74—7.)

2. In apparatus of the class described, wherein a dial plate is rotatably supported on an instrument board, a

vernier adjuster including a relatively long arm, an insulating head upon one end thereof, separable cooperating means carried by the adjuster and instrument board for positioning the head for frictional engagement with the dial plate adjacent the peripheral edge thereof, said cooperating means including an apertured stud carried by the instrument board and an axial pin extension carried by the adjuster to be received therein.

1,450,567. INTERNAL-COMBUSTION ENGINE. EUGÈNE HENRI TARTRAIS, Maisons-Laffitte, France. Filed July 14, 1921. Serial No. 484,807. 3 Claims. (Cl. 123—32.)

1. An internal combustion engine comprising a cylinder, a combustion chamber having the shape of a torus and communicating with said cylinder by a central opening, a fuel atomizer extending into said combustion chamber opposite said central opening and adapted to discharge the fuel in radial directions, a piston working in said cylinder and a projection on the head of the piston, adapted to engage into said central opening, said projection being provided with means affording a restricted passage for the air surrounding the projection, which passage opens into the end face of the projection.

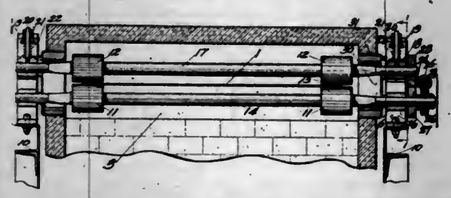


1,450,568. PACKING RING AND METHOD OF MAKING THE SAME. JACOB B. WENZEL, Bloom, Colo. Filed Nov. 19, 1920. Serial No. 425,095. 21 Claims. (Cl. 29—156.6.)

1. A method of tensioning packing rings, consisting in densifying the material by line indentations intersected by spot indentations.

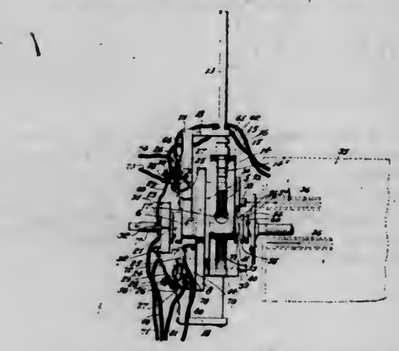
1,450,569. APPARATUS FOR PRODUCING KETONES. ROBERT R. WILLIAMS, Chicago, Ill., and HERBERT L. J. HALLER, Cincinnati, Ohio, assignors, by mesne assignments, to Seth B. Hunt, trustee, Mount Kisco, N. Y. Filed Mar. 31, 1919. Serial No. 286,430. 8 Claims. (Cl. 260—173.)

8. An apparatus for conducting exothermic gas phase reactions, comprising a heating chamber through which outgoing products of the reaction must pass, a reaction chamber having a mass of catalytic material so placed that gases to be treated must pass therethrough before entering the heating chamber, and a pipe passing through such heating chamber and the mass of catalytic material and of sufficient length so that the heat of reaction will vaporize liquids introduced into such pipe for treatment before the material so introduced enters the reaction chamber.



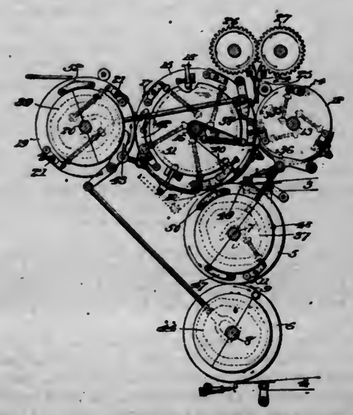
1,450,570. BAG. DAVID ZUKERBERG, Newark, N. J. Filed Feb. 3, 1922. Serial No. 533,747. 3 Claims. (Cl. 150—12.)

1. In a bag, the combination of a body part, a frame at the edge of said body part projecting laterally from the surface thereof, a handle with its end portion laid across said frame and onto the body part, and a holder secured to said body part over said handle end portion and pinching it against the frame.



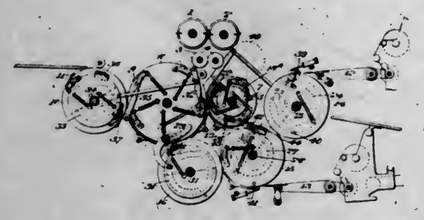
1,450,571. LEER CONVEYER FOR SHEET GLASS. HORACE E. ALLEN, Toledo, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 10, 1921. Serial No. 506,663. 12 Claims. (Cl. 198—127.)

1. In a leer for continuous sheet glass, a series of idler rollers for supporting the glass sheet, and a series of means engaging the sheet between certain of the idler rollers at spaced intervals throughout the leer for advancing the sheet over the idler rollers.



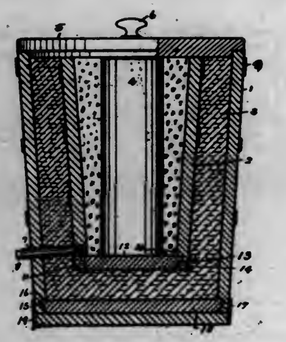
12. In a leer for continuous sheet glass, a series of idler rollers for supporting the glass sheet, a series of idler edge rollers, resting freely on the upper edge portions of the glass sheet to hold the sheet in rolling contact with the supporting rollers, and pairs of driving rolls engaging the edges only of the sheet for advancing the sheet through the leer.

1,450,572. REVERSING AND CONTROL SWITCH. OTTO BAHLS, Long Island City, N. Y., assignor to O. B. Electric Vehicles, Inc., Long Island City, N. Y., a Corporation of New York. Filed Dec. 15, 1921. Serial No. 522,663. 16 Claims. (Cl. 172—179.)



10. In combination with a motor control switch including a part mounted for pivotal movement while maintaining a closed circuit, a variable resistance unit of the carbon pile compression type in the motor circuit, a movable member to coact with the compression means of the resistance unit, a second movable member, said members having coacting cam surfaces, and means operatively connecting the movable switch part to the second named member to actuate the latter in the pivotal movement of the switch part and thereby vary the resistance.

1,450,573. SHEET COLLECTING AND ASSOCIATING MECHANISM. HOWARD M. BARBER, Stonington, Conn., assignor to C. B. Cottrell & Sons Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 30, 1921. Serial No. 518,982. 12 Claims. (Cl. 270—60.)

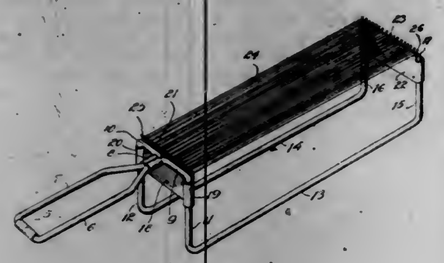


1. Means for collecting main press sheets, two sources of extra sheet supply, and means for feeding the extra sheets alternately from both sources to the sheet collecting means to be associated with the collected main press sheets either as inserts or as covers.

1,450,574. SHEET COLLECTING AND ASSOCIATING MECHANISM. HOWARD M. BARBER, Stonington, Conn., assignor to C. B. Cottrell & Sons Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 18, 1922. Serial No. 530,104. 19 Claims. (Cl. 270—60.)

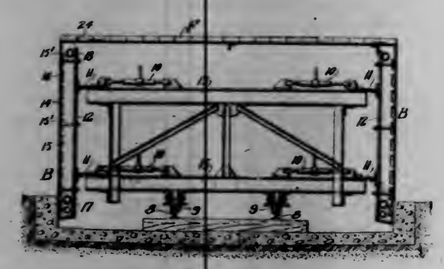
1. Two coacting sheet collecting and associating cylinders, two extra sheet supply sources, and means for feeding all of the extra sheets when covers from both sources to one of the cylinders or all of the extra sheets when inserts from both sources to the other cylinder.

1,450,575. CABINET. JOSEPH BECKER, Houston, Tex. Filed July 5, 1922. Serial No. 572,990. 1 Claim. (Cl. 217—7.)



In a cabinet, a tub formed of staves and having an annular inside groove at its lower end, the upper side of the groove forming an abrupt shoulder, and the lower side of the groove converging downwardly, a bottom whose margin is formed to conform to and fit in said groove, a supplemental bottom fitted against the lower ends of the staves and resting against the bottom first mentioned, and a hoop driven onto the supplemental bottom of the tub and being of sufficient width to surround the lower ends of the staves and secure said supplemental bottom in position.

1,450,576. COMB CLEANER. ALBERT J. BENNETT, Chicago, Ill. Filed Dec. 5, 1921. Serial No. 519,825. 2 Claims. (Cl. 132—29.)

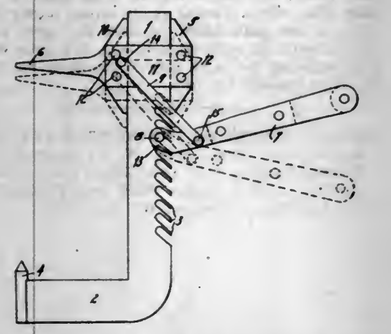


2. In a device of the class described, a frame consisting of two U-shaped members formed of continuous wire so bent that the upper ends of corresponding legs of the U's are connected together by horizontal members integral

with the U's, the wire of one of which horizontal members extends laterally to form a handle, bridges reinforc-

ing said wire at the four corners where the U's connect to the horizontal members and thread carried by said bridges.

1,450,577. METHOD OF AND APPARATUS FOR CONSTRUCTING TUNNELS AND THE LIKE. CHRISTIAN BRYNOLDT, Pittsburgh, Pa., assignor to Blaw-Knox Company, a Corporation of New Jersey. Filed Apr. 13, 1920. Serial No. 373,528. 9 Claims. (Cl. 25—131.6.)



1. The herein described method of constructing walls, tunnels and the like from molten material such as refuse slag which consists in filling and forming the slag against a cooled form.

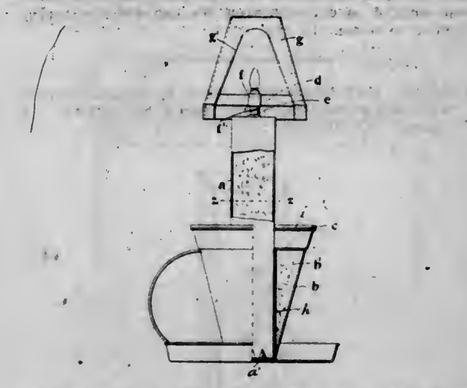
3. In mold form apparatus for constructing tunnels, walls and the like from hot material the combination of a hollow form, and means for establishing a cooling circulation through the form.

4. In mold form apparatus for constructing tunnels, walls and the like from hot material the combination of a movable hollow form, a movable source of cooling liquid supply, and means for establishing a circulation of the liquid through the form.

1,450,578. VALVE-SPRING COMPRESSOR. GEORGE W. CARY, Springfield, Mass. Filed Mar. 14, 1921. Serial No. 452,151. 4 Claims. (Cl. 29—56.3.)

1. The combination, in a valve-spring compressor, with a serrated shank having an angular extension which is provided with an engaging member for a valve, of a slide mounted on said shank and having a fork to engage a valve spring, an operating handle provided with a non-oscillatory engaging member to contact with said shank, connecting means between said handle and slide, whereby the handle may be moved independently of the slide, said engaging member being the only medium of direct connection between the handle and shank, and capable of entering any of the

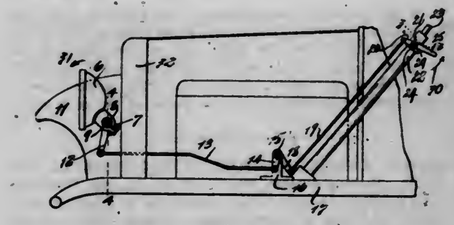
serrations of the shank, and said connecting means being connected with said handle forward of said engaging member.



1,450,579. PROJECTILE. CONSTANTIN CHILOWSKY, Paris, France. Filed July 11, 1919. Serial No. 310,181. 8 Claims. (Cl. 102—29.)

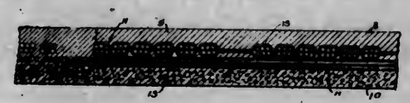
2. A projectile having means for stabilizing its flight by initially heating the air in advance of the projectile, comprising a receptacle for combustible, means for igniting such combustible upon the discharge of the projectile, and means, including a restricted duct from said receptacle to the nose of the projectile, for directing the burning gases therefrom forward of the advancing projectile, combined with a combustible in said receptacle adapted on ignition to burn with such rapidity as to provide a burst of flame at the critical instant following the discharge of the projectile from the gun.

1,450,580. OIL LAMP. HENRY COURTEEN, Sunbury-on-Thames, England. Filed May 13, 1921. Serial No. 469,316. 7 Claims. (Cl. 67—35.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. A lamp comprising in combination a cylindrical casing in the form of a candle, open at its lower end and closed at its upper end, a burner tube mounted at the upper end of the said casing, a wick within the said burner tube, absorbent material filling the said casing by which the casing is adapted to serve as a reservoir for the liquid illuminant, and a socket adapted for

the removable mounting therein of the lower end of the said casing, said socket being adapted to form an annular space surrounding the lower inserted end of the

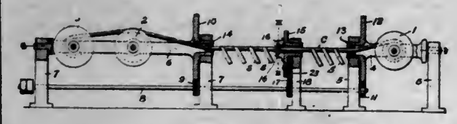


said casing whereby the annular space serves as a filling receptacle for the liquid illuminant on the said casing being inserted within the said socket, substantially as described.

1,450,581. HEADLIGHT. DAVID L. DAVIS, Norwalk, Conn. Filed Mar. 17, 1922. Serial No. 544,459. 1 Claim. (Cl. 240—61.)

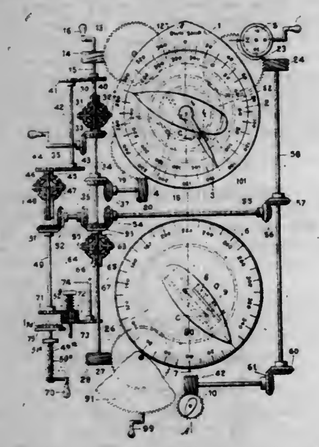
In combination with a motor vehicle having fenders, a rod extending transversely of the vehicle, means to secure said rod at each tnd to an adjacent fender, a carrier rotatably supported by said rod, a pair of lamp-casings carried by the rod, means whereby the lamp-casings may be adjusted relatively to said rod, a bracket carried by the steering post of the vehicle, a handle movably supported by said bracket and adapted, when manipulated, to further adjust said lamp casings, friction disks interposed between the handle and the bracket therefor, arranged to hold the handle in adjusted positions, and means to vary the pressure of one disk against the other.

1,450,582. COMPOSITION BOARD. HENRY C. DORN, Milwaukee, Wis. Filed Dec. 20, 1920. Serial No. 433,875. 11 Claims. (Cl. 154—45.9.)



5. A composition board, comprising a thickness of material formed of cement and asbestos, another thickness of material formed of asbestos, plaster Paris and magnesia, and an interposed insulating portion formed of straw or like material imbedded in both thicknesses of material to form an integral board.

1,450,583. FASTENING DEVICE. THOMAS FERRY, Cleveland, Ohio. Filed Jan. 28, 1921. Serial No. 440,768. 1 Claim. (Cl. 85—35.)

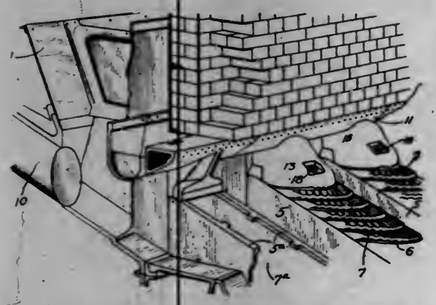


A fastener including a metallic terminal member having an angular shaped base portion provided with inwardly constricted sides, and a cover cap forming a hollow terminal head provided with similarly shaped angular base portion having similarly constricted sides fitted on and interlocking with said constricted sides of said angular base portion of said terminal member.

1,450,584. CABLE-BUILDING MACHINE. HENRY W. FISHER and NORMAN C. DAVIS, Perth Amboy, N. J., assignors to Standard Underground Cable Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 24, 1922. Serial No. 563,446. 7 Claims. (Cl. 117—36.)

1. In a taping machine the combination of means for causing the article under treatment to advance on straight away course rotating as it advances, means for placing under tension a tape secured to the article under treatment and drawn forward by the article as it advances, and means adapted to engage the surface of the advancing article and by such engagement to oppose torsional stress upon the article, substantially as described.

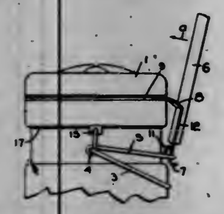
1,450,585. RANGE AND BEARING KEEPER. HANNIBAL C. FORD, Jamaica, N. Y., assignor to Ford Instrument Company, Inc., New York, N. Y., a Corporation of New York. Filed June 19, 1918. Serial No. 240,883. 43 Claims. (Cl. 235—61.)



1. In an instrument of the class described, indicating mechanism having a movable element for indicating the course of one moving object, other indicating mechanism having a movable element for indicating the direction

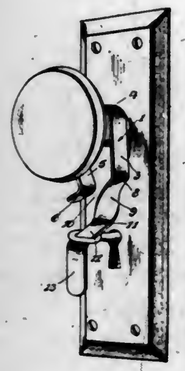
of a second movable object with respect to the line of sight between the objects, means for shifting the movable element of said first named indicating mechanism and for simultaneously shifting the movable element of said second named mechanism when the course of the first object changes and means for shifting the movable element of the second named mechanism independently of the element of said first named mechanism when the course of the second object changes.

8. In an instrument of the class described, mechanism for indicating the course of a moving object, mechanism for indicating the course of a second moving object, mechanism for indicating the direction of the line of sight between said objects and differential gearing connecting said mechanisms.



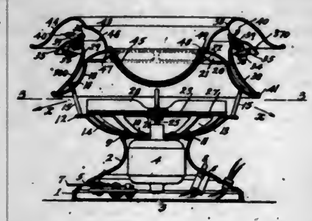
24. In an instrument of the class described, two mechanical vectors, members for resolving each of said vectors into components at right angles to each other, means for adding corresponding components together and means for connecting said vectors for simultaneously changing both vectors or for changing one of said vectors independently of the other.

1,450,586. UNDERFEED STOKER. ROBERT A. FORESMAN, Chicago, Ill., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 6, 1918. Serial No. 232,804. 10 Claims. (Cl. 110—44.)



8. In a furnace, the combination with a multiple retort underfeed stoker having alternate fuel feeding retorts and series of fuel supporting twyers extending downwardly and rearwardly from the front wall of the furnace, of a fuel guide member mounted on the upper twyer of each series of twyers at the point of joinder of the twyers with the front wall, said fuel guiding member having a surface sloping rearwardly from the effective front wall surface to the twyers at a greater angle of inclination than that of the series of twyers.

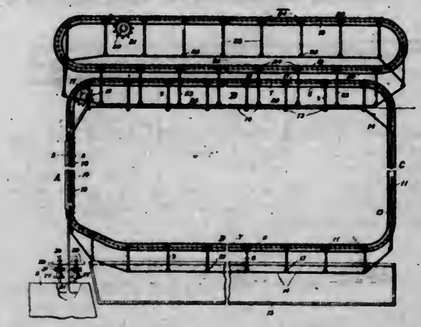
1,450,587. IMPLEMENT FOR OPENING AND SEALING JARS. FREDERIC A. FROST, West Newton, Mass. Filed Oct. 24, 1921. Serial No. 509,872. 3 Claims. (Cl. 81—3.1.)



1. A device of the class described comprising a body portion constituting a handle having at one end thereof on one side a fulcrum hook to engage and fulcrum on the wire of a preserve jar, and a cap-loosening prong on the opposite side extending laterally from the body member in a direction opposite to that in which the hook faces and adapted to enter between the cap and the gasket thereby to loosen the cap.

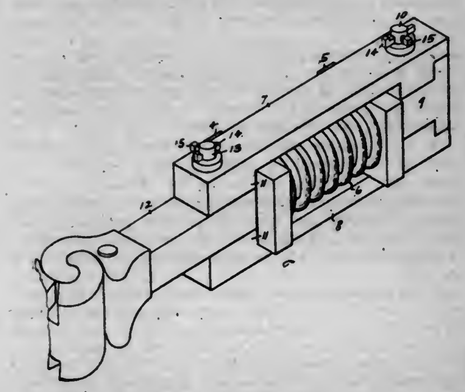
1,450,588. KEY FASTENER. BOYD H. FULLER, Detroit, Mich. Filed Jan. 13, 1922. Serial No. 528,927. 2 Claims. (Cl. 70—65.)

1. A key fastener comprising a knob shank engaging yoke having resiliently connected sides formed to provide a restricted throat at the lower end of the yoke, one of said sides being continued downwardly and provided with a depending locking finger rigid with respect thereto and offset with relation to the plane of the said yoke.



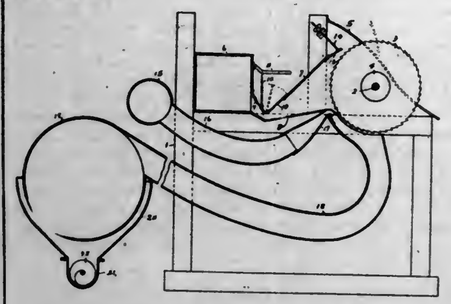
1,450,589. COMBINED HEATING AND COOLING DEVICE. GEORGE GRAFF, New York, N. Y., and WILLIAM A. KENNEDY, Leonia, N. J., assignors to Graff, Washburne & Dunn, a Corporation of New York. Filed Jan. 31, 1921. Serial No. 441,148. 40 Claims. (Cl. 219—39.)

1. In a device of the character described, the combination of a base, an electric motor mounted thereon, a fan driven from the motor, a heating element, and means for directing air and heat outwardly peripherally from the device and preventing a substantial amount of heat and air from rising directly upward from the device.



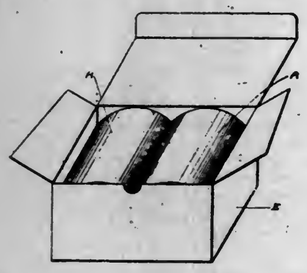
1,450,590. GLASS-DRAWING APPARATUS. WILLIAM GRAY, Lancaster, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed July 10, 1920. Serial No. 395,246. 20 Claims. (Cl. 49—17.)

13. In apparatus for drawing glass, the combination with a reservoir for molten glass, of drawing apparatus located thereover, and upright shafts located on opposite sides of the margins of the sheet being drawn and having outstanding fingers that engage said margins between the drawing apparatus and reservoir, to maintain a predetermined width to said sheet.



20. In an apparatus for drawing sheet glass, the combination with a reservoir for the melted glass, of means for drawing a continuous sheet of glass vertically therefrom and then bending the sheet into the horizontal plane, comprising two endless series of articulated flat plates, the sheet being guided by one series of plates in its vertical run, and gripped between the two series in its horizontal run.

1,450,591. COUPLING YOKE. WILLIAM F. GREEN, Houston, Tex. Filed Apr. 9, 1921. Serial No. 459,877. 1 Claim. (Cl. 213—68.)

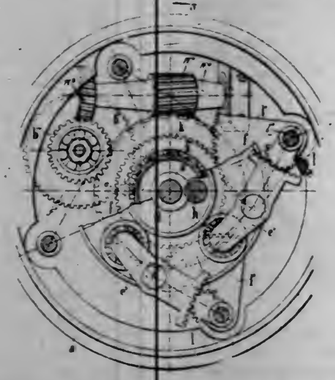


The combination with a draft frame formed of side members spaced apart and whose inner sides have the front and rear draft lugs in transverse alignment, front and rear followers which rest against the front and rear lugs respectively, a draft spring between said followers, a yoke formed of upper and lower clamps, lugs carried by the facing sides of the rear ends of said clamps, a filler block between the rear ends of said clamps and formed with notches to receive said lugs, the forward ends of said clamps being thickened inwardly forming shoulders against which the front follower normally rests, a coupler stem fitted between the forward ends of the yoke clamps, bolts passing upwardly through the front and rear ends of said yoke, said bolts passing through said coupler stem and filler block respectively, keys fitted through the respective ends of said bolts and means for securing said keys against displacement.

1,450,592. LINT-CLEANING ATTACHMENT FOR COTTON GINS. JOHN W. GUYNES, Calvert, Tex. Filed Sept. 8, 1921. Serial No. 498,194. 9 Claims. (Cl. 19—59.)

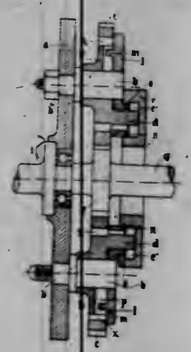
7. The combination with a gang of gin saws, of a suction flue, a chute leading from the saws and entering said flue, one wall of the chute having an adjustable section adjacent the saws, means for adjusting said section toward and from the saws, said chute being contracted adjacent the flue, a lint flue disposed to receive the cotton from the saws and one side of which is foraminated, a vacuum box surrounding said foraminated side and means for creating air currents through said flues.

1,450,593. PACKAGE FOR INCANDESCENT MANTLES. JOHN P. HARRIS, Lakewood, Ohio. Filed Jan. 28, 1919. Serial No. 273,630. 2 Claims. (Cl. 206—68.)



1. A package for incandescent mantles consisting of a series of endless cylindrical casings each having within it an internal lug-supporting ledge and a rectangular box for holding the cylindrical casings and which forms a closure for the upper and lower ends of the cylindrical casings.

1,450,594. PROGRESSIVE CHANGE-SPEED GEAR. CHARLES EDOUARD HENRIOD, Chanelaz-Areuse, Neuchatel, Switzerland. Filed Nov. 16, 1920. Serial No. 424,534. 8 Claims. (Cl. 74—34.)



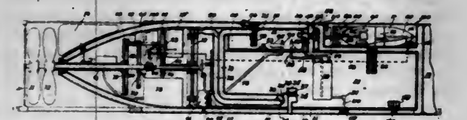
1. In a progressive change-speed mechanism, the combination of a motor flywheel adapted to turn at the speed of the motor; a driven shaft disposed in line with the axis of the flywheel, but independent thereof; a resistance gear on said shaft; a planetary gear carried by the flywheel to revolve bodily therewith and constantly meshing with the resistance gear; a transmission device connected with the planetary gear to normally hold it against axial rotation during its movement with the flywheel, to enable it to positively drive said resistance gear at the same speed as the flywheel; a set of normally-inactive free wheels associated with the transmission device to rotate the same; and a variable-movement de-

vice settable to render the free wheels active in succession for movements of different extents, thereby to rotate the planetary gear idly about its axis through corre-

sponding angular distances and thus produce lost motion between it and the resistance gear, with consequent reduction of speed.

1,450,595. GRADUAL-CHANGE GEAR. CHARLES EDOUARD HENRIOD, Lausanne, Switzerland. Filed Feb. 28, 1922. Serial No. 540,007. 11 Claims. (Cl. 73—34.)

1. In a progressive change-speed mechanism, the combination of a motor flywheel adapted to turn at the speed of the motor; a driven shaft; a resistance gear on said shaft; a planet gear carried by the flywheel to revolve bodily therewith, and comprising a plate rotatably mounted on the flywheel and an externally toothed ring gear loosely encircling said plate and meshing with the resistance gear; a controlling member loosely related to said plate; a finger on the plate; a sleeve on the controlling member adapted to turn around said finger; a member having tracks of variable eccentricity in which said finger and sleeve are adapted to travel; and a coupling device operative by the controlling member for locking the plate and ring gear together.

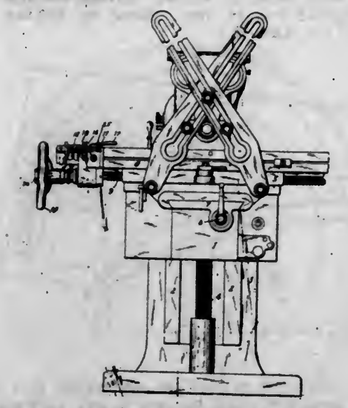


1,450,596. FIREARM. ELLISON D. HENRY, Houston, Tex. Filed Sept. 27, 1921. Serial No. 503,573. 1 Claim. (Cl. 42—49.)

The combination with a gun having a tubular magazine for the reception of cartridges whose outer end is externally threaded of a tubular extension whose inside diameter is the same as the inside diameter of the casing, and one end of which is internally threaded and screwed into the externally threaded end of said magazine, a cap threaded into the other end of said extension, a clamp surrounding said extension and whose upper end is

formed with arcuate fingers which embrace the gun barrel, a set screw threaded through the clamp between said barrel and the extension, and a single coil spring whose outer end rests against said cap and whose other end is adapted to press against the cartridges in the magazine and extension.

,597. TORPEDO. ALEXANDER T. KASLEY, Essing-..., Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylania. Filed July 2, 1921. Serial No. 482,282. 18 Claims. (Cl. 114—20.)



2. In combination, an automobile torpedo having the usual war head, a pilot torpedo leashed to the automobile torpedo and having a harpoon at its forward end, the pilot being designed to travel at a materially lesser depth than the main charge-carrying torpedo and in advance thereof, means for propelling the torpedoes, the arrangement being such that when the torpedoes are sent against a ship equipped with lateral torpedo-proof constructions, the pilot fixes its harpoon in the side of the ship and draws the main charge-carrying torpedo into explosive contact with the unprotected bottom of the ship.

11. In an automobile torpedo, a hollow double-walled shell for the torpedo, a tank containing nitrous oxide under high pressure, and means for circulating water through the double walled shell while the torpedo is in storage whereby the temperature may be maintained reasonably low and the poison nitrous oxide fumes may be absorbed in the water and not permitted to escape into the ship.

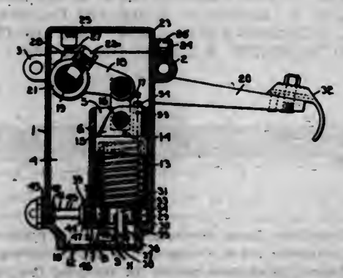
18. In combination, an automobile torpedo, a pilot torpedo, a flexible cable secured at one end to the automobile torpedo and at the other end to the pilot torpedo, means for housing the pilot torpedo within the automobile torpedo, propulsion machinery for the automobile torpedo, including gyroscopic mechanism, propulsion machinery for the pilot torpedo including gyroscopic mechanism, means for simultaneously expelling the pilot torpedo from the automobile torpedo and for initiating operation of the propulsion machinery of the pilot torpedo when the automobile torpedo has traveled a predetermined distance whereby the gyroscopic mechanism of the pilot torpedo becomes most effective in maintaining a straight course of the torpedoes at the time the gyroscopic mechanism of the automobile torpedo is losing its effectiveness.

1,450,598. SLIDE-ACTUATING MECHANISM. EDWARD J. KEARNEY, Wauwatosa, Wis., assignor to Kearney & Trecker Corporation, West Allis, Wis., a Corporation of Wisconsin. Filed Aug. 3, 1918. Serial No. 248,155. 12 Claims. (Cl. 90—21.)

1. In a milling machine, the combination with the work table and its actuating screw, of a motor, a manually operable member, means for interchangeably connecting the motor and said member operatively to the screw,

and means whereby said member will normally remain at rest while the screw is motor actuated.

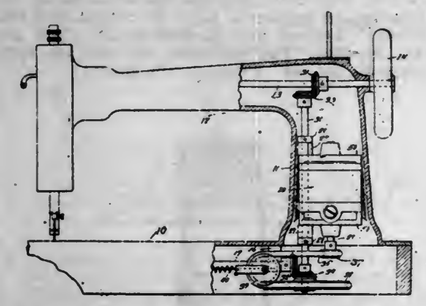
1,450,599. ARMATURE. JOHN K. LENCKE, Brooklyn, N. Y. Filed June 2, 1920. Serial No. 385,977. 7 Claims. (Cl. 171—206.)



1. An insulating collar to carry a conductor member on its exterior, said collar having a central bore therethrough extending from end to end and having a boss projecting from one end of the collar, said boss being closer along one side to the axis of said bore than the major portion of the inside surface of said bore.

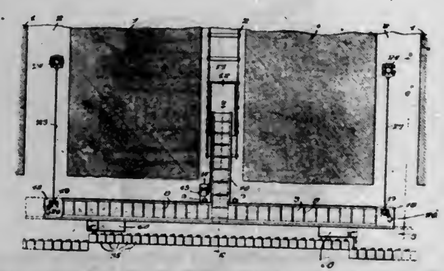
1,450,600. PAPER MADE FROM KAPOK FIBER. AUGUST LENDLE, Forest Hills, N. Y., assignor to Kuttroff Pickhardt & Co., Inc., New York, N. Y., a Corporation of New York. Filed Sept. 9, 1920. Serial No. 409,245. 4 Claims. (Cl. 92—3.)

1. As a new article of manufacture a paper made from kapok fiber.



1,450,601. SHOCK ABSORBER. RALPH M. LOVEJOY, Meredith, N. H. Filed Dec. 15, 1919. Serial No. 344,969. 18 Claims. (Cl. 188—88.)

1. A shock absorber comprising a casing having a plurality of fluid containing compartments, a piston in one of said compartments, a valve operating to permit the fluid to flow freely into said piston containing compartment upon movement of the piston in one direction and to prevent the flow of fluid therethrough upon movement of the piston in the opposite direction, and an irregular impeded delivery conduit leading from said fluid containing compartment operating upon movement of the piston in said opposite direction to cause a reflection of the current of fluid passing therethrough upon itself whereby resistance to the flow of the fluid is increased in correlation to the increase in force applied to the piston.



11. A shock absorber comprising a casing having an open top and presenting an enclosed fluid chamber, a cylinder, the lower end of said casing having an aperture therethrough to permit access to the interior of said casing and cylinder, a countersink in the wall of said aperture, an expansible disk closing said aperture and detachable means for covering the top of said casing.

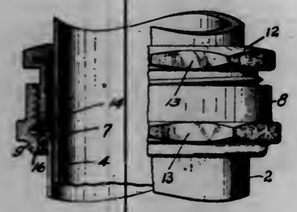
1,450,602. DRIVING MECHANISM FOR SEWING MACHINES. ARTHUR T. MACE, Cleveland, Ohio, assignor to The Domestic Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 16, 1919. Serial No. 331,233. 12 Claims. (Cl. 112—220.)

1. In a sewing machine, a motor mounted within the head thereof, and a shaft approximately parallel to, but eccentric of the armature shaft of the motor and connected therewith, a needle bar operating mechanism, shuttle operating mechanism, said eccentrically disposed shaft being geared directly to the needle bar operating mechanism and shuttle operating mechanism to drive the same.

1,450,603. MINING APPARATUS. EDMUND C. MORGAN, New York, N. Y. Filed June 17, 1916, Serial No. 104,174. Renewed Feb. 18, 1921. Serial No. 446,426. 58 Claims. (Cl. 262—1.)

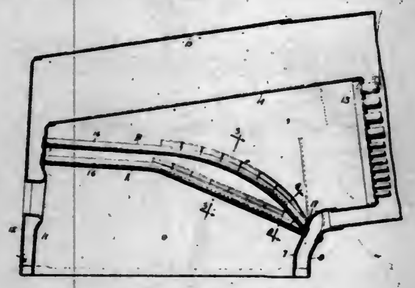
1. In mining apparatus, the combination of a multiplicity of props arranged side by side to form a continuous mine support between the floor and roof of a mine chamber, and mechanism arranged to be moved along said line of supports in said mine chamber for manipulating said props individually.

1,450,604. RAZOR. FRANK MOSSBERG, Attleboro, Mass., assignor to Mossberg Pressed Steel Corporation, Attleboro, Mass., a Corporation of Massachusetts. Filed Feb. 20, 1919. Serial No. 278,147. 1 Claims. (Cl. 30—12.)



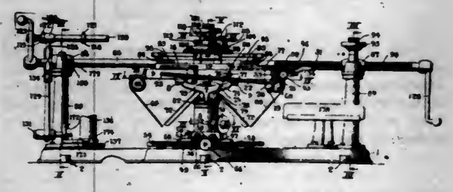
A safety razor comprising a front plate, a back plate, a cutter blade removably clamped between said plates, a tubular socket member having an inturned outer edge and lugs on its inner edge adapted to enter and be riveted into corresponding openings in said back plate, a handle having a ball end adjustably held in said socket, and a spring washer in said socket engaging on said ball to frictionally retain the handle in any relative adjusted position.

1,450,605. CUE TIP. STEPHEN NEMECEK, Chicago, Ill. Substitute for application Serial No. 275,534, filed Feb. 7, 1919. Renewed Mar. 31, 1920, Oct. 11, 1920, and Aug. 20, 1921. This application filed Mar. 20, 1922. Serial No. 545,338. 2 Claims. (Cl. 46—9.)



1. A cue tip formed of leather and having an indurating filling in its pores of moisture proof resin, said filling being superficial leaving a central porous core in the interior of the tip.

1,450,606. PIPE UNION. HENRY E. PAINE, San Francisco, Calif. Filed Jul 21, 1920. Serial No. 397,853. 5 Claims. (Cl. 285—165.)

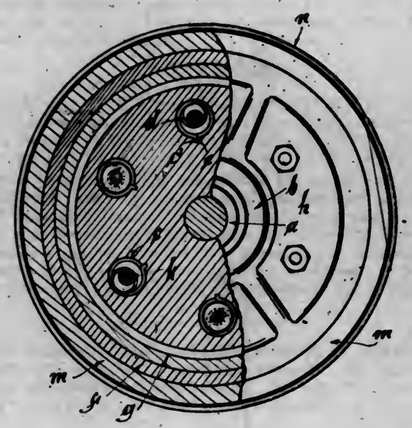


1. A pipe union comprising an external flange on one of the pipes, a socket ring having an internal flange and adapted to be passed over the external flange, a bushing ring interposed between said flanges, a stud ring in threaded engagement with said socket ring, and a gasket interposed between the stud ring and the external flange and adapted to be expanded inwardly when the stud ring is turned in the socket ring.

1,450,607. LOCOMOTIVE FIRE BOX. LE GRAND PARISH, Mountainview, N. J. Original application filed June 4, 1919, Serial No. 301,785. Divided and this application filed Dec. 19, 1921. Serial No. 523,254. 5 Claims. (Cl. 110—87.)

1. In a locomotive fire box the combination of a plurality of circulation tubes arranged in two rows spaced apart, with the tubes of one row in staggered relation with the tubes of the other row, an arch supported on the upper row with a space between the same and a side sheet of the box, and an arch-supported on the lower tubes, comprising wing bricks and center bricks, said arch having an open portion intermediate its sides.

1,450,608. REGISTERING AND SQUARING MACHINE. VERNON ROYLE, Paterson, N. J. Filed Apr. 3, 1919. Serial No. 287,265. 26 Claims. (Cl. 33—78.)

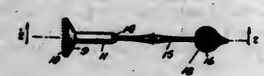


1. An apparatus of the character described comprising, a table for holding the work, mechanism for locating marginal lines on the work, means for rotating the table with respect to the lining mechanism for presenting the work in different positions to the same lining mechanism and means tending to raise and lower the table in its movement from one position to another.

1,450,609. PLATE CLAMP. LOUIS A. SCHMIDT, New York, N. Y., assignor to R. Hoe and Co., New York, N. Y., a Corporation of New York. Filed Apr. 12, 1922. Serial No. 551,756. 8 Claims. (Cl. 101—378.)

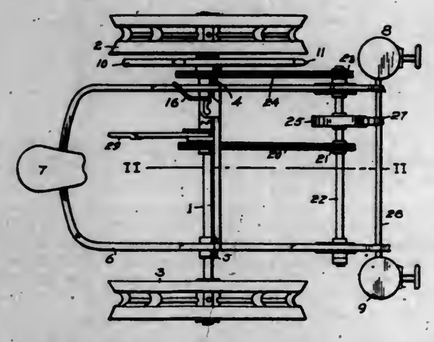
1. In a plate clamp, the combination of a plate support having a recess, of a clamp in the recess having differently formed faces, and means for rotating the clamp to bring the different faces thereof toward a plate on the support.

1,450,610. VEHICLE WHEEL. MAX SCHOSER, Manchester, England. Filed Mar. 16, 1922. Serial No. 544,285. 3 Claims. (Cl. 152—28.)



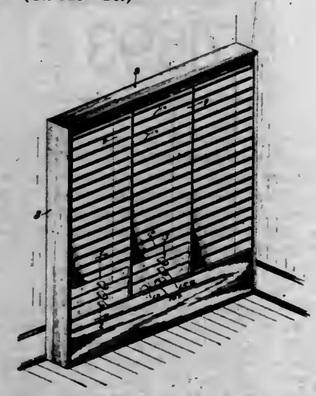
1. Spring wheels comprising, in combination, a disc, side flanges overlapping said disc, through holes in said disc formed with circumferential slots, volute springs in said holes having projections to engage said slots, through bolts connecting the side flanges and passing through the holes in the disc and the innermost convolutions of the springs, and collars on said through bolts, relative movement being possible between said disc and flanges, and one of the relatively moving elements being provided with a tyre and the other relatively moving element being provided with a hub, substantially as described.

1,450,611. FLOWMETER. RUDOLPH WILLIAM SCHROEDER, Dayton, Ohio. Filed Oct. 30, 1919. Serial No. 334,465. 15 Claims. (Cl. 73—167.)



1. A device for indicating the rate of flow of a fluid comprising a gauge glass compartment having an outlet for the fluid, a pipe in said compartment having a longitudinal slot in the wall thereof communicating with said compartment and an inlet and a piston in the tube moved by the fluid along the slot controlling the communication between the pipe and gauge glass compartment.

1,450,612. EAR MANIPULATOR. FREDERICK A. SCHULTZ, Hasbrouck Heights, N. J. Filed May 27, 1921. Serial No. 472,962. 8 Claims. (Cl. 128—297.)



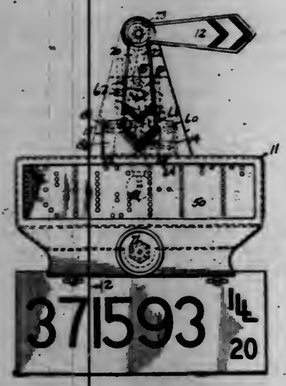
2. In a device of the class described, a rigid handle having headed end portions, and a compressible manipulating member adapted for attachment to one of the headed ends of said handle, said member having its active surfaces formed to provide a plurality of substantially rib-like fins.

1,450,613. CORN PLANTER. JESSE SCOTT, Dayton, Ohio. Filed Apr. 15, 1922. Serial No. 553,173. 2 Claims. (Cl. 111—32.)

2. In combination in a corn planter, a pair of wheels, an axle therefor secured so as to turn with the wheels, a counter shaft forward of the axle, a marking device free to rotate on the axle, a sleeve also free to rotate on the axle, a clutch for connecting the axle to drive the sleeve, a driving connection between the sleeve and counter-shaft, a driving connection between the counter-shaft and the marker, and manually operable means for rotating the sleeve to set the marking device.

1,450,614. FILE AND FILE CABINET FOR LETTERS OR OTHER PAPERS. WILLIS S. SHAFT, Faribault, Minn. Filed Sept. 25, 1920. Serial No. 412,766. 9 Claims. (Cl. 129—16.)

7. The combination with files having open ended pockets for holding letters or other papers, of a cabinet having

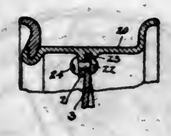


one or more compartments for receiving said pockets with the vertical walls of the compartments spaced apart so as to snugly abut the open ends of the files, when the latter are in the cabinet, vertically spaced horizontal rungs near the front edge of said compartments, and means extending across one end of the files for engaging over said rungs to suspend the files therefrom.

1,450,615. HOPPER-CAR DOOR. WILLIAM M. SHEEHAN, St. Louis, Mo., assignor to Commonwealth Steel Company, St. Louis, Mo., a Corporation of New Jersey. Filed Nov. 11, 1922. Serial No. 600,336. 8 Claims. (Cl. 105—250.)

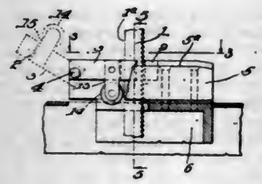
1. A hopper car door consisting of a one-piece casting comprising a hopper closure, hinge butts, reinforcing ribs, and brackets for attaching operating mechanism.

1,450,616. TRAFFIC GUIDE. HAZOR JUDSON SMITH, Springfield, Mass., assignor of one-half to Willard Reid, Chicago, Ill. Filed Apr. 6, 1920. Serial No. 371,719. Renewed Oct. 10, 1922. Serial No. 593,652. 4 Claims. (Cl. 116—39.)



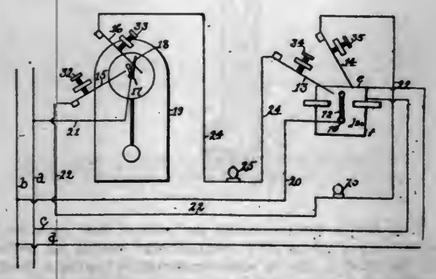
1. In a signal device of the class described two semaphore arms each mechanically connected to a reciprocating perforated plate, a fixed perforated plate superinforced over the two reciprocating perforated plates, the perforations in the three plates so arranged that when either or both semaphores are operated the holes in the three plates are brought into registry.

1,450,617. PROCESS OF PURIFYING MINERAL OILS. JAMES SMITH, Glasgow, Scotland. Filed Mar. 23, 1921. Serial No. 454,731. 1 Claim. (Cl. 196—26.)



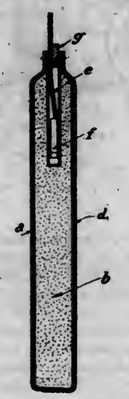
The herein described processof purifying mineral oil consisting in digesting the oil under pressure with absorbent cotton waste saturated with alkali by application of steam heat without contact of the steam with the oil while excluding the air from the oil.

1,450,618. PRESSED-STEEL WHEEL AND METHOD OF MAKING SAME. JOSEPH G. SWAIN, Akron, Ohio. Filed Nov. 20, 1919. Serial No. 339,400. 3 Claims. (Cl. 301—64.)



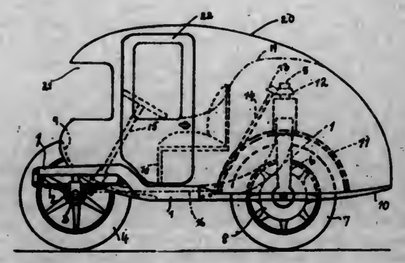
1. In a wheel, the combination of a hub member, a continuous tire-receiving rim member provided with two continuous parallel and adjacent integral flanges on its inner surface, one of said flanges being deeper than its companion flange, and a disk mounted on said hub and held in engagement with the inner surface of said deeper flange by the clamping action of said flange of lesser depth.

1,450,619. BAND-SAW GUIDE. JAY W. VAUGHAN, Chicago, Ill. Original application filed May 26, 1919, Serial No. 299,718. Divided and this application filed Sept. 22, 1921. Serial No. 502,501. 4 Claims. (Cl. 143—165.)



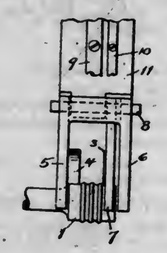
1. In a band saw machine, a guide for the saw blade comprising a block having a vertical slot at one end to accommodate said blade and carried by a horizontal pivot at a point back of the blade, together with a mount for said block formed with a rearwardly opening space and having a part which extends rearwardly beyond the opening at one side supporting the pivot of the guide block, said block being dimensioned to lie horizontally in said space in its saw-guiding position but to stand back from the opening when swung about its pivot to permit entering or withdrawing the saw blade.

1,450,620. SYSTEM FOR REGULATING FREQUENCY. HENRY E. WARREN, Ashland, Mass., assignor to Warren Clock Company, Ashland, Mass., a Corporation of Maine. Filed Dec. 13, 1918. Serial No. 266,520. 10 Claims. (Cl. 58—24.)



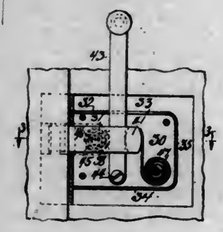
1. In an alternating current system, in combination, an alternating current circuit, a synchronous motor connected with said circuit, a circuit controller having a movable member actuated by said motor, a second circuit controller actuated by a standard time keeper, an electric circuit governed by said circuit controllers, and a device in the last mentioned circuit governed by said circuit controllers for indicating the accumulated error in the integrated frequency of the current in the alternating current circuit.

1,450,621. LIQUID-AIR BLAST CARTRIDGE. GUILLAUME WEBER, Hayange, Lorraine, France, assignor to Societe les Petits Fils de Francois de Wendel et Cie., Paris, France. Filed Sept. 27, 1919. Serial No. 326,976. 2 Claims. (Cl. 102—6.)



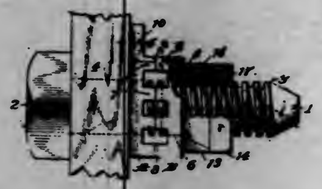
1. An air liquid blast cartridge comprising a pervious flexible envelope made of thin paper wound in several concentric layers and folded down at the ends, and a blasting charge in said envelope adapted to be impregnated with liquid air entering the cartridge at both extremities thereof and along the outer generatrix of the last layer.

1,450,622. THREE-WHEELED AUTOMOBILE. EAWIN WESNIGK, Berlin, Germany. Filed Jan. 17, 1922. Serial No. 529,980. 4 Claims. (Cl. 180—26.)



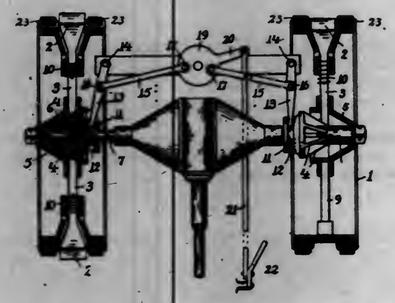
1. A three wheeled automobile comprising, in combination, two fore wheels; a hind wheel; a body of stream line or drop form, having its broader part forward and its narrow pointed part at the rear; a seat arranged in the broad fore part of the body; and a motor driving the automobile, said motor, its accessories, and the hind wheel being disposed within and below the pointed rear part of said body.

1,450,623. WEFT-REPLENISHING MECHANISM FOR LOOMS. JOHN WHITTAKER, Wilpshire, and RICHARD BRADSHAW and JOSEPH BRIGGS, Rishton, near Blackburn, England; Millicon Briggs, administratrix of said Joseph Briggs, deceased, assignors, by direct and mesne assignments, to The Whittaker Loom Company Limited, Preston, Lancaster County, England. Filed June 17, 1920. Serial No. 389,747. 2 Claims. (Cl. 139—85.)



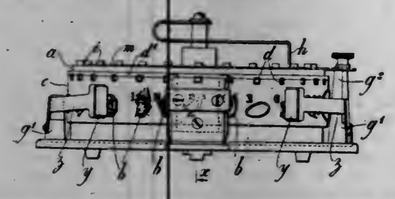
1. In weft-replenishing mechanism for looms, a cop magazine of the type described, having three pivoted jaws of which the first bears on the end of the heel of the skewer or pirn, the second bears on the cylindrical portion of the heel close to that same end of the heel while the third jaw bears upon the skewer or pirn beyond the heel, one of the two last-named jaws being movable independently of the other two.

1,450,624. SELF-ADJUSTING DOOR LATCH. BENJAMIN A. WOINA, South River, N. J., assignor of one-half to Arvid L. Johnson, New York, N. Y. Filed June 21, 1920. Serial No. 390,338. 4 Claims. (Cl. 292—173.)



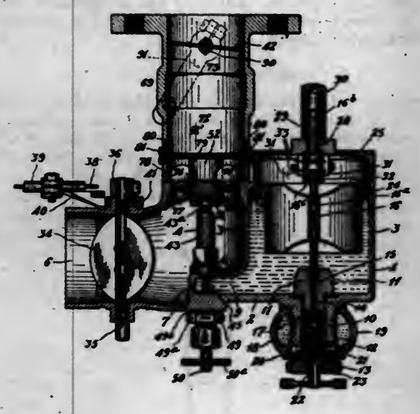
1. In a latch for a door the combination of a bolt having a nose with an inclined bearing face, a lock pillow for the door, a striker fastened to the lock pillar with a clearance space for said nose, said striker having an inclined bearing face in the path of and adapted to coact with the inclined bearing face of the nose, said faces bearing against each other when the bolt is moved to its closed position, means to move the bolt to a locked or unlocked position and tension means to maintain the inclined bearing face of the nose against the inclined bearing face of the striker when the bolt is moved to lock it with the striker, said means tending to slide the nose of the bolt on the striker and thereby swing the door to its closed position, said clearance space between the nose of the bolt and the lock pillar enabling the door to swing and take up the lost motion of its parts.

1,450,625. WASHER. WILLIAM S. ALEXANDER, Elsmere, Del. Filed June 23, 1920. Serial No. 391,120. 3 Claims. (Cl. 85—50.)



1. A washer formed of two members, ribs formed on one face of each member, the ribs of one member having transversely extending grooves and the ribs of the other member having transversely extending tongues adapted to be received in the grooves.

1,450,626. VARIABLE TRACTOR WHEEL. LEONARD ATWOOD, Boston, Mass. Filed Aug. 6, 1920. Serial No. 401,635. 2 Claims. (Cl. 301—46.)

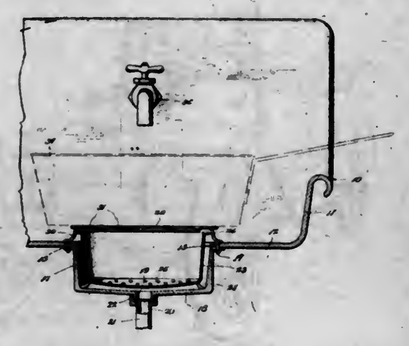


1. A wheel having radially movable spades, a conical hub, a rim, spokes rigidly connecting said rim and hub, a cylindrical sleeve within said hub, a plurality of wedges equal in number of said spades and rigidly connected but slidable on said sleeve, shanks each carrying one of said spades and yieldingly pressed against the slanting edge of one of said wedges, and means for sliding said wedges along said sleeve for forcing said spades radially outward.

1,450,627. TYPEWRITER. PERCY HENRY DARNLEY, London, England, assignor of one-half to Barnett Richards, London, England. Filed Sept. 23, 1921. Serial No. 502,710. 5 Claims. (Cl. 197—46.)

1. A typewriter comprising a circular rotatable member, printing elements carried by said member around the periphery thereof, a circular series of index elements on the said rotary member, a lever freely movable with respect to the rotary member and adapted to engage any one of the index elements whereby to actuate the rotary member and bring a printing element to printing position, and means for operating the printing element.

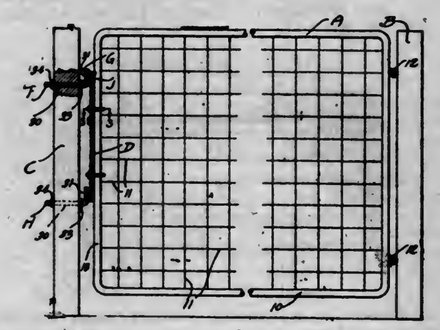
1,450,628. CARBURETOR. JOHN M. FLANNERY, Detroit, Mich. Filed Apr. 7, 1922. Serial No. 550,491. 19 Claims. (Cl. 261—41.)



1. In a carburetor, the combination of a supply chamber, an air intake, an outlet conduit, a pair of mixing tubes each communicating with said intake and said conduit, a nozzle disposed in each said mixing tube connected with said chamber, a throttle for controlling the flow of carbureted air through said conduit, a valve for controlling the flow of carbureted air from one of said mixing tubes into said conduit, means for operating said throttle and said valve, and a valve mechanism for admitting air into one of said tubes independently of said communication of the latter tube with said intake.

13. In a carburetor, the combination of a mixing tube of relatively small capacity having a fuel nozzle arranged to supply carbureted air for ordinary driving speeds, a mixing tube of relatively large capacity having a fuel nozzle, said relatively large mixing tube being coordinated with said first mentioned mixing tube to supply carbureted air supplemental to that supplied thereby for higher driving speeds, an outlet to which said mixing tubes are connected, means for supplying fuel to said nozzles, a valve for controlling the flow of carbureted air from said relatively large mixing tube, means for controlling the flow of carbureted air from said tubes through said outlet, said control means being disposed and arranged to permit substantially equal portions of the combustible mixture to pass to either side thereof when either the mixing tube of relatively small capacity or both mixing tubes are supplying carbureted air to said outlet, and connections between said control means and said valve, whereby the latter is positively operated.

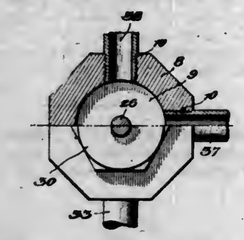
19. A carburetor having in combination an air intake, a mixture outlet, a plurality of mixing tubes of different capacities communicating with said intake and said outlet, a plurality of air admitting means controlling the admission of air to one of said mixing tubes under different operating conditions, a fuel chamber, fuel inlet means in each mixing tube and communicating with said fuel chamber, means controlling the action of said mixing tubes so that said tubes are brought into action successively, and means controlling the flow through said mixture outlet arranged to divide the mixture passing therethrough in equal parts under all conditions of operation.



1,450,629. DRAINER FOR SINKS. LILLY S. GRIGG, Long Beach, Calif. Filed Aug. 4, 1922. Serial No. 579,725. 2 Claims. (Cl. 4—35.)

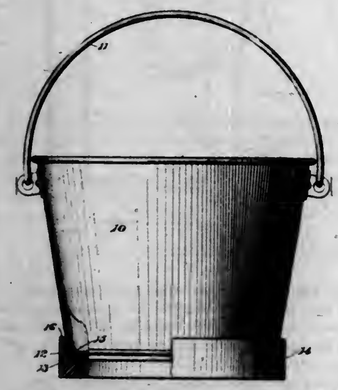
1. The combination with a sink having a large opening in its bottom; of a basin rigidly secured under said bottom so as to register with said opening and adapted to be connected with a drain pipe, a colander fitting loosely in said basin and having its top edge raised above the

bottom of the sink, and a cover for said colander adapted to be supported upon the bottom of the sink so as to be slightly raised above the top edge of said colander.



1,450,630. GATE-FASTENING DEVICE. JAMES HARRIS, Ponoka, Alberta, Canada. Filed June 2, 1921. Serial No. 474,473. 13 Claims. (Cl. 292—189.)

1. In a fastening device, the combination with a closure member, of a stationary support fixed adjacent said closure member, means on said closure member for engaging said stationary support, and gravity operated locking means pivoted on said stationary support, and having a portion thereof normally projecting from a side support, and foldable within said support upon placing of said first mentioned means thereover, said projecting portion of the pivoted means adapted by gravity to automatically assume its normal position for retaining said first mentioned means in locked position on the support.



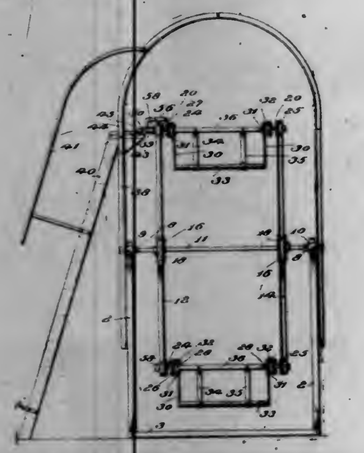
1,450,631. BURNER. JAMES F. HIGGINS, New Orleans, La., assignor to The Rogers-Higgins Co., Inc., New Orleans, La., a Corporation of Louisiana. Filed May 28, 1920. Serial No. 385,021. 5 Claims. (Cl. 158—74.)

2. In a burner, an outer tubular casing, a closing-cap on the discharge end of said casing having a central opening, an inner tubular casing spaced from said outer casing, and a nozzle on said inner casing having a tip portion extending into said opening, there being a mixing-chamber in said tip portion, a passage leading concentrically from the interior of the nozzle to said mixing-chamber, and passages leading from the space between the two casings to said mixing-chamber, said

passages being straight and located eccentrically with respect to said chamber.

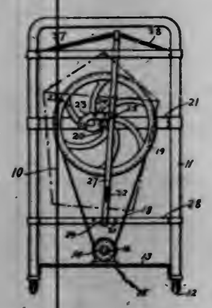
1,450,632. BUCKET PROTECTOR. EUGENE L. HORTON, San Francisco, Calif. Filed June 28, 1922. Serial No. 571,537. 2 Claims. (Cl. 220—69.)

1. In combination with a bucket having an annular flange projecting downwardly from its bottom and an annular projection circumscribing said flange, of an annular cushion member of resilient material, said member being grooved adjacent its top edge for the reception of said flange and said projection, and an upwardly extending flange portion on said cushion member adapted to circumscribe the outer surface of the bucket and yieldably hold the cushion member in position.



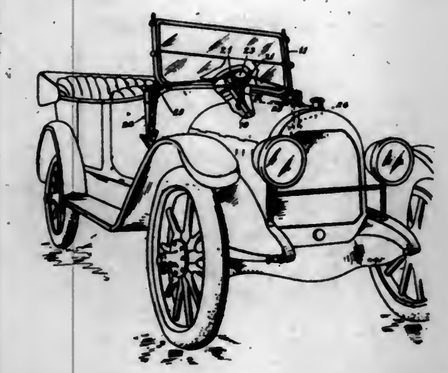
1,450,633. SELF-WATERING FLOWERPOT. WILLARD W. HUDSON, Shelbyville, Ill. Filed May 14, 1921. Serial No. 469,543. 1 Claim. (Cl. 47—19.)

A self-watering flower vase or pot including a hollow base member having a reduced hollow pedestal with



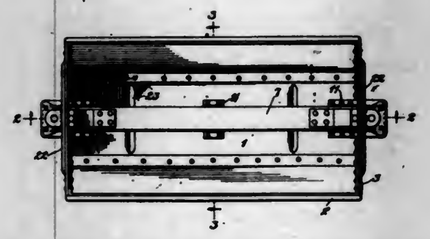
interior screw threads at the mouth thereof, a pot having a concentric screw threaded opening adapted to aline with the opening of the pedestal and to rest thereon, and a hollow tube having screw threads to engage the hollow portion of the pedestal and pot to hold the members together and providing means for supplying water from the base to the pot.

1,450,634. AMUSEMENT DEVICE. OMER B. HUNTER, Chickasha, Okla. Filed Dec. 15, 1921. Serial No. 522,530. 8 Claims. (Cl. 46—27.)



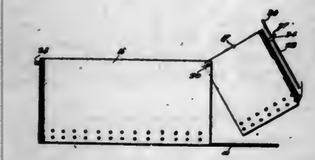
2. A device of the class described comprising a support, a frame movably journaled on a horizontal axis on said support, a plurality of seats on said frame adapted to travel around said axis and in said travel to approach sufficiently close to the ground so that the occupants thereof can propel said frame by means of their feet on the ground.

1,450,635. CRADLE. WOJCIECH LACKI, Chicago, Ill. Filed May 12, 1922. Serial No. 560,421. 2 Claims. (Cl. 5—57.)



1. A rocking cradle of the class described, comprising a cradle body, a frame from which said cradle body is suspended, a projecting pin on one end of said cradle body, a slotted operating rod adjustably connected with its lower end to a cross bar of said frame, said pin extended through the slot in said rod, a drive wheel, means for rotating said wheel from a motor, a link secured to one of the spokes of said wheel and to said rod intermediate its ends, and springs secured to the upper end of said rod and to the side posts of said frame.

1,450,636. TRAFFIC SIGNAL. ADAM LATSHAW, Dubois, Pa. Filed Dec. 9, 1920. Serial No. 429,380. 2 Claims. (Cl. 74—39.)

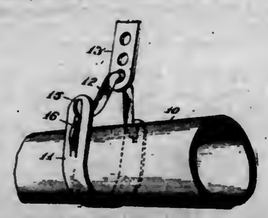


1. A traffic signal including a post, mating bearing plates mounted upon the post, one of said plates being provided with a quadrant, and a control lever journaled between said plates to cooperate with said quadrant and arranged for operative connection with a signaling member whereby the lever may be rocked for swinging the member.

1,450,637. MINE CAR. MICHAEL EARL LOHR, Johnstown, Pa. Filed Feb. 16, 1922. Serial No. 536,083. 3 Claims. (Cl. 105—364.)

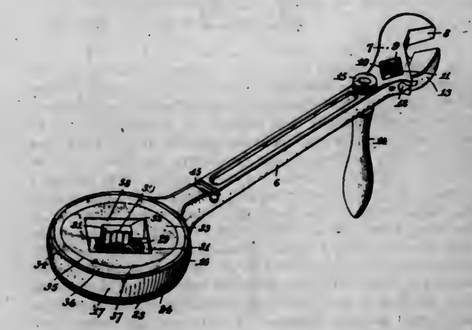
3. A steel mine car having a removable center beam of hollow construction, and separate fillers of wood inserted in said beam, said fillers being spaced apart centrally of the car.

1,450,638. WASHBOILER. JOHN P. METTEL, Dubuque, Iowa. Filed Jan. 3, 1922. Serial No. 526,780. 1 Claim. (Cl. 68—30.)



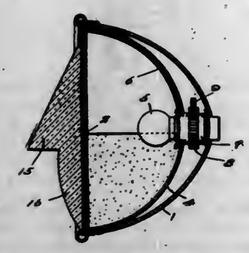
The combination with a wash boiler, of an inner receptacle composed of two sections abutting on a vertical line spaced from one end and hinged at the upper edges to open at the lower side thereof, a handle for each section at the outer end thereof, and means operable by one of the handles for locking the sections against relative movement.

1,450,639. DENTAL IMPRESSION TRAY. GEORGE S. MONSON, St. Paul, Minn. Filed July 31, 1920. Serial No. 400,325. 4 Claims. (Cl. 32—6.)



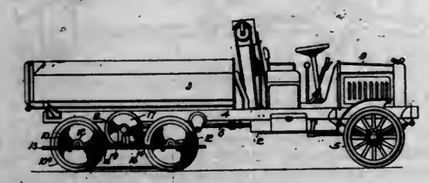
1. A dental-impression tray having a concave upper surface with a centrally arranged raised portion and adapted to receive a plastic material in which the impression of the roof of the mouth is formed, one end of said tray having a handle on the underside thereof and the under surface of said tray having a concave finger seat at the end of said handle and forming substantially a continuation of the surface thereof, said finger seat being adapted to receive the thumb or finger and insure uniform upward pressure at all points on the walls of the tray.

1,450,640. PIPE-SUPPORTING MEANS. CHARLES ERWIN NORMAN, Chicago, Ill. Filed Dec. 18, 1920. Serial No. 431,790. 4 Claims. (Cl. 248—31.)



2. In a device of the class described, the combination of two downwardly diverging arms, means for supporting said arms, hooks on the lower ends of said arms respectively, a pipe-supporting member in the form of a loop the arms of which are provided with openings for receiving said hooks, one of said openings being of a size to prevent disengagement of one of said hooks therefrom by a straight lateral pull thereon, and a spring tongue carried by the pipe supporting member adjacent to the other opening adapted yieldingly to prevent disengagement of the other hook.

1,450,641. WRENCH. STEPHEN J. OGRABISZ, Buffalo, N. Y. Filed Apr. 16, 1921. Serial No. 461,850. 4 Claims. (Cl. 81—60.)



1. A wrench comprising a shank and a dished head having a cylindrical wall and a flat end wall provided with an axial opening, an actuating-disk within said dished head lying against the inner side of said end wall and having a boss extending through said axial opening, a manipulating-disk lying against the outer side of said end wall and secured to the boss of said actuating-disk, a block fitting into said head and having a socket and radial grooves therein, and clamping jaws co-acting with said actuating-disk and arranged for movement within said radial grooves.

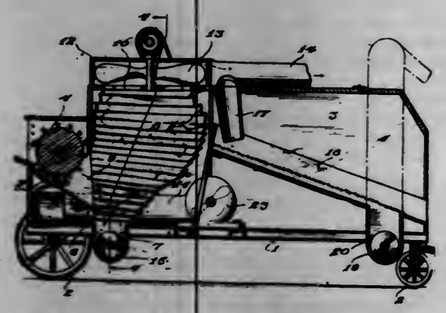
1,450,642. AUTOMOBILE HEADLIGHT. WILLIAM D. OTT and HENRY FRANCIS GRIFFIN, Riverside, Iowa. Filed Mar. 25, 1921. Serial No. 455,586. 3 Claims. (Cl. 240—41.)

2. A vehicle headlight comprising a casing, a stationary reflector supported in said casing, a movable reflector section rotatable in front of said stationary reflector and adapted to cover the upper or the lower portion thereof, said stationary reflector having its lower portion tinted, a lens supported at the front of said casing and having its upper part formed as a base-down single prism, and its lower part formed as a condenser, said prism presenting a quadrilateral front face sloping downwardly and forwardly and triangular side faces sloping downwardly and laterally, the outer surface of said prims being ground for the purpose of diffusing the light.

1,450,643. POWER TRANSMISSION FOR MOTOR VEHICLES. EDWIN H. PLATT, Denver, Colo., assignor of one-half to Edwin F. Platt, Portland, Oreg. Filed Mar. 9, 1921. Serial No. 450,944. 12 Claims. (Cl. 180—9.1.)

1. In a motor vehicle, the combination with the vehicle chassis, of frames connected at opposite sides thereof, traction wheels having drum faces of smaller diameter than their tread circles, mounted one before the other, on said frames, endless belts carried on said drum faces, rotary drive wheels frictionally engaging with the upper stretches of the belts, and a motor on the vehicle in driving connection with the drive wheels.

1,450,644. WIRE FASTENER FOR FENCEPOSTS. FRED PRACHT, Williamsville, Mo. Filed Apr. 4, 1921. Serial No. 458,283. 2 Claims. (Cl. 256—52.)

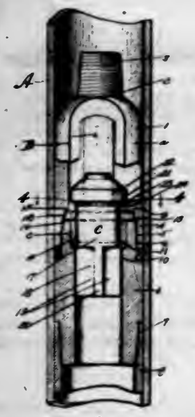


1. In a device of the character described the combination with a fence post provided with spaced openings, of a plate secured to one side of said fence post adjacent the bottom thereof, a retaining member pivotally mounted on said plate at a point spaced from the edges thereof, means

carried by said retaining member adapted to pass through said openings in said fence post, means to fasten said last mentioned means and thereby maintain said retaining

member in rigid relation to said fence post, and said plate being adapted to limit movement of said retaining member in one direction and maintain the same in spaced relation to said fence post substantially as described.

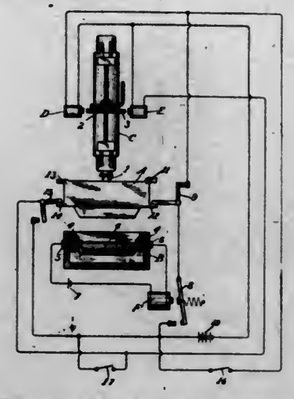
1,450,645. SEPARATOR. DAVID C. RUTH, Halstead, Kans., assignor of one-half to S. Ella L. Ruth, Halstead, Kans. Filed July 10, 1922. Serial No. 573,945. 1 Claim. (Cl. 130—17.)



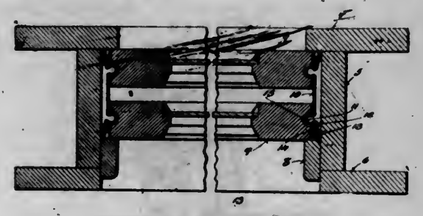
A grain separator comprising in combination with a threshing mechanism, an air trunk disposed below the threshing mechanism, a grain conveyer arranged in juxtaposition to said air trunk whereby the trunk will deliver a blast across the top of the said conveyer, a separating chamber rising from said conveyer and having its bottom and front side in direct communication therewith and with the threshing mechanism and air trunk, said chamber expanding upwardly and having an outlet opening through its upper end, annular deflecting ribs extending entirely around the walls of said chamber from the bottom to the top of the same, a fan casing covering the upper end of the separating chamber and in direct communication with the chamber through the upper end thereof, a suction fan mounted within said fan casing, and a stacking chute leading from said fan casing.

1,456,646. BASEBALL BAT. FRANK SADENWATER, Michigan City, Ind. Filed May 1, 1920. Serial No. 378,062. 1 Claim. (Cl. 46—4.)

A ball bat comprising flat, parallel laminations of wood having the grain extending longitudinally of the bat and alternating laminations of wood having the grain extending crosswise of the bat, such laminations being joined by a bonding agent.

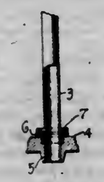


1,450,647. DEEP-WELL PUMP. HENRY SCHWAB, Bicknell, Calif. Filed Jan. 10, 1922. Serial No. 528,288. 1 Claim. (Cl. 251—127.)



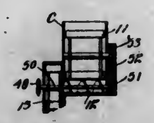
A valve structure for oil well pumps including a body member having an externally tapered and threaded portion at its upper end, a valve cage member having an interiorly tapered and threaded ring portion for engaging with the externally tapered and threaded portion of the body, and the said ring portion of the cage being provided with an interior stepped shoulder, a detachable valve housing having an annular exterior rib adapted to be engaged by the upper edge of the body and the stepped shoulder of the ring thereby to be firmly held in place, and the upper edge of said valve housing constituting a valve seat, the inner edge of which is cut away, and a piston valve including a body fluted at one end and having a disc-like head portion at the other, the underside of the said disc-like head portion adapted to rest on the valve seat formed at the upper edge of the valve housing, and the portion of the body adjacent the head being reduced in diameter to provide a clearance chamber to supplement the cut away portion of the valve seat.

1,450,648. METHOD OF FORMING METAL. HARRY A. SCHWARTZ, Defiance, Ohio. Filed May 1, 1922. Serial No. 557,527. 8 Claims. (Cl. 207—1.)



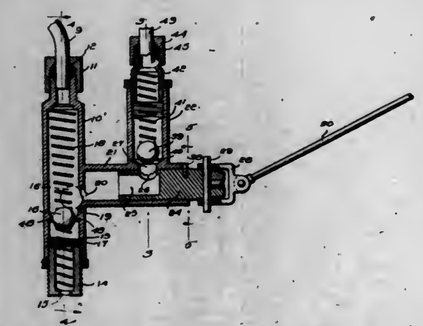
1. The herein described method, consisting in introducing molten metal into one forming member and utilizing the electric conductivity of said metal to control movement of the other forming member.

1,450,649. WINDOW STRIP. JOHN W. SCOTT, West Allis, Wis. Filed Apr. 4, 1922. Serial No. 549,457. 2 Claims. (Cl. 20—69.)



1. A device of the character described comprising a pair of metallic strips adapted to be secured to a window jamb and the adjacent side of the sash respectively, one of said strips having a longitudinal groove formed therein and the other strip having a bead slidably engagable therewith, the latter strip being normally under spring tension so as to exert pressure in said groove to frictionally hold said sash in adjusted position.

1,450,650. COOLING APPARATUS FOR AUTOMOBILES. CHARLES SEYMOUR, Brantford, Ontario, Canada. Filed Nov. 13, 1919. Serial No. 337,767. 3 Claims. (Cl. 285—47.)

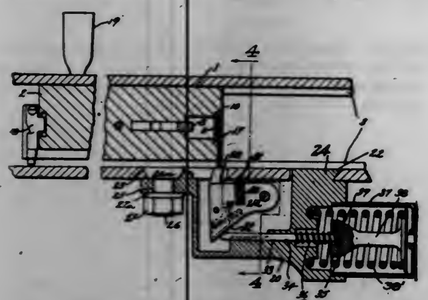


1. In a radiator the combination with upper and lower housings having aligned perforations, of radiator pipes inserted and seated within the perforations and extending between the housings, and collapsible gaskets originally substantially cylindrical embracing and surrounding said pipes and compressed by said pipes against the exterior of the housing.

1,450,651. MACHINE FOR DISTRIBUTING POWDER OVER GROWING PLANTS. GEORGE F. SPROULL, Montgomery, Ala. Filed Nov. 18, 1920. Serial No. 424,951. 4 Claims. (Cl. 43—148.)

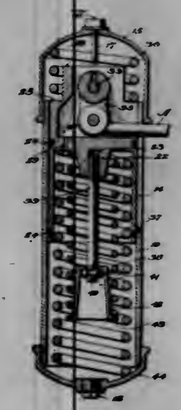
4. A machine of the character described comprising a frame, a hopper on the frame, parallel shafts extending through the hopper, a screw conveyor on the lower shaft, agitating plates for the material in the hopper parallel to the upper shaft and secured thereto, and gearing connecting the shafts for driving one from the other, substantially as set forth.

1,450,652. ATTACHMENT FOR INTERNAL-COMBUSTION ENGINES. JOHN STUTIKA, West Pullman, Ill. Filed Apr. 13, 1921. Serial No. 461,081. 3 Claims. (Cl. 123—25.)



3. A device for supplying steam and air to the intake manifold of an internal combustion engine comprising a pipe connected to the overflow pipe of the radiator to supply steam, a valve casing connected to said pipe, said valve casing being provided with an opening for the introduction of air, an outlet opening arranged intermediate said air inlet opening and the connection to said pipe, a valve arranged in said casing and positioned between said openings, a pair of springs arranged above and below said valve to normally cut off the supply of air, said valve being adapted to raise when the engine is running to permit introduction of air, and being further adapted to close said outlet opening to cut off the supply of air and steam when the speed of the engine exceeds a predetermined limit, and connections between said outlet opening and said intake manifold.

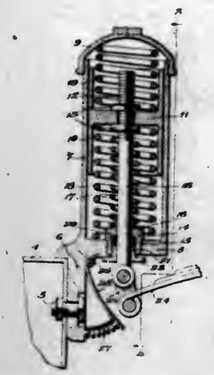
1,450,653. AUTOMATIC GUN. CARL G. SWEBILIUS, New Haven, Conn., assignor, by mesne assignments, to The Marlin Firearms Corporation, New Haven, Conn., a Corporation of Delaware. Filed June 11, 1918, Serial No. 239,360. Renewed Nov. 21, 1921. Serial No. 516,901. 30 Claims. (Cl. 89—3.)



11. In an automatic gun, an oscillatory trigger, a reciprocating breech block, a sear slidably mounted on said breech block, a slide on said breech block for operating

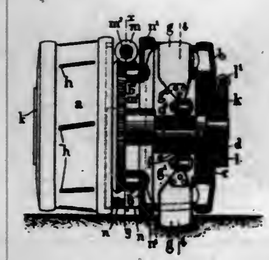
said sear, and means to allow continuous oscillation of the trigger without operating the slide until after the gun is completely breeched.

19. In an automatic gun, a carrier containing a trigger, a housing attached to said carrier, a two piece piston reciprocatively mounted in the housing and extending into the carrier.



1,450,654. VEHICLE SPRING. CLARENCE W. THOMPSON, Wilmington, Del., assignor to Thompson Spring Company, Wilmington, Del., a Corporation of Delaware. Filed July 9, 1921. Serial No. 483,621. 3 Claims. (Cl. 267—29.)

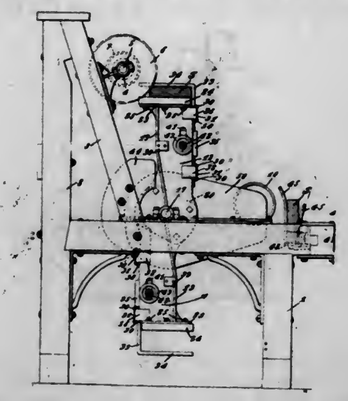
1. A spring device comprising an elongated casing arranged to be connected with a vehicle part and having an end wall and a longitudinal slot in its side wall, a hollow piston therein having a partition, a main compression-resisting coil-spring interposed between said partition and end wall, a rod on said partition extending into said main spring, a sleeve slidable on said rod normally out of contact with and arranged to contact with said end wall after initial compression of said main spring and having an annular seat, a member maintaining said sleeve on said rod, an auxiliary spring interposed between said partition and annular seat, and a member mounted on said piston arranged to be connected with a vehicle part movable in said slot.



1,450,655. VEHICLE SPRING. CLARENCE W. THOMPSON, Wilmington, Del., assignor to Thompson Spring Company, Wilmington, Del., a Corporation of Delaware. Filed Mar. 24, 1922. Serial No. 546,401. 2 Claims. (Cl. 267—29.)

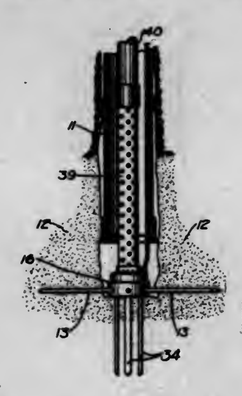
1. In a vehicle, the combination of an upstanding bracket, an abutment extending laterally therefrom, a spring on said abutment, a rod arranged to compress said spring extending below said abutment, a body-supporting member, a member connecting said member and

rod, and a sheet-material spring-buffer secured to said bracket below said abutment and curving outwardly from said bracket and arranged to restrain movement of said connecting member.



1,450,656. TRACTION WHEEL WITH MOVABLE BLADES. FRANÇOIS TRÉCHOT, Paris, France. Filed Mar. 30, 1921. Serial No. 457,114. 8 Claims. (Cl. 301—48.)

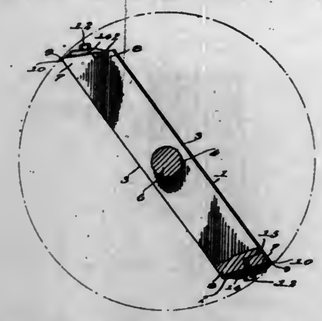
2. A wheel with movable blades for tractors, sleighs and generally self-propelled vehicles, comprising webs secured to the vehicle frame, a drum adapted to rotate around an axis lying at right angles to the direction of motion of the vehicle, bearings between the said drum and the webs, means for rotating said drum, slots provided in the periphery of said drum, a transverse normally stationary crank shaft, loosely carried by the webs, a collar loosely mounted on said crank shaft and independent of the drum, blades pivotally connected to said collar within the drum and adapted to pass through the slots of the drum, said blades being driven by the rotation of the drum.



1,450,657. SAWING MACHINE. JOSEPH LEE WALKER, Baton Rouge, La. Filed Mar. 8, 1921. Serial No. 450,688. 4 Claims. (Cl. 143—57.)

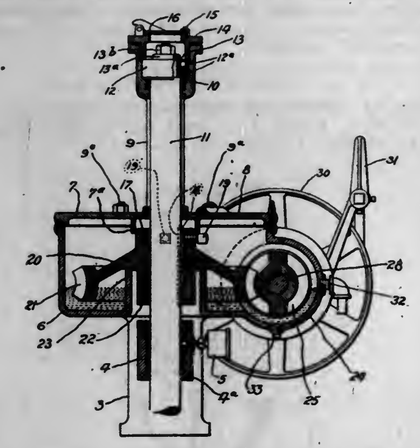
1. In a machine for cutting veneer the combination with stack holding means, of aligning arms mounted for rotation about a common axis, spaced saws mounted for rotation about a common axis, said arms being adjustable toward and from each other, rods slidably mounted upon the arms, blocks secured to the outer ends of the arms and constituting stack supports, fingers extending transversely of and parallel with the blocks and carried by the rods, said rods constituting means for engaging a stack during the rotation of the arms and lifting it from its holding means, weights connected to the rods and operating by gravity to bind the fingers upon the

stack engaged by the rods to clamp the stack throughout its width upon the blocks, said fingers engaging the stack at points close to and parallel with the planes of the saws.



1,450,658. OIL-WELL HEATER. MICHAEL WARNICK, Los Angeles, Calif., assignor to Warnick Oil Heater Syndicate, Los Angeles, Calif. Filed Dec. 6, 1921. Serial No. 520,424. 12 Claims. (Cl. 219—33.)

1. An oil well heater comprising a supporting member, and a plurality of flexible heating elements mounted on said supporting member.

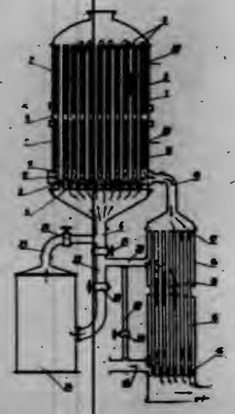


1,450,659. RIPSAW STICKER HEAD. JOSEPH CLARK WILLIAMS, Cleveland, Ohio. Filed Aug. 29, 1922. Serial No. 584,971. 2 Claims. (Cl. 144—228.)

1. A cutter head comprising a longitudinal body having parallel faces at the ends thereof and having outstanding flanges extending along the lateral marginal edges of said faces, a cutter blade for each of said faces, each cutter blade being of such width as to be adapted to slide on one of said faces between the flanges thereon, said cutter blade having a longitudinal slot therein, and a cap plate for each face, said cap plate being substantially co-extensive in area with the face and being adapted to be superimposed on the cutter blade thereon, and means extending through each cap plate and through the slot of the underlying cutter blade into threaded

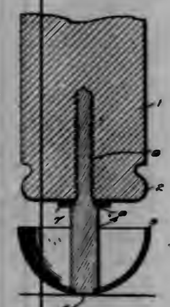
engagement with said body for releasably holding said cutter blade clamped against the underlying face in adjusted relation to the body.

1,450,660. DRIVING MECHANISM FOR AGITATORS. ALVAN H. ALBERGER, New York, N. Y. Filed Oct. 22, 1920. Serial No. 418,788. 11 Claims. (Cl. 74—7.)



1. A mixing or stirring apparatus comprising a tank with stirrer shaft and blades, a bracket detachably supported on the top of the tank and carrying a gear casing comprising a seamless annular housing with integral bottom and up-turned outer and inner walls, a detachable cover for said housing detachably secured in contact with the rim of the outer up-turned wall of the housing and having a central opening free of contact with the stirrer shaft, a stirrer shaft bearing below and separate from the bottom of the housing and a bracket supporting said bearing in fixed relation to the housing, a thrust bearing above the housing remote from a drive gear attached to the stirrer shaft and rotating in the housing.

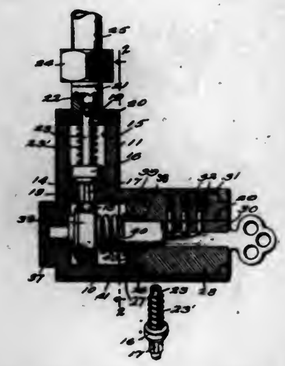
1,450,661. APPARATUS FOR THE MANUFACTURE OF SULPHURIC ANHYDRIDE. PAUL AUDIANNE, Paris, France, assignor to Etablissents Kuhlmann, Paris, France. Filed July 29, 1920. Serial No. 399,714. 5 Claims. (Cl. 23—1.)



1. An apparatus for the manufacture of sulphuric anhydride by the contact method comprising in combina-

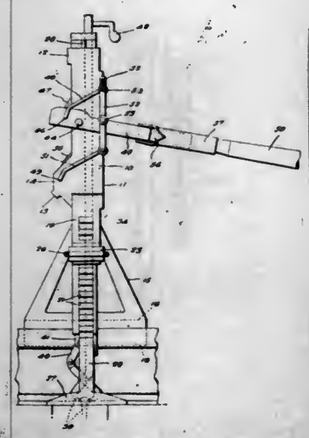
tion a chamber, a plurality of vertical tubes in the said chamber, a catalyst placed between and around the said tubes, means for distributing a mixture containing sulfurous anhydride and oxygen inside the said

tubes, means for causing the said mixture to rise inside the said tubes, and to flow downwardly through the catalyst, and means for maintaining a substantially uniform temperature throughout the height of the mass of catalyzer material.



1,450,662. ATTACHMENT FOR FURNITURE. JOHN M. BIGGS, Helena, Ark. Filed Oct. 31, 1921. Serial No. 511,875. 1 Claim. (Cl. 43—109.)

A guard for furniture legs comprising a cup having a smooth substantially semi-spherical outer surface and being provided in its lowermost portion with a vertical opening, and a vertical fastening member having a reduced lower end mounted in said opening and adapted to be secured therein and form a closure therefor whereby said cup is adapted to contain a liquid, the upper end of said fastening member being threaded for reception in an opening in the furniture leg, the lower end of said fastening member being smooth and forming a continuation of the semi-spherical outer surface of said cup and adapted to directly support the weight of the furniture.

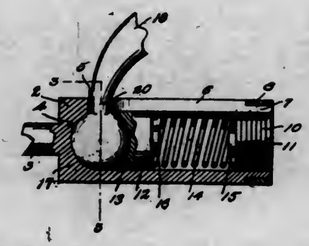


1,450,663. VALVE. MATTHIAS CHRISTMAN, Springfield, Mo. Filed Feb. 21, 1920. Serial No. 360,306. 1 Claim. (Cl. 251—30.)

A valve comprising a casing, inlet and outlet conduits connected with said casing, a valve seat, a valve engaging said seat, a tappet carried by said valve and extending within the casing, a rotatable cam mounted within the casing and engaging said tappet, said cam being provided with high and low portions whereby said valve

is shifted to opened and closed position, the high point of said cam being provided with a notch adapted to receive the end of the tappet to maintain the valve in opened position.

1,450,664. SPIKE PULLER. GEORGE M. CLARK, Charleston, W. Va. Filed Feb. 11, 1922. Serial No. 535,874. 4 Claims. (Cl. 254—18.)



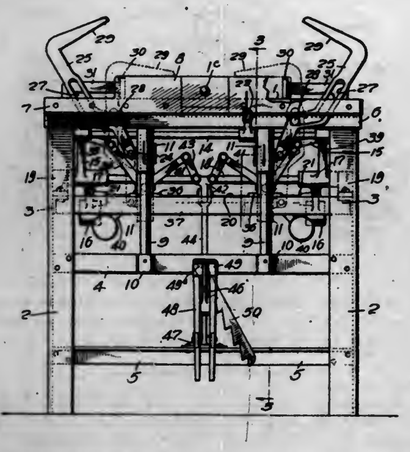
1. A tool of the class described comprising a housing, means whereby the housing may be supported in vertical position, a rack bar movable in said housing, pivotally connected gripping jaws, a shank rigid with one of the jaws and slidable longitudinally through the rack bar, a link having one end pivotally secured to the other jaw and its opposite end pivotally connected to the rack bar and means whereby the rack bar may be operated.

1,450,665. COUPLING. ARTHUR R. CROZIER, El Paso, Tex. Filed Apr. 16, 1920. Serial No. 374,891. 1 Claim. (Cl. 287—90.)

In a device of the kind described, a tubular member having one end closed and reduced to form a stem, said

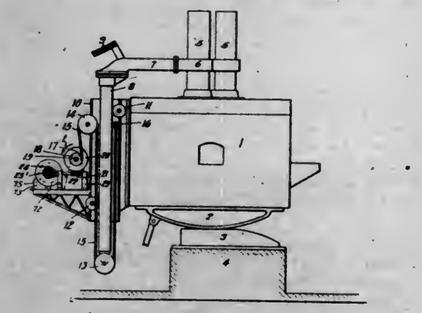
stem being threaded to provide nut receiving means, the opposite end of said member being open, threaded interiorly and reduced exteriorly, a plug adapted to be received within the open interiorly threaded end of said member, said member having a slot extending from the open end and terminating adjacent the closed end, a re-

taining ring on the reduced open end of said member for closing the slot at its open end and having an outside diameter equal to the body of said member, a plunger slidable in said member, a compression spring between said plunger and plug, a ball head engaged by said plunger, and a bracket arm extending from the ball upwardly through the slot.



1,450,666. EXPLOSIVE CARTRIDGE. SHARP DECKER, Commodore, Pa. Filed Dec. 21, 1922. Serial No. 608,277. 2 Claims. (Cl. 102—6.)

1. A cartridge comprising a tubular body having a reinforced intermediate portion, the tubular body being formed from an elongated blank having tapering ends which constitute the reinforcement at the intermediate portion of the body, an explosive filling within the tubular body, plugs glued in the ends of the body and consisting of sections of corn cobs having weakened central portions capable of being readily displaced, a coating of paraffine extending about the tubular body and the plugs for excluding moisture.

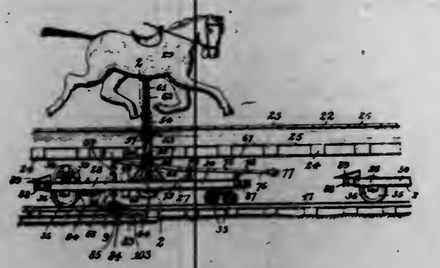


1,450,667. BACON-STRINGING MACHINE. JOHN DVORAK, Cedar Rapids, Iowa. Filed Nov. 6, 1922. Serial No. 599,311. 19 Claims. (Cl. 17—14.)

1. In a bacon stringing machine, a table for supporting the bacon, presser boards slidably mounted upon said table, and means for moving said presser-boards simultaneously toward each other in parallelism to force them

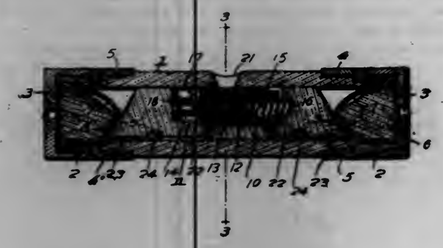
into engagement with the edges of said bacon to clamp and press the bacon to shape with substantially parallel sides at right angles to the ends thereof.

1,450,668. APPARATUS FOR MOVING FURNACE ELECTRODES. WALDEMAR DYRSSEN, New York, N. Y. Filed Feb. 25, 1921. Serial No. 447,648. 14 Claims. (Cl. 204—64.)



8. An electric furnace having a movable electrode, a motor rotating continuously in one direction at a substantially constant speed, a shaft connected by differential gearing to said motor for moving said electrode, and means operatively connected with said differential gearing for controlling the rate of rotation of said shaft.

1,450,669. AMUSEMENT APPARATUS. PETER A. LALLE and CLAUDE F. FOWLER, Buffalo, N. Y., assignors of one-third to Sebastian L. Petrino, Buffalo, N. Y. Filed July 7, 1921. Serial No. 483,028. 14 Claims. (Cl. 104—60.)



4. An amusement apparatus, comprising a plurality of correspondingly trending tracks, a plurality of trucks adapted for traveling movement on each track and having driving wheels connected by an axle, a motor on each truck for operating the driving wheels thereof, an eccentric shaft, means for rotating said eccentric shaft from said axle, an eccentric on said eccentric shaft, standards

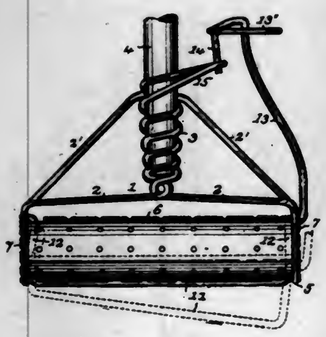
rising from said trucks, a guide element pivotaly secured to said standards, a supporting rod guided for movement

in said guide element and having an eccentric strap surrounding said eccentric, and a passenger mount secured to the upper end of said supporting rod.

1,450,670. INDICATOR FOR ELECTRIC FUSES. FRANK C. LA MAR, Pittsburgh, Pa. Filed June 7, 1920. Serial No. 387,017. 10 Claims. (Cl. 200—121.)

1. An electric fuse, comprising a casing, a fuse element fixed in said casing, and an electrically operated movable indicator for said fuse connected in circuit with said fuse element, adapted to be controlled by the current passing through said fuse element to continuously and alternately indicate the on and off conditions of the current.

1,450,671. RESILIENT WHEEL. IRVIN LINCOLN, Lansing, Mich. Filed July 5, 1921. Serial No. 482,315. 1 Claim. (Cl. 152—52.)

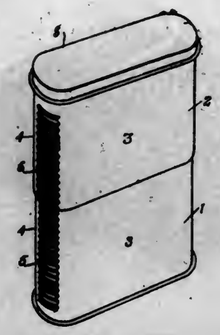


A resilient wheel comprising a rim, lugs provided with openings, said lugs being mounted in spaced relation on the inner surface of said rim, the hub disk having radially disposed lugs projecting outwardly from the peripheral edge thereof, said lugs being alternately disposed to extend on opposite sides of the disk, and spring spokes adapted to be connected to the hub disk lugs and the rim lugs, each of said spring spokes being provided with a hook formed from a single piece of material, one end of which is bent to form a knob which is adapted to be received between and embraced by the convolutions of the spring spoke, the internal coils of the spring spoke being constructed about the hook above the knob to retain the same in firm engagement therewith.

1,450,672. SAFETY EXPLODER. HUGH MCEWAN, Pittsburgh, Pa., assignor to William W. Nicoll, New York, N. Y. Filed Aug. 24, 1921. Serial No. 494,923. 2 Claims. (Cl. 102—8.)

1. An exploder of the character described, comprising a cylindrical tube, a head on one end of the tube, a cover hingedly connected to the head and adapted to be removably connected to the head so as to hold the cover against the head, a firing pin in the tube, a shoulder on the firing pin, said firing pin having an opening therein, a wire projected through the cover and through the opening in the firing pin, and a coiled spring under compression on the pin interposed between the wire and the shoulder.

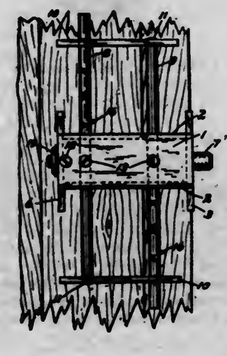
1,450,673. MOP HOLDER AND WRINGER. EDWARD M. MCNAMARA, Chicago, Ill. Filed Dec. 23, 1920, Serial No. 432,659. Renewed Sept. 1, 1922. Serial No. 585,830. 10 Claims. (Cl. 15—119.)



1. In a mop holder and wringer, the combination of a revoluble drum, a frame having bearing rings at its ends of an internal diameter equal to that of the drum adapted to encircle and provide peripheral bearings for the ends of the drum, means for preventing longitudinal movement of the drum in the bearing rings, means for attaching the mop material to the drum, and means for imparting rotation to the drum.

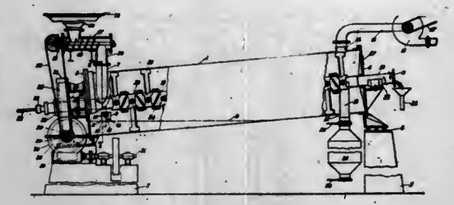
1,450,674. SIZE-REDUCIBLE BOX. HOWARD F. MARSTON, Dayton, Ohio. Filed Nov. 18, 1921. Serial No. 516,188. 2 Claims. (Cl. 220—8.)

2. A size-reducible box comprising a base section broader than it is thick and having on its narrow side alternate grooves and ridges and a top section having a hinged cover, said top section fitting over the base section and having also similar narrow and broad sides, the narrow sides being provided with alternate grooves and ridges to fit into the grooves and ridges of the other section to hold



the sections in a plurality of adjusted positions, said sections forming a box of extreme size when the serrations are least overlapped and forming a box of minimum size when said sections are most overlapped, said sections being movable back or forth as desired.

1,450,675. PROCESS OF SEPARATING ISOMERIC TRINITROTOLUENES. CHARLES M. STINE, Wilmington, Del., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a Corporation of Delaware. Filed Nov. 5, 1917. Serial No. 200,369. 4 Claims. (Cl. 260—142.)

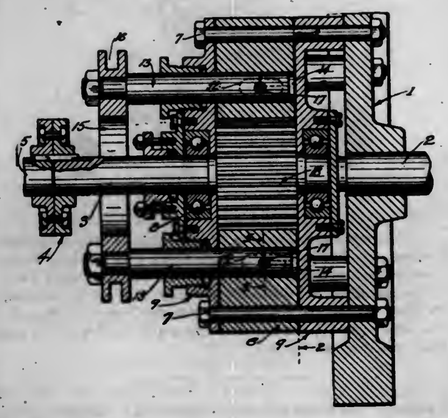


1. The process of purification of the crude product of nitration of toluol to obtain the trinitrotoluol of commerce, comprising subjecting said mixture to the action of carbon tetrachloride.

1,450,676. BUTT GAUGE. NEWTON C. WELLS and HUBERT J. MEYER, Los Angeles, Calif.; said Meyer assignor to said Wells. Filed Mar. 24, 1921. Serial No. 455,128. 4 Claims. (Cl. 33—197.)

1. A gauge comprising a base, a transverse gauge plate carried thereby, rods slidable transversely through said base, gauge plates upon said rods at the respective sides of said base and secured respectively to opposite ends of the respective rods, means for securing said rods in adjusted positions relative to said base, a screw rod extending longitudinally of said base, and a transverse abutment element threaded thereon for adjustment lengthwise of said base and relative to said transverse gauge plate.

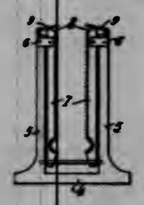
1,450,677. SULPHUR BURNER. HORACE G. CHICKERING, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed May 13, 1922. Serial No. 560,677. 7 Claims. (Cl. 23—1.)



1. In a sulphur burner for continuously burning sulphur high in ash, in combination, a combustion chamber with its bottom inclined to provide a sulphur-puddle portion, means for charging sulphur into said chamber at the lower end of said portion, an ash discharger adjacent the upper end of said portion, a gas outlet and an air inlet spaced from each other along said chamber, and means immersed in the puddle upon said portion for continuously removing the ash therefrom and discharging the same into said ash discharger.

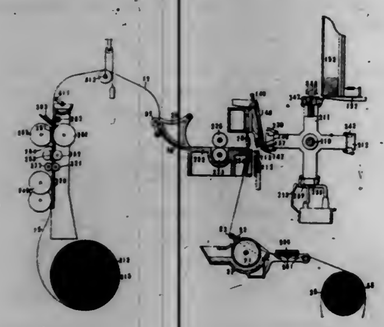
1,450,678. PROCESS OF PRODUCING PHTHALIMIDS. HARRY D. GIBBS, Penns Grove, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Feb. 24, 1920. Serial No. 360,828. 10 Claims. (Cl. 260—124.)

2. The process of producing a phthalimid which comprises passing a gaseous mixture consisting of naphthalene, oxygen, and a substance containing the group NH_2 into contact with a catalyst capable of accelerating the oxidation of the naphthalene to phthalic anhydride, while maintaining the catalyst at a temperature between 200 and 650° C.



1,450,679. HYDRAULIC CLUTCH. EMIL S. GRAFENSTATT, Los Angeles, Calif. Filed Sept. 3, 1920. Serial No. 407,834. 6 Claims. (Cl. 192—61.)

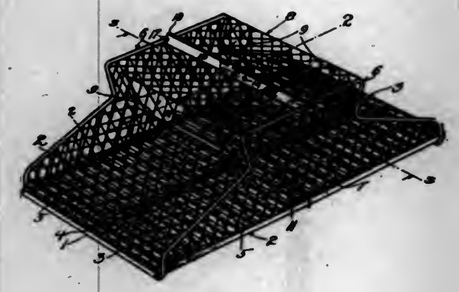
1. The combination with a fly wheel of a casing secured thereto, said casing having diametrically opposite chambers, pinions loosely journaled in said chambers, said chambers having ports connecting the same at opposite sides of said pinions, a driven shaft carrying a gear meshing with said pinions, closure rods for said ports con-



nected for longitudinal adjustment to regulate the openings through said ports, said rods having valve means for allowing escapement of a hydraulic medium from the spaces at the ends of said rods.

1,450,680. CYCLE STAND AND BRUSH HOLDER. ALBERTO GUAZZONI, Rome, Italy. Filed Oct. 13, 1921. Serial No. 507,486. 5 Claims. (Cl. 15—160.)

1. A bicycle wheel cleaner, comprising a stand provided with a pair of movable brushes, and means carried by the stand to engage and move the brushes toward each other when a bicycle is supported on said means.



1,450,681. METHOD OF MAKING BOXES AND ELEMENTS THEREOF. CARLOS HOLLY, Lockport, N. Y., assignor to F. N. Burt Company, Limited, Buffalo, N. Y., a Corporation of Ontario, Canada. Filed Sept. 17, 1912, Serial No. 720,731. Renewed Sept. 8, 1922. Serial No. 586,973. 40 Claims. (Cl. 93—40.)

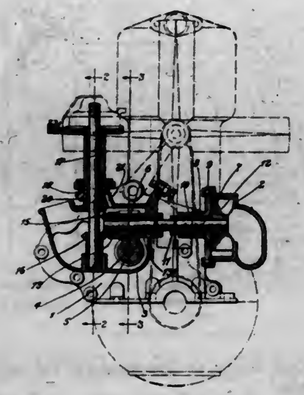
1. The method of making box elements which comprises feeding a web, scarfing the edges thereof on opposite faces, applying an adhesive to the scarfed edges thereof as it is fed, dividing the web into sections, folding the sections on lines transverse of the severed edge, and superposing the adhesive supplied scarfed edges after the glue on one edge has become tacky.

1,450,682. LOBSTER TRAP. CLIFFORD L. KEDDY, Lynn, Mass., assignor of one-half to William A. Frye, Welchville, Me. Filed Oct. 15, 1919. Serial No. 331,209. 2 Claims. (Cl. 43—100.)

1. A lobster trap comprising a base; two walls pivotally connected with opposite sides of said base; a top wall of open flexible material fastened at its edges to said base and to said pivotally connected walls; a removable brace for the upper portions of said pivotally connected walls, and flexible ties each secured at one end to the upper

part of one of said pivotally connected walls and at its opposite end to said base at the opposite side of the structure.

1,450,683. COMBINATION UNDERGARMENT FOR STOUT WOMEN. IRENE E. KELLY, Highland Park, Ill. Filed Feb. 8, 1922. Serial No. 535,081. 1 Claim. (Cl. 2—144.)

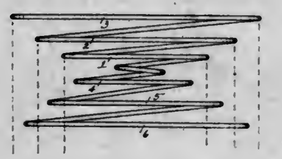


A woman's combination undergarment having the general form of a chemise, a crotch piece joining the front and back of the garment at the bottom thereof and defining, in conjunction with adjacent parts of the garment, openings for the legs of the wearer, one side of the garment having an opening therein that extends from the region of the waist of the garment through the bottom thereof, the back of the garment being formed in a lower section whose top is at the waist line of the garment and an upper section which is continued below the top of said lower section to form an apron to cover the upper portion of said lower section in various relative positions of said sections, and an elastic assembled with the top edge of the aforesaid lower garment section and anchored at its ends at the sides of said lower garment section.

1,450,684. AUTOMOBILE. RAYMOND R. KIRSCH, St. Louis, Mo., assignor to Hexagon Specialty Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed June 23, 1921. Serial No. 479,967. 17 Claims. (Cl. 123—195.)

1. The combination with the cam shaft of an engine, of a horizontal shaft journaled for rotation at right angles to the axis of the cam shaft, gearing for driving said horizontal shaft from the cam shaft, a single vertical shaft, gearing for rotating the vertical shaft from the

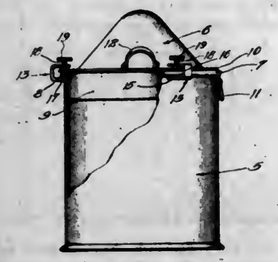
horizontal shaft, a chamber enclosing said gearings, a pump device above said chamber operated by the single



vertical shaft for pumping oil into said chamber, and timer mechanism operated by said single vertical shaft above said pump device.

1,450,685. BITUMINOUS EMULSION AND PROCESS OF MAKING SAME. LESTER KIRSCHBRAUN, Chicago, Ill. Filed Aug. 16, 1922. Serial No. 582,316. 6 Claims. (Cl. 134—1.)

3. An emulsion, non-coalescible on drying, consisting of sulphite liquor, an earthy colloidal material, and a bitumen being in dispersed phase.



1,450,686. SPRING. AREND KLAASSE, Jackson, Mich. Filed Apr. 17, 1922. Serial No. 553,480. 3 Claims. (Cl. 5—256.)

1. A longitudinally-resilient helical spring whose coils adjacent the respective ends thereof successively increase in diameter toward said ends, the coils adjacent one end of the spring being of greater diameter than the coils corresponding in position thereto respectively adjacent the other end of the spring.

1,450,687. COOKING VESSEL. HARRY KUNIN, Chicago, Ill., assignor to Midwest Machinery Products Co., Chicago, Ill., a Corporation of Illinois. Filed Dec. 9, 1920, Serial No. 429,335. Renewed Jan. 22, 1923. 1 Claim. (Cl. 220—55.)

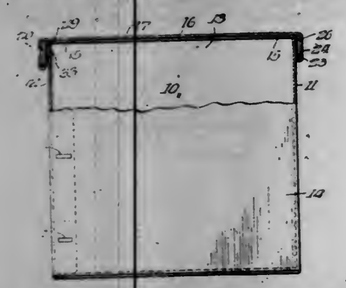
In a device of the class described, the combination of a cylindrical vessel having its upper edge portion outwardly flared and downwardly curved to provide an outstanding bead, a cover for said vessel having an outwardly projecting flange adapted to seat on the upper surface of said bead, and a clamping device for clamping said flange and bead together, said clamping device including a U-shaped member having its top arm extending at right angles to its central portion, and having its bottom arm extending at right angles to its central portion and terminating at a point back of the point of termination of the top arm, and having its terminal edge curved upwardly to provide an up-turned lip conforming to the curvature of the lower face of the aforesaid

bead, and a clamping screw working through the top arm in a direction at right angles to the top and bottom arms and in substantial alignment with the central portion of the up-turned lip aforesaid, substantially as described.

1,450,688. PAINT. JOHN T. LAWRENCE, Newark, N. J. Filed Sept. 19, 1921. Serial No. 501,693. 4 Claims. (Cl. 134—39.)

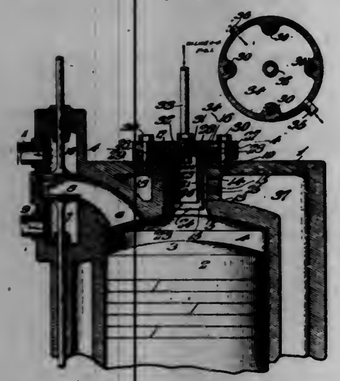
3. A paint including the following ingredients in substantially the proportions named: oil 80 parts, barium sulphate 12 parts, sodium carbonate 12 parts, prepared white zinc 24 parts, white lead 12 parts, zinc sulphate 16 parts, silica 12 parts, ground white antimony 6 parts, commercial yellow rosin 6 parts, water white rosin 6 parts.

1,450,689. BADGE. ALFRED B. LEMON, Providence, R. I. Filed Feb. 15, 1922. Serial No. 536,645. 2 Claims. (Cl. 63—23.)



1. A badge comprising a body having an outline of the desired significance and having an unobstructed opening through it shaped to carry a significance different from that of the body, and a hinged closure plate mounted on opposite sides of said body adapted to be moved independently to expose said opening and permit an unobstructed view of the opening from either side of the body.

1,450,690. COLLAPSIBLE CADDY. SAMUEL N. LEOPOLD, Chicago, Ill., assignor to Morris Paper Mills, Chicago, Ill., a Corporation of Illinois. Filed Oct. 27, 1921. Serial No. 510,859. 6 Claims. (Cl. 229—44.)

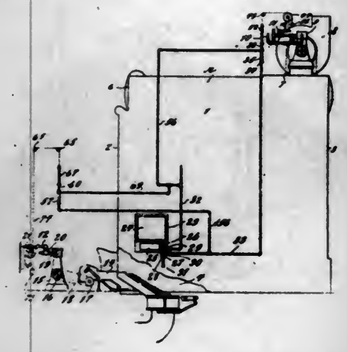


1. In a container, the combination of a rectangular receptacle portion and a cover portion therefor comprising a lid having flanges integrally connected to the edges of the lid and adapted to overlap the four sides of the receptacle part when the cover is closed, one of said flanges

having along its edge an intermediate and two end extension flaps, the intermediate extension flap being united

to one of said sides and constituting with said flange a hinge for said cover, the end extension flaps constituting means for locking said flange to the adjacent flanges.

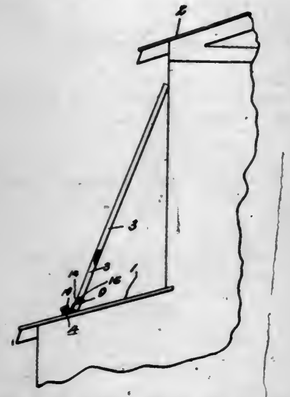
1,450,691. BURNER FOR INTERNAL-COMBUSTION ENGINES. EDWARD L. LOWE, Palo Alto, Calif. Filed Dec. 29, 1922. Serial No. 609,776. 13 Claims. (Cl. 123—33.)



1. In a device of the character stated, a burner composed of an outer sleeve, and an inner sleeve positioned within said outer sleeve, both of said sleeves being open and unobstructed at their lower ends, whereby an outer ignition chamber is formed between said sleeves open at its bottom, and a relatively large combustion chamber is formed within said inner sleeve, said chambers being in communication at their upper and lower ends.

1,450,692. PRINTING INK. WILLIAM J. MCELROY, New York, and JOHN CLARKE, Manhasset, North Hempstead, N. Y., assignors, by mesne assignments, to Alchemic Gold Company, Inc., a Corporation of New York. Filed June 16, 1922. Serial No. 568,849. 12 Claims. (Cl. 134—36.)

11. A printing composition composed of the recited ingredients in the following proportions by weight: 16 per cent of coumarone resin dissolved in 84 per cent of a solvent composed of 95 per cent terpineol and 5 per cent rosin oil; with metallic powder pigment in the proportion of two parts of pigment to one part of the resin solution.

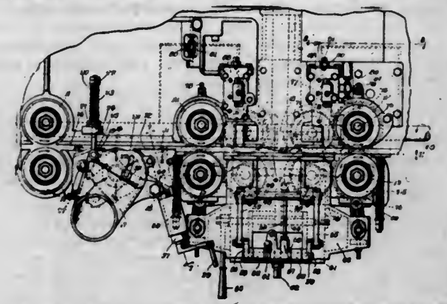


1,450,693. FURNACE CONTROL. EMBURY MCLEAN, Brooklyn, N. Y. Filed Oct. 21, 1920. Serial No. 418,594. 10 Claims. (Cl. 236—15.)

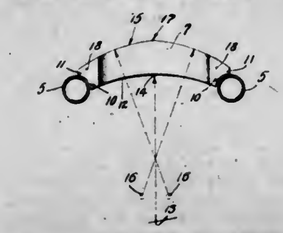
1. In combination, a furnace, a plurality of independent operating means for the furnace, a controller for each of said means, a pressure cylinder for operating each controller and connected to a common source of

pressure, and means for synchronizing the operation of said cylinders.

1,450,694. SAFETY DEVICE FOR LADDERS. RAYMOND MAHONEY, Philadelphia, Pa. Filed Sept. 7, 1922. Serial No. 586,578. 2 Claims. (Cl. 228—64.)



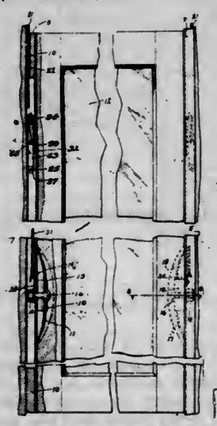
1. A safety or holding device for ladders, comprising a body bar with raised intermediate portions and longitudinal slots therein, holders arranged to receive the side bars of a ladder and having shanks positioned under the raised portions of the body bar, and means connecting the body bar and holder shanks and extending through said slots; the holders each including a bifurcated body and an angular shank whereby the body will be maintained above and in spaced relation to a roof or other support.



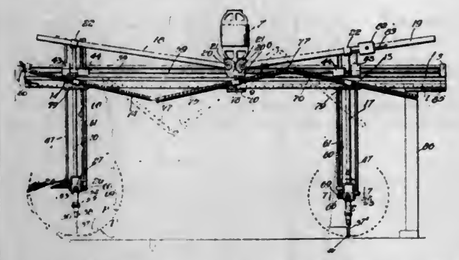
1,450,695. MILLING-MACHINE ADJUSTMENT AND QUICK RELEASE. CHARLES J. MARSHALL and FRANK R. WEAVER, Beloit, Wis., assignors to P. B. Yates Machine Company, Beloit, Wis., a Corporation of Wisconsin. Filed May 20, 1920. Serial No. 382,707. 17 Claims. (Cl. 144—246.)

1. In a machine of the character described, a cutter head, a stock abutment rail opposed to the operative face thereof, stock guides disposed one in advance and the other at the rear of the cutter head, means to yieldingly press both guides towards the abutment rail, and means to adjust the forward limit of movement of the second guide, said last mentioned guide and mount

including a slide carrying the guide, a second slide, a yieldable connection therebetween, and means for adjusting position of the second slide to determine the operative position of the guide.



1,450,696. LOCOMOTIVE ARCH. CHARLES E. MILLER, Chicago, Ill., assignor to Universal Arch Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 5, 1920. Serial No. 363,463. 3 Claims. (Cl. 110—87.)

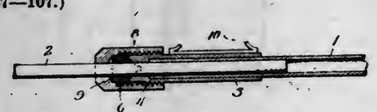


1. A refractory arch brick for support upon water tubes in a fire box, the ends of the brick having quarter circle grooves for receiving the supporting tubes, and the brick arched up between its ends, the middle part of the brick being thicker than its ends, substantially as described.

1,450,697. WINDOW CONSTRUCTION. ARTHUR R. MITCHELL, Milwaukee, Wis., assignor to Mitchell Window Device Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 1, 1920. Serial No. 421,023. 2 Claims. (Cl. 20—49.)

1. In combination a window frame having vertically extending guideways, a sash frame, runners associated with said frame and adapted to slide in said guideways, a sash cord in one of said guideways fixed to and arranged to support said sash frame, and an anti-rattler device associated with said sash frame including a roller adapted to travel in the guideway in which said sash cord is located, said roller being grooved to permit the passage of the sash cord between it and the opposite wall of the respective guideway without interference.

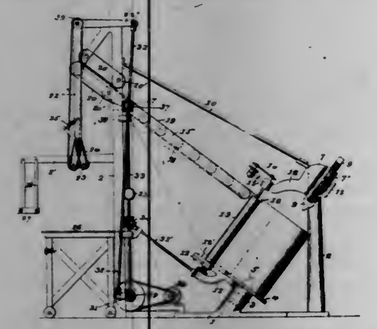
1,450,698. CARVING OR REPRODUCING MACHINE. NAZARENE MORICI, Chicago, Ill. Filed June 18, 1920. Serial No. 390,005. 11 Claims. (Cl. 90—13.1.)



1. In a device of the kind described, a frame, means for pivotally supporting the same intermediate its ends, a plurality of adjustable tool carriers slidably carried by said frame and arranged one on each side of said supporting means, means for driving the tools carried by said tool carriers, and intermediate connecting means between the carriers whereby movement of one will be transmitted to and move the other.

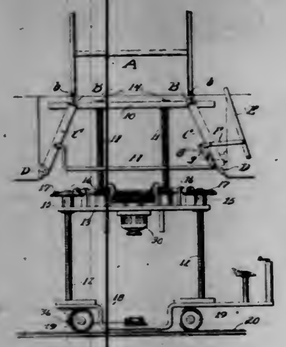
1,450,699. PROCESS FOR SEAMLESS-TUBE DRAWING. ALONZO CLAY MORSE and HARRY RICHARD LEWIS, Jr., Shelby, Ohio. Filed Sept. 13, 1921. Serial No. 500,414. 11 Claims. (Cl. 148—12.)

1. A step in the process of seamless tube drawing, consisting in a refinement of the grain of the metal by heat-treatment to a predetermined degree and then quenching.



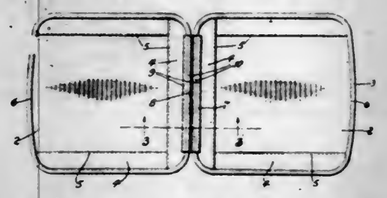
1,450,700. FISH ROD. RAYMOND A. MULL, Benton Harbor, Mich., assignor to Holland Rod Manufacturing Company, St. Joseph, Mich., a Corporation. Filed Nov. 19, 1921. Serial No. 516,440. 5 Claims. (Cl. 287—107.)

1. A fish rod comprising a plurality of sections of different diameters, so that the rod as a whole tapers



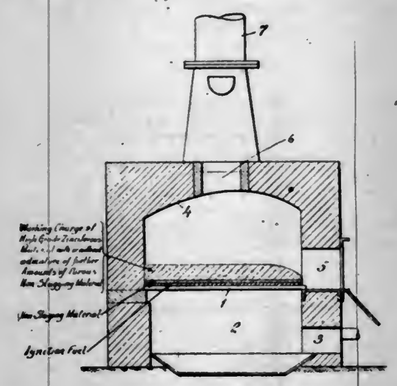
toward the outer end thereof, and a joint between the sections, comprising an externally screw threaded tube forming a sleeve fixed on the tubular larger section, a collar fixed on the smaller section, to engage the end of said tube, with the end of the smaller section projecting some distance beyond said collar thereon to freely enter the bore of the larger section, so that the insertion is limited only by said engagement of the collar with the sleeve, and a rotary sleeve retained on the smaller section by said collar and threaded internally to screw upon said tube, thereby to force said collar into endwise engagement with said sleeve.

1,450,701. MACHINE FOR TREATING BOLTS OF CLOTH FOR CLOTHING. CHARLES E. MURRAY, Chicago, Ill. Filed Nov. 9, 1921. Serial No. 513,987. 6 Claims. (Cl. 26—2.)



1. In a machine for spreading bolts of cloth the layers of which are longitudinally folded, the combination of a supporting frame, a triangular platform extending from said frame, a series of positively driven carrier belts associated with the inclined sides of said platform, means for revolubly supporting a bolt of cloth adjacent to the apex of said platform, a pair of drawing rollers arranged intermediate of said supporting means and the apex of the platform, and a pleating mechanism associated with the other end of said platform.

1,450,702. WHEEL-PIT DROP TABLE. SPENCER OTIS, Barrington, Ill. Filed Sept. 6, 1921. Serial No. 498,940. Renewed Feb. 21, 1923. 19 Claims. (Cl. 104—32.)

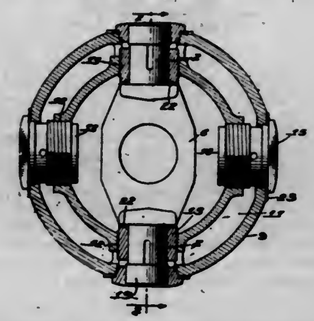


3. In an elevating apparatus, a table, primary elevating mechanism adapted to raise and lower said table, a platform upon which said primary elevating mechanism is mounted, and a secondary elevating mechanism adapted to raise and lower said platform; said secondary elevating mechanism comprising screws projecting upward past the level of the lower limits of movement of the table; and said primary elevating mechanism comprising screws mounted upon the platform and projecting upwardly past said table.

1,450,703. SEAT PAD. JOHN REECE, St. Louis, Mo., assignor to Evr Klean Seat Pad Co., St. Louis, Mo., a Corporation of Missouri. Filed Jan. 11, 1922. Serial No. 528,528. 3 Claims. (Cl. 155—182.)

1. As an article of manufacture, a seat pad comprising a seating member and a back member, each of which is characterized by sufficient stiffness to remain extended vertically and by sufficient flexibility to permit bending to the curvature of the seat and back of the support to which it may be applied, a border of flexible material enclosing the adjacent edge of each of said members, a pair of hinge strips covering said borders and having their edges stitched to said members respectively beyond said borders, and said strips also being stitched to said members and to said borders near the marginal edges of said members, and a row of stitching uniting said hinge strips and holding said strips together between the adjacent edges of said members and separating said borders from each other.

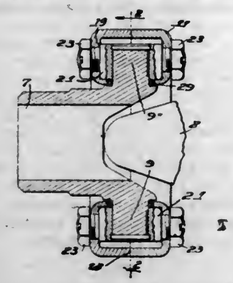
1,450,704. PRODUCTION OF ZINC OXIDE. JAMES A. SINOMASTER and FRANK G. BREYER, Palmerton, Pa., assignors to New Jersey Zinc Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 18, 1920. Serial No. 359,507. 9 Claims. (Cl. 75—19.)



1. In the production of zinc oxide by the Wetherill process from a working charge containing high grade zinciferous material relatively low in gangue constituents, the step of supplying a porous distributing layer of substantially non-slagging material between the ignition fuel and the working charge; substantially as described.

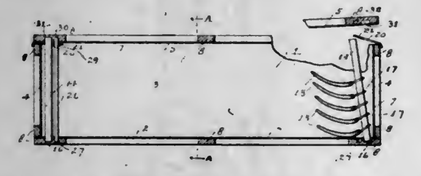
1,450,705. HEEL CONSTRUCTION. JOHN C. STILES, St. Louis, Mo. Filed Apr. 5, 1922. Serial No. 549,837. 6 Claims. (Cl. 36—41.)

1. In a heel construction, the combination of a heel, having a transversely disposed seat at an intermediate point on the upper side thereof with a socket extending forwardly and inclining downwardly from a point behind the seat on a line passing under the seat, a heel-plate having a tongue extending forwardly and down into the socket, said heel-plate constructed to be secured to the heel portion of the sole of the shoe, resting upon said seat and supported thereby and having its forward end supported on the forward portion of the heel, and means for securing the forward portion of the heel to the sole.



1,450,706. UNIVERSAL JOINT. CARL L. ANDERSON, Rockford, Ill., assignor of one-fourth to Levin Faust, one-fourth to Eric S. Ekstrom, and one-fourth to Carl E. Swenson, all of Rockford, Ill. Filed Mar. 25, 1921. Serial No. 455,609. 8 Claims. (Cl. 64—102.)

4. In a universal joint, the combination of a pair of terminal coupling members, a transmission housing having an oil reservoir, means for connecting the terminal members and transmission housing comprising trunnions and bearing bodies for trunnions, each bearing body having a through bore providing radial bearing for its trunnion and having a hardened steel bearing plug secured in the outer end of said bore providing a bearing complemental to the outer end of said trunnion for taking the end thrust thereof, each body being exteriorly threaded and adapted to be screwed into operative position, and means providing oil communication between the lubricant reservoir and the radial and end thrust trunnion bearing surfaces.



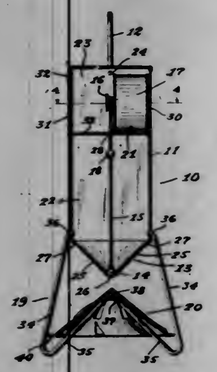
1,450,707. UNIVERSAL JOINT. CARL L. ANDERSON, Rockford, Ill., assignor of one-fourth to Levin Faust, one-fourth to Eric S. Ekstrom, and one-fourth to Carl E. Swenson, all of Rockford, Ill. Filed Mar. 25, 1921. Serial No. 455,610. 10 Claims. (Cl. 64—102.)

10. In a universal joint, the combination of coupling members, a sectional transmission member, trunnion connections between said members, a bearing block for each trunnion serving for connecting the sections of the transmission member together, each bearing block having a through opening providing radial bearing for its trunnion, and a bearing member secured in the outer end of

each bore providing a bearing surface complemental to the outer end of its trunnion for taking the end thrust of the latter.

1,450,708. PACKING AND SHIPPING CASE FOR GARMENTS. JOHN THOMAS BATTS, Grand Rapids, Mich. Filed Apr. 28, 1919. Serial No. 293,094. 8 Claims. (Cl. 206—7.)

3. In a garment packing and shipping case; a plurality of garment hangers; a supporting post swingably carried inside the case for removably supporting the hangers and held at one end on the bottom of the case against lateral movement; means adjacent the top of the case for holding the other end of the post in swung position.



1,450,709. COLUMN OR SUPPORT FOR ROCK DRILLS. LEWIS C. BAYLES, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed June 24, 1921. Serial No. 480,167. 2 Claims. (Cl. 255—53.)

1. A column adapted to support a rock drill in operative position, comprising a single tubular body portion,

a nut secured against rotation within the upper end of said body portion, a jack screw rotatable within said nut in axial alignment with the body portion and extending beyond the end of said body portion, a rock engaging member at the outer end of the jack screw, a supporting member having relatively slidable but non-rotatable engagement within the lower end of the body portion of the column, a rock engaging member at the outer end of the supporting member, a spring adapted to be compressed within the tubular body portion of the column by relative longitudinal movement between the body portion and the supporting member, means for manually rotating the jack screw within the said nut, and means adjustable upon the jack screw for manually locking the screw against rotation relatively to the nut when the parts are in desired position.

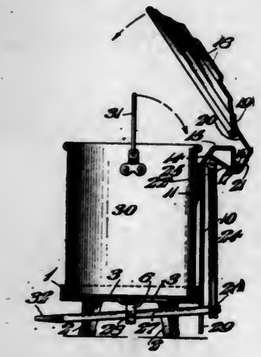
1,450,710. AUTOMATIC FEEDER. JOHN BRODNER, Seattle, Wash. Filed May 31, 1921. Serial No. 473,987. 2 Claims. (Cl. 119—56.)

1. An automatic feeder comprising a storage container, means for automatically discharging the feed from the container, a feed distributor suspended beneath the container, the distributor and mounting thereof embodying a wire frame having outer side bars diverging downwardly, and a central inverted V-shaped frame portion having the apex vertically alined with the discharging means and said distributor embodying a conical shell.

1,450,711. PROCESS OF MAKING A FUSED BIFOCAL. LUCIAN W. BUGBEE, Indianapolis, Ind., assignor to Franklin Optical Company, Indianapolis, Ind., a Corporation of Indiana. Filed Apr. 29, 1921. Serial No. 465,582. 5 Claims. (Cl. 49—82.1.)

1. In the process of making fused bifocal lenses, placing upon the main portion of the lens a circular group of nodules of glass of a relative high index of refraction, and then fusing said nodules to said main portion of the lens for forming the reading segment.

1,450,712. PROCESS OF MAKING PREPARED ROOFING. WALTER H. CADY, Boston, Mass. Filed Nov. 7, 1921. Serial No. 513,334. 6 Claims. (Cl. 91—68.)



2. A process for producing prepared roofing, consisting in surfacing a prepared roofing sheet with a granular substance and with a colored adhesive binder in the form of a non-adhesive emulsion.

3. A process of producing a prepared roofing consisting in distributing on to the surface of the roofing a mixture of granular substance and an adhesive binder in the form of a non-adhesive emulsion.

5. A process for producing a prepared waterproof sheet consisting in surfacing the prepared sheet with a granular substance and with a waterproof pitchy binder in the form of an emulsion.

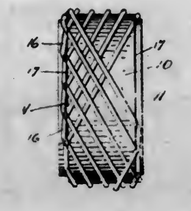
6. A process for producing a prepared waterproof sheet consisting in surfacing said sheet with a granular substance and with a waterproof colored pitchy binder in the form of an emulsion.

1,450,713. RECEPTACLE STAND. LAWRENCE F. CAREY, Philadelphia, Pa. Filed June 8, 1921. Serial No. 475,960. 4 Claims. (Cl. 248—11.5.)

4. A receptacle stand, comprising a frame having a standard rising therefrom and deflected laterally and then downwardly at its upper end, a cover, a plate connected with said cover and movably connected intermediate its ends with the deflected portion of said standard and having its free end inwardly deflected, a bar movably connected with the free end of said plate, and a treadle operatively connected with said bar whereby when said treadle is depressed said bar is moved upwardly to effect the opening movement of said cover, said opening movement being limited by the contact of said free end with the juxtaposed portion of said standard.

1,450,714. CELLULOSE-ETHER SOLVENT AND COMPOSITION. STEWART J. CARROLL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed May 24, 1921. Serial No. 472,270. 6 Claims. (Cl. 106—40.)

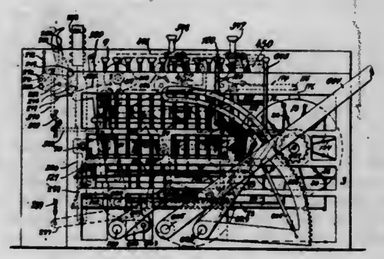
1. A composition of matter, comprising cellulose ether dissolved in a mixture containing perchlorethylene and a lower monohydroxy aliphatic alcohol.



1,450,715. CELLULOSE-ETHER SOLVENT AND COMPOSITION. STEWART J. CARROLL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed May 24, 1921. Serial No. 472,271. 6 Claims. (Cl. 106—40.)

1. A composition of matter, comprising cellulose ether dissolved in a mixture containing methyl salicylate and a lower monohydroxy aliphatic alcohol.

1,450,716. CELLULOSE-ETHER SOLVENT AND COMPOSITION. STEWART J. CARROLL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed May 24, 1921. Serial No. 472,272. 6 Claims. (Cl. 106—40.)

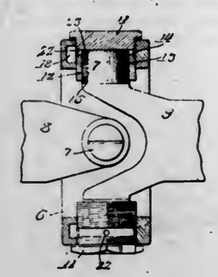


1. A composition of matter, comprising cellulose ether dissolved in a mixture containing furfural and a lower monohydroxy aliphatic alcohol.

1,450,717. WINDING MANDREL. OMER E. COTE, Pawtucket, R. I. Filed July 31, 1920. Serial No. 400,372. 4 Claims. (Cl. 242—118.)

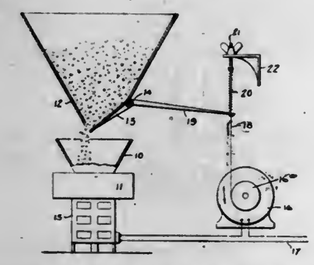
2. A wire winding mandrel having recessed portions in its surface at the edge of its winding surface providing sharp-angled unobstructed shoulders for engaging the knuckle portions of the material wound diagonally thereon.

1,450,718. CALCULATING MACHINE. MICHELE G. DE SIMONE, Stapleton, N. Y., assignor to George B. Agnew, New York, N. Y. Filed June 17, 1918. Serial No. 240,537. 116 Claims. (Cl. 235—60.)



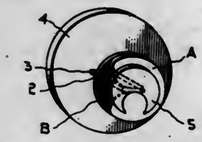
5. In a calculating machine, the combination of means for mechanically computing the difference between two values, including a rotary element, rotary means for mechanically computing the product of said difference and any third value, said product computing means being controlled in extent of rotation by said rotary element, and means for recording the resulting product, said recording means being controlled by said product computing means.

39. In a calculating machine, the combination of means for deriving the product of any multiplier value and the difference between any subtrahend and any minuend value, a key-board comprising keys for the multiplier and subtrahend and minuend values, means for restoring the operated subtrahend and minuend keys to neutral, and separate means for restoring the operated multiplier key to neutral.



1,450,719. UNIVERSAL JOINT. LEVIN FAUST, Rockford, Ill., assignor of one-fourth to Carl E. Swenson, one-fourth to Eric S. Ekstrom, and one-fourth to Carl L. Anderson, all of Rockford, Ill. Filed June 7, 1920. Serial No. 387,272. 6 Claims. (Cl. 64—102.)

4. A universal joint comprising a pair of coupling members having trunnion ends, a transmission member having an annular lubricant reservoir and quarteringly disposed openings intersecting said reservoir and threaded internally throughout their length, and bearing units threadingly engaged in said openings, each unit comprising a member externally threaded and having a bearing socket providing radial bearing for one of the trunnion ends, and

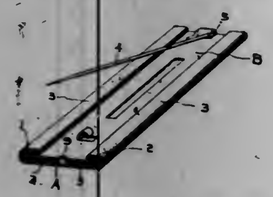


a thrust bearing at the outer end of said radial bearing for the outer end of said trunnion.

1,450,720. LOAD-REGULATING MEANS. HOWARD MAIN GASSMAN, Birmingham, Ala. Filed Feb. 20, 1919, Serial No. 278,218. Renewed Jan. 19, 1922. Serial No. 530,496. 18 Claims. (Cl. 83—44.)

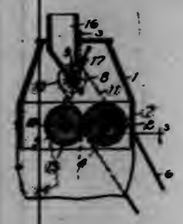
9. In feed regulating devices, the combination of a material treating device, having electrical operating means including a torque motor, with a feeding device for said material treating device, said feeding device having its output controlled by the operation of said torque motor.

1,450,721. HOLDER FOR BADGES, BUTTONS, AND THE LIKE. CHARLES F. GAUNT, Birmingham, England. Filed Mar. 10, 1921. Serial No. 451,362. 1 Claim. (Cl. 40—1.5.)



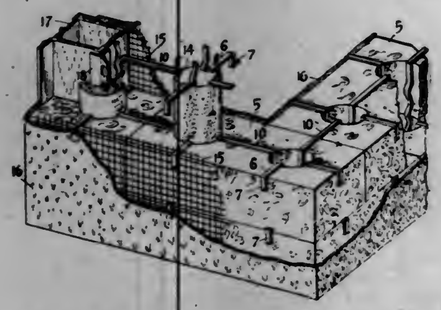
A holder for securing a badge button or the like having a flat shank in a button hole said means consisting of two metal parts hinged one upon the other each of said parts having an open ended slot curved concentrically to the pivot point of the hinge whereby they may be placed in position presenting an opening conforming to and snugly encircling the shank of the button badge or the like when closed, the open end of each having a flared mouth.

1,450,722. MEDAL-RIBBON MOUNT. CHARLES F. GAUNT, Birmingham, England. Filed Mar. 10, 1921. Serial No. 451,363. 3 Claims. (Cl. 40—15.)



1. A medal ribbon bar consisting of a sheet metal front bar of channel cross section, a sheet metal back

bar located in position between the flanges of the front bar and bearing flat against said last mentioned bar, a ribbon stretched over the front face of said front bar and having its ends extending over the flanges and interposed between the bearing faces of the two bars, said

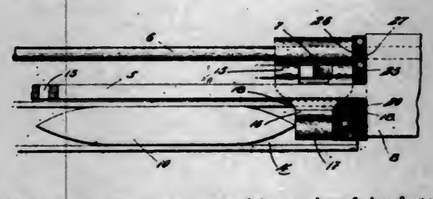


flanges being bent down upon and overlapping said back bar for the purpose of retaining the latter and the ribbon in place, means located at opposite ends of the front bar for preventing endwise displacement of the back bar thereon and means carried by the back bar for attachment to a garment.

1,450,723. DEVICE AND PROCESS FOR FEEDING ROLLER MILLS. ALEXANDER GILLESPIE, Pittsfield, Ill. Filed July 18, 1921. Serial No. 485,605. 8 Claims. (Cl. 83—12.)

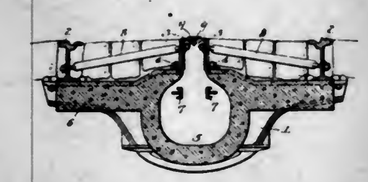
7. The method of feeding grain to the differential grinding rolls of a roller mill, which consists in regulating the numerical feed of the grain to cause the number of grains passed to the grinding rolls per revolution of the slow roll of the differential grinding rolls, to be such that the totality of the area of the flattened grains shall substantially equal the surface area of said slow roll.

1,450,724. WALL STRUCTURE. JAMES MONROE HEWLETT, Lawrence, N. Y., assignor to The Stockade Building System, Inc., New York, N. Y., a Corporation of New York. Filed May 26, 1922. Serial No. 563,785. 7 Claims. (Cl. 72—10.)



1. A wall structure comprising blocks with vertical openings therethrough in register, parallel wall facings, a row of concrete columns in the vertical openings, and tie members between each column and the wall facings which have depending arms embedded in the columns.

1,450,725. ELECTRICAL RESISTANCE HEATING ELEMENT AND PROCESS OF MAKING SAME. FRANK HODSON, Philadelphia, Pa. Filed May 22, 1922. Serial No. 562,568. 11 Claims. (Cl. 219—63.)

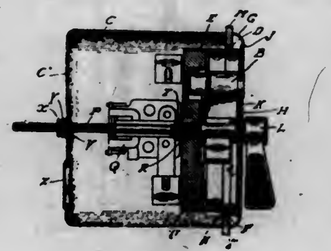


1. An electrical resistance heating element including a coil of carbon.

1,450,726. BUFFER FOR PICKERS. CHARLES W. HOLBROOK, Providence, R. I. Filed May 6, 1922. Serial No. 558,857. 3 Claims. (Cl. 139—29.)

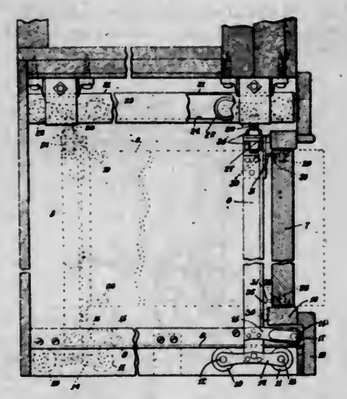
3. A buffer for looms comprising a broad head portion adapted to receive the impact of a picker head and a narrow neck portion to receive the impact of a picker body, the said head and neck portions formed of superposed layers of tough material disposed with their edges to constitute the impact face of the buffer, and means holding said layers in close contactual engagement with each other throughout their length.

1,450,727. AUTOMATICALLY-OPERATED SLOT COVER. SLAUGHTER W. HUFF, New York, N. Y. Filed Mar. 29, 1922. Serial No. 547,695. 12 Claims. (Cl. 104—145.)



1. A slot cover normally closing the slot by the action of gravity comprising a longitudinally extending member having at least a portion of its under surface bevelled to permit of upward and outward movement on an edge of the slot.

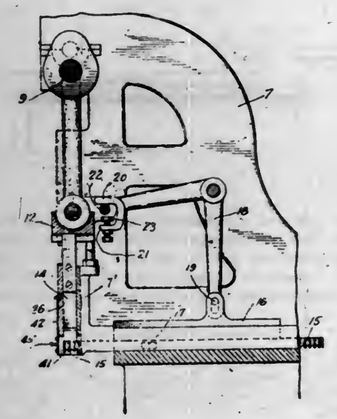
1,450,728. IGNITION SWITCH. WILLIAM KAISLING, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed July 15, 1918. Serial No. 244,864. 7 Claims. (Cl. 200—168.)



7. The combination of an electrical switch of the character described, of a mounting plate having an orifice to receive said switch, cooperating means for preventing said electrical switch from rotating relative to said

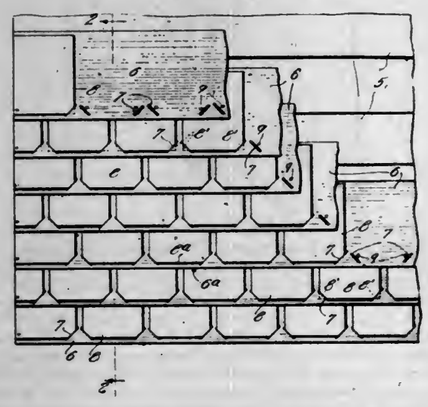
mounting plate, of a cup-shaped cover adapted to be mounted against the rear of said mounting plate and to extend over said orifice, an orifice in said cover, and

a threaded stud secured to said switch and adapted to extend rearwardly through the orifice in said cover to yieldingly secure said cover and switch in position.



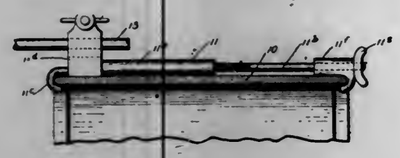
1,450,729. CARRIER FOR DISAPPEARING DOORS. ROBERT R. LEEDS, Ashland, Ohio, assignor to The Topping Manufacturing Co., Ashland, Ohio, a Corporation of Ohio. Filed Dec. 8, 1921. Serial No. 520,938. 12 Claims. (Cl. 20—19.)

8. As an article of manufacture, a carrier for disappearing doors, including a hanger bar for pivotally supporting a door, a truck for one end of said hanger bar, including a pair of rollers on pivots on opposite front and rear sides of said hanger bar and adapted to run on one horizontal side of a track, and a third roller on a pivot on said hanger bar and spaced from each of said other rollers and adapted to run on the opposite side of the track.



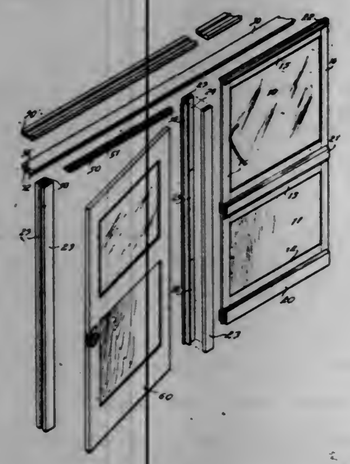
1,450,730. NAILER FOR CORRUGATED FASTENERS. CHARLES A. MACDONALD, Cambridge, Mass., assignor to William S. Doig, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Jan. 7, 1922. Serial No. 527,656. 7 Claims. (Cl. 1—9.)

1. In a nailing machine for corrugated fasteners, a frame, a hammer, means for reciprocating said hammer, a head block having a passage therein, means for feeding a corrugated fastener strip to the passage in said head block, means for holding the end of said strip in said block in position to be driven, means for shearing a predetermined length from the end of the strip in said head block while the end is in position to be driven,



and a resiliently mounted head stop for the free end of the corrugated fastener, said hammer being adapted to drive the sheared length of fastener.

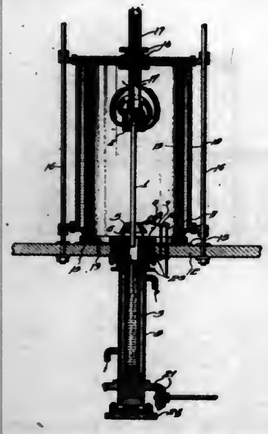
1,450,731. BUILDING CONSTRUCTION. ROBERT S. MACLEAN, Chicago, Ill. Filed July 31, 1922. Serial No. 578,564. 12 Claims. (Cl. 108—9.)



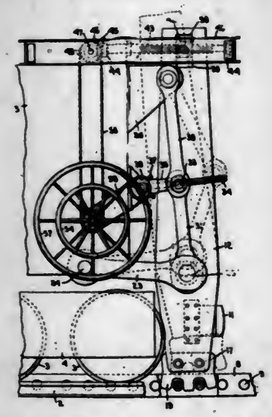
1. The combination with a supporting surface of a plurality of strips of flexible roofing material arranged on said surface in overlapping relation, the free edges of said strips being substantially parallel, said strips being provided at spaced intervals and adjacent their free edges with a plurality of pairs of outwardly converging slots, a plurality of rectangular shingles extending transversely of each of said strips in spaced relation, each of said shingles having its outer corners loosely inserted in one of said pairs of slots, and a nail driven through each of said strips and the next adjacent strip, its superimposed shingle, and said supporting surface, adjacent each of said slots, the head of said nail being concealed by the shingle having its corner secured in said last named slot.

1,450,732. TRAP-DRUM SUPPORT. LAWRENCE A. MUELLER, Kankakee, Ill. Filed May 10, 1920. Serial No. 380,301. 5 Claims. (Cl. 248—20.)

5. In a device of the class described, a clamping member, a rod mounted thereon and slidable in a substantially parallel direction relative to said clamping member, a bracket supported by said rod and adjustable thereon, and drum-engaging means mounted on said bracket.



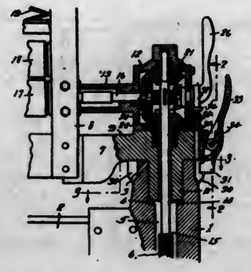
1,450,733. SECTIONAL PARTITION. ERNEST W. REAUGH, Cleveland, Ohio, assignor to The Reaugh Construction Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 17, 1921. Serial No. 478,291. 6 Claims. (Cl. 20—.)



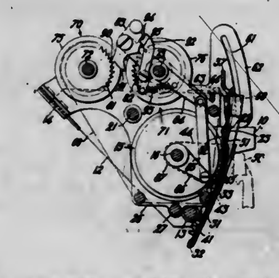
1. In a sectional partition, a panel section having stiles at each end extending throughout the length thereof, a fabricated post comprising single piece facing strips extending throughout length of the section, and a plurality of fillers positioned intermediate the strips with the ends thereof in abutting engagement, said fillers having a width less than that of the strips, whereby a groove may be formed for receiving one of said stiles, the uppermost filler extending beyond the strips to provide a tongue, and a cap rail having a groove in its under side for receiving the section, and the tongue respectively.

1,450,734. HEAT-TREATMENT METHOD OF RENDERING METALS DUCTILE. EMERY ROTH, Chicago, Ill. Filed Jan. 19, 1921. Serial No. 438,331. 8 Claims. (Cl. 148—11.)

1. The method of producing a comparatively large body of ductile tungsten which consists in forming a rod or long ingot of non-ductile tungsten, passing it slowly through a short heating zone having a temperature equal to or above the critical temperature at which the crystalline structure of the tungsten permanently changes and keeping that part of the rod or ingot which has not reached the heating zone cool.



1,450,735. MATERIAL-HANDLING BRIDGE. ROBERT E. SHEAL, Cleveland, Ohio. Filed Dec. 3, 1921. Serial No. 519,725. 11 Claims. (Cl. 105—29.)



1. In combination, a material bridge movable along fixed tracks or runways, a rack, means on the structure cooperating with the rack for propelling the same along the tracks, an anchor secured to the structure and adapted to be brought into cooperating relation with said rack to hold the structure stationary on the track, and means for moving said anchor along the bridge parallel to the rack to cause it to engage tightly the teeth of the same.

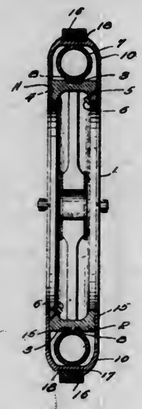
1,450,736. POWER-DRIVEN WRINGER MECHANISM. HAROLD E. SMITH, Cleveland Heights, Ohio. Filed Aug. 24, 1920. Serial No. 405,604. 5 Claims. (Cl. 68—32.)

3. In a device of the character described, the combination with a support and a bracket pivoted thereto, rotating devices carried by said bracket, a drive shaft, power transmitting means carried by said bracket for connecting said rotating devices to said drive shaft, said means including a clutch, and a pair of independent latching devices adapted and arranged to secure said bracket against pivotal movement, there being sockets for said latch members, one of said latch members operatively connected to said clutch so as to permit the engagement of said clutch only upon the insertion of such latch member into a socket, and the other latch member being arranged to register with a socket simultaneously therewith.

1,450,737. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 20, 1921. Serial No. 462,890. 12 Claims. (Cl. 197—135.)

1. In a typewriting machine, the combination with a revoluble platen, of a stencil-holder comprising a pair of fingers, and means on said fingers for holding a stencil-frame at its bottom edge, said fingers having raised portions to bend the upper part of the stencil-frame rearwardly, and rearward projections engaging the upper edge of said stencil-frame to hold said frame against upward movement in said holder.

1,450,738. TENSION OIL CAP FOR FISHING REELS. FRANCIS M. CASE, Cleveland, Ohio, assignor to The Enterprise Manufacturing Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 19, 1921. Serial No. 516,406. 8 Claims. (Cl. 64—24.)

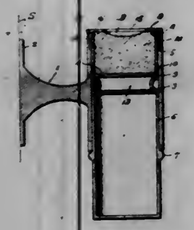


1. In a device of the character described, a hollow boss, a cup shaped member surrounding and spaced from said boss, a removable cap having a skirt surrounding said boss and entering said member, and a bent metal spring strip within said member for frictionally engaging the skirt of said cap.

1,450,739. MATERIAL FOR PHONOGRAPH RECORD BLANKS AND PROCESS OF MAKING THE SAME. JAMES P. ELLIOTT, Chicago, Ill.; Mary Broders Elliott executrix of said James P. Elliott, deceased. Filed Sept. 15, 1920. Serial No. 410,425. 4 Claims. (Cl. 18—48.4.)

1. The method of making material for phonograph record blanks which consists in laying a layer of phonograph record composition upon a porous layer of fibrous material containing in a powdered or granular form a binder which is cementitious when heated, and then applying heat sufficient to cause the binder to become cementitious and pressure sufficient to cause the layer containing the binder to become compacted and united to the other layer.

1,450,740. RESILIENT WHEEL. MILTON J. HELMICK and THOMAS L. AGNEW, Albuquerque, N. Mex. Filed Oct. 22, 1920. Serial No. 418,687. 2 Claims. (Cl. 152—34.)



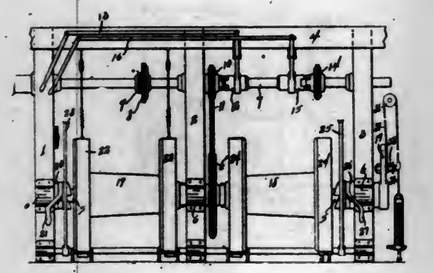
1. A resilient vehicle wheel comprising a felly having a centrally disposed and circumferentially extending continuous groove in the outer face thereof providing a seat, an annular pneumatic cushioning element formed with a continuous rim fitted throughout in said seat, the transverse diameter of said element being substantially less than the width of said felly, a metallic rim substantially U-shape in cross section and engaged over said felly and element and having the inner face of the tread portion thereof normally and centrally in contact with said element, the sides of said rim disposed in sliding contact with the sides of said felly, said rim having a thickened tread portion and the outer face thereof provided with a continuous circumferentially extending groove of greater width than the groove in the rim, and an annular resilient tread member fitted in throughout and projecting from the groove in the tread portion of the rim.

1,450,741. BILLIARD-CUE-TIP CHALKER. EDWIN HILL, Norwich, Conn. Filed Oct. 22, 1921. Serial No. 509,595. 4 Claims. (Cl. 46—8.)

1. A billiard cue chalker comprising a cylindrical guide having a bracket for attachment to a support, a tube slidable and rotatable in said guide and provided at one

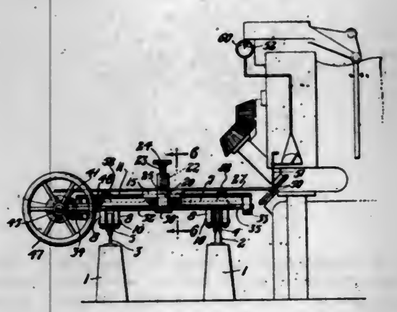
end with a chalk chamber, a closure for said chamber rotatable in and held against longitudinal movement

with respect to said guide, said closure and guide having cooperating inter-engaging means to prevent the withdrawal of the tube in one direction.



1,450,742. PORTABLE SPRAYER. WAITE W. KEENE, Quincy, Mass., assignor to Masury-Young Company, Charlestown, Mass., a Corporation of Massachusetts. Filed Jan. 16, 1922. Serial No. 529,470. 4 Claims. (Cl. 299—95.)

1. A sprayer comprising a portable tank having a discharge port through its bottom wall, a rotatable valve disposed below said wall and controlling said port, a carrying handle mounted at the top of said tank and comprising spaced attaching portions and a cross-piece connecting said portions, a pull member operatively connected to said valve and having at its upper end an inwardly extending finger hook disposed across the tank top to lie beneath the cross-piece of the carrying handle whereby said pull member may be raised to open the valve by the forefinger of the same hand with which the user grasps the carrying handle, and a spring opposing the raising movement of said pull member.

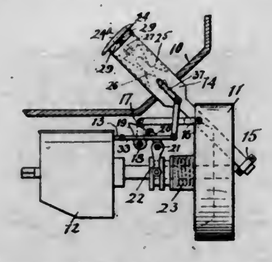


1,450,743. DRAW WORKS FOR STANDARD AND ROTARY DRILLING OPERATIONS. JAMES M. KELLERMAN, Los Angeles, Calif. Filed Feb. 18, 1922. Serial No. 537,636. 6 Claims. (Cl. 255—3.)

1. A draw works for standard and rotary drilling operations comprising a frame, a drive shaft journaled on said frame, a line shaft and gearing for driving said drive shaft from said line shaft, drums loosely mounted on

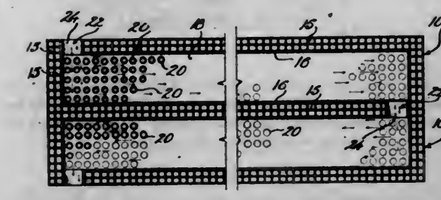
said drive shaft, clutches for making said drums rigid with said drive shaft, and an operating crank rigid with said drive shaft.

1,450,744. PLATE HOLDING AND GUIDING APPARATUS. THOMAS FRANKLIN KELLEY, Gloucester, N. J. Filed July 31, 1919. Serial No. 314,545. 2 Claims. (Cl. 164—63.)



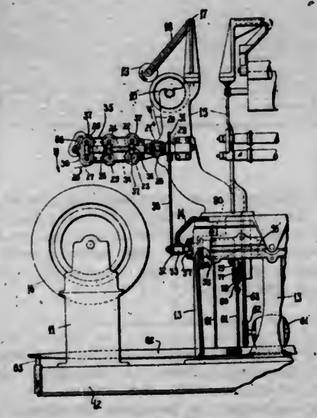
1. A work holding and guiding device comprising a movable member provided with a guide and having projections extending from the front edge thereof, a work holding device upon said member, said device being guided upon and by the said guide, and said device having a projection extending forwardly therefrom intermediate the projections upon the said member, said projection being provided with a screw threaded opening, a screw threaded rod revolubly supported in bearings in the projections upon the said member and extending through the screw threaded opening in the projection upon the said device, and means for causing rotation of said rod in either direction to effect adjustments of the said work holding device in either direction upon the said member.

1,450,745. GEAR SHIFT FOR MOTOR VEHICLES. LEICESTER L. LEECE, Cleveland, Ohio. Filed Apr. 6, 1921. Serial No. 459,018. 7 Claims. (Cl. 74—81.)



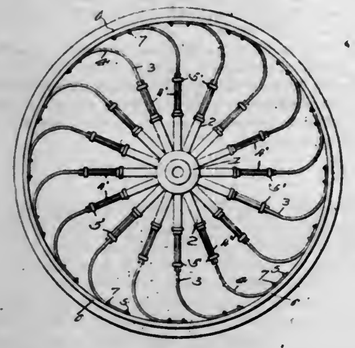
1. In a foot controlled gear shift for motor vehicles, a pair of gear shifting members movable to and from neutral position, a pedal, and selective means operated by the

pedal and serving when the pedal is actuated in a certain direction to move either of the shifting members to a po-



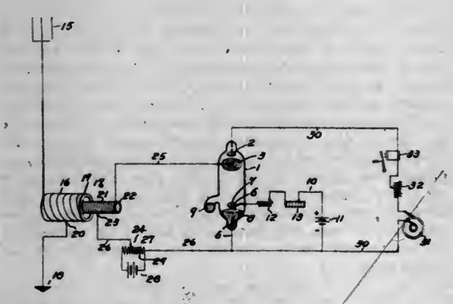
sition to effect a selected shift and to move the other to neutral position.

1,450,746. RADIATOR CORE. PATRICK H. LONERGAN, Boulder, Colo. Filed Oct. 13, 1920. Serial No. 416,693. 4 Claims. (Cl. 257—128.)



1. A radiator core comprising a plurality of superimposed sections, each section having an inlet opening in its upper wall adjacent one end and an outlet opening in its lower wall adjacent the other end, and means in each section for cooling the contents thereof comprising a plurality of air tubes having their ends fixed in the front and rear walls of each section and extending through the section, and a plurality of cooling cells arranged along the periphery of each section.

1,450,747. TENSION DEVICE FOR TIRE-BUILDING MACHINES. THOMAS MIDGLEY, Hampden, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Nov. 2, 1920. Serial No. 421,385. 6 Claims. (154—10.)



1. In a tire building machine, an annular core upon which the tire may be built, and means for supplying fabric to the core comprising a series of rolls constructed and arranged to give to the fabric a longitudinal stretch by successive increments.

1,450,748. SPRING WHEEL. JAMES A. MORROW, Wichita Falls, Tex. Filed Sept. 5, 1919. Serial No. 321,799. 1 Claim. (Cl. 152—49.)

A resilient wheel comprising a hub formed with radially projecting sockets, a rim, and resilient spokes consisting of main flat leaf springs whose outer extremities are of arcuate shape and secured to the inner periphery of the rim, supplemental flat springs of substantially half the length of the main springs and disposed on opposite sides of the latter, the supplemental springs terminating short of the arcuate portion of the main springs, the inner terminals of the main and the supplemental springs being disposed in the sockets of the hub and clips in surrounding relation to the outer extremities of the supplemental springs and embracing the adjacent portion of the main spring.

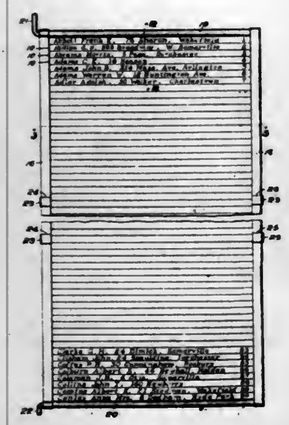
1,450,749. APPARATUS FOR AND METHOD OF CONTROLLING ELECTRIC CURRENTS. GEORGE W. PIERCE, Cambridge, Mass., assignor to Peter Cooper Hewitt, Ringwood Manor, N. J.; The Farmers' Loan and Trust Company, New York, N. Y., a Corporation of New York, executors of said Peter Cooper Hewitt, deceased. Filed Mar. 11, 1914. Serial No. 824,035. 26 Claims. (Cl. 250—27.)

1. An apparatus for controlling electric currents having, in combination, an evacuated vessel, an ionizing agency in the vessel, an electrode in the vessel, a controlled electric circuit connected between the ionizing

agency and the electrode including a source of periodic electric-motive force, an open-work electrode interposed between the ionizing agency and the first electrode and extending substantially across the interior of the vessel, and means including a controlling electric circuit for varying the potential of the open-work electrode, substantially as described.

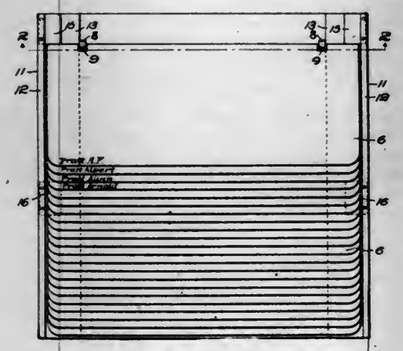
5. A gaseous detector of radiant energy having a cathode, an anode, and potential gradient changing means, said detector having a local circuit, and means to interrupt said circuit at sufficiently short periods to maintain the detector effectively sensitive to receive signals, substantially as described.

6. That step in the method of controlling the action of a gaseous detector of radiant energy which comprises the effecting of a drop to zero value of a local current of said detector, at sufficiently short periods to maintain the detector effectively sensitive to receive signals, substantially as described.



1,450,750. OIL FILTER. GEORGE E. PUTNAM, East Kansas City, Mo. Filed Jan. 25, 1921. Serial No. 439,825. 1 Claim. (Cl. 210—48.)

An oil filter comprising a receiving tank, a vertical supply tube within the tank having its inlet at the top and an outlet at the bottom of the tank, a filter bed carried by the tube and coextensive with the cross sectional area of the tank whereby, when the filter bed is expanded, its edges will fit tight against the inner wall of the tank, the filter bed being positioned intermediate the ends of the tank to divide the same into an upper chamber and a lower chamber, and a plurality of similar inverted, concavo-convex plates carried by the tube and located in the lower chamber, said plates being spaced from each other and from the walls of the tank, each plate constituting an oil trap, the plates each having an opening offset with respect to a complementary opening in an adjacent plate.

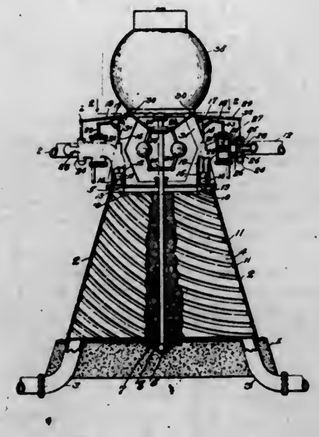


1,450,751. ADJUSTABLE INDEX. JOHN T. QUIGLEY, Boston, Mass., assignor to Costmeter Company, Boston, Mass., a Corporation of Massachusetts. Filed Mar. 4, 1919. Serial No. 280,637. 10 Claims. (Cl. 40—64.)

1. In an adjustable index, the combination of front and back guides, and a series of index bars received between said guides and abutting edge to edge, each of said bars comprising a sheet of paper folded to present longitudinal

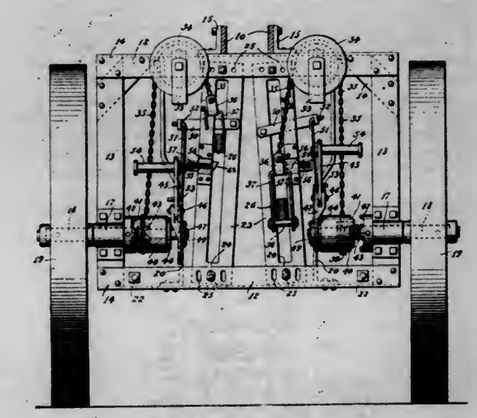
folds, and being thereby rendered resiliently expansible in thickness between said guides, whereby it is retained in place by frictional engagement therewith.

1,450,752. FILING EQUIPMENT. JOHN T. QUIGLEY, Boston, Mass., assignor to Costmeter Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 29, 1919. Serial No. 334,151. 11 Claims. (Cl. 129—16.)



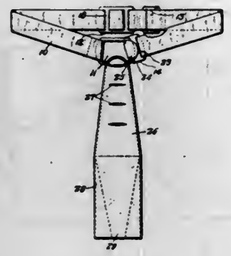
1. A file comprising, in combination, a pair of guides, a series of sheet-supports having their ends received by said guides, a series of overlapping sheets supported by said sheet-supports, respectively, and means secured to said sheet-supports intermediate and independent of said guides to position said sheets.

1,450,753. RIFLE TURBINE. OSCAR J. RENSHAW, Langells Valley, Oreg. Filed Nov. 19, 1921. Serial No. 516,465. 4 Claims. (Cl. 253—65.)



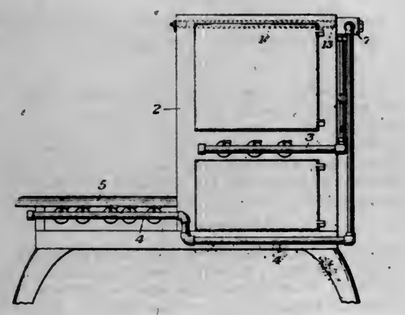
2. In a mechanism of the class described, the combination with a conical casing, of a conical rotary piston in said casing provided with a driving shaft, said piston

provided with a plurality of spiral grooves in its side and on one end with a circular groove and with a plurality



of grooves extending radially of the end and opening into said circular groove and said spiral grooves, and valved means for supplying steam to said grooves.

1,450,754. POWER LIFT FOR TRACTOR PLOWS. ARTHUR W. REYNOLDS, Newtown, Conn., assignor of one-half to Edward Benedict, Newtown, Conn. Original application filed Oct. 14, 1920, Serial No. 416,834. Divided and this application filed Jan. 27, 1921. Serial No. 440,265. 15 Claims. (Cl. 97—73.)

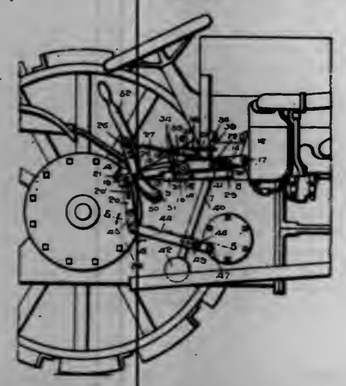


14. In a plow of the character described, a frame, a guide yoke thereon, a plow beam extending through said guide yoke, power means for raising said plow beam, and a manually releasable latch incorporated in said guide yoke and normally extending across the guide space thereof for holding said plow beam in elevated position said plow beam adapted upon release by the latch to move by gravity to its lower position independently of said power means.

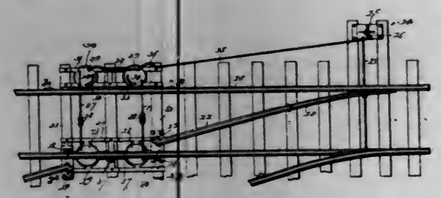
1,450,755. CATAMENIAL BANDAGE. ROY R. RIDER, St. Louis, Mo. Filed June 13, 1921. Serial No. 477,119. 2 Claims. (Cl. 128—289.)

1. A device for the purpose set forth comprising front and rear buckles each consisting of a skeleton frame and an outwardly arranged and upwardly directed semi-circular hook extended from the lower bar of and disposed parallel to the outer face of the frame, said hook having its sides incut at the joinder thereof with said bar, straps connecting said frames together, and a pad element having its termini detachably mounted on said hooks and overlapped by said incut portions whereby the said element is connected with the straps.

1,450,756. GAS RANGE. FREDERICK W. ROBERTSHAW, Pittsburgh, and GEORGE A. ROBERTSHAW, Greensburg, Pa. Filed Apr. 7, 1921. Serial No. 459,359. 4 Claims (Cl. 126—39.)



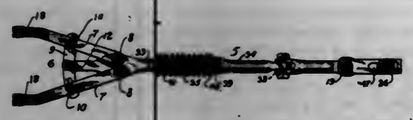
1. A gas range comprising an oven and an independent heater for cooking purposes, said range having two burner supply pipes each provided with a manual control therein and adapted to supply said oven and independent heater, respectively, a valve casing having a gas supply connection and a separate outlet connection to each of the burner supply pipes, and a thermostatically controlled valve in said casing and controlling the flow of gas to one of said outlets only, substantially as described.



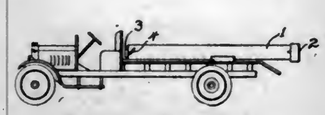
1,450,757. AUTOMATIC CLUTCH RELEASE. EDGAR S. RUSSELL, Sweet Home, Oreg. Filed May 31, 1921. Serial No. 473,701. 9 Claims. (Cl. 180—82.)

1. The combination with a tractor having a clutch controlling member, of a device carried by the tractor including means for moving said member to open the clutch, a pendulum member, a stop to limit the swinging movement

of said pendulum member in one direction, and means for holding the aforesaid means out of operation and releasable when the tractor is inclined to move the pendulum member and stop apart.

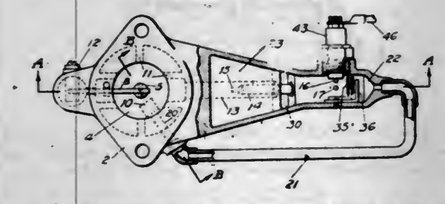


1,450,758. MONORAIL FROG. WILLIAM SCHWIER, Tacoma, Wash., assignor of one-half to Frank Haubrock, Tacoma, Wash. Filed Aug. 23, 1921. Serial No. 494,674. 8 Claims. (Cl. 246—388.)



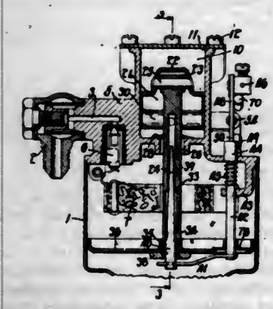
1. A monorail frog for actuation simultaneously with a switch tongue having a frog rail disposed at the intersection of the siding and main track rails for pivotal movement in a horizontal plane into aligning relation alternatively with said rails, and revoluble carrier disks respectively supporting the extremities of said frog rail and operatively connected with the switch tongue.

1,450,759. DRAWBAR FOR TOWING VEHICLES. SAMUEL W. SNYDER, Hamlet, Nebr., assignor of one-third to John H. Wable and one-third to William Hummell, both of Hamlet, Nebr. Filed June 13, 1921. Serial No. 477,048. 1 Claim. (Cl. 280—33.55.)



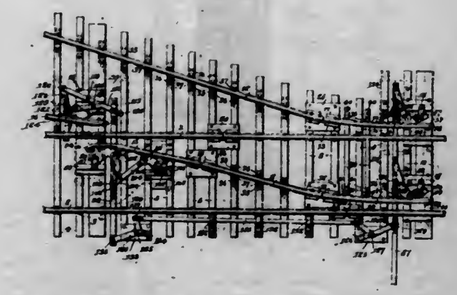
A draw bar for towing automobiles, comprising a spring held longitudinal yieldable body member having a bifurcated forward portion, the extremities of the two arms of this portion extending both above and below the body member and shaped to engage the housing of the towing machine, flexible devices cooperating with the said arm extremities to connect the draw bar with the towing machine, the two arms being pivoted to the body member, and a cross piece mounted on the body member and with which the said arms are connected and on which they are adjustable to regulate the spacing of their forward extremities.

1,450,760. METHOD OF TRANSPORTING PLASTIC MATERIAL OR CONCRETE FOR PAVING AND OTHER PURPOSES. ROBERT C. STUBBS, Dallas, Tex. Filed Oct. 17, 1921. Serial No. 508,117. 4 Claims. (Cl. 214—152.)



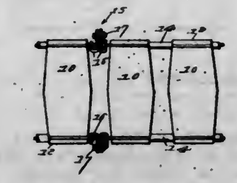
1. A method of transporting plastic material which consists in placing the material in a closed receptacle and sealing the material in the receptacle with pressure and maintaining pressure on the material in the sealed receptacle during transit whereby segregation of the particles of the material is prevented.

1,450,761. GASIFIER. WILLIAM M. SUBLETTE, Fresno, Calif. Filed Aug. 2, 1921. Serial No. 489,248. 1 Claim. (Cl. 48—107.)



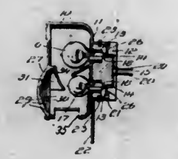
In a gasifier of the class described, adapted to be connected between a carbureter and intake manifold of an internal combustion engine, the combination of a combustion chamber with a firing means, a mixing chamber, an intake passing from a carbureter to the mixing chamber, a discharge means passing from the mixing chamber to the said intake manifold, a valve operatively positioned within the said intake and the mixing chamber, an automatic valve control means, adapted to be connected to the said valve, a vapor supply means, adapted to lead from the said intake to the combustion chamber, a nozzle adapted to be positioned between the said vapor supply means and the said combustion chamber, a vapor atomizer plate, adapted to be positioned within the said combustion chamber adjacent to the said nozzle, flame deflector screens positioned within the combustion chamber between the said vapor atomizer plate and the said firing means, and adjustable hot vapor delivery means extended between the combustion chamber and the mixing chamber.

1,450,762. CARBURETOR. CALEB E. SUMMERS, Detroit, Mich., assignor to Master Carbureter Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 6, 1917. Serial No. 184,586. 12 Claims. (Cl. 261—44.)



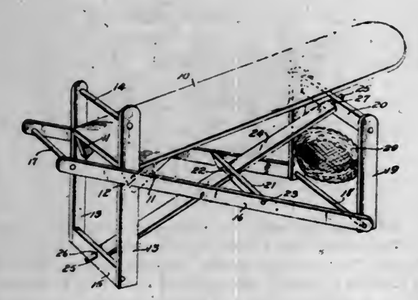
1. A carburetor comprising a mixing chamber, a fuel chamber, a suction controlled air valve in the mixing chamber, said air valve having a rear end and a forward end and being pivoted near its rear end, and a fuel pipe connected to the air valve to be moved thereby and having a nozzle extending laterally therefrom toward the forward end of the air valve, said nozzle being constructed and arranged to deliver fuel from the fuel chamber substantially midway in the air current between the forward end of the air valve and the adjacent wall of the mixing chamber at all positions of the air valve.

1,450,763. RAILWAY SWITCH. WILLIAM H. SWINDELL and LEWIS PHILLIPS, Waldo, Fla. Filed Oct. 26, 1922. Serial No. 596,996. 10 Claims. (Cl. 246—384.)



1. A railway switch comprising a lead having a switch point extending therefrom, a lead having a pair of switch points extending therefrom, a switch point leading to one of the switch points of said pair, said switch points being shiftable and capable of overlapping the track rails of a track, a clamping member associated with each of said switch points, an abutment associated with each of the clamping members, and means for simultaneously actuating said clamping members for shifting them in binding engagement with the switch points and abutments for rigidly securing the switch points in operative position with respect to the track rail sections.

1,450,764. ANTISKID-TIRE PROTECTOR. BERRY MARTIN TALLEY, Morrow, Ark. Filed Nov. 23, 1921. Serial No. 517,256. 1 Claim. (Cl. 152—16.)

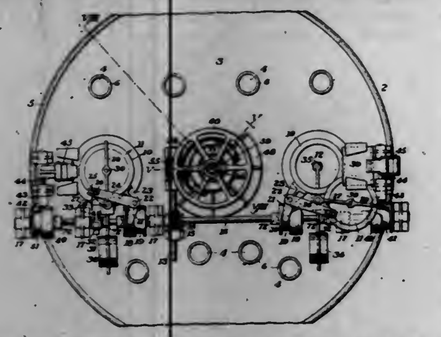


A tire protector consisting of flexible transverse tread elements in spanning relation with the tire, flexible runners to which said tread elements are secured and uniformly spaced from each other, and fasteners for the terminals of said runners consisting of complemental U-shaped members of which one leg is shorter than the other, the shorter legs being secured to the terminals of the runners and the longer legs disposed adjacent each other, and bolts spanning the longer legs to exert tension on the runners.

1,450,765. AUTOMOBILE SIGNAL. FREDERICK TRINCA and HENRY WOLF, New York, N. Y., assignors to Ever Ready Auto Signal Co., Inc., New York, N. Y., a Corporation of New York. Filed Mar. 20, 1922. Serial No. 545,342. 4 Claims. (Cl. 40—132.)

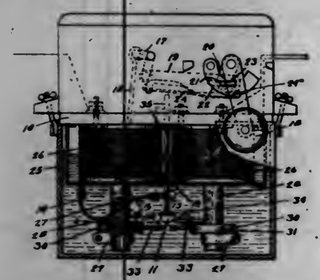
3. In a signal, a lens body having a pair of signal portions each provided with a light emitting part and the remaining part thereof opaque, and said lens body further having as an inherent part thereof, means projecting rearwardly therefrom and providing an angularly extending and curved opaque element, and a lamp associated with each of said portions and said means.

1,450,766. IRONING BOARD. JESSE A. WILLIAMS, Baltimore, Md. Filed Apr. 28, 1921. Serial No. 465,100. 1 Claim. (Cl. 68—10.)



In combination with an ironing board, of a pair of ears depending from the ironing board at one end thereof, legs pivoted to said ears, a transverse member connected to lower ends of said legs and having a substantially central opening therethrough, diagonal brace members mounted on the pivots of the legs, a rod connecting said brace members at one end, other legs pivotally mounted on said rod, a transverse brace connecting the upper ends of the last mentioned legs and having a substantially central opening extending therethrough, a third transverse member connecting the diagonal braces intermediate their ends and having a centrally disposed opening and a third diagonal brace extending through the last mentioned opening and having reduced ends receivable in the previously mentioned openings.

1,450,767. GAS PRODUCER. EDGAR H. WILSON, Chartiers Township, Allegheny County, Pa., assignor to Taylor-Wilson Manufacturing Company, McKees Rocks, Pa., a Corporation of Pennsylvania. Filed Aug. 21, 1920. Serial No. 405,151. 24 Claims. (Cl. 214—36.)



1. A gas producer, comprising a cover having a feed opening therein, a feed hopper co-operating with said

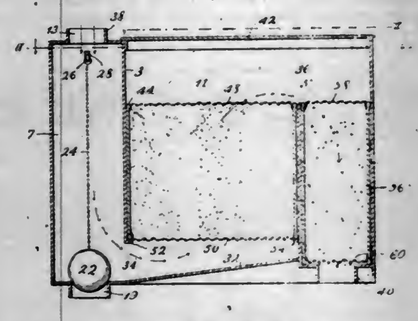
opening, a laterally movable cover for the upper end of said hopper, a closure for the lower end of said hop-

per, and mechanically operated means for periodically laterally moving said cover and moving said closure to inoperative positions, substantially as described.

1,450,768. SHORT-TIME-LIMIT SWITCH. GEORGE A. BURNHAM, Saugus, Mass., assignor to Sears B. Condit, jr., Brookline, Mass. Filed May 17, 1917. Serial No. 169,227. 4 Claims. (Cl. 200—17.)

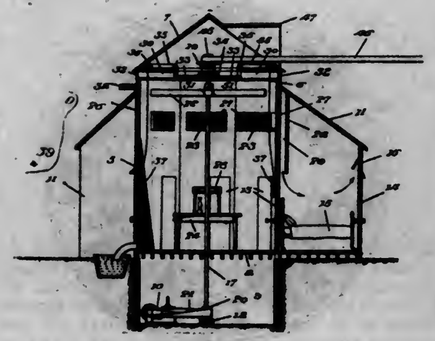
2. An induction motor starting and controlling device including an electric switch having starting and running positions, an operating handle movable between starting and running positions and arranged to be held in running position to hold the switch in running position and operating mechanism releasingly connecting the handle with the switch, and overload tripping means associated with the running position of the switch arranged to break the connection between the operating mechanism and handle and effect the movement of the switch to open position independently of movement of the handle from running position, said tripping means having retarding means associated with it arranged to hold the tripping means against effective operation due to the momentary overload resulting when the switch is thrown from starting to running position, and effect its operation to trip the switch upon overloads having characteristics substantially exceeding those of the aforesaid momentary overload.

3. An electric switch comprising a casing adapted to contain oil, stationary and movable switch members immersed in the oil in said casing, operating mechanism arranged releasingly to hold the switch closed, and overload switch-tripping means having fluid-governed retarding means associated with it also contained in said casing and immersed in the oil therein.



1,450,769. TIRE-DEFLATION SIGNAL. RAYMOND A. CROSBY, Holyoke, Colo. Filed Apr. 17, 1922. Serial No. 553,513. 7 Claims. (Cl. 116—34.)

4. A tire deflation signal comprising a tube, one end of which is engageable over a valve stem of a tire, a plug in the tube providing an air passage, the tube having a whistle opening, a tubular guide secured to the plug and projecting toward said end of the tube, the end of the guide opposite to the plug being contracted, a rod slidable through said contracted end of the guide and

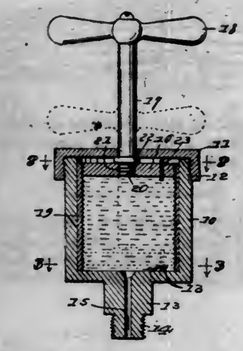


having an enlargement slidable in said guide, the projecting portion of the rod having a portion to bear against the end of a valve rod in said stem, and a coiled spring surrounding said guide and confined between said plug and the last named portion of said rod.

1,450,770. SANITARY SELF-CLEANING FILTER. PHILLIP S. FRICK and CLAUDE E. ROBINSON, Oswego, Kans. Filed Feb. 17, 1919, Serial No. 277,529. Renewed Sept. 7, 1922. Serial No. 586,804. 1 Claim. (Cl. 210—92.)

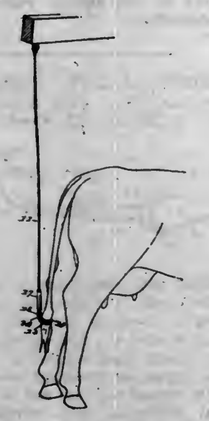
A filter consisting of a container having an inlet at one end, an outlet at its opposite end, and an inclined bottom portion, an imperforate partition adjacent the inlet and extending downwardly to a point adjacent the bottom of the container, a second imperforate partition adjacent the outlet and extending upwardly to a point adjacent to the top of the container, a removable receptacle for filtering material having screened top and bottom portions and supported above the inclined portion of the bottom of the container by the partitions, a second removable receptacle for filtering material having screened top and bottom portions and disposed between the second partition and the adjacent end of the receptacle, and a removable cover for the container to permit access to the removable receptacles, for the purpose set forth and described.

1,450,771. VENTILATION SYSTEM. WILLIAM BAXTER GLISSON, Rutherford, Tenn. Filed May 4, 1921. Serial No. 466,856. 3 Claims. (Cl. 98—27.)



1. A structure of the character described comprising a central room and a plurality of other rooms radiating therefrom, with openings between the central and radiating rooms, a rotary fan within the upper portion of the central room for directing air downwardly in the central room from above said openings with a whirling motion, and an L-shaped deflector within the central room extending along the lower edge and one end of each of said openings whereby part of the downwardly whirling current of air is caught by the deflectors and directed through said openings into the radiating rooms.

1,450,772. MILK-BOTTLE RECEPTACLE. NICHOLAS GRANDE, New York, N. Y. Filed Mar. 3, 1922. Serial No. 540,715. 3 Claims. (Cl. 232—41.)



1. A milk bottle container embodying a casing provided at its top with a receiving opening, a slide mounted for sliding movement on the inner side of said top and adapted to be slid into and out of registration with the opening to seal or unseal the same, a bell crank provided with arms of unequal length and pivoted at its elbow within the casing with its shorter arm directly beneath the receiving opening in the top of the casing and its longer arm positioned at substantially right angles to said shorter arm and having pivotal connection with the slide, the bell crank being normally positioned to retract the slide, whereby a bottle dropped through the receiving opening in the top of the casing will fall directly upon the shorter arm of the bell crank and the weight of said bottle will cause the bell crank to be tilted to automatically move the slide into registration with the opening to seal the same, and a normally locked door in said casing adapted to be opened by the housewife to permit of removal of the bottle and the resetting of the parts into bottle receiving condition.

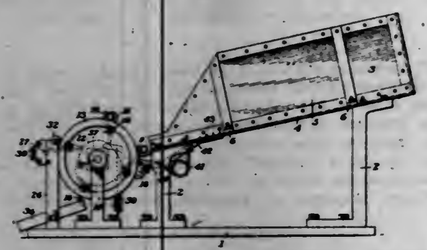
1,450,773. HARD-GREASE CUP. FRED C. GRANT, Sangerville, Me. Filed June 3, 1921. Serial No. 474,635. 2 Claims. (Cl. 184—38.)

1. A grease cup having an outer casing provided with a removable lid or cover, an open ended sleeve removably fitted in the casing, a follower fitted in and having threaded engagement peripherally with the sleeve, an operating stem extending through the lid or cover and having a threaded engagement with the follower, and means for preventing reverse rotary movement of the follower to permit of unscrewing the stem therefrom.

1,450,774. COW-TAIL HOLDER. JOSEPH HARRING, Louisville, Ky. Filed May 16, 1922. Serial No. 561,501. 3 Claims. (Cl. 119—105.)

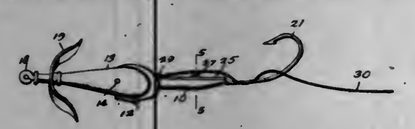
1. A cow tail holder having a yieldingly supported clasp for engaging a cow's tail, said clasp consisting of a flexible band provided with a staple and having a plurality of eyes for selective engagement with said staple, and a key engageable with the staple to hold the selected eye in place thereon and displaceable by a strain on the clasp.

1,450,775. GAME TRAP. JARDER HARDAWAY, Pittsburgh, Pa. Filed Aug. 25, 1922. Serial No. 584,241. 6 Claims. (Cl. 42—61.)



1. A trap having a cage provided with an inwardly opening spring closed door, a trip lever fulcrumed at an

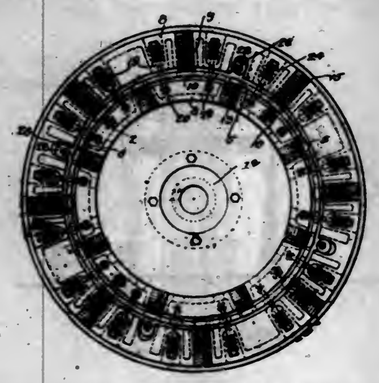
intermediate point for engagement at one end with the free edge of the door, and a swinging frame connected



with the other end of said lever and spring impelled in a direction to cause a downward pressure of the door engaging end of said lever.

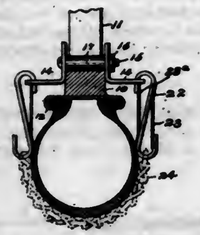
1,450,776. MARKING MACHINE. WESLEY E. HOWELL, Millville, N. J., assignor to Whitall-Tatum Company, Millville, N. J., a Corporation of New Jersey. Filed Dec. 20, 1920. Serial No. 431,875. 32 Claims. (Cl. 33—21.)

1. A marking machine, comprising a carrier for the articles to be marked, means for operating the carrier and means cooperating with said carrier for producing severance marks on the articles carried thereby, substantially as described.



1,450,777. ARTIFICIAL BAIT. WILLIAM Q. HUMMELL, New Philadelphia, Ohio. Filed Sept. 7, 1921. Serial No. 499,102. 2 Claims. (Cl. 43—47.)

1. An artificial bait comprising a boat-shaped body portion provided with a forwardly projecting conical head decreasing in diameter forwardly, said head projecting laterally beyond the body portion, a conical cap held upon the conical head increasing in diameter rearwardly having oppositely arranged vertical flanges extending laterally beyond the rear end of the conical head for substantial distances, said vertical flanges being spaced from the body portion forming water passages between them and said body portion, said flanges being adapted to simulate the distended gills of a frightened minnow, an attaching element connected with the conical head, a spinner mounted upon the attaching element in advance of the conical head, and a hook connected with the body portion in the rear of the conical head.

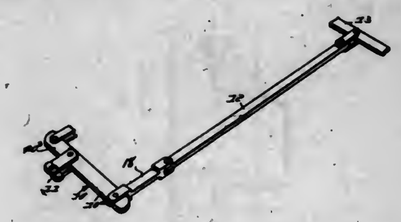


1,450,778. RESILIENT WHEEL. JOHN C. JACKSON, Philadelphia, Pa., assignor of one-fourth to Harry Grasser, Wissahickon, Philadelphia, Pa. Filed Sept. 7, 1922. Serial No. 586,711. 10 Claims. (Cl. 152—28.)

1. A resilient wheel comprising hub elements, a ring resiliently mounted on said hub elements, an outer tread bearing ring resiliently connected with said inner ring, and resilient means controlling the circumferential

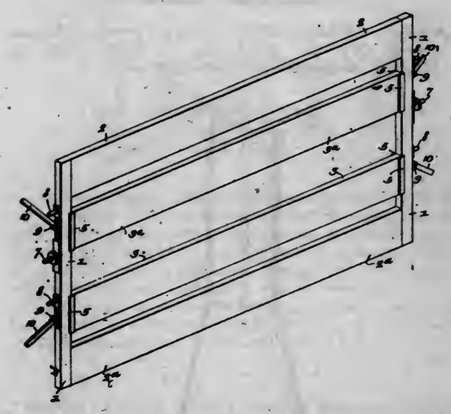
movement of the said outer ring with respect to the hub elements.

1,450,779. ANTISKID DEVICE. MATHIAS J. LA RIVIERE, Waterbury, Conn. Filed Feb. 24, 1922. Serial No. 539,008. 1 Claim. (Cl. 152—14.)



In an anti-skid device, in combination, two L-shaped members adapted to be clamped to the opposite sides of the felly of a wheel, bolts to bind said members into engagement with said felly, said bolts being spaced apart sufficiently to permit the enclosing of a spoke therebetween, cushioning means enclosing said bolts, and means surrounding the tire and detachably secured to the wings of said L-shaped members adapted to prevent skidding.

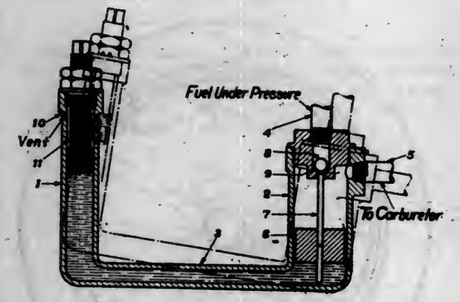
1,450,780. KNUCKLE JOINT FOR AUTOMOBILE STEERING MECHANISM. EDWARD OLSON, Mount Alton, Pa. Filed Feb. 10, 1922. Serial No. 535,564. 2 Claims. (Cl. 287—90.)



1. A knuckle-joint for the steering mechanism of automobiles comprising a yoke each member of which is provided with a round bore extending inwardly from its outer end to provide an inner bearing-seat with a slot at the inner side of the member communicating with the bore, a cross-head extending through the slots and having rounded ends seated in the members of the yoke, and yielding bearings engaging the cross-head opposite the aforesaid bearing-seats.

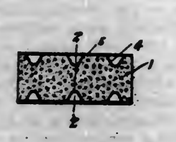
1,450,781. DRAFT EQUALIZER. RAYMOND E. ANDERSON, Boone, Iowa. Filed May 27, 1920. Serial No. 384,589. 1 Claim. (Cl. 278—3.)

A draft equalizer having an intermediately fulcrumed equalizing bar, an equalizer arm pivotally connected with one arm of said bar and having hitching means connected respectively with the extremities thereof, a leader bar having draft equalizing means at its forward end, and a link having bifurcated extremities straddling respectively the remaining arm of the equalizer bar and the rear end of the leader bar, the said link being reduced in thickness between the said bifurcated extremities to provide clearance space for the adjacent end of the equalizing beam.



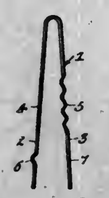
1,450,782. SKIN-DRYING BOARD. ELWOOD B. AYRES, Philadelphia, Pa., assignor to The Philadelphia Textile Machinery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 23, 1919. Serial No. 325,715. 2 Claims. (Cl. 149—21.)

2. The combination in a board for drying skins, of side channel members; end sections spaced apart and secured to the side members; two intermediate members having plates overlapping the side members, the end sections and the intermediate sections being on the same plane; teeth on each end of each intermediate section; and ratchet mechanism located in the side channel members for moving and holding the said intermediate sections to stretch and hold the skins attached to the frame.



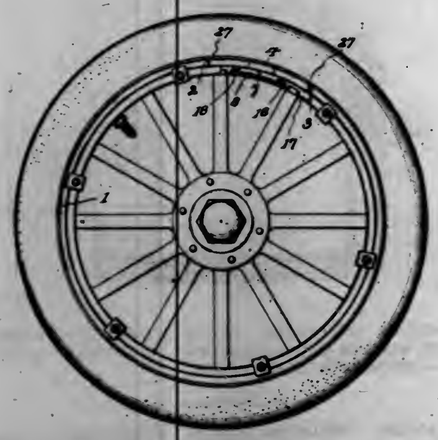
1,450,783. PRESSURE REGULATOR. BRYANT BANNISTER, Pittsburgh, Pa. Filed Oct. 8, 1921. Serial No. 506,257. 9 Claims. (Cl. 137—159.)

1. A pressure regulator for use in the fuel feed line for the internal combustion engine of a power propelled vehicle comprising a fluid containing U-tube, fuel inlet and outlet connections for one leg of said U-tube, and valve means controlling fuel inlet to said leg and arranged to be operated by the fluid in said leg; said regulator



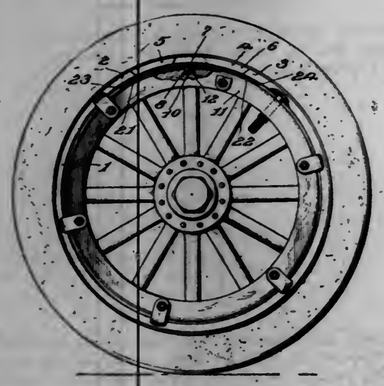
being so arranged that the relative fluid level in said legs will vary in accordance with the disposition of the longitudinal axis of the vehicle.

1,450,784. BUILDING BLOCK. JAMES BARNES, New Kensington, Pa. Filed Feb. 8, 1922. Serial No. 534,838. 6 Claims. (Cl. 72—35.)



1. A building block or the like comprising a body of cementitious material, a vacuum cup imbedded in said block and opening at a face thereof, and a facing of dense material on the face of the block and lying against the open end of the cup.

1,450,785. HAIRPIN. HARRY R. BAYLIS, Seattle, Wash. Filed Dec. 1, 1921. Serial No. 519,128. 1 Claim. (Cl. 132—50.)

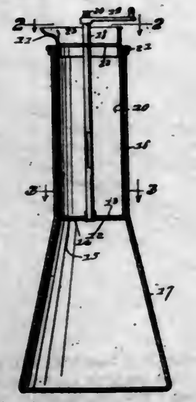


A hair pin composed of a single piece of wire bent intermediate its ends to form a pair of substantially parallel prongs, one of said prongs centrally of its length having a series of alternately disposed crimps arranged to extend edgewise of the prong and the other of said prongs centrally of its length having a series of alternately disposed crimps extended facewise of the prong, each of said prongs furthermore provided at a point between the inner one of its series of crimps and its free end and spaced therefrom with a crimp, the crimp on the prong having the edgewise disposed series of crimps extending face-wise of the prong and the crimp carried by the prong having the face-wise disposed series of crimps extending edgewise of the prong.

1,450,786. AUTOMOBILE TIRE RIM. JOHN A. BEDINGFIELD, Fort Valley, Ga. Filed Oct. 10, 1921. Serial No. 506,737. 6 Claims. (Cl. 301—31.)

1. A tire supporting rim comprising a section having an open portion or gap therein, a detachable rim section composed of relatively short sections having their free ends extending into and secured within the aforesaid open portion for completing the rim, and a hinge connection located wholly beneath the tire supporting surface of the rim and arranged to form a staggered joint with the inner ends closely abutted at all points, said hinge connection having a portion forming a driving lug.

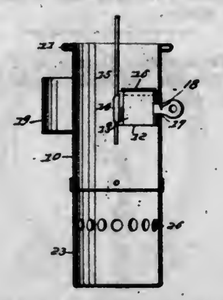
1,450,787. AUTOMOBILE TIRE RIM. JOHN A. BEDINGFIELD, Fort Valley, Ga. Filed June 1, 1922. Serial No. 565,115. 8 Claims. (Cl. 301—32.)



1. A tire supporting rim comprising a section having an open portion or gap therein, a detachable rim section composed of relatively short sections having their free ends extending into and secured within said open portion for completing the rim, and a hinge joint connecting said short sections, said joint including complementary projecting portions adapted to coact longitudinally of the rim to form a driving pin adapted to engage the felloe of a wheel.

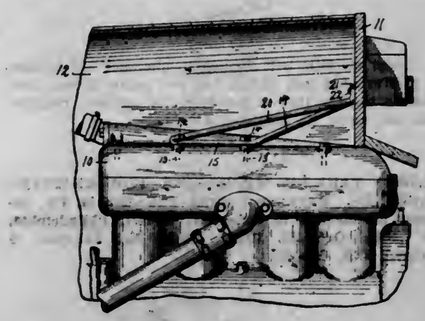
1,450,788. VALVE-GRINDING TOOL. WARREN S. BELLOWS, Worcester, Mass., assignor to Walden-Worcester, Inc., Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 9, 1918. Serial No. 221,404. 3 Claims. (Cl. 51—29.)

1. A valve grinding tool including a stock, a valve-engaging bit pivotally connected to said stock and provided with a plurality of studs, and a locking member mounted on said stock and adapted to engage the said studs to lock the bit against rotation about its pivot.



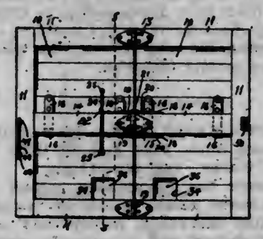
1,450,789. CREAM LIFTER. LONNIE SHELDON BENDER, Kansas City, Mo. Filed July 11, 1922. Serial No. 574,291. 2 Claims. (Cl. 65—28.)

1. A cream lifting and removing device for milk bottles having a barrel for introduction into the neck of the bottle in close relation with the side wall of the same, a cream inlet valve provided at the lower end of the barrel and a tubular stem extending axially through the barrel and operatively connected with the valve to provide for the actuation of the same and to admit air to the bottle to preclude suction in the same as the barrel is being removed.



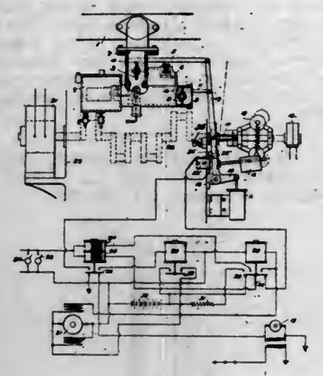
1,450,790. INCENSE BURNER. JETSON O. BENTLEY, Schenectady, N. Y. Filed July 29, 1921. Serial No. 488,337. 3 Claims. (Cl. 167—12.)

2. An incense burner having a casing and an enclosed clamp supported by the casing and consisting of jaws connected by a cylindrical axially vertical spring whereby the upper end of the spring forms a support for an incense containing pan or plate, said jaws being terminally



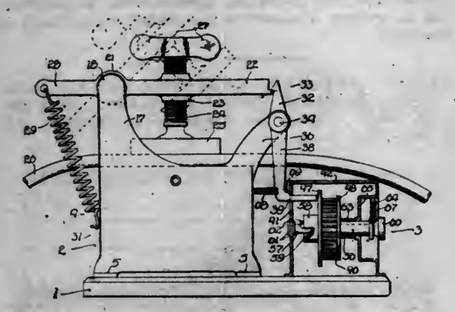
held in engaging relation at the axis of the casing and provided with seats for engaging an interposed incense stick.

1,450,791. INSTRUMENT BOARD AND ENGINE BRACE. WALTER BETHKE, Walburg, Tex. Filed Mar. 18, 1921. Serial No. 453,514. 1 Claim. (Cl. 180—54.)



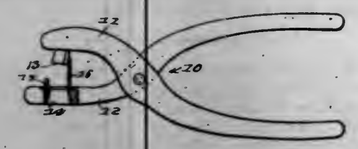
The combination with the instrument board and the motor casing of a motor driven vehicle, including the clamp bolts of the engine casing head, of a stay member perforated to engage a plurality of said bolts and held in place by the nuts of the same, a brace member extending obliquely from one end of the stay member and attached at its free end to the instrument board, and a brace member extending obliquely from the other end of the stay member and attached to the instrument board.

1,450,792. GRAIN DOOR. JOHN R. BILLINGS, JR., Durham, N. C. Filed May 13, 1922. Serial No. 560,651. 4 Claims. (Cl. 20—30.)



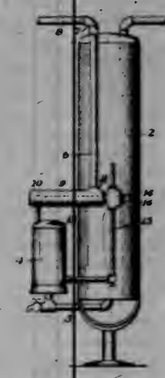
1. A grain door comprising a body portion formed of a pair of sections, means for hinging said sections together near their top and bottom edges, a locking bar comprising a pair of opposed sections hingedly united at their opposed ends and each hingedly united near each end to a door section whereby the bar sections operate to lock the door sections when in one position and permit the door sections to collapse when in their other position.

1,450,793. AUTOMATIC POWER-UNIT CONTROL. WILLIAM W. BUCHER, Chicago, Ill., assignor, by mesne assignments, to Kohler Company, Kohler, Wis., a Corporation of Wisconsin. Filed Mar. 20, 1919. Serial No. 283,912. 8 Claims. (Cl. 123—108.)



1. In speed control devices, an internal combustion engine, a carbureter connected thereto, a throttle between the carbureter and the engine, a choker valve in the air supply of the carbureter, a self regulating supplementary air supply leading to the throttle independently of the choker controlled supply, a governor actuated by the engine, and connections between the governor, the throttle and the choker for simultaneous operation to control the starting of the engine.

1,450,794. VULCANIZER. DAVID G. CHANDLER, Racine, Wis. Filed Sept. 2, 1920. Serial No. 407,617. 8 Claims. (Cl. 18—18.)



1. In a portable, self-contained vulcanizer for garage use and the like, the combination of a frame, a vulcanizing surface supported by said frame, means supported by said frame for heating said vulcanizing surface, a releasable clamping member carried by said frame and adapted to clamp the work against said vulcanizing surface, and a self-contained time-control mechanism supported entirely by said frame so as to be transportable therewith, said time control mechanism being operable to automatically release said clamping member at a predetermined time.

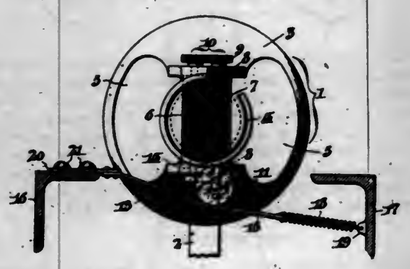
1,450,795. FILM-REPAIR TOOL. RUSSELL C. DOHR, Okeene, Okla. Filed July 14, 1921. Serial No. 484,657. 2 Claims. (Cl. 164—121.)

1. A tool for repairing moving picture films having pivotally connected jaws carrying complemental die members for removing the portions of a film adjacent to a broken sprocket opening thereof to form outwardly divergent free edges, one of said jaws carrying a positioning stud for engagement with the mutilated sprocket opening of the film.

1,450,796. WATER-HEATING SYSTEM. THOMAS H. DRYNAN, Sewickley, Pa. Filed Apr. 4, 1922. Serial No. 549,588. 6 Claims. (Cl. 236—33.)

5. A release chamber for water heating systems of the type embodying a heater and reservoir, comprising a casing having an opening to cooperate with the heated water outlet connection from the heater, an opening to cooperate with the circulating connection to the reservoir, and an opening to receive a thermostat, substantially as described.

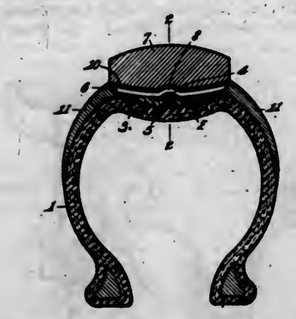
1,450,797. AUTOMATIC GATE FOR RAILWAY CROSSINGS. WILLIAM H. ENFIELD, Osage, Iowa. Filed Jan. 24, 1923. Serial No. 614,605. 12 Claims. (Cl. 246—293.)



1. A guard gate mechanism for railway crossings comprising a pivoted counter-balanced gate element normally held in inoperative position and automatically movable to operative position when released, a spring controlled pivoted holding arm normally maintaining said element in inoperative position, a train actuated means connected to said arm for shifting it against the action of its controlling spring to release said element, a latching device for maintaining said arm against the action of its controlling spring when in shifted position, and a train actuated spring controlled means cooperating with said latching device for operating the latter to release said arm whereby the latter will engage said element and shift it to inoperative position.

1,450,798. FISHHOOK. WLADYSLAV FILIPOWSKI, Chicago, Ill. Filed Apr. 29, 1922. Serial No. 557,326. 8 Claims. (Cl. 43—47.)

1. A cast metallic bait formed to simulate a fish-body, with a bifurcated tail, having the two parts thereof bent oppositely to constitute a propeller for causing rotation of the bait about its longitudinal axis.

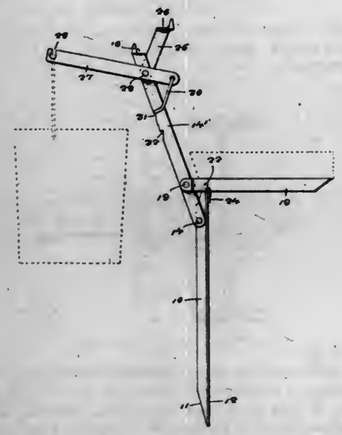


1,450,799. TAKE-UP MECHANISM FOR KNITTING MACHINES. RAYMOND FISHER, Philadelphia, Pa., assignor of one-half to Oscar W. Weisel, Philadelphia, Pa. Filed Oct. 31, 1921. Serial No. 511,648. 9 Claims. (Cl. 66—9.)

3. A fabric take up mechanism for knitting machines comprising a draft roller for engaging the knitted fabric; and a yielding drive for the roller including a disk, and a flexible member for rotating said disk through intermittent rolling contact therewith.

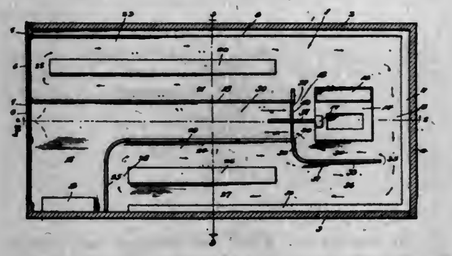
1,450,800. PNEUMATIC TIRE. TRUMAN D. FRAZIER, Martins Ferry, Ohio. Filed Aug. 31, 1922. Serial No. 585,344. 6 Claims. (Cl. 152—17.)

5. A pneumatic tire comprising a carcass having its tread portion bowed inward to form an external circumferential seating channel, a flexible band conformably fitted in said channel and permanently preserving the inwardly bowed configuration of said carcass, protective sheaths of rubber carried by said carcass at opposite sides of and terminating abruptly adjacent to said channel, anchor members disposed transversely on said band in circumferentially spaced relation and having their



ends abutting the edges of said sheaths, and a tread member embracing said band and gripped internally by said anchor members.

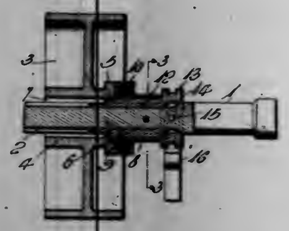
1,450,801. INTERNAL-COMBUSTION ENGINE. ARTHUR N. FRISBIE, Utica, N. Y. Filed May 7, 1920. Serial No. 379,593. 1 Claim. (Cl. 123—50.)



An internal combustion engine comprising a cylinder, a hollow piston mounted for reciprocation within the said cylinder and having a closed end, a hollow closure arranged within the said piston, and means for supporting the said closure whereby the latter will automatically center or line itself within the piston, said means including relatively spaced supporting arms fixed at their lower extremities to the base of the engine and having their upper extremities presenting bearings within the said closure, a pin journaled in said bearing, and a second pin arranged at right angles to the first mentioned pin having its ends journaled in bearings in the said closure member, one of said pins presenting a transverse bore in which the other pin is journaled.

1,450,802. DEVICE FOR SUPPORTING UTENSILS OVER CAMP FIRES. FRED A. FAYE, Azusa, Calif. Filed Oct. 8, 1921. Serial No. 506,428. 2 Claims. (Cl. 126—30.)

1. In a device of the class described, a standard, an element connected therewith, and foldable with reference to the standard, a foldable arm connected with said element and including a device for supporting a utensil, means for retaining the said arm in a plurality of positions with reference to said element, a member pivoted to the element connected with the standard and projecting from the standard on the side opposite to that in which the utensil is supported, and means on the standard for engaging the member so projecting.

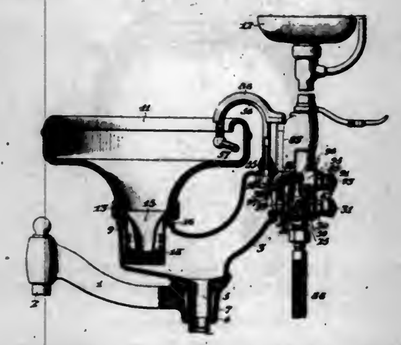


1,450,803. SELF-SERVING STORE. GROVER C. GREENE, THOMAS OSCAR TUNE, and ROBERT E. STAMPS, Nashville, Tenn. Filed Aug. 4, 1921. Serial No. 489,797. 2 Claims. (Cl. 211—8.)

1. In a self-serving store, a sales room having an entrance, an aisle extending from the entrance to a relatively remote point and substantially midway longitudinally between the side walls of the room, a checking station arranged opposite the end of the aisle and in spaced

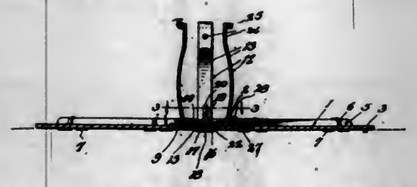
relation thereto, means dividing the aisle longitudinally at its said end and extending from the checking station toward the entrance a distance into said aisle, whereby to define distinct entrance and exit passageways, means controlling the passage of customers through the said passageways, article storage means extending longitudinally within the space at either side of the aisle and parallel thereto and to the respective wall of the room whereby to display the articles stored thereby to customers passing through the aisle and before their entry through the entry passageway, the said storage means defining a circuitous passageway at either side of the aisle and means extending from one side of the rear end of the aisle laterally and thence rearwardly and past one side of the checking station in spaced relation thereto to define an exit passageway through which customers must pass in leaving the sales room.

1,450,804. CLUTCH. WILLIAM B. GROSS, Oxnard, Calif. Filed Apr. 28, 1921. Serial No. 465,115. 2 Claims. (Cl. 192—67.)



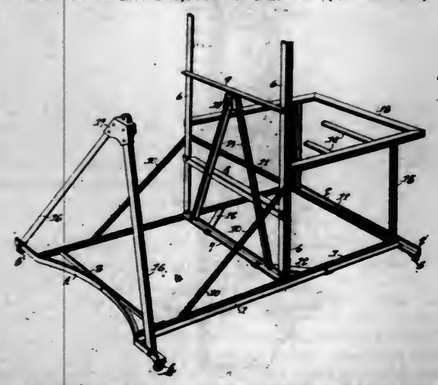
1. A device of the class described comprising a driven shaft having a longitudinal groove in one side, a pulley arranged on said shaft and including a central hub having a groove formed therein for registry with the first named groove, said hub being also formed at one end with an enlargement having a socket, a grooved guide sleeve mounted on said shaft adjacent the pulley, said sleeve having a lateral flange at its inner end extending into and rotatable in said socket, separate means for positively fixing the guide sleeve to the shaft, a retaining ring secured to the outer end of said enlargement and bearing against said flange to hold the latter in the socket, and a clutch member slidably mounted on said shaft and provided with a key slidably received in the grooves in said hub, shaft and sleeve.

1,450,805. UNIVERSAL JOINT OR COUPLING. HERBERT HART-SPRATT, London, England. Filed July 18, 1922. Serial No. 575,788. 13 Claims. (Cl. 64—91.)



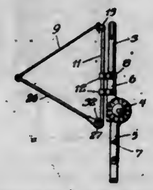
1. In combination, a pair of members each provided with lugs alternating with the lugs of the other member; elongated rollers between the lugs, each having a length approximately twice its diameter; and positioning means for holding the rollers radial to a common center and in the same plane with each other; said means including a ring engaging the outer ends of the rollers.

1,450,806. SPITTOON. GEORGE D. HECK, Prince Bay, N. Y., assignor to The S. S. White Dental Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 9, 1918. Serial No. 249,041. 17 Claims. (Cl. 4—40.)



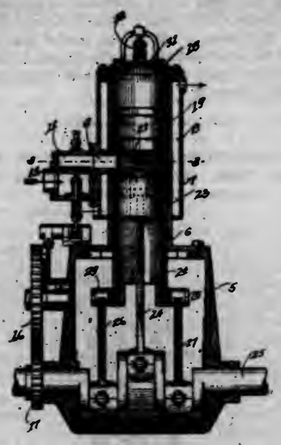
1. A spittoon of the class described, having a waste-pipe outlet, a saliva ejector having its discharge outlet leading directly into said waste-pipe outlet, and means automatically actuated to prevent gases flowing back into said saliva ejector when not in use.

1,450,807. TREE HOLDER. EDWIN G. HINES, Drums, Pa. Filed Feb. 3, 1922. Serial No. 533,870. 8 Claims. (Cl. 248—38.)



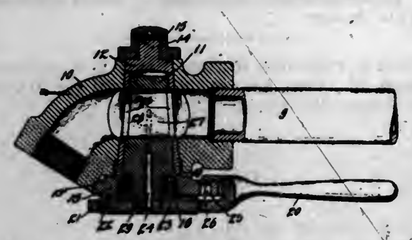
1. In a tree holder, a base member, reinforcing members on the base member, and a trunk socket detachably mounted on the base member and rotatable into and out of engagement with the reinforcing members.

1,450,808. WASHING-MACHINE FRAME. WILLIAM HAROLD HUENERGARDT, Lincoln, Nebr., assignor to Huenergardt Manufacturing Co., Lincoln, Nebr., a Corporation. Original application filed Feb. 15, 1918, Serial No. 217,364. Divided and this application filed Nov. 11, 1920. Serial No. 423,377. 3 Claims. (Cl. 68—35.)



1. A frame for power driven washing machines which includes a base unit, an end standard unit, and an intermediate standard unit, said standard units being connected to the base unit, tub bearings carried by said standard units, a bench unit connected to said intermediate standard unit and to the base unit, bracing means for said intermediate unit, said bracing means comprising diagonals connected to said intermediate standard unit and to the base unit to maintain said intermediate standand unit in a plane normal to that containing the base unit.

1,450,809. VISOR FOR USE WITH AUTOMOBILES. GEORGE L. LAMB, Nappanee, Ind. Filed Jan. 20, 1922. Serial No. 530,593. 3 Claims. (Cl. 296—95.)

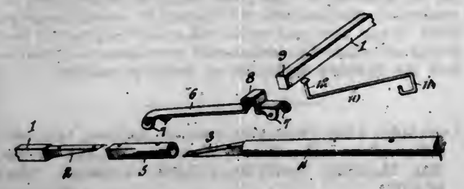


2. A visor for automobiles comprising a pair of uprights removably attached to the side portions of the wind shield frame, said uprights having forwardly projecting ears at their upper ends, a shaft journaled to rotate in said ears, a roller free to rotate on the shaft, a spring wound about the shaft and attached at one end to the roller and at the other to the shaft, a notched pin passing through the shaft, a bracket carried by one of said uprights and projecting forwardly beneath the shaft and having an edge received into the notch of the pin, a shade wound on the roller, and arms connected to the free end of the shade and adjustably pivoted to the lower ends of the uprights.

1,450,810. INTERNAL-COMBUSTION ENGINE. WILLIAM N. LONG, Springfield, Oreg. Filed Mar. 29, 1921. Serial No. 456,528. 2 Claims. (Cl. 123—50.)

1. In an internal combustion engine, a cylinder having an inlet and an outlet port combined, an outer piston movable in said cylinder, a port in said piston, said port being adapted to register with said cylinder port, a cross wall in said outer piston, an inner piston movable within said outer piston and at a point below said cross wall, a crank shaft mounted below said cylinder, and suitable cranks for imparting movement from said inner and outer pistons to said crank shaft.

1,450,811. SELF-LOCKING ANGLECOCK. ROBERT E. MCGAHEY, Alexandria, Va. Filed Jan. 29, 1921. Serial No. 441,067. 9 Claims. (Cl. 251—91.)



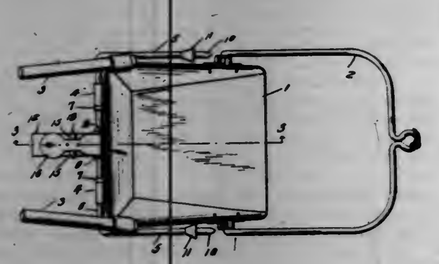
1. An angle cock comprising a body having an upwardly tapering opening, a turning plug, a sleeve interposed between the plug and the body, said sleeve being closed above the plug and provided with means for drawing the sleeve upward in said tapering opening and also provided with means for sustaining the parts in operative position, a handle beneath the train pipe and extending parallel thereto in the open position of the plug, and means for locking the handle in open position, substantially as set forth.

1,450,812. SAW SET. WILLIAM HUGO MACK, Oak Grove, La. Filed May 8, 1922. Serial No. 559,489. 1 Claim. (Cl. 76—70.)

A saw set comprising an elongated beam having means to anchor it, in a support and provided with a sloping anvil face near one end to receive the saw teeth, a yoke having legs straddling said elongated beam, a pivot passing through the inner ends of said legs and the middle portion of said beam whereby to secure the yoke to the beam and permit the swinging of the yoke from one end to the other of the beam, an upstanding head connecting the outer ends of said legs, said head having spaced lugs overlying the anvil face of the beam, a plunger mounted to reciprocate in said lugs, stop means projecting from the plunger between said lugs, yieldable means to hold the plunger normally in an elevated position, and rests projecting laterally from the beam near the anvil end thereof to receive said legs for freely supporting the same and said head.

1,450,813. TRAIN-ORDER HOLDER. JOHN J. METS, Meadville, Pa. Filed Nov. 23, 1921. Serial No. 517,337. 5 Claims. (Cl. 258—8.)

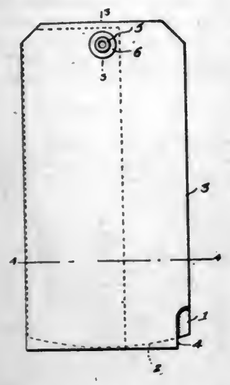
1. In a train order deliverer, the combination of a hoop formed of bendable material, a plate secured thereto and



having an eye therein through which a portion of the hoop passes; said eye being slightly larger than the diameter of the member, a message clip secured to the member and constructed and arranged to relieve strain applied to the hoop.

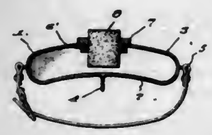
1,450,814. FUEL-GAS MIXER. HENRY R. MICKA, Maywood, Ill. Filed Nov. 12, 1921. Serial No. 514,654. 2 Claims. (Cl. 48—180.)

1. An auxiliary fuel mixer for fuel conduits comprising a plate having a central opening which partly closes the passage of the conduit, an inner hollow frusto-conical member arranged over but not wholly closing the opening, said member having its outer reduced and closed end apertured, a second and outer hollow frusto-conical mixer arranged over but spaced away from the end of the first mentioned mixer, said last mentioned mixer having its outer reduced end apertured, and its inner edge scalloped.



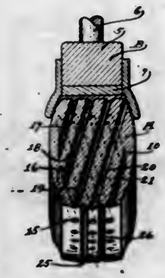
1,450,815. ROAD SCRAPER. JOHN F. NEUNABER and LOUIS E. BARTELS, Bethalto, Ill. Filed Dec. 12, 1921. Serial No. 521,743. 2 Claims. (Cl. 37—138.)

1. In combination with a shovel or road scraper, brackets extending rearwardly from the back wall thereof, a dumping device mounted in said brackets and embodying side arms and a cross piece, the latter having stops in cooperative relation with the brackets to prevent longitudinal play of the cross piece, and a latch carried by the shovel and adapted to engage said cross piece to normally hold the dumping device out of operative position.



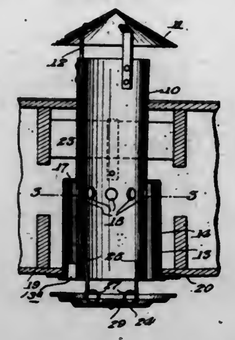
1,450,816. TAG. HENRY H. ORDUNG, Laporte, Ind., assignor of one-half to Joseph Wade, Laporte, Ind. Filed Mar. 13, 1922. Serial No. 543,498. 3 Claims. (Cl. 40—10.)

1. As a new article of manufacture, a routing or shipping tag comprising a record receiving tag, a cover enclosing said tag and pivotally connected to the tag, and an extension formed along one side edge of said cover



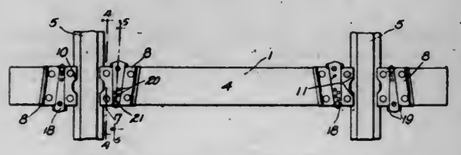
and folded between one side of the cover and said tag to provide a stop for limiting pivoted movement of said tag in one direction.

1,450,817. MOISTENER. LOUIS E. PORTER, Connellsville, Pa. Filed Jan. 14, 1922. Serial No. 529,249. 2 Claims. (Cl. 91—54.4.)



1. An envelope moistener designed to be clamped on the back of the hand of an operator, comprising a water containing body whose under face is concaved and whose outer face is convex, a rib on the under face of the body designed to be received between the fingers of the operator, and a capillary agent in the body and projecting through the outer face thereof.

1,450,818. CUSHION TIRE. CHARLES F. RISAK, San Francisco, Calif. Filed Aug. 14, 1922. Serial No. 581,800. 4 Claims. (Cl. 152—1.)



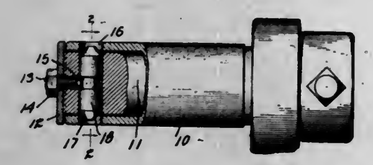
1. A cushion tire for vehicles comprising an annular body having rows of openings therethrough alternately extending in opposite diagonal relation across the tire, and the periphery of the tire having circumferentially extending grooves disposed between the rows of openings.

1,450,819. VENTILATOR. FRANK D. SAMMES, Carlinville, Ill. Filed Oct. 10, 1921. Serial No. 506,575. 1 Claim. (Cl. 98—30.)

A ventilator comprising a hollow cylindrical casing open at each end, a cone-shaped member secured to and spaced from one end of the casing, a sleeve surrounding the lower end of the casing and providing an annular passage open at the lower end and communicating with the interior of the casing by means of openings formed in the latter and a closure adjustably and removably located in the lower end of the casing for controlling the same and the open end of the sleeve.

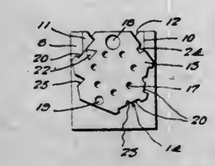
1,450,820. COMBINED RAILROAD STEEL TIE AND RAIL FASTENER. ORESTE SAMMINIATELLI, East Toledo, Ohio. Filed Aug. 31, 1922. Serial No. 585,461. 1 Claim. (Cl. 238—352.)

A metal tie and a means for securing rails thereon, said tie being in the nature of an I-beam and having the edges of its head notched longitudinally, cushions on the head on which the rails rest, rail engaging clips having their inner edges beveled inwardly to engage the base flanges of the rail and being centrally notched to provide spaced lips, inwardly directed flanges on the ends of the clips, binding means passing through the clips, the flanges thereof and the head of the tie, said clips having their outer edges grooved longitudinally, clips having inwardly directed flanged ends received in the notch of the tie head and contacting with the end walls thereof and disposed angularly with respect to the clips, means securing the clips on the tie, said clips having their inner edges grooved longitudinally, wedge keys having longitudinal tongues received in the grooves of the opposed clips, each of said wedge keys having staggered apertures therethrough, a headed element having its shank passing through one of the apertures and contacting the edge of the tie, and a cotter pin passing through one of said apertures.



1,450,821. EASEL. CHARLES HENRI SCHUTZ, Paris, France. Filed June 6, 1921. Serial No. 475,565. 3 Claims. (Cl. 40—146.)

1. An easel for holding photographs comprising a frame adapted to receive a photograph introduced from the back of the frame, a rigid back plate adapted to serve as a support for the said photograph, a foot pivoted to the back of the said frame and adapted to hold the frame and press against the said plate, eyelets placed at both sides of the frame, journals upon the foot adapted to



rotate in the said eyelets and serve as the pivoting axis of the said foot, the said foot being engageable with said back plate at two points, one above and the other beneath the plane of its oscillation axis.

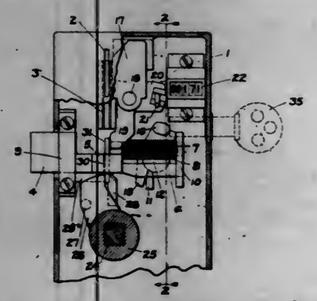
1,450,822. FLOATING REAMER HOLDER. JAMES E. SHEUMAN, Waynesboro, Pa. Filed July 6, 1921. Serial No. 482,767. 9 Claims. (Cl. 279—16.)

1. A tool holder comprising a shank, a bushing, registering transverse apertures therein, a pin having a cylindrical portion in the aperture of the shank and having oppositely tapered ends adapted to engage the apertures in the bushing, and means to hold the pin against withdrawal, said means permitting limited longitudinal movement thereof.

1,450,823. RIFLE SIGHT. ISAAC CARLING SPENCER, Glendale, Utah. Filed Sept. 10, 1921. Serial No. 499,660. 2 Claims. (Cl. 33—54.)

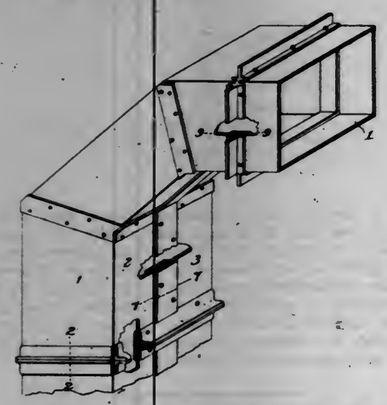
1. In a firearm, the combination with a fixed front sight, of a rear sight including a spring plate having one end fixed to the firearm and the other end presenting a vertical groove, a removable plate seated in the groove, a rotatably adjustable member carried by the said plate and presenting a plurality of sight-openings, and an elevating member adjustable under the free end of the spring plate for raising or lowering the said rotatable member with respect to the said fixed front sight.

1,450,824. RAILROAD-CROSSING SIGNAL. JOHN R. STOGNER and POMEROY ADAMS, Lancaster, S. C. Filed Sept. 16, 1922. Serial No. 588,728. 5 Claims. (Cl. 246—294.)



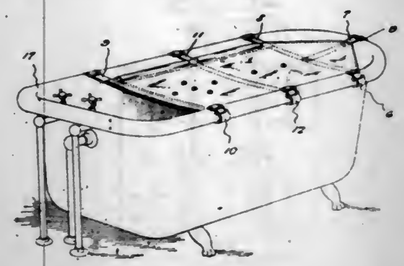
1. A signal for railroad crossings comprising a supporting structure carrying a bell, a swingably mounted blade

spring pressed normally away from the bell and carrying a clapper engageable therewith, and a train wheel oper-



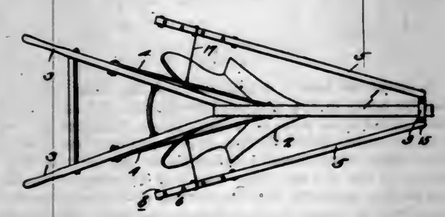
ated actuator mounted on the track and connected with the movable blade of the signal.

1,450,825. COIN-CONTROLLED LOCK. CHARLES N. VAN CLEAVE, Indianapolis, Ind. Filed Mar. 1, 1920. Serial No. 362,308. 6 Claims. (Cl. 194—74.)



1. A lock for doors and the like comprising a casing having a slot for a coin, a bolt having a slot to receive and hold said coin, a pivoted closure for the slot in the casing, said coin adapted to contact with said closure, and means acting through the coin in the slot of said bolt to retract the bolt and to close the slot in the casing, substantially as set forth.

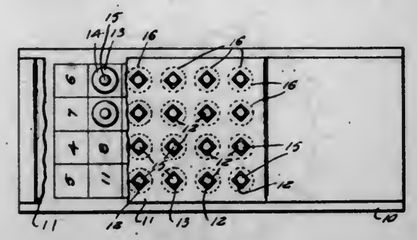
1,450,826. COUPLING DEVICE. MAX WALTEN, Washington, D. C. Filed Feb. 28, 1922. Serial No. 539,886. 2 Claims. (Cl. 285—201.)



1. A sheet metal connecting device comprising connected parts one of which has parallel separated sides adapted to receive between them a sheet lying in a plane therewith, and a set screw threaded into one of said sides and adapted to bind said sheet against the other side whereby said sheet is removably held therebetween.

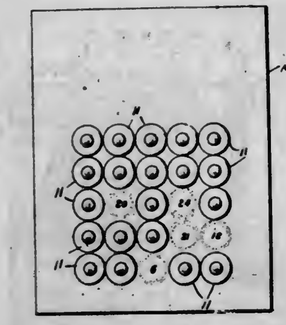
1,450,827. BATH TRAY. SIDNEY C. WOOD, Jamestown, N. Y., assignor to Chautauqua Hygienic Institute, Inc., Jamestown, N. Y., a Corporation of New York. Filed July 3, 1922. Serial No. 572,431. 2 Claims. (Cl. 4—2.)

1. A tray designed to be arranged in the top of and to be supported from the rimmed edge of a bath tub, comprising a fabric body of a less length than that of the tub, said body having a V-shaped end designed to be received in the rounded head portion of the tub, equidistantly spaced transverse straps stitched to the under face of the body and extending beyond the edges thereof, adjustable means on the ends of said straps to engage the beaded edge of the tub, a longitudinally arranged strap disposed centrally beneath the V-shaped end of the body, projecting therebeyond, stitched to the body and to the transverse strap adjacent thereto, means on the end of the said longitudinal strap to engage the bead at the head of the tub, and non-yieldable reinforcing elements embedded in the edges of the body between said transverse straps, all as and for the purpose set forth.



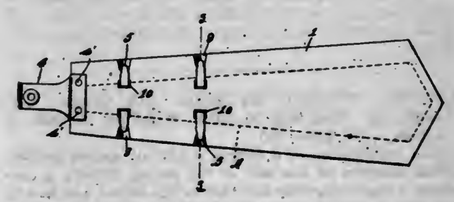
1,450,828. PLOW FENDER. ROBERT M. ANDERSON, Como, Miss. Filed Mar. 5, 1921. Serial No. 449,924. 1 Claim. (Cl. 97—188.)

A plow comprising a share, and a frame including a beam; a clamp embracing the beam and including upper and lower members having laterally projecting flanges, one flange of the lower member being provided with a depending lip disposed at an angle to the length of the beam; a securing device connecting the flanges of the upper and lower members and comprising a detachable part housed between the lower member and the lip; a bar extended along the lip; a pivot element connecting the bar with the lip for vertical swinging movement; a tie extended between the rear portion of the bar and the frame; and depending teeth carried by the rear end of the bar and located adjacent to the share.



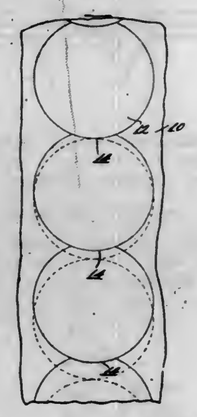
1,450,829. VENDING DEVICE. WILSON D. ANDERSON, Bremerton, Wash. Filed Apr. 25, 1921. Serial No. 464,091. 3 Claims. (Cl. 46—56.)

1. A vending device having a base, vendible articles for individual removal by vendees, said articles being disposed on said base means to indicate the winner of a contest concealed by said articles, a retaining web for said



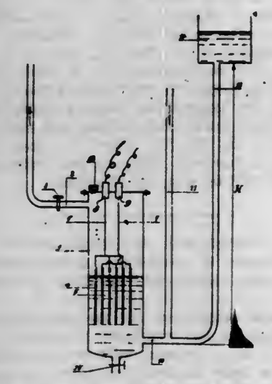
articles associated with the base and said articles extending through said web to facilitate engagement or removal.

1,450,830. VENDING DEVICE. WILSON D. ANDERSON, Bremerton, Wash. Filed Apr. 25, 1921. Serial No. 464,092. 3 Claims. (Cl. 46—56.)



1. A vending device consisting of a base, means on said base to determine the winner of a contest, vendible articles exposed to the view of and for sale to and removal by entrants in such contest, and means removably securing said articles on the base in concealing relation to said means.

1,450,831. TIE PRESSER. WALTER H. ATWOOD, Walden, N. Y. Filed June 30, 1922. Serial No. 571,876. 1 Claim. (Cl. 100—57.)



A press of the class described, comprising a top board and a bottom board, a spring clip for connecting the boards together at one end, the top board having notches in its side edges and recesses in its upper face, L shaped bolts carried by the bottom board and engaging the notches in the top board, each bolt having a projection on its extremity for engaging a recess when the bolts are in clamping position and nuts on the bolts.

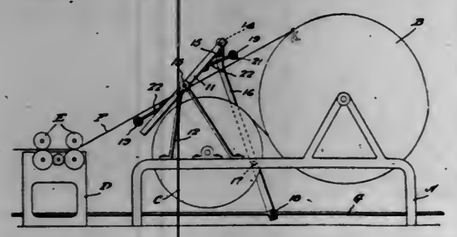
1,450,832. SUNDAE DISH AND METHOD OF MANUFACTURE. CESARE BARBIERI, New York, N. Y., assignor to The Vortex Mfg. Co., a Corporation of Illinois. Filed Sept. 21, 1921. Serial No. 502,212. 9 Claims. (Cl. 229—1.5.)

1. A blank for forming receptacles comprising a circular disk having a concave notch cut in the periphery thereof.

1,450,833. STEAM-HEATING APPLIANCE. PAUL BERGEON, Grenoble, France. Filed Oct. 6, 1921. Serial No. 505,867. 1 Claim. (Cl. 219—38.)

A steam generator for steam heating appliances, containing water in which dip electrodes fed by an electrical circuit, this generator being connected at its lower part with an expansion tank full of water, the surface of which is submitted to the pressure of a compressed gas, so as to automatically regulate the production of steam.

1,450,834. MACHINE PISTOL. THEODOR BERGMANN, Gaggenau, Germany. Filed July 9, 1920. Serial No. 395,180. 3 Claims. (Cl. 42—3.)



1. A machine pistol comprising in combination a stock, a barrel, a breech frame, a breech bolt, a trigger mechanism, a firing pin loosely mounted in said breech bolt and the front end of which projects from the front

end of said bolt, a spring acting directly on said pin and hence also on said breech bolt to throw said bolt and pin into firing position after each recoil, a sleeve fixed

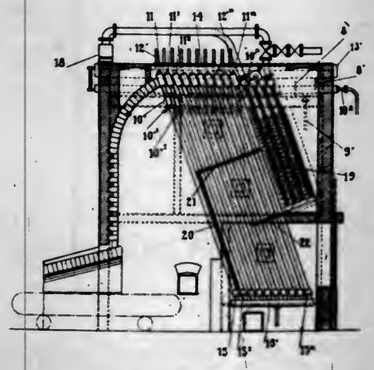
to said breech frame and having a channel through which to feed cartridges into the barrel, and also having an opening to eject the spent cartridges.

1,450,835. YARN HOLDER. LONES BLAIR, Oakland, Calif. Filed Apr. 3, 1922. Serial No. 549,053. 4 Claims. (Cl. 28—23.)

1. In combination with a slashing machine including a drum onto which yarn passes, a size box provided with rollers between which the yarn is fed, and further including a shifting rod; a yarn holding device comprising a rectangular frame of elongated shape disposed transversely of the slashing machine and pivoted at its ends, the longitudinal axis of said frame being transverse with respect to the path of the yarn, rollers journaled at the longitudinal sides of said frame, and means connected with said shifting rod and with said frame whereby to tilt the latter to bring the rollers thereon into engagement with the yarn when the shifting rod is moved to stop the machine.

1,450,836. POWDERED MODIFIED-MILK SUBSTITUTE. ALFRED W. BOSWORTH, Boston, Mass. Filed Jan. 16, 1922. Serial No. 529,715. 6 Claims. (Cl. 99—11.)

5. A product capable of use for producing a human milk substitute, which comprises a mixture consisting essentially of: (a) a substantially dry bulky pulverulent to granular to flaky material containing an edible fatty oil, which material is capable of forming a relatively stable emulsion when mixed with water; (b) substantially dry whey solids; and other substantially dry materials, such ingredients being mixed in such proportions as to produce a product of which the dry matter has approximately the following analysis,—27.8% oil, 55.5% milk sugar, 13.9% protein and 2.8% mineral salts, such product, on mixing with water, producing an emulsion resembling normal human milk.

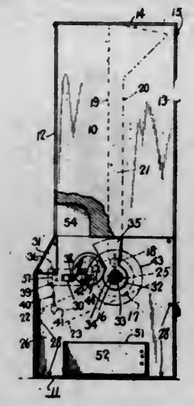


1,450,837. TRACTOR. EILERT J. BURSHEIM, Sperling, Manitoba, Canada. Filed July 29, 1921, Serial No. 488,397. Renewed Oct. 17, 1922. Serial No. 595,168. 2 Claims. (Cl. 301—44.)

2. A traction wheel, calks having threaded shanks passing therethrough, lugs on the inner face of the wheel through which the shanks also pass, nuts securing the shanks to the lugs, said lugs being projected beyond the

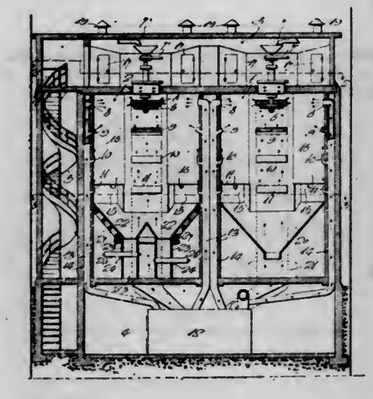
edges of the wheel and having their outer portions twisted and extended to provide right angularly disposed ground contacting members.

1,450,838. STEAM GENERATOR. GEORGES ALBERT BUSSAC, Paris, France. Filed July 20, 1920. Serial No. 397,692. 12 Claims. (Cl. 122—265.)



1. A steam-boiler comprising upper longitudinal feed water headers, upper and transverse collectors of water and steam, communicating means between said headers and collectors, sediment collectors arranged at the bottom of the boiler, vaporizing tubes connecting said water and steam collectors to said sediment collectors and comprising each an outer tube for the ascending mixture of steam and water and an inner tube for the descending water, upper longitudinal steam collectors connected to said steam and water collectors, and a main steam collector connected to said upper longitudinal steam collectors.

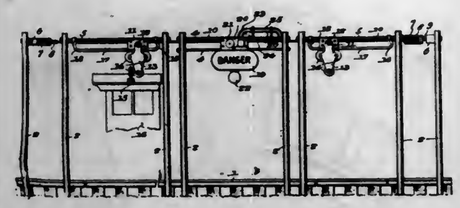
1,450,839. VENDING MACHINE. ROY CUSICK, Carnegie, Pa. Filed May 20, 1919. Serial No. 298,505. 1 Claim. (Cl. 194—70.)



The combination of a casing, a pair of spaced parallel plates mounted at one side of the casing forming a coin chute, a shaft rotatably mounted in the casing and having one end journaled thru said plates, a collar mounted on the shaft for rotation therewith between said plates, a disk provided with a recess mounted on the shaft, a coin controlled element slidably mounted upon the outer side of one of said plates and having one end normally disposed within said recess in the disk to prevent rotation of the shaft, a projection on the coin controlled element adapted to engage a coin at one side, an extension on the collar adapted to engage said coin at its opposite side, said

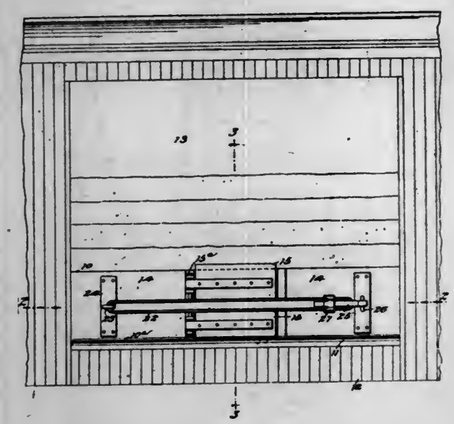
projection and extension forming a retaining means for a coin placed in the chute, and means to rotate said shaft whereby said extension rotatably carried thereon will force

the coin against the opposite projection sliding the coin controlled element from engagement with the recess in the disk.



1,450,840. DEHYDRATING APPARATUS. SAMUEL M. DICK, Minneapolis, Minn. Filed Nov. 12, 1919. Serial No. 337,581. 11 Claims. (Cl. 127—9.)

1. In a dehydrating apparatus, a vertical cell, means for spraying liquid into the upper end of said cell, means at the vertical side walls of said cell for directing vertical currents of air along the inner sides of said walls to prevent the sprayed liquid from accumulating thereon, outlet means for the moisture laden air located between the upper and lower ends of the cell, and outlet means for the dehydrated product below said air outlet means and said current directing means.

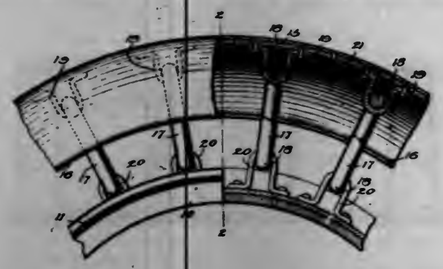


1,450,841. SIGNAL FOR RAILROAD CROSSINGS. WILLIAM DICKHART, Evansville, Ind.; John F. Pfeiffer administrator of said William Dickhart. Filed Sept. 25, 1922. Serial No. 590,390. 4 Claims. (Cl. 246—293.)

1. In a signal for railroad crossings, the combination with a signal which is movable to display and inactive positions, respectively, of an endless cable carrying said signal, and car actuated trips carried by the cable, one

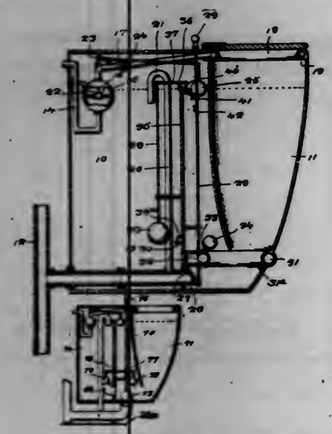
being adapted for shifting the signal to display position and the other for shifting the signal to inactive position.

1,450,842. GRAIN-CAR DOOR. JOSEPH EVERETT DRAKE, Blue Rapids, Kans. Filed Mar. 17, 1922. Serial No. 544,501. 4 Claims. (Cl. 20—30.)



1. An auxiliary grain car door including sections hinged together and presenting an opening between the opposed ends of said sections, a closure for said opening swingably mounted on one section, a lock bar U-shaped in cross section secured to one section and adapted to overlie the outer face of said closure to lock the same in place, said lock bar serving also to hold the sections and the closure in alignment and securing means on the other section for the opposite end of said lock bar, said securing means comprising a pivoted latch adapted to lie over the free end of said lock bar and a sliding keeper to engage both the end of the bar and the latch.

1,450,843. NONPNEUMATIC TIRE. CARL A. FISK, New York, N. Y. Filed June 15, 1922. Serial No. 568,466. 2 Claims. (Cl. 152—8.)



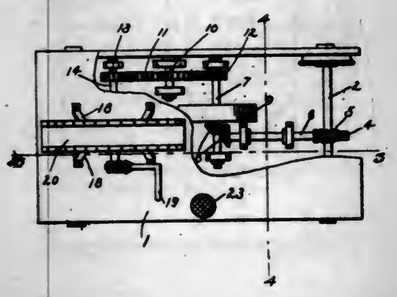
1. A non-pneumatic resilient filler for a tire shoe or casing comprising a resilient band of semi-circular configuration in cross section arranged within the shoe or casing adjacent the tread portion thereof, and a connection between said band and the tire shoe supporting rim for normally maintaining the band in spaced concentric relation to the rim, said connection consisting of inwardly disposed looped bearing members on the band, outwardly disposed looped bearing members on the rim, and a ra-

dially disposed link between each bearing member of the band and rim having the opposite bight portions thereof

respectively engaging the inner and outer bearing members, for swinging and sliding movements with respect to the bearing members.

1,450,844. PLUMBING APPARATUS. JOHN L. FLEMING, Peoria, Ill. Filed July 23, 1921. Serial No. 487,137. 1 Claim. (Cl. 4—17.)

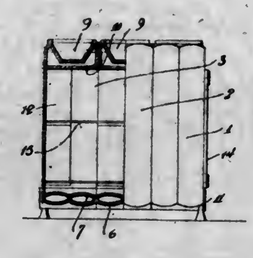
A device of the character described comprising a tank portion and a bowl portion communicating therewith at the lower end, a check valve within said point of communication, an outlet pipe leading from the lower end of the bowl portion and adapted for connection with the waste pipe of a building, a valve normally closing the inlet end of said outlet pipe, a vertically movable rod member connected with said valve and provided above the top of the tank and bowl with an operating handle, an inlet pipe, a valve casing upon said pipe, at the upper portion of the tank portion, a valve within said valve casing adapted to close and cutoff the inlet of water thereinto, a lever arm pivotally mounted and connected with said last named valve, a float on said lever arm, latch means for holding said rod in elevated position when it has been moved to unseat said first named valve, a depending rod connected with said latch mechanism and carrying a float whereby when the water level drops to a certain degree said latch member will be released to permit said first named valve to close, and float controlled means for controlling flow of water from said tank into said bowl.



1,450,845. DRILL BIT AND COLLAR THEREFOR. JAMES P. FLOURNOY, Jr., Shreveport, La. Filed Aug. 27, 1921. Serial No. 495,998. 7 Claims. (Cl. 285—120.)

1. In well boring apparatus, the combination with a hollow tubular stem, and a hollow collar secured thereto, the said collar being provided with internal tapered screw threads in its lower end, and also with external screw threads, of a bit provided with a shank having at its upper end tapered screw threads engaging in the internal screw threads on said collar, the said shank being also provided with an annular flange below its tapered screw threaded portion, a hollow screw cap provided with an

inwardly projecting flange surrounding said shank and screwed over the external screw threads on said collar, a segmental metal packing ring made up of a plurality of segments, each L-shaped in cross section supported on said flange of said cap, and hydraulic packing held firmly between said segmental ring and said flange on the bit shank.



1,450,846. HAND CAR. ONEIL B. GAUDIN, Laurel, Miss. Filed July 5, 1922. Serial No. 572,819. 3 Claims. (Cl. 105—89.)

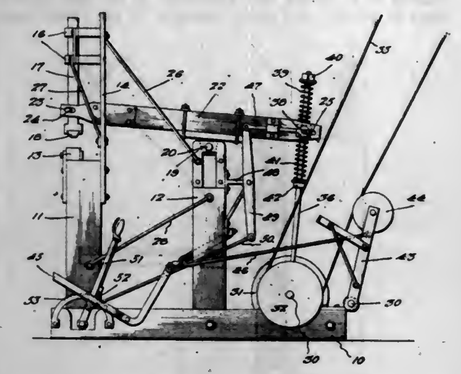
1. A hand car of the class described comprising a wheel supported platform, axles for the wheels, one of the axles having a worm gear thereon, a shaft, a worm thereon meshing with the worm gear, a second shaft, a fly wheel on said second shaft, gears connecting said second shaft with the first shaft, a driven shaft, gears connecting the same with the second shaft, a toothed hand wheel supported above the platform, a gear on the driven shaft meshing with the teeth of said wheel and a shield for said wheel.

1,450,847. COMBINED RADIATOR, STEAM COOKER, AND WARMING OVEN. CHARLES M. GEIGER, Denver, Colo. Filed Oct. 26, 1921. Serial No. 510,626. 1 Claim. (Cl. 126—20.)

The combination of a plurality of radiator sections adapted to be assembled together and having hollow interiors in open communication, one of the end sections being provided with an end wall, a horizontal shelf arranged on the interior of the sections, the said sections being provided with double side walls, double bottom walls, and double upper walls, a door hingedly connected to the opposite end section to cooperate with the opposite end

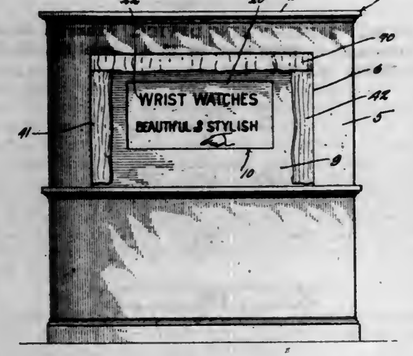
wall, side walls, bottom walls, and top walls to form an oven, and the uppermost wall of the double upper walls being provided with an inverted frustroconical receptacle adapted to receive a cooking utensil, whereby the utensil may be heated from the heat generated between the double upper walls.

1,450,848. WATCH PROTECTOR. MAX M. GETO, Brooklyn, N. Y., assignor to Watch Protector Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 9, 1921. Serial No. 490,931. 3 Claims. (Cl. 63—25.)



1. A watch protector which includes a casing having a cover with apertures therein, a stub shaft slidable in said casing, a spring within the casing engaging the stub shaft, said spring being expansible to hold the stub shaft retracted within the casing, the lower end of the stub shaft being provided with a plurality of longitudinal slots, a flange on the end of the stub shaft, a plurality of spears located in said slots, and a flexible ring surrounding the end of the stub shaft and the ends of the spears to hold them in said slots.

1,450,849. HAMMER. CHARLES GREEN, Muscatine, Iowa, assignor of one-fourth to Evert F. Richman and one-fourth to Charles J. Richman, both of Muscatine, Iowa. Filed June 6, 1921. Serial No. 475,523. 3 Claims. (Cl. 78—32.)

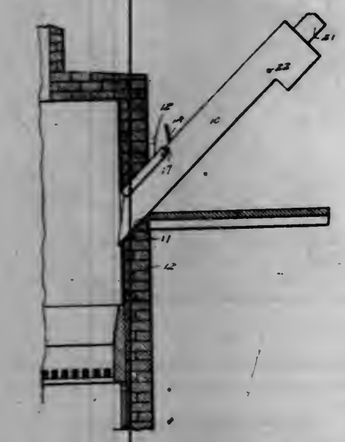


1. A device of the character described comprising a base, a pair of uprights rising therefrom, an anvil member on one of said uprights, a lever pivoted upon the other upright and having its forward end provided with a hammer cooperating with said anvil, the rear end of said lever being bifurcated and formed with longitudinal slots, a shaft journaled upon said base, means for rotating said shaft, a cam on said shaft, an eccentric strap

encircling said cam, a rod connected with said strap, a block engaged upon said rod and having trunnions dis-

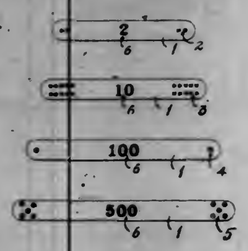
posed through said slots, and means for moving said trunnions along said slots whereby to vary the leverage upon said lever.

1,450,850. CHANGEABLE EXHIBITOR. MARTIN A. GAIP, Chippewa Falls, Wis. Filed Sept. 7, 1922. Serial No. 586,751. 3 Claims. (Cl. 40—32.)



1. In a device of the class described, a frame; shafts journaled in the frame; a display belt engaged with one shaft; a gear wheel on said shaft; a segment carried by the other shaft and adapted to move into and out of engagement with the gear wheel; a curtain slidable on the frame and constituting a shield for the belt; and means for operating the curtain from the last specified shaft.

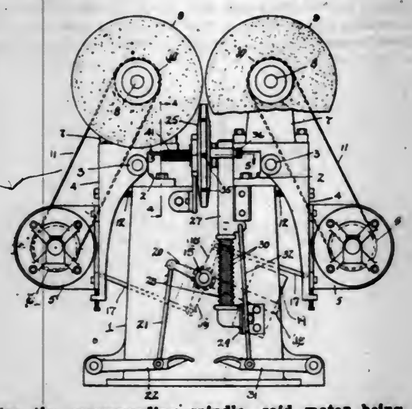
1,450,851. FURNACE STOKER. HENRY D. GROSS, Kennett, Mo. Filed Oct. 4, 1920. Serial No. 414,565. 1 Claim. (Cl. 214—35.)



A furnace stoking apparatus comprising a chute adapted to have its discharge end in communication with a furnace fire box, a yielding feed regulating damper disposed in a forwardly and downwardly inclined relation to the path of travel of the fuel and pivotally mounted in a plane above the bottom of the chute, an adjustable extension carried by said damper whereby the angle of inclination of the damper may be varied and thereby vary the retarding action of the damper, a second damper arranged to intercept and regulate the passage of fuel to the inclined damper, the receiving end of the chute having

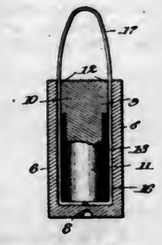
its bottom cut away, a reversible trap pivoted to the side walls of the chute adjacent the cut away portion and adapted to be moved into a position at an angle to the chute to prevent fuel being deposited in the chute when

the trap is in one position and thereby prevent overstoking of the furnace, and said trap adapted to form a part of and an extension for the chute when the trap is in its normal position.



1,450,852. GAME-SCORING DEVICE. ALBERT B. HAGER, Manila, P. I. Filed Sept. 25, 1922. Serial No. 590,430. 1 Claim. (Cl. 235—1.)

A game counter consisting of a plurality of relatively long and thin counting pieces arranged in series with the pieces of each indicated value differing in length from the pieces of the other values and each having at both its ends the same value indicating character, each of the indicating characters of each piece corresponding in value with the length of the piece to which they are applied and the several pieces being adapted by reason of the relatively long and thin form thereof to be grasped in a bunch in the hand and when so grasped to cause them to expose at the exposed end of the respective pieces the indicating characters thereon, all substantially as and for the purposes set forth.



1,450,853. MACHINE FOR POLISHING AND GRINDING. CHARLES L. HAWES, Ashtabula, Ohio. Filed Nov. 26, 1919. Serial No. 340,710. 16 Claims. (Cl. 51—83.)

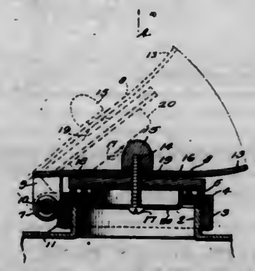
1. In a machine of the character described, the combination with a suitable base; of two arms oscillatorily supported thereon about spaced parallel axes; a spindle mounted on each arm above and parallel with its axis, adapted to receive a polishing or grinding wheel, said spindle being adjustable transversely of such axis in an approximately horizontal plane; and an electric motor mounted on each arm below its axis and connected to

drive the corresponding spindle, said motor being adjustable transversely of such axis in an approximately vertical plane.

1,450,854. IDENTIFICATION DEVICE. ARTHUR B. HENNECH, New York, N. Y., assignor to Arthur Trading Corporation, New York, N. Y. Filed June 16, 1922. Serial No. 568,842. 2 Claims. (Cl. 40—19.)

1. A device of the class described, comprising a barrel opened at one of its ends, a plug inserted in the barrel, said plug having a reduced extension, an identification sheet wound about the extension of said plug, one end of said sheet being attached to the plug, the other end of said sheet being attached to the interior wall of the barrel, a strap passed about said plug and extending out of said barrel to form an attaching loop, and means for hermetically sealing the identification sheet within said barrel.

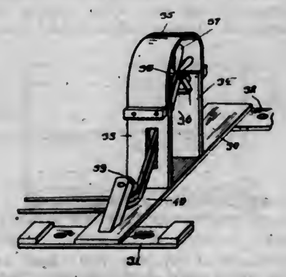
1,450,855. FLYTRAP. JAMES W. HILDRETH, Marion, Ohio, assignor of one-half to Ward C. Hufford, Marion, Ohio. Filed June 19, 1922. Serial No. 569,188. 4 Claims. (Cl. 43—119.)



1. A fly trap including a rear support adapted to fit against a fly screen and provided with a groove arranged

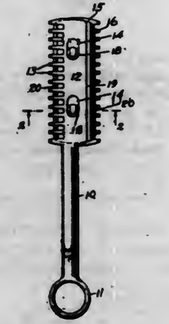
to receive the top bead of the screen frame, said rear support being also provided with a transverse series of tapered blocks fitting between the side beads of the fly screen and forming intervening tapered entrances, the said groove and the block interlocking the rear support with the fly screen against vertical and lateral movement, fastening means for detachably securing the rear support to the screen frame, a receptacle mounted on the rear support, and conical trap members located within the receptacle and communicating with the tapered entrances and provided with outlets communicating with the interior of the said receptacle.

1,450,856. NONCONDUCTING MATERIAL. ROBERT ILLEMANN, Glasgow, Scotland. Filed June 3, 1920. Serial No. 386,353. 6 Claims. (Cl. 106—20.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. The method of making porous, non-conducting material suitable for covering steam boilers and for like purposes, which comprises mixing together calcined gypsum and an excess of water, then intermittently agitating the mixture until a plastic spongy mass is produced by the absorption of the excess of water, and finally evaporating the water so as to leave an air filled mass.

1,450,857. CLOSURE. ALBERT H. JOHNSON, Washington, D. C. Filed Nov. 9, 1921. Serial No. 514,049. 5 Claims. (Cl. 220—24.)

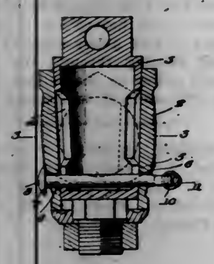


1. A closure member comprising a base having an opening therein, a hinged member mounted on said base, a pin movably secured to said hinged member, and a cap carried by said pin and adapted to close said opening, said cap being provided with a rounded portion on one face surrounding said pin and contacting with said hinged member to permit it to center itself over said opening.

1,450,858. COOLING DEVICE FOR POWER-TRANSMISSION JACKS. GEORGE W. KIRKPATRICK, Rochester, N. Y. Filed Oct. 10, 1921. Serial No. 506,914. 2 Claims. (Cl. 230—11.)

1. In a cooling device for power transmission jacks, the combination of an air tunnel, an inverted V shaped bracket suspended within said air tunnel, a bearing formed on said V shaped bracket, a spindle mounted to rotate in said bearing, a pulley and fan mounted on said spindle, a base for supporting said tunnel, an inclined bracket mounted on said base on one side of said tunnel, a pulley mounted to rotate on said inclined bracket between it and said base, said tunnel having an opening in the side thereof adjacent to said pulley mounted on said inclined bracket, a belt passing through the opening in said tunnel from said pulley on the outside of said tunnel to said pulley on the inside of said tunnel.

1,450,859. SAFETY RAZOR. FERDINAND KULHAWY, West Hoboken, N. J., assignor to Comfort Safety Razor and Novelty Co. Inc., West Hoboken, N. J., a Corporation of New Jersey. Filed Apr. 28, 1921. Serial No. 465,122. 2 Claims. (Cl. 30—12.)



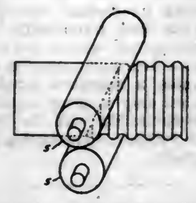
1. A device of the character set forth including in combination a blade having cutting edges at its opposite sides and a holder therefor which comprises a pair of guard members each having guard teeth at one edge and between which members the blade is adapted to be arranged, interengageable means on said guard members for associating the same with each other to dispose the guard teeth on opposite sides of one of the cutting edges of the blade to provide a hair trimmer, or for reversing the arrangement and holding said members reversed to dispose the guard teeth respectively at one side of each of the cutting edges of the blade to constitute a double edged safety razor.

1,450,860. HAIR-WAVING COMB. CHARLES LAUFE, New York, N. Y. Filed Sept. 22, 1922. Serial No. 589,957. 2 Claims. (Cl. 132—38.)

2. A comb comprising an integral structure having a longitudinally channelled back, and teeth extended from both edges thereof, the teeth extending from the rear edge being short and set at substantially ninety degrees from said back, and the teeth extending from the forward edge of said back being downwardly curved and relatively long for insertion in the human hair.

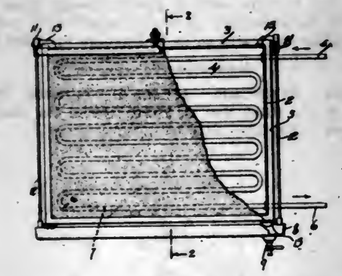
1,450,861. STOPCOCK. ROBERT M. MANNING, Hewitt, Okla. Filed June 18, 1921. Serial No. 478,715. 2 Claims. (Cl. 251—6.)

1. A locking means for preventing the turning of a plug in the body of a stop cock, and likewise for providing an outlet for fluid accumulated in the fluid passage of said plug, comprising a pin which is passed transversely through the body of the cock and through a notch in the lower wall of the fluid passage in the plug, and removable means locking the pin so positioned.



1,450,862. HEADLIGHT ATTACHMENT. CORAL A. NELSON, Binghamton, N. Y. Filed Mar. 23, 1922. Serial No. 546,092. 1 Claim. (Cl. 240—48.4.)

The combination with a headlight lens and its supporting frame, a supporting band secured between the front part of the supporting frame and the marginal edge portion of the lens, a headlight visor having an opening circular in front elevation, said opening being eccentric to the center of the lens and tangential to the bottom of the supporting frame, the visor inclining downwardly at its upper part, a second visor tangential to the upper part of the supporting frame and inclined downwardly with the top portion in parallelism to the first visor and its center eccentric thereto, and a third visor positioned intermediate the first two visors and inclined downwardly with its top portion in parallelism to the top portion of said visors, the third visor being arranged with its center eccentric to the other two visors.

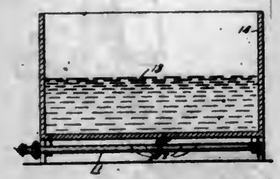


1,450,863. PROCESS OF OPENING SHEET AND TIN-PLATE PACKS. WILLIAM NEWBY, Youngstown, Ohio. Filed Aug. 27, 1920. Serial No. 406,437. 3 Claims. (Cl. 29—19.)

2. The method of opening sheet tin plate packs consisting of passing them through a pair of crimping rolls and then passing them through a pair of flattening rolls placed at an angle less than a right angle to the crimps

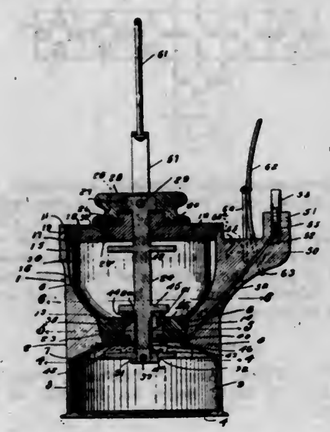
whereby the rolls will span two or more of the crimps but not all of the crimps in the pack.

1,450,864. PROJECTING SCREEN. JOHN W. PECK, Jr., New York, N. Y. Filed Dec. 3, 1921. Serial No. 519,618. 8 Claims. (Cl. 88—24.)



1. As a new article of manufacture, a projecting screen for motion pictures, including an artificially cooled sheet of material adapted to collect frost.

1,450,865. WATER-SOLUBLE PRODUCT AND PROCESS OF MAKING THE SAME. JOSEPH PELC, Cicero, Ill. Filed May 5, 1922. Serial No. 558,786. 9 Claims. (Cl. 23—11.)



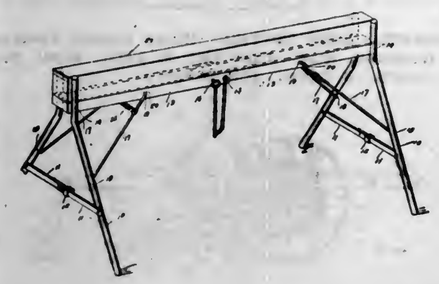
1. The herein described water soluble product consisting of a hard, dry, porous mass which is stable in the absence of moisture, comprising an active principle and a vehicle consisting of effervescing salts which have reacted together to produce a limited amount of carbon dioxid but which are capable of further reaction to produce additional carbon dioxid.

1,450,866. METHOD OF PREPARING FRUITS AND VEGETABLES FOR SHIPMENT. THOMAS JEFFERSON PETERS, Peters, Fla. Filed Aug. 8, 1918. Serial No. 248,923. 2 Claims. (Cl. 99—11.)

2. The method of treating fruit such as tomatoes, peaches and citrus fruit which consists of immersing the fruit in water for a period of from 15 to 90 seconds, the temperature of the water being approximately 125° F. to effect a partial sterilization of the broken places on the fruit and subsequently removing the fruit from the water at which time there is a partial evaporation of the water from the peeling and the fruit is retained in its natural state for shipment.

1,450,867. CARBIDE LAMP. LOUIS E. POLHEMUS, Miami, Ariz. Filed July 15, 1919. Serial No. 310,950. 4 Claims. (Cl. 48—4.)

3. A distributing mechanism having a distributing plate, a plurality of means to discharge material therefrom at different distances from its marginal edge, a plurality of discharge means for communication with said first means, and means operable to successively effect communication between a source of supply and said second mentioned discharge means.

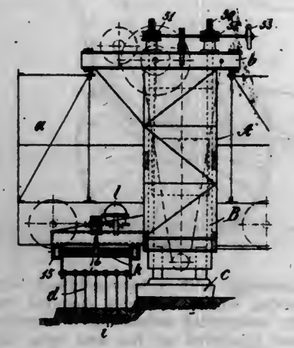


1,450,868. ELEMENTARY-MUSIC-NOTATION DEVICE. CARY H. RANDOLPH, St. Louis, Mo. Filed Oct. 7, 1921. Serial No. 506,186. 4 Claims. (Cl. 84—476.)

3. An integral block formed to represent the musical staff, the block having spaced portions with substantially flat surfaces to represent lines and intermediate portions with curved surfaces to represent spaces, said substantially flat surfaces and curved surfaces extending in the same direction, and means in said portions to support note-representing means.

1,450,869. CARPENTER'S FOLDING SAWHORSE. WILLIAM WESLEY REINELT, Deckerville, Mich. Filed Apr. 30, 1920. Serial No. 377,856. 1 Claim. (Cl. 304—5.)

A folding saw horse having a base, a pair of legs adjacent to each end of and pivoted to said base on a substantially horizontal axis, a beam to removably rest on said base, said legs having substantially straight portions extending above said base to retain said beam thereon, the faces of said portions presented toward the sides of said beam being smooth throughout their extent, said legs spreading outwardly below and from said base,



and brace members pivoted to the legs on substantially horizontal axes at a distance below said base and being separably engageable with said base at a distance from its ends.

1,450,870. VAPOR STOVE. JAMES E. SANDERS, Great Falls, Mont. Filed July 7, 1921. Serial No. 482,979. 2 Claims. (Cl. 126—38.)

1. In a stove, a casing, a burner within the casing a closure hinged at one end to the upper edge of one end wall of the casing, the end of the casing opposite to said wall being open, and an end piece hinged to the other end of the closure whereby it may rest on the base of the casing to constitute the wall for said open end when the closure is in closed position or may support the closure when in an open position so that the closure may constitute a support for utensils.

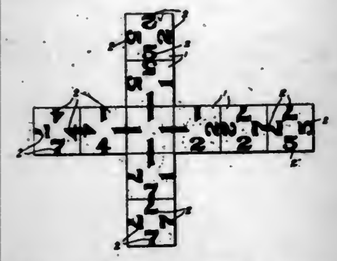
1,450,871. APPARATUS FOR MAKING OPEN MOLDS. EDUARD SCHIEGRISS, Duisburg-Meiderich, Germany. Filed Jan. 25, 1922. Serial No. 531,685. 19 Claims. (Cl. 22—20.)

1. In an apparatus of the class described, the combination, with a frame, of means for dressing the mold bed, a horizontal mold pattern located beside the dressing means and in position for making molds in the mold bed, means to move said pattern into position above the dressed

bed, and means to exert pressure on the mold pattern for forcing the same vertically into the dressed mold bed, said dressing and pressure exerting means being adapted for simultaneous operation on different parts of the bed.

1,450,872. BEET TOPPER. HARRY LEMUEL SPARKS, Huntsman, Nebr. Filed Mar. 2, 1922. Serial No. 540,475. 6 Claims. (Cl. 55—107.)

1. A device of the type described comprising a frame, an axle carried by said frame, wheels carried by said axle, and being adapted to rotate said axle in one direction, a beet-top cutting drum, a drum supporting frame having one end pivotally connected to said axle and having its other end secured to said drum, a pair of shoes carried by said second named frame and being adapted to lift said drum, said shoes being disposed one on each side of said drum.



6. A device of the type described comprising a frame, an axle carried by said frame, means for rotating said axle in one direction, a beet-top cutting drum frame pivotally carried by said axle, a shaft carried by the free end of said second named frame, a beet-top cutting drum carried by said shaft, a large pinion loosely carried by said axle, a small pinion loosely carried by said shaft, a chain connecting said pinions, a clutch for connecting said large pinion to said axle, and an automatic clutch for connecting said small pinion to said shaft, whereby said drum is free to stop from rotating when striking an obstacle.

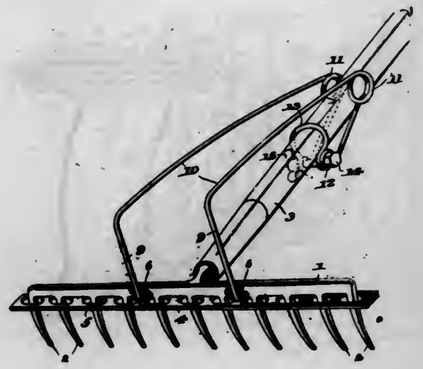
1,450,873. BRAKE FOR BABY CARRIAGES. RAYMOND C. STARBARD, Paterson, N. J. Filed Mar. 11, 1922. Serial No. 542,982. 4 Claims. (Cl. 188—20.)

1. In combination with a baby carriage including a rear axle having wheels rotatably mounted thereon, a braking device comprising notched disks attached to the wheels, means supported on the axle upon which the handle is fulcrumed, means associated with the handle for engaging the notched disks and adapted to be removed from engagement with said disks when the handle is pressed downward, and means for normally retaining the disk engaging means in engagement with the disks when the handle is released.

1,450,874. GAME APPARATUS. KARL OTTO STROMME, San Bernardino, Calif. Filed Apr. 19, 1921. Serial No. 462,574. 2 Claims. (Cl. 46—65.)

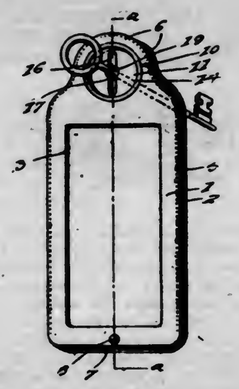
1. A game apparatus, comprising a plurality of rectangular blocks, each provided on one face with four numerals, one at the center of each of its sides, the numerals of certain of the blocks being all alike and the numerals of each of the other blocks being different and arranged in pairs, the numerals of the pairs being alike and the numeral of one pair being different from the numerals of the other pair.

1,450,875. PLIERS. ALEX P. TESELSKY, Ruso, N. Dak. Filed June 14, 1921. Serial No. 477,416. 13 Claims. (Cl. 294—86.)



1. A tool of the class described having relatively movable lever members providing coacting jaws, a shank having a coacting jaw in spaced relation to said jaws and arranged to grip an object simultaneously therewith.

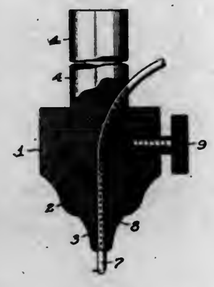
1,450,876. DIRECTION SIGNAL AND PARKING LIGHT FOR VEHICLES. EDWARD VOELKER, St. Louis, Mo. Filed Dec. 27, 1921. Serial No. 524,989. 2 Claims. (Cl. 116—49.)



1. In a device of the character described, the combination of an elongated rotary frame which is rectangular in cross section, a pair of relatively long windows arranged in parallel planes at opposite sides of the frame, a cylindrical extension from one of the plane sides of the frame which is at right angles to the two windows which is of a diameter relatively much less than the length of either of said windows, a window in said extension, a bracket for supporting the frame for rotary movements on its longitudinal axis, an axial member supporting one end of the frame in said bracket, a cylindrical hub rigid with the opposite end of the frame and journaled in said bracket, a lamp socket in said hub, a lamp supported by said socket within the frame, a circuit for said lamp, and means for rotating said frame in said bracket.

1,450,877. ATTACHMENT FOR RAKES. GUSTAVUS A. N. WAHLEN, Louisville, Ky. Filed May 7, 1920. Serial No. 379,550. 1 Claim. (Cl. 55—146.)

An attachment for rakes comprising a bar formed with a plurality of openings elongated longitudinally of the bar and adapted to receive rake tines, and a spring support for the bar comprising a single continuous wire bent to form spring arms with coils at one end of said arms, and the intermediate portion of the wire between the coils bent to form a loop to embrace a rake handle with eyes at the ends of the loop to receive a bolt for clamping the loop about the handle.



1,450,878. HOTEL KEY CHECK. JAMES C. WEBSTER, Topeka, Kans. Filed May 9, 1921. Serial No. 467,900. 2 Claims. (Cl. 40—2.)

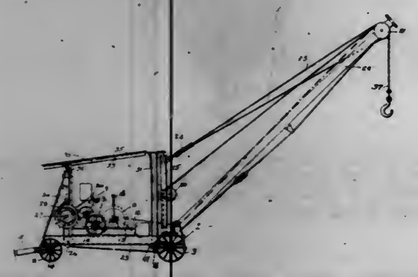
1. A key, a check, plates to retain the key having elongated openings through which the key is inserted, and said plates being disposable on the check immovable relatively to each other with the key passing through said openings and with said openings disalined.

1,450,879. NEEDLE AND NEEDLE HOLDER. EUGENE WERNER, Highland Park, Mich. Filed Mar. 12, 1921. Serial No. 451,727. 1 Claim. (Cl. 279—44.)

A needle holder comprising a sleeve having a tapered seat, a stem fixed in said sleeve, said stem having a portion thereof removed to afford a jaw loosely held by said sleeve, the jaw of said stem having one end thereof engaging said stem and the opposite end thereof engaging the seat of said sleeve so that said jaw cannot shift longitudinally of said stem, said stem and the loosely held jaw thereof having their confronting faces grooved and adapted for holding a piece of wire or needle having its outer end co-axial of said stem, and a screw carried by said sleeve engaging the jaw of said stem and adapted to cause the stem jaw to clamp the wire or needle against said stem.

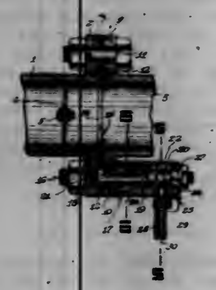
1,450,880. SPLIT BELT PULLEY. HANS WOTTLE, Vienna, Austria. Filed May 6, 1922. Serial No. 559,102. 2 Claims. (Cl. 64—18.)

1. A sectional belt pulley composed of two sections each of which is cast in a single piece and consists of a semi-circular rim portion, semi-disc like side walls integral with the side edges thereof and provided with central recesses, pairs of opposed ribs extending inwardly from the rim and side walls and projecting slightly beyond the recesses in the side walls to form a shaft engaging bore, bracket portions formed in the rim portions of the sections and arranged opposite to each other and means engaging the bracket portions for clamping the pulley sections together and adapted to maintain the ribs in biting engagement with a shaft, substantially as and for the purposes set forth.



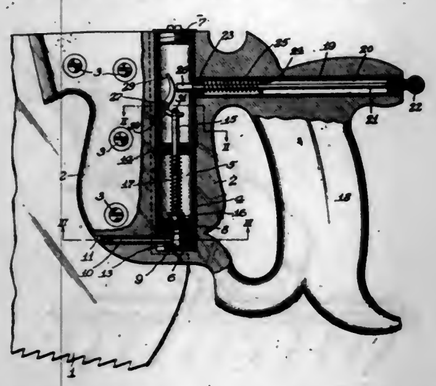
1,450,881. HYDROCARBON-OIL BURNER. GEORGE F. ALLEN, Oronogo, Mo. Filed June 16, 1921. Serial No. 478,070. 2 Claims. (Cl. 158—75.)

1. An oil burner comprising an elongated body having its delivery end contracted and a tapered portion adjacent the contracted end, and having a fuel inlet at its opposite end, a head fitted to the receiving end of the body, a tube within the body and spaced therefrom and



attached at one end to said head, and having a jet outlet at its opposite end terminating within the tapered portion of the body, means for supplying steam to said tube, a valve within the tube, and a regulator threaded to the contracted end of the body and adapted to coact with the jet outlet end of the said tube to regulate the flow of the fuel through the body.

1,450,882. HOISTING MACHINE. HENRY C. BECKWITH, Ravenna, Ohio, assignor to The John F. Byers Machine Company, Ravenna, Ohio, a Corporation of Ohio. Filed Aug. 7, 1918. Serial No. 248,682. 5 Claims. (Cl. 212—40.)



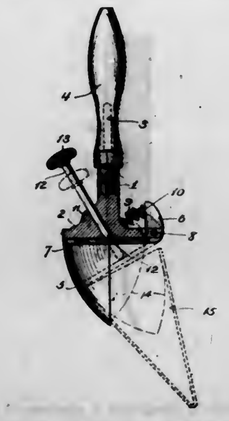
1. In a machine of the character described, the combination of a triangular platform bearing hoisting mechanism and having recesses formed therein at the opposite sides of the broader end, and counterweights adapted to fit and be removably mounted in said recesses at either side of the laterally broader end of the platform.

1,450,883. COMBINED PRIMER AND GAS-SAVING DEVICE. JAMES C. BENNETT, Detroit, Mich. Filed Aug. 9, 1922. Serial No. 580,593. 11 Claims. (Cl. 123—119.)

1. In a priming and auxiliary air supply device for internal combustion engines wherein an intake manifold is connected to a carbureter connection;—means for admitting air to the intake manifold, said means comprising a gasket interposed between the manifold and carbureter connection, a hollow bolt cooperating with the manifold and carbureter connection in holding said gasket in place, said bolt communicating with said manifold through said gasket and adapted to supply air thereto, a valve member on said bolt controlling the admission of air thereto, a tube carried by said valve member and through which air or a priming agent may pass into said bolt, and means connected to said tube to facilitate adjustment of said valve member.

1,450,884. LUBRICATING DEVICE FOR SAWS. JOSEPH ESZTO, Halfway, Mich. Filed Apr. 22, 1920. Serial No. 375,725. 1 Claim. (Cl. 145—35.)

In a saw lubricator, the combination with a saw blade having a handle, of a tubular reservoir in said handle disposed to have its outer end open at the upper edge of the saw handle and its inner end communicate with side walls of said saw blade, a cap normally closing the outer end of said reservoir, a ported base piece at the inner end of said reservoir, a spider intermediate the ends of said reservoir, a spring pressed valve slidable in said spider and normally closing said ported base piece, a bell crank pivoted in said reservoir above said spider and adapted for opening said valve, and a spring retracted plunger in said saw handle extending into said reservoir and adapted for actuating said bell crank, said plunger being operatable by thumb pressure at the end of the saw handle.



1,450,885. TROLLEY CONSTRUCTION. JAMES F. HEALY, Chicago, Ill. Filed May 25, 1921. Serial No. 472,494. 1 Claim. (Cl. 191—87.)

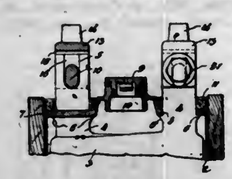
The combination of a trolley pole having a pivoted section which carries the trolley wheel, a fluid-pressure cylinder, a piston in the cylinder, a connection between the piston and the trolley pole, a valve for admitting fluid-pressure to the cylinder for moving the piston in a direction to elevate the trolley pole, a fluid-pressure exhaust valve, actuating means for the valves whereby the closure of one valve is accompanied by the opening of the other valve, the admission valve being normally open and the exhaust valve being normally closed, a spring engageable with the aforesaid pivoted section of the trolley-pole for normally holding said section in alinement with the pole, and a flexible connection between said pivoted section and the aforesaid actuating means of the valves.

1,450,886. ICE-CREAM DIPPER. WILLIAM GLOCK HEIMERDINGER, Louisville, Ky. Filed Aug. 10, 1921. Serial No. 491,197. 3 Claims. (Cl. 107—48.)

1. An ice cream dipper consisting of a head, a rigid handle extending from one side of the head, a hollow conoidal cutter secured at its basal end upon and extending part way around the edge of the head and projecting from the side of the head opposite the handle, an ejector pivotally mounted on the head to swing toward and from the same over the inner concave face

of the cutter, means for holding the ejector normally against the head, and means for moving the ejector from the head to discharge the contents of the cutter.

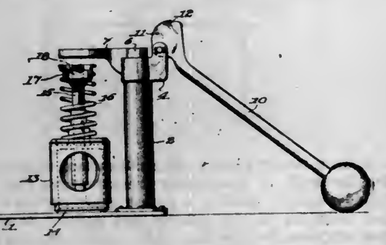
1,450,887. SELF-CENTERING ICE CHUTE AND RUN. GUSTAV HOLTZ and CALVIN GRESS, Gouldsboro, Pa. Filed Mar. 12, 1920. Serial No. 365,260. 11 Claims. (Cl. 193—41.)



1. In combination, an ice chute tapered from its receiving end to its discharging end, an ice run joined thereto but separated by an interval therefrom, and means on the run for cutting grooves in the ice as it passes over said interval.

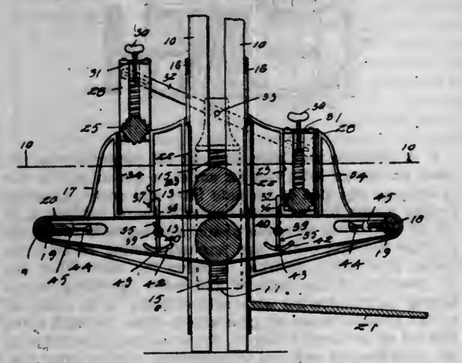
1,450,888. COKING OF COAL. STEWART ROY ILLINGWORTH, Radyr, Glamorgan, Wales, assignor to Illingworth Carbonization Company, Limited, Manchester, England. Filed Aug. 12, 1922. Serial No. 581,488. 2 Claims. (Cl. 202—8.)

2. In the art of coking coal, the improvement which comprises heating the coal in a partial vacuum to a temperature between 500° and 600° C., the temperature being so selected for the particular coal as to leave in the coal not substantially less than 5% of substances soluble in boiling pyridine and in chloroform, while destroying the bulk of the substances in the coal which are soluble in caustic alkalies, whereby a coal having good coking properties is produced.



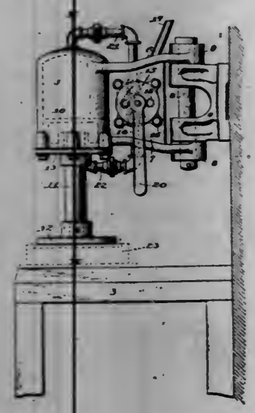
1,450,889. STORAGE BATTERY. NORMAN B. LAING, Detroit, and FRED C. RINDFLISH, Highland Park, Mich. Filed Apr. 10, 1922. Serial No. 550,958. 9 Claims. (Cl. 204—29.)

1. As a new article of manufacture, a connector for battery plate risers, said connector having multiplicity of arms affording slots to receive plate risers and said arms having alining slots to receive means by which said



arms and plate risers may be intimately clamped in engagement with the plate risers.

1,450,890. VALVE-SPRING COMPRESSOR. WILLIAM F. LANDGRAF, Washington, D. C. Filed Oct. 29, 1921. Serial No. 511,314. 3 Claims. (Cl. 29—86.3.)



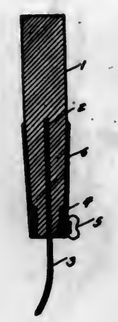
1. A spring compressing device, comprising a hollow vertical post, a spring loosely disposed in said post, a plunger vertically movable in said post and resting on said spring, a cam lever pivoted to said post in position to contact with and depress said plunger, and spring engaging means on said plunger.

1,450,891. FEEDING ATTACHMENT FOR POWER WRINGERS. EDWARD L. LEIMBERGER and ALBERT BRASHER, Chicago, Ill. Filed July 21, 1921. Serial No. 486,486. 6 Claims. (Cl. 68—32.)

1. A wringer comprising supporting posts, frames mounted on said supporting posts, pressure rollers mounted in said supporting posts, arms extended from said frames in pairs, guide rollers mounted in said arms, a feed belt extended around said guide rollers and passing said pressure rollers to cooperate therewith, feed rollers mounted above said feed belt, means connecting said feed rollers to retain one of the said rollers in operative position with relation to said belt and the remaining feed roller in inoperative position, and locking means for said feed rollers.

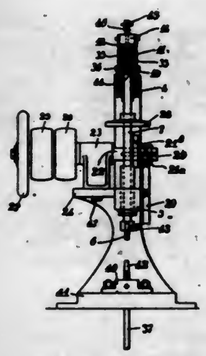
1,450,892. MOLDER'S PRESS. WILLIAM J. MACNEILL, Wauwatosa, Wis., assignor to Federal Malleable Company, West Allis, Wis., a Corporation of Wisconsin. Filed Feb. 1, 1921. Serial No. 441,655. 3 Claims. (Cl. 22—43.)

1. In a molder's press the combination, with a support for the mold, of a swinging bracket above the mold, a cylinder carried thereby, a presser plate carried by a piston operating in the cylinder and adapted to act upon and compress the sand in a mold resting upon the support, and means for controlling the movements of motor fluid to and from the cylinder to operate the piston the said controlling means being carried by the swinging cylinder bracket.



1,450,893. PRESSURE REGULATOR AND CUT-OFF. JOHN B. MORROW, Harrisburg, Pa. Filed June 7, 1921. Serial No. 475,706. 2 Claims. (Cl. 50—11.)

1. A pressure regulator and cut off comprising a cylinder having an inlet and an outlet, a piston within the cylinder at one side of the said inlet and outlet, pressure setting means in cooperative relation with the piston, a cut off connected with the piston and movable therewith to close the said outlet and normally acting to hold the piston in a given position, a valve for controlling the air pressure to the cylinder and valve operating means having communication with said cylinder to be actuated by the predetermined air pressure to close the said valve and cut off the supply thereto, the communication between the cylinder and said valve controlling means being normally closed by the said cut off connected with the piston.

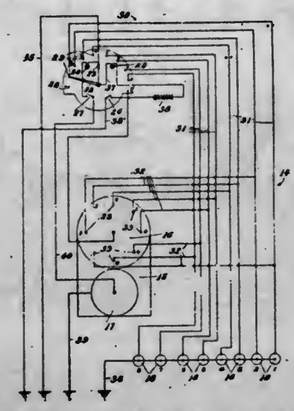


1,450,894. CAN OPENER. JAMES BLY SANDERS, Basic, Va. Filed June 24, 1922. Serial No. 570,591. 1 Claim. (Cl. 30—3.)

An implement of the character specified comprising a handle having a kerf in an end portion thereof, a heavy ferrule fitted to the end of the handle through which the kerf extends, a blade adjustable in the kerf, a sleeve encircling the ferrule and the end of the handle provided with the kerf, and a clamp screw passing through the sleeve and having screw thread engagement with said

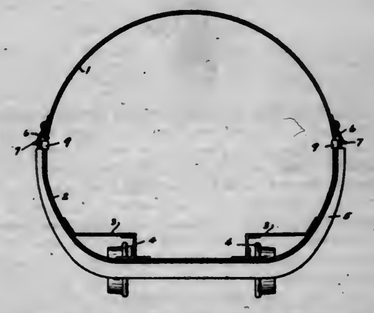
ferrule and adapted to compress a portion of the handle at one side of the kerf to contract the latter and clamp the blade therein.

1,450,895. HAMMERING MACHINE. CONRAD SIEPER, Krawinkelerbrucke, Germany. Filed July 31, 1916. Serial No. 112,426. 5 Claims. (Cl. 78—27.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



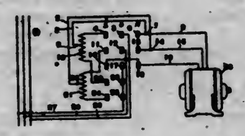
1. In a hammering machine, in combination: a tool-carrier spindle movable up and down, a spring pressing said spindle downwardly, a friction disc fastened to said spindle, and a rotary cam coacting with said friction disc for lifting said spindle at intervals and simultaneously turning said spindle, the rotating axis of said cam lying parallel with a chord of said friction disc, and said cam being adjustable with respect to said friction disc in the direction of said chord.

1,450,896. MEANS FOR LOCATING TROUBLE IN IGNITION SYSTEMS. AUGUSTE PACHE, New York, N. Y. Filed Apr. 26, 1918. Serial No. 230,975. 10 Claims. (Cl. 175—183.)



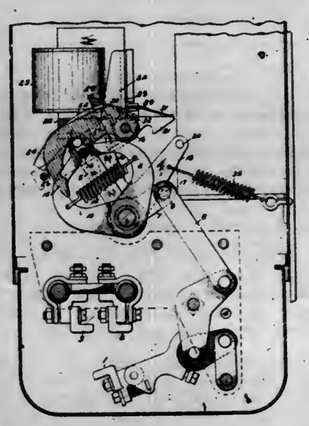
1. An ignition system embodying a source of current supply, a plurality of spark plugs and leads from the magneto to the respective plugs, in combination with

means for locating trouble in said system embodying a single spark gap, unitary means for selectively including



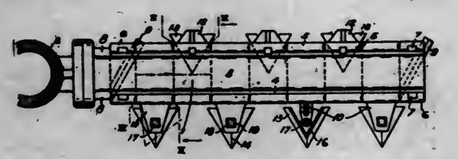
the spark gap in any of the plug circuits, a signal, and means for including said signal in the primary circuit of the magneto.

1,450,897. TIMBER-TREATING APPARATUS. EDWIN F. STEMMLER, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Jan. 15, 1921. Serial No. 437,433. 8 Claims. (Cl. 280—179.)



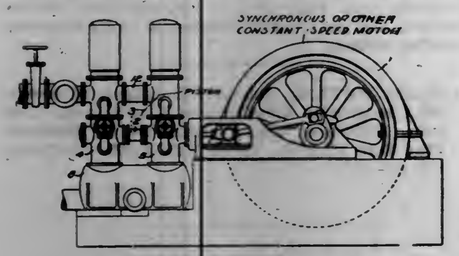
1. In a timber treating car, a bail arm member, a bail member, a link pivotally connected to one of said members, a hook slidably supported in the other of said members and engageable with said link to connect said members, and means associated with one of said members for positively limiting the extent of sliding of said hook to two extreme and an intermediate position.

1,450,898. MOTOR CONTROLLER. HERBERT W. CHENEY, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Dec. 6, 1919. Serial No. 343,402. 12 Claims. (Cl. 172—179.)



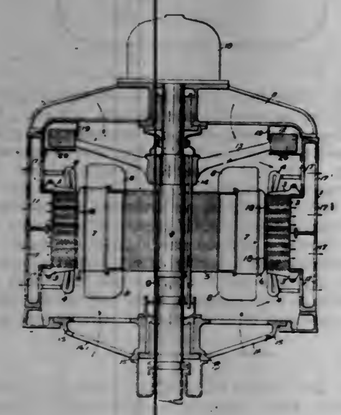
1. A motor controller having starting and running positions, comprising five movable contacts three of which are connectible to a given supply line, each of the other two being connectible to a supply line, a pair of auto-transformers, five relatively stationary contacts in said starting position four of which are connected to the respective terminals of said auto-transformers, three relatively stationary contacts in said running position which cooperate with three of said line-connectible movable contacts, and one of which is connected to the remaining starting contact.

1,450,899. SWITCH. HERBERT W. CHENEY, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Sept. 27, 1920. Serial No. 413,086. 16 Claims. (Cl. 200—89.)



9. In a controller, movable contacts, a pivotally mounted actuating arm for said contacts, a shaft, a latch, loosely mounted on said shaft, for holding said actuating arm in circuit closing position, a trip lever mounted concentrically with said actuating arm, a second latch, loosely mounted on said shaft, for holding said trip lever in energy-stored condition, an armature rigidly mounted on said shaft, a lever rigidly associated with said shaft said lever having a surface substantially concentric with and co-operating with a portion of said actuating arm said lever also having a notch whereby said lever may move with respect to said actuating arm, and means whereby effective movement of said armature releases said second latch.

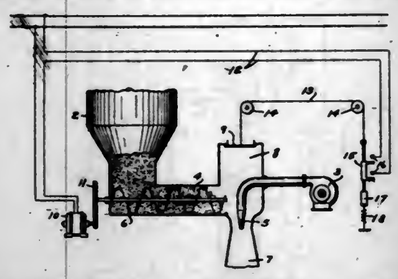
1,450,900. ROASTING FURNACE. HENRY C. HOLTHOFF, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Apr. 7, 1921. Serial No. 459,306. 15 Claims. (Cl. 259—134.)



1. In combination, a rabble support, and a rabble associated with and automatically adjustable relatively to said support.

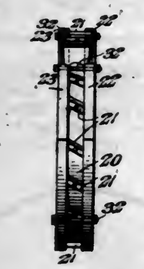
1,450,901. PUMP. GUSTAF L. KOLLBERG, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Aug. 29, 1921. Serial No. 496,204. 7 Claims. (Cl. 103—41.)

1. A pump unit including a plurality of cylinders and associated plungers, a motor constrained to operate at a constant speed irrespective of load drivingly connected to said plungers, and means whereby said pump unit may be caused to deliver the capacity of all or any desired number of said cylinders without changing the speed of said motor.



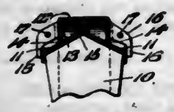
1,450,902. DYNAMO-ELECTRIC MACHINE. SOREN H. MORTENSEN, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Dec. 3, 1920. Serial No. 427,981. 9 Claims. (Cl. 171—252.)

5. In a dynamo-electric machine, a stator, a rotor, a fly wheel associated with said rotor and disposed within said stator, said fly wheel having a ventilating passage therethrough.



1,450,903. FUEL FEEDER. RAY C. NEWHOUSE, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Jan. 27, 1921. Serial No. 440,402. 4 Claims. (Cl. 302—42.)

1. In combination, means forming a conduit, means for producing a flow of fluid through said conduit, a flow actuated valve for controlling the admission of air direct from atmosphere to said conduit, means for delivering



pulverulent material to said conduit, and means for automatically preventing said delivery of material when said valve is closed.

1,450,904. WHEEL ATTACHMENT. ALBERT W. SCHEDE, Drexel Hill, and JOHN A. MITCHELL, Ridley Park, Pa. Filed Nov. 10, 1921. Serial No. 514,144. 2 Claims. (Cl. 301—39.)

1. In combination, a tractor wheel having a plurality of transversely disposed traction producing fins on the tread surface thereof, a plurality of smooth tread segmental rings of angle section arranged respectively to have one portion thereof seating on said fins and the other portion thereof abutting one end of the respective fins, means for clamping the respective ring segments together, and transverse bolts extending from one ring to the other between said projections for rigidly securing said rings to said fins.

1,450,905. WHEEL ATTACHMENT. ALBERT W. SCHEDE, Drexel Hill, and JOHN A. MITCHELL, Ridley Park, Pa. Original application filed Nov. 10, 1921, Serial No. 514,144. Divided and this application filed May 11, 1922. Serial No. 560,096. 2 Claims. (Cl. 301—39.)

2. In combination, a tractor wheel having a circumferential fin radially projecting from the tread surface thereof, a removable ring arranged to seat circumferentially upon said fin, flanges on said ring arranged to seat circumferentially upon said tread surface, said ring thereby having a plurality of circumferential lines of bearing contact upon said wheel, and means including side extensions for clamping said ring to said wheel and preventing lateral displacement thereof.

Patents Nos. 1,450,906 to 1,451,672.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 309—No. 2. TUESDAY, APRIL 10, 1923. Price—$5 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.
Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decisions.

EX PARTE KEYLESS AUTO CLOCK COMPANY.

Decided January 13, 1923.

TRADE-MARK—ACT OF MARCH 19, 1920—TRADE-MARK USE.

A trade-mark use under the one-year clause of the March 19, 1920, act must include the exclusive use of a mark to point out distinctly the origin or ownership of the articles to which it is affixed; a word or words, a symbol or symbols, or combination of some or all of these, so used as to distinguish the goods of a manufacturer or vendor over others of their class. The words "Rim Wind" and "Rim Set" when applied to automobile clocks in no distinctive way *Held* not to constitute trade-mark use.

ON APPEAL.

TRADE-MARK FOR CLOCKS.

Mr. George E. Tew for applicant.

KINNAN, *First Assistant Commissioner:*

The Keyless Auto Clock Company, by its counsel, appealed from the decision of the Examiner of Trade-Marks denying registration, under the one-year provisions of the act of March 19, 1920, of the words "Rim Wind" and "Rim Set" as applied to automobile clocks. The alleged mark is printed on the labels of the boxes in which the clocks are packed and sold and also imprinted on the dials of the clocks made by the appellant company.

The rejection is based upon the ground that trade-mark use of the words has not been shown; that the words are merely those indicative of a common type of clock and are such as any dealer or maker would use in describing his clocks and are, therefore, in no way distinctive of the origin of appellant's clocks. Aside from this the only feature of distinction is the relative spacing of the words, and this, clearly enough, is not sufficient to constitute a trade-mark use.

There is no difference of view, as between appellant and the Examiner, that descriptive marks are not prohibited registration under the one-year clause of the March 19, 1920, act any more than under the ten-year clause of the February 20, 1905, act; but the mark must be a trade-mark, a word or words, a symbol or symbols, or combination of some or all of these, so used as to distinguish the goods of a manufacturer or vendor over others of their class. The United States Supreme Court, in the *Elgin National Watch Company* v. *Illinois Watch Case Company et al.* (94 O. G., 755; 179 U. S., 665) has given a most illuminating definition of a trade-mark. That Court has stated that a trade-mark—

means a distinctive mark of authenticity, through which the products of particular manufacturers or the vendible commodities of particular merchants may be distinguished from those of others.

That Court stated further, the—

office of a trade-mark is to point out distinctly the origin or ownership of the articles to which it is affixed.

It is believed this definition, although rendered prior to the passage of the act of 1920, applies to marks sought to be registered under any of the acts now in force. Tested by this definition, appellant's mark falls short of what can be regarded as a registerable trade-mark. It does not point out distinctively origin or ownership of the clocks. There would appear to be nothing distinctive about these words. They merely convey a fact—that the clock is of a certain type—and this is not a distinctive or distinguishing mark as to origin at all.

Lacking, therefore, the essentials of a trade-mark, something distinctive, something which shows on its face that it is intended as a trade-mark used to indicate origin or ownership, the appellant's contention must fail.

The decisions cited in support of the appeal do not seem persuasive, because they are based, as I read them, upon the assumption of a trade-mark use of a mark which possesses the essentials which, as above pointed out, are absent in the alleged mark.

The decision of the Examiner of Trade-Marks is affirmed.

EX PARTE GRIER.

Decided February 2, 1923.

1. PRACTICE OF THE PATENT OFFICE—FORMAL AMENDMENT OF REJECTED CLAIMS—FINAL REJECTION.

Where the applicant merely changed the form of some of the rejected claims and asked for reconsideration and the Examiner allowed some of the claims and rejected the others on a patent which had previously been cited as a reference, *Held* that he should have finally rejected the rejected claims.

2. SAME—REJECTION OF CLAIMS THAT HAVE BEEN REPEATEDLY ALLOWED.

Claims that have once been allowed should not ordinarily be reconsidered unless new art is found or a manifest mistake has been made, and where they have been repeatedly allowed a reversal of position with no new reasons for rejection should be indulged in only where there can be no reasonable doubt.

3. SAME—ACQUIESCENCE IN REQUIREMENT OF DIVISION—SUBSEQUENT SUGGESTION BY EXAMINER THAT CANCELED CLAIMS ARE ALLOWABLE.

Where an applicant once elects an invention, he must abide by his election. However, where an Examiner repeatedly changes his own position and at last twice rejects all the claims and advises applicant that the claims which were divided out could be allowed if presented alone, and applicant presents such claims, *Held* that an appeal from the Examiner's actions should be forwarded to permit the Examiners in Chief to decide the questions of division at the same time that they act upon the merits of the claims for the invention that was first elected.

ON PETITION.

SPARK PLUG.

Messrs. Dodge and Sons for the applicant.

ROBERTSON, *Commissioner:*

Applicant petitions that the Examiner be directed to forward his appeal to the Board of Examiners in Chief, the Examiner having refused to

transmit the appeal for the reason that the appeal on the requirement for division "is not considered in order."

Upon review of this application it is found that it has been pending almost seven years and has received numerous actions by the Office and applicant. There are now 23 papers in the file, which show remarkable vacillation on the part of the Examiner and a waste of official time which should have been avoided. In the official action dated Sept. 15, 1919, when six claims were allowed out of nine, the case could and should have been finally rejected as to the three claims rejected in order that the appeal which now has been filed could have been made at that time and the prosecution of the case closed.

In reviewing the application a record is found as follows:

The application was filed with six claims for the process and five for the article.

The application was rejected on April 6, 1916, division being required between the process and article claims. Among the patents cited was one to Melanson, hereinafter referred to.

On May 17 applicant canceled the process claims and stated that the subject matter thereof would be "reserved for a divisional application."

On June 7 all the claims were rejected except claim 4, which was considered "allowable."

On May 8, 1917, applicant changed his claims and added two new ones.

On July 21 the Examiner again allowed claim 4 and rejected the other claims, the patent to Melanson again being cited.

On July 18, 1918, applicant rewrote claim 2, amended some of the other claims, and inserted two new claims (8 and 9).

On Aug. 22 the Examiner allowed five out of the nine claims and rejected the other four, principally on the patent to Melanson.

On June 18, 1919, applicant changed the form of some of the rejected claims and asked reconsideration.

[1] On Sept. 15 the Examiner allowed six claims, rejecting the other three on the Melanson patent. If this action had been a proper one, the three claims rejected could and should have been finally rejected in order to close the prosecution.

On Aug. 6, 1920, applicant amended the three rejected claims and asked for reconsideration.

On Oct. 29 "all" the claims were rejected solely on the patent to Melanson, referred to in almost every official letter in the application, notwithstanding a number of these claims had been allowed repeatedly in several official letters. The Examiner thus reopened the prosecution of the case.

On Oct. 22, 1921, applicant asked for reconsideration.

On Jan. 17, 1922, the Examiner again rejected all the claims, principally on the patent to Melanson, of record. In this official action the Examiner used the following language:

> If any invention is presented in these claims, it resides in the process of manufacture; and, properly presented alone, would be allowed.
> It is suggested that original claims 2, 3, 4 and 5, if presented alone, can be allowed.

(These "original" claims 2, 3, 4 and 5 related to the process and must not be confused with the claims that had been allowed.)

On Apr. 25, 1922, the attorney inserted six process claims in the case, evidently considering the language above quoted to justify such action.

On Oct. 8 the Examiner again rejected article claims 1 to 9 and stated that his rejection could be considered final for the purpose of appeal, but held that the process claims 10 to 15 were "not properly in this case," applicant having previously "acquiesced" in the requirement for division, and therefore could not now shift his ground.

On Nov. 25 applicant filed an appeal on *all* the claims.

On Dec. 1 the Examiner refused to forward the appeal, since he still held that the process claims—

> are not properly in this case and an appeal to the Board from such holding is not in order.

On Dec. 9 applicant petitioned to the Commissioner that the appeal be forwarded as filed.

On Dec. 15 the Examiner filed a statement in defense of his position.

On Dec. 19 applicant filed a brief opposing the Examiner's position.

[2] The record in this case shows an inexcusable vacillation on the part of the officials of this Office. Claims which were repeatedly allowed were afterwards rejected upon the same patent which was before the Examiner at each time they were allowed. One-half of the record in this case is made up of actions which constituted a waste of Government time. The charge is frequently made that such actions constitute one of the reasons why some of the Examiners are so far behind in their work. Claims that have once been allowed should not ordinarily be reconsidered unless new art is found or a manifest mistake has been made, and where they have been repeatedly allowed a reversal of position with no new reasons for rejection should be indulged in only where there can be no reasonable doubt.

It is true that applicant acquiesced in the requirement for division. It is also true that this Office rigidly adheres to the rule that where an applicant once makes his election he must abide thereby. It is not the intention to change this rule to the slightest extent. However, where an Examiner changes his own position as often as it has been changed in this case it is not seen that he is in a position to object if the applicant changes his after the Examiner advises him (in rejecting claims that have been repeatedly allowed) that the claims which were divided out could be allowed if presented alone.

[3] The Commissioner does not intend to encourage the shifting of ground after an applicant has once made his election, nor does he approve of the long delays of the applicant in amending, as in the present instance, but, nevertheless, there must be a time for the case to be closed and the prosecution of this case should have been closed over two years ago. The Examiner is therefore directed to forward the appeal to permit the Board of Examiners in Chief to decide the question of division at the same time that they act upon the merits of the article claims.

In forwarding the appeal the Examiner is authorized to cite any pertinent art against the method claims and, if necessary, consult the Examiner in charge of the division to which he believes the method claims belong. In any event the prosecution of the case should be closed and the appeal forwarded without delay.

The petition is granted.

U. S. Circuit Court of Appeals—Second Circuit.

CENTRAL RY. SIGNAL CO. *v.* UNEXCELLED MFG. CO. INC.

Decided March 7, 1922.

[281 Fed. Rep., 141.]

PATENTS—954,330, FOR RAILWAY SIGNAL FUSEE, HELD VOID FOR LACK OF INVENTION.

The Niditch patent, No. 954,330, for a time-burning railway signal fusee, in the burning compound of which perchlorate of potash is substituted for chlorate of potash, previously used, to render it less liable to spontaneous combustion, *Held* void for lack of invention, the two combinations and their characteristics having been previously fully known.

APPEAL from the District Court of the United States for the Southern District of New York.

Suit in equity by the Central Railway Signal Company against the Unexcelled Manufacturing Company, Inc. Decree for defendant, and complainant appeals. Affirmed.

Mr. Ralph L. Scott (*Mr. F. P. Fish, Mr. A. S. Pattison*, and *Mr. S. T. Cameron* of counsel) for the appellant.

Messrs. Duell, Warfield & Duell (*Mr. F. P. Warfield, Mr. H. S. Duell*, and *Mr. L. A. Watson* of counsel) for the appellee.

Before ROGERS, MANTON, and MAYER, Circuit Judges.

MANTON, *Cir. J.:*

The patent in suit is for a compound for railway signal fusees on Patent No. 954,330, issued to Isidore Niditch on an application filed December 16, 1909, and granted April 5, 1910. It is a time-burning railway signal fusee. It is made of strong, tough paper, containing a combustible composition and provided with a spike at one end and ignition means at the other. Some are made so as to burn red, others green, and others yellow, and are required to burn a specified length of time. They are used as safety signals, to keep the proper distance between trains and prevent accidents. It is essential that they be absolutely dependable, for failure to function may produce loss of life or property. They are thrown from a moving train, and therefore must have the qualities of toughness and strength, so as not to be broken, and the burning composition in the tube must be of such a character as will not be extinguished by the shock of throwing or by weather conditions, such as rain, snow, sleet, and high wind, or even when thrown into water pools or snow banks. It must be constructed so as to avoid danger to brakemen who handle them, and be capable of being stored with safety in warehouses, cabooses, and other parts of trains.

The two claims in suit read as follows:

> 1. A time-burning signal fusee, comprising a metallic nitrate sulphur, a carbohydrate and a perchlorate, all combined in about the proportions herein specified, producing a time-burning signal fusee compound burning with brilliancy and force of flame for the purpose described, and which is not subject to spontaneous combustion.
> 2. A time-burning signal fusee, comprising a metallic nitrate, sulphur, a carbohydrate and potassium perchlorate, all combined in about the proportions herein specified, producing a time-burning fusee compound with brilliancy and force of flame for the purpose described, and which is not subject to spontaneous combustion.

Questions of the validity of the patent and infringement are presented. The claim in brief is that by substitution of perchlorate of potash for chlorate of potash an advantage is obtained; that is, to decrease the susceptibility of the product to spontaneous combustion. The fact is that the other necessary requirements for fusees were old, and the inventor has not added any other advantage; that is to say, the burning time, the brilliancy and force demanded in the art, is fulfilled in a large degree by known compositions. The structure and composition of this new one is the same, except that the old chlorate is replaced by the perchlorate. Therefore the inquiry is: Was the substitution with the result obtained, invention? This has been answered below in the negative.

The claim of the patent is that the patentee has largely reduced the danger of spontaneous combustion by this substitution for the unstable potassium chlorate. The perchlorate is a chemical substance containing a greater amount of oxygen and holding it on a firmer bond, and it is not inclined to so easily give it up. It has been found that, under ordinary conditions of moisture and temperature encountered in the use of fusees, the acid produced by the moisture acting on the sulphur will not decompose the potassium chlorate, and spontaneous ignition will not take place. The specification, as well as the file wrapper, acknowledges this departure in the making of fusees in this one respect; and the claim is for this single purpose of reducing the liability of spontaneous combustion. Fusees have been made and used for 20 years or more; but the difficulty was that they did not always burn long enough, but sometimes exploded spontaneously, and it was to meet this condition that the patentee labored. Perchlorate has been known as long as chlorate. The difference between them had long been known to chemists, as the several German publications offered in evidence indicate. These publications had, long before Niditch's date of inventive thought, been available, even in this country. The use of perchlorate in fireworks avoided danger of spontaneous ignition. The difference in the cost made, in America, more frequent use of chlorate. Appellant had used the well-known compound for fusees, but not the perchlorate. It was after it had secured the services of a chemist that perchlorate was used.

It is necessary that publications, to be available, must furnish such details as are necessary for the

practical working of an invention. But the German publications did this. The patentee did not make any substantial change in the relation of the compounds. The articles in "Die Fuerwerkerei" by Eschenbacker (1897), and in "Leitfaden der Pyrotechnik" by Bujard (1899), and "Anorganische Chemie," a book on chemistry by Otto (1884), all refer to potassium perchlorate as a less active oxidizing agent than potassium chlorate, and as not harmless in mixtures containing combustible substances like sulphur or sulphide of antimonate, and that it is far less dangerous to handle than potassium chlorate. Otto, in 1884, referred to potassium perchlorate as—

employed in fireworks as a substitute for potassium chlorate, a substance which is more dangerous to handle and is prone to spontaneous inflammation.

These were full and complete disclosures, and anticipated what the patentee did here. Both the problem and the solution were set forth. The fact that these publications referred to the use of fireworks does not detract from the usefulness of this prior publication as an anticipation. The art of fireworks and fusees we hold to be the same. Pyrotechny is defined as:

The management and mechanical application of fire.
2. The fabrication of fireworks for military and ornamental purposes * * * the composition and scientific use of combustible substances employed as signals, as destructive agents, or for purposes of display.
The Century Dictionary and Cyclopedia, vol. 6.

We think the patentee was dealing with pyrotechnic compositions which contained sulphur and carbohydrates as the burning material, coloring matter in the form of strontium, barium, or calcium nitrate, and potassium chlorate as the oxidizing agent. The sulphur and potassium chlorate, under certain climatic conditions, were subject to a reaction which yielded a gas spontaneously ignitable. All this had long been known in chemistry. The patent in suit is void for lack of patentable invention.

Decree affirmed.

Court of Appeals of the District of Columbia.

RICE MANUFACTURING CO. *v.* SMITH & HEMENWAY COMPANY, INC.

No. 1,517. Decided January 2, 1923.

TRADE-MARKS—SIMILAR DESCRIPTIVE PROPERTIES—LARGE PNEUMATICALLY-OPERATED TOOL AND SMALLER HAND TOOL—"RED DEVIL."

The tool portion of applicant's pneumatically-operated rivet cutter being a cold chisel which functions in the same way as though manually operated and fulfills the same purpose as some of the tool and hardware specialties sold by the opposer, such as glass cutters, cold chisels, saw vises, etc., *Held* that the rivet cutter has the same descriptive properties as the tool and hardware specialties named and that there is sufficient similarity in the characteristics of the articles to create confusion in the mind of the public and to deceive purchasers, although it is conceded that there is considerable difference between a large automatic rivet cutter and a smaller hand tool.

Mr. J. F. Robb, Mr. H. C. Robb and *Mr. H. S. Hill* for Rice Mfg. Company.

Mr. F. C. Somes for Smith & Hemenway Co.

ROBB, *J.:*

Appeal from concurrent decisions of the Patent Office tribunals in a trade-mark opposition proceeding in which applicant was denied the right to register the words "Red Devil," accompanied by a supposedly representative picture.

Applicant adopted this mark in 1918, and since that time has used it in connection with the sale of pneumatic rivet cutters. Prior to the adoption of this mark by the applicant, the opposer, appellee here, adopted and has since used substantially the same mark in connection with the sale of numerous tool and hardware specialties, such as glass cutters, cold chisels, pliers, saw vises, chain drills, hack saws, nail and rivet sets, wire grips, etc.

It is the contention of the applicant that its pneumatic rivet cutters are not of the same descriptive properties, within the meaning of the Trade-Mark Act, as the smaller tools of the opposer. The Patent Office thought otherwise. The business end of applicant's rivet cutter is a cold chisel and, although the power actuating it is derived from pneumatic pressure, it functions in exactly the same way as though manually operated. In other words, it is a rivet cutter, whether automatically or manually operated. It may be conceded that there is considerable difference between a large automatic rivet cutter and a smaller hand tool, such as opposer manufactures and sells, but that difference is less noticeable in the smaller tool manufactured by applicant and called the "Baby Devil." In either case, however, the purpose of the tools of the two parties is the same, and it must be held that they are goods of—

the same general qualities or characteristics as those of the goods to which—

opposer's trade-mark already has been applied. (*Anglo-American Incand. L. Co.* v. *General E. Co.*, 43 App. D. C., 385; 215 O. G., 3251. *Imperial Cotton Sales Co.* v. *N. K. Fairbanks Co.*, 50 App. D. C., 250; 284 O. G., 961.) Certainly there is sufficient similarity in the characteristics of the products of the parties as to be likely to create confusion in the mind of the public and to deceive purchasers.

The decision therefore is affirmed.

Affirmed.

TRADE-MARKS

OFFICIAL GAZETTE, APRIL 10, 1923.

[VOL. 309. NO. 2.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 121,766. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) STANLEY GLIDDEN CO., INC., Boston, Mass. Filed Aug. 18, 1919.

No claim being made to the word "Merit" apart from the other features of the mark shown on the drawing.

Particular description of goods.—Pneumatic and Solid Rubber Tires, Tubes, Patches, Outside Tire Sleeves, Inside Tire Sleeves, Rubber Hose, Portable Tire-Vulcanizing Outfits, and Rubber Gaskets.

Claims use since July 21, 1919.

Ser. No. 136,346. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE ANHYDROUS FOOD PRODUCTS CO., Chicago, Ill. Filed Aug. 23, 1920.

No claim is made to the word "Sa vry" apart from the mark as shown.

Particular description of goods.—Dehydrated Soup Mixture, Dehydrated Vegetables, Dehydrated Fruits, Dehydrated Fish, and Dehydrated Meats.

Claims use since Aug. 9, 1920.

Ser. No. 138,568. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) HYGRADE PROVISION CO., INC., Brooklyn, N. Y. Filed Oct. 20, 1920.

"Feast"

Particular description of goods.—Meat Products—viz, Smoked Sausages, Frankfurters, Ring Bologna, Knock Wurst, Thick Bologna, Long Bologna, Tied Bologna, Goose-Liver Sausage, Garlic Ring, Lilliputians; Fresh Sausage: Headcheese, Veal Sausage, Liver Wurst, Long, Liver Wurst, Ring; Salami Sausage: Extra Fresh Salami, Land-

jagers, German Salami, Salami Rings; Pickeled Meats and Tongues: Corned Beef, Brisket, Corned Beef Bottom Round, Pickeled Roulade, Brisket, Pickled Tongues, Long Cut, Pickled Tongue, Short Cut, Pickled Roulade Flank; Smoked Meats and Tongues: Smoked Tongues, Long Cut, Smoked Tongues, Short Cut; Smoked Beef, Brisket, Pastroma Shoulder, Pastroma Breast, Pastroma Roulade, Pastroma Payes, Pastroma Flank, Speck; Rendered Fat: Can Fat in 3, 5, 10, 25, 50; Tub Fat; Boiled Meats and Tongues: Boiled Beef Brisket, Boiled Bottom Round, Boiled Tongues, Long Cut, Boiled Tongues, Short Cut; Pork Products: Frankforters, Ring, Knock, Straight Bologna, Thick Bologna, Minced Ham, Polish Bologna, Polish Ring, Smoked Liver Wurst, Fresh Liver Sausage, Fresh Pork Sausage, Headcheese, Blood Wurst, Ham Bologna, Boiled Ham, Clear Bacon, Clear Bellies, Rib Bacon, Rib Bellies, Tongue Roulade, Chicken Roulade, Meat Loaf, German Salami, Cervelate, and Braunsweiger Liver Wurst.

Claims use since Dec. 21, 1921.

Ser. No. 140,289. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) MARSHALL FIELD & COMPANY, Chicago, Ill. Filed Nov. 27, 1920.

GOLDENGATE

Particular description of goods.—Sheets and Pillowcases.
Claims use since Dec. 14, 1916.

Ser. No. 142,219. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) LUTZ & ZUELLIG, Manila, Philippine Islands. Filed Jan. 13, 1921.

Particular description of goods.—Cotton, Silk, and Woolen Piece Goods.
Claims use since Oct. 1, 1920.

Ser. No. 142,220. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) LUTZ & ZUELLIG, Manila, Philippine Islands. Filed Jan. 13, 1921.

Particular description of goods.—Cotton, Silk, and Woolen Piece Goods.
Claims use since Oct. 1, 1920.

Ser. No. 146,397. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PRAIRIE REMEDY CO., Batavia, Ill. Filed Apr. 19, 1921.

Prairie

Particular description of goods.—Stock and Poultry Tonics and Conditioners.
Claims use since 1903.

Ser. No. 146,780. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PEROLIN FABRIKATIONSGESELLSCHAFT M. B. H., Vienna, Austria. Filed Apr. 26, 1921.

Perolin

Particular description of goods.—Ethereal Oils and Essences for Deodorizing and Purifying the Air.
Claims use since March, 1906.

Ser. No. 151,922. (CLASS 38. PRINTS AND PUBLICATIONS.) NORTH-WESTERN TRUST & SAVINGS BANK, Chicago, Ill. Filed Aug. 18, 1921.

NORTH-WESTERN

Particular description of goods.—Publications—Namely, Printed Circulars, Pamphlets, and Periodical Publications Relating to Banking Service, Investments, and Securities; and Negotiable Papers—Namely, Drafts and Travelers' Checks or Letters of Credit.
Claims use since July 30, 1906.

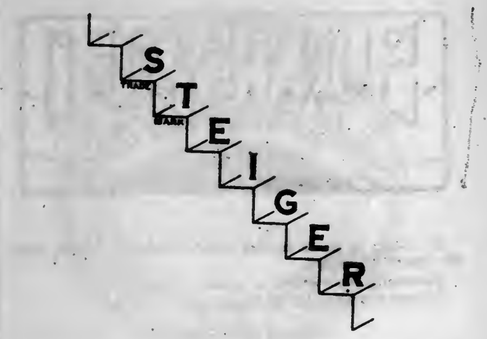
Ser. No. 152,224. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) KILBY FROG & SWITCH CO., Birmingham, Ala. Filed Aug. 26, 1921.

ATLAS

Particular description of goods.—Railroad Frogs.
Claims use since June 6, 1921.

Ser. No. 153,551. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) JEFFERSON CO. INC., Richmond, Va. Filed Sept. 30, 1921.

SNOW QUEEN



Particular description of goods.—Vegetable Shortening, Lard Substitute.
Claims use since June 1, 1921.

Ser. No. 154,344. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) CHARLES WARNER COMPANY, Wilmington, Del. Filed Oct. 19, 1921.

"LIMOID"

Particular description of goods.—Hydrated Lime.
Claims use since Sept. 12, 1901.

Ser. No. 154,769. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) ERNEST STEIGER, New York, N. Y. Filed Oct. 29, 1921.

The words "Trade Mark" apearing on the drawing are herewith specifically disclaimed apart from the mark as shown.
Particular description of goods.—Kindergarten Material—Namely, Building Blocks, Tablets, Parquetry Papers, Sticks, Slats, Sewing Cards, Interlacing Strips, Weaving Mats, Weaving Needles, Folding Papers, Cutting Papers, Peg Boards, and Wooden Beads.
Claims use since about the 4th day of October, 1921.

Ser. No. 154,986. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) MURPHY VARNISH COMPANY, Newark, N. J. Filed Nov. 3, 1921.

Coat-a-Day

Particular description of goods.—Varnishes, Paint Enamels, and Varnish Stains.
Claims use since Sept. 27, 1904.

Ser. No. 155,122. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE REESE CHEMICAL CO., Cleveland, Ohio. Filed Nov. 7, 1921.

The words "Safety Tubes" being disclaimed except in connection with the mark as shown.
Particular description of goods.—Prophylactic Remedy.
Claims use since Oct. 1, 1921.

Ser. No. 156,281. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) JAMES H. KEELY, Philadelphia, Pa. Filed Dec. 5, 1921.

SUN RAISED RAISINS

No claim is made to the word "Raisins" apart from the mark as shown.

Particular description of goods.—Raisins.

Claims use since on or about Nov. 1, 1921.

Ser. No. 157,375. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE LOWELL COMPANY, New York, N. Y. Filed Dec. 31, 1921.

PRIM

Particular description of goods.—Toilet Preparation for the Removal of Superfluous Hair.

Claims use since on or about May 1, 1921.

Ser. No. 157,376. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE LOWELL COMPANY, New York, N. Y. Filed Dec. 31, 1921.

KO-HUL

Particular description of goods.—Toilet Preparation to Darken and Grow Eyelashes.

Claims use since on or about May 1, 1921.

Ser. No. 158,391. (CLASS 15. OILS AND GREASES.) GET-GAS SERVICE STATIONS, INC., Springfield, Ill. Filed Jan. 24, 1922.

WHITE ROCK

Particular description of goods.—Gasoline, Kerosene, Naphtha, Distillate, Motor Oils, Transmission Oils, Machine Oils, Ice Oils, Road Oil, Fuel Oil, and Gas Oil.

Claims use since Mar. 15, 1921.

Ser. No. 158,942. (CLASS 9. EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES.) THE NATIONAL FIREWORKS MANUFACTURING COMPANY, Boston and West Hanover, Mass. Filed Feb. 6, 1922.

Electric Dragon

Particular description of goods.—Fireworks.

Claims use since Nov. 22, 1921.

Ser. No. 160,025. (CLASS 37. PAPER AND STATIONERY.) POTTER-WRIGHTINGTON, INC., Charlestown, Boston, Mass. Filed Mar. 1, 1922.

OLD GRIST MILL

Particular description of goods.—Bread Wrappers.

Claims use since 1897.

Ser. No. 160,166. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) VOX-SCHALLPLATTEN- UND SPRECHMASCHINEN- AKTIENGESELLSCHAFT, Berlin, Germany. Filed Mar. 3, 1922.

Vox

Particular description of goods.—Talking Machines, Dictating Machines, Records for Talking Machines.

Claims use since Jan. 12, 1920.

Ser. No. 160,255. (CLASS 5. ADHESIVES.) PENN PASTE MILLING COMPANY, Wilkes-Barre, Pa. Filed Mar. 6, 1922.

PENN PASTE FLOUR

Exclusive use of the words "Flour" and "Paste" is disclaimed.

Particular description of goods.—Dry Pastes.

Claims use since Apr. 1, 1916.

Ser. No. 161,263. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOHN F. LITTOOY, Boise, Idaho. Filed Mar. 25, 1922.

MAKE YOUR SPRAY SPREAD AND STAY
3S
SPREADER
THREE S SPREADER
J. F. LITTOOY
DISTRIBUTOR
BOISE IDAHO
CALCIUM CASEINATE

No claim is made to the wording appearing on the drawing except the words "3S" and "J. F. Littooy" apart from the association shown.

Particular description of goods.—Calcium-Caseinate Spreader, Material in Powdered Form to be Added to Lime-Sulphur, Lead Arsenate, Bordeaux Mixture, and Other Sprays Used in the Orchard and on the Farm for the Extermination and Control of Insects for Which Sprays are Used, the Object of Said Spreader Being to Cause the Spray Material to Spread in a Thin Uniform Film and to Adhere to the Surfaces Sprayed.

Claims use since Feb. 1, 1922.

Ser. No. 161,619. (CLASS 7. CORDAGE.) COLUMBIAN ROPE COMPANY, Auburn, N. Y. Filed Apr. 1, 1922.

No claim is made herein for the coloring on the tape. Trade-mark consists of a thin pliant tape capable of being bunched transversely, as by folding or twisting, and applied to the goods by being incorporated within and surrounded by the fiber constituting one of the yarns used for making the rope or twine. The representation of the rope in the drawing is merely for the purpose of showing the method of application of the mark and is not claimed as a part of the mark.

Particular description of goods.—Rope.

Claims use since Feb. 11, 1922.

Ser. No. 162,327. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) MARIUS H. TROMBA, doing business as Paramount Lens Corporation, Brooklyn, N. Y. Filed Apr. 14, 1922.

PARAMOUNT LENS
New York Paris
SILVER RAY
GOLD SEAL
MARIUS H. TROMBA

No claim made to the exclusive use of the words "Lens, New York, Paris" apart from the mark as shown in the drawing.

Particular description of goods.—Photographic, Projecting, and Optical Lenses.

Claims use since about June 7, 1921.

Ser. No. 162,546. (CLASS 39. CLOTHING.) GOODALL WORSTED CO., Sanford, Me., and New York, N. Y. Filed Apr. 19, 1922.

Palm Beach

Particular description of goods.—Men's and Boys' Coats, Vests, Pants, and Knickerbockers.

Claims use since June 2, 1914.

Ser. No. 162,564. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) A. B. MEWHINNEY CO. INC., also doing business as Mewhinney's, Terre Haute, Ind. Filed Apr. 19, 1922.

FOUR ACES

Particular description of goods.—Chocolate-Coated Fudge Bars.

Claims use since Aug. 10, 1921.

PoP KORN

Particular description of goods.—Corn Plasters.
Claims use since Nov. 1, 1917.

Ser. No. 173,882. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) E. DALTROFF & CIE., doing business as Parfumerie Caron, Paris, France. Filed Dec. 27, 1922.

BELAMOUR

Particular description of goods.—Perfume, Toilet Water, Rouges, Face Powder, Talcum Powder, Brilliantine, Sachet Powder, and Dentifrices.
Claims use since May 1, 1906.

Ser. No. 173,916. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) E. DALTROFF & CIE., doing business as Parfumerie Caron, Paris, France. Filed Dec. 28, 1922.

Christmas-Eve

Particular description of goods.—Perfume, Toilet Water, Rouges, Face Powder, Talcum Powder, Brilliantine, Sachet Powder, and Dentifrices.
Claims use since Nov. 1, 1922.

Ser. No. 173,920. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FARBENFABRIKEN VORM. FRIEDR. BAYER & CO., Leverkusen, near Cologne-on-the-Rhine, Germany. Filed Dec. 28, 1922.

Venetan

Particular description of goods.—Parasiticides.
Claims use since about Jan. 1, 1919.

Ser. No. 173,921. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FARBENFABRIKEN VORM. FRIEDR. BAYER & CO., Leverkusen, near Cologne-on-the-Rhine, Germany. Filed Dec. 28, 1922.

Certan

Particular description of goods.—Parasiticides.
Claims use since about Jan. 1, 918.

Ser. No. 173,922. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FARBENFABRIKEN VORM. FRIEDR. BAYER & CO., Leverkusen, near Cologne-on-the-Rhine, Germany. Filed Dec. 28, 1922.

Canadrast

Particular description of goods—Hæmostatics.
Claims use since about Oct. 15, 1922.

Ser. No. 173,923. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FARBENFABRIKEN VORM. FRIEDR. BAYER & CO., Leverkusen, near Cologne-on-the-Rhine, Germany. Filed Dec. 28, 1922.

Aspiphenin

Particular description of goods.—Antineuralgics.
Claims use since about Dec. 31, 1921.

Ser. No. 173,925. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FARBENFABRIKEN VORM. FRIEDR. BAYER & CO., Leverkusen, near Cologne-on-the-Rhine, Germany. Filed Dec. 28, 1922.

Eulan

Particular description of goods.—Compositions for Exterminating Moths.
Claims use since about Jan. 19, 1920.

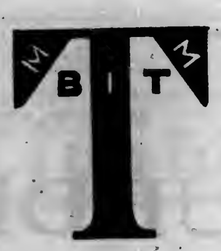
Ser. No. 173,926. (CLASS. 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FARBENFABRIKEN VORM. FRIEDR. BAYER & CO., Leverkusen, near Cologne-on-the-Rhine, Germany. Filed Dec. 28, 1922.

Vulkacit

Particular description of goods.—Vulcanization Accelerators.
Claims use since about July 4, 1914.

Ser. No. 173,931. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) HYGIENIC LABORATORIES, Chicago, Ill. Filed Dec. 28, 1922.

KUBAK



Particular description of goods.—Shampoo.
Claims use since Nov. 1, 1918.

Ser. No. 173,932. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) HYGIENIC LABORATORIES, Chicago, Ill. Filed Dec. 28, 1922.

GROBAR

Particular description of goods.—Hair Tonics.
Claims use since Aug. 1, 1922.

Ser. No. 173,952. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MRS. L. A. BLACKBURN, Fort Worth, Tex. Filed Dec. 29, 1922.

Particular description of goods.—Preparation for Influenza.
Claims use since Sept. 9, 1922.

Ser. No. 173,980. (CLASS 17. TOBACCO PRODUCTS.) CHARLES B. PERKINS CO., Boston, Mass. Filed Dec. 29, 1922.

No claim being made for the word "Mixture" apart from the mark as shown. The drawing is lined for the color red.

Particular description of goods.—Smoking Tobacco.
Claims use since Dec. 11, 1922.

Ser. No. 173,989. (CLASS 39. CLOTHING.) PHILIP WOLF, doing business as The Wolf Waist Shop, Wallingford, Conn. Filed Dec. 29, 1922.

Applicant disclaims the use of the word "Brassiere" apart from the mark shown.

Particular description of goods.—Brassières.
Claims use since Sept. 1, 1922.

Ser. No. 173,999. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE DRUG PRODUCTS CO., INC., Long Island City, N. Y. Filed Dec. 30, 1922.

Salvarols

Particular description of goods.—Suppositories.
Claims use since Oct. 10, 1921.

Ser. No. 174,011. (CLASS 45. BEVERAGES, NONALCOHOLIC.) HURTY-PECK & Co., Indianapolis, Ind. Filed Dec. 30, 1922.

BUDDIE

Particular description of goods.—Nonalcoholic, Noncereal, Maltless Beverage Sold as a Soft Drink and Sirups for Making the Same.
Claims use since Dec. 6, 1922.

Ser. No. 174,023. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NESTOR DRUG AND CHEMICAL COMPANY, Chicago, Ill. Filed Dec. 30, 1922.

CASCALOES

Particular description of goods.—Dry Anticonstipation Medicine Put Up in Either Pill or Capsule Form.
Claims use since Nov. 22, 1922.

Ser. No. 174,030. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) BENEDICT A. ROTOLO, Brooklyn, N. Y. Filed Dec. 30, 1922.

ROTOLO'S
ROSEBUD BEAUTY

Particular description of goods.—Hair Tonic.
Claims use since Nov. 6, 1922.

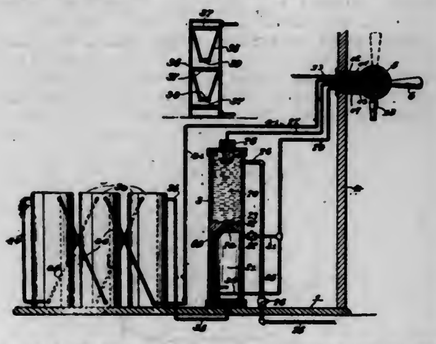
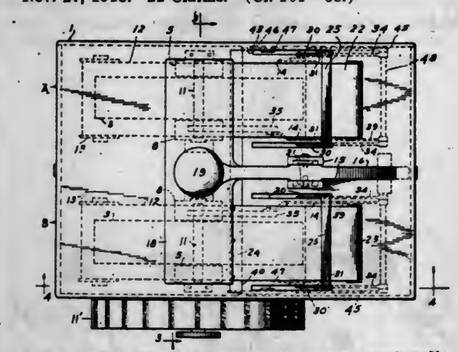
REISSUES.



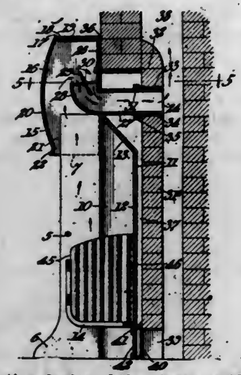
APRIL 10, 1923.

15,574. WEATHER STRIP. JOSEPH C. DUNHAM, Oklahoma, Okla. Filed Jan. 22, 1923. Serial No. 614,320. Original No. 1,416,698, dated May 23, 1922, Serial No. 395,537, filed July 12, 1920. 2 Claims. (Cl. 20—69.)



2. In a closure structure comprising a frame and a movable closure member, a resilient weather strip normally disposed between the face of one of the jambs of said frame and the normally adjacent edge face of said member, said strip comprising a plurality of arcs struck from points on the same side of the strip, and terminating in a securing edge for attachment to one of said faces and in a lip at the opposite edge of said strip, the adjacent portions of the respective arcs uniting to form a peak separating said arcs, said strip, when said closure member is in closed relation to the jamb, being cramped between said faces with the peak and lip in weather-excluding engagement with one, and the rear portions of the arcs in engagement with the other of said faces.

15,575. CARBONATOR AND DRAFT ARM FOR SODA WATER. CHARLES A. GEDDES, Philadelphia, Pa., assignor to National Carbonator Manufacturing Company, Incorporated, a Corporation of Delaware. Filed May 24, 1922. Serial No. 563,370. Original No. 1,397,029, dated Nov. 22, 1921, Serial No. 411,516, filed Sept. 20, 1920. 11 Claims. (Cl. 225—21.)

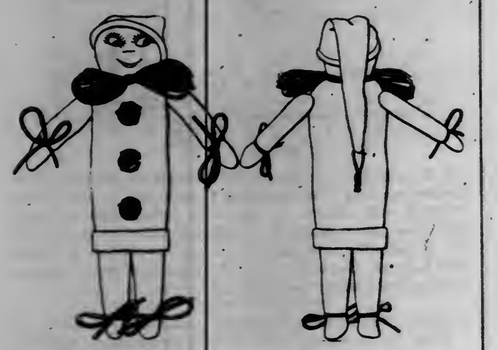


1. In a dispensing apparatus, the combination of one or more secondary absorption chambers, a tubular member divided into upper and lower chambers, the latter of which constitutes a primary absorption chamber, a check valve between said chambers, a gas pipe leading into the upper chamber, a gas supply pipe leading into the lower chamber, a pipe connecting said lower chamber to said secondary absorption chamber or chambers, a water supply pipe leading into said upper chamber, and a valve controlling both the admission of gas to said upper and lower chambers and the discharge of carbonated water from said secondary absorption chamber or chambers.

15,576. TICKET-PRINTING MACHINE. JAMES W. HUBBARD, Eau Claire, Wis., assignor, by mesne assignments, to Continental and Commercial Trust and Savings Bank. Filed Dec. 22, 1921. Serial No. 524,287. Original No. 1,324,673, dated Dec. 9, 1919, Serial No. 264,372, filed Nov. 27, 1918. 22 Claims. (Cl. 101—68.)

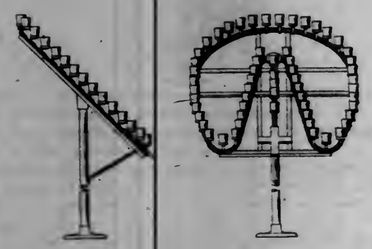
1. In a ticket printing machine, duplicate printing dies, platens coacting with said dies respectively, a cross piece carrying said platens, an operating lever connected with said cross piece, means for feeding a ticket strip between one of said dies and platens, means for feeding a record strip between the other die and platen and means for actuating the feeding means by the lever.

15,577. FIREPLACE HEATER. JAMES S. NICHOLS, Atlanta, Ga., assignor to Nic-Heater Corporation, Atlanta, Ga., a Corporation of Georgia. Filed Mar. 1, 1923. Serial No. 622,209. Original No. 1,370,349, dated Mar. 1, 1921, Serial No. 405,042, filed Aug. 21, 1920. 15 Claims. (Cl. 126—120.)



1. In a heating device of the class specified, the combination with an open fireplace having communication with a chimney flue, of a heater inset in the fireplace and consisting of side members and rear extensions and a back wall extending upwardly in connection with the side members and provided with an upwardly and forwardly inclined closed top extending over the extensions of the side members, a grate held fully between the side members and rear extensions, and a radiating drum open at the bottom to fit over the side members and extensions and to overhang the front edges of the side members, the drum being provided with a rearwardly extending flue for communicating with the chimney flue, the said drum being interiorly divided for a portion of its vertical extent by a forwardly projecting portion of the bottom of the flue and provided with a damper for controlling the outlet to the said drum flue.

DESIGNS.



APRIL 10, 1923.

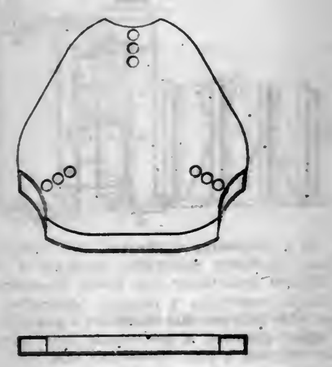
62,190. VOTIVE STAND. MARTIN A. FLANNERY, New York, N. Y., assignor to Will & Baumer Candle Co., Inc., Syracuse, N. Y., a Corporation of New York. Filed Aug. 25, 1922. Serial No. 3,552. Term of patent 14 years.

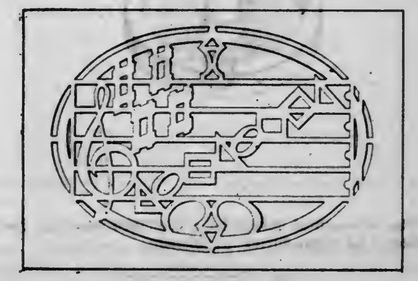


The ornamental design for a votive stand, substantially as shown.

62,191. TEXTILE FABRIC. EMILE ERICSON, Pelham, and ROGER WEISS, New York, N. Y., assignors to The Pennsylvania Textile Mills Inc., Glenriddle, Pa., a Corporation of Pennsylvania. Filed Dec. 22, 1922. Serial No. 4,664. Term of patent 3½ years.

The ornamental design for a textile fabric, substantially as shown.

62,192. CASING FOR HOLDING COUNTING DISKS. FRED A. HELFRECHT, Berkeley, Calif. Filed Mar. 16, 1921. Serial No. 452,762. Term of patent 3½ years.



The ornamental design for a casing for holding counting disks, as shown.

62,193. BRUSH HOLDER. WALTER E. KEENE, Baltimore, Md. Filed June 11, 1921. Serial No. 476,942. Term of patent 3½ years.

The ornamental design for a brush holder as shown.

62,194. GRILLE FOR PHONOGRAPH CABINETS. JOHN O. MILLER, Chicago, Ill., assignor to The Brunswick-Balke-Collender Company, Chicago, Ill., a Corporation of Delaware. Filed Aug. 14, 1922. Serial No. 3,382. Term of patent 14 years.

The ornamental design for a grille for phonograph cabinets as shown.

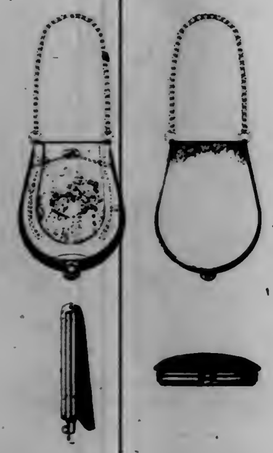
62,195. WATCHCASE OR SIMILAR ARTICLE OF MANUFACTURE. MORRES SEIGER, New York, N. Y., assignor to Morres Seiger and Simon Seiger, doing business under the firm name of M. Seiger & Son, New York, N. Y. Filed Sept. 9, 1922. Serial No. 3,662. Term of patent 14 years.

The ornamental design for a watch case or similar article of manufacture substantially as shown.

62,196. WATCHCASE OR SIMILAR ARTICLE OF MANUFACTURE. MORRES SEIGER, New York, N. Y., assignor to Morres Seiger and Simon Seiger, doing business under the firm name of M. Seiger & Son, New York, N. Y. Filed Sept. 16, 1922. Serial No. 3,743. Term of patent 14 years.

The ornamental design for a watch case or similar article of manufacture substantially as shown.

62,197. WEDDING RING. CHARLES F. SELBER, Chicago, Ill. Filed July 29, 1922. Serial No. 3,239. Term of patent 3½ years.

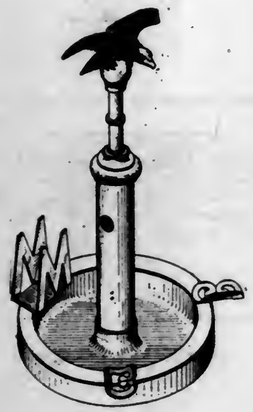


The ornamental design for a wedding ring, as shown.

62,198. PENCIL. CONRAD STEHL, Oakland, Calif. Filed July 24, 1922. Serial No. 3,186. Term of patent 3½ years.

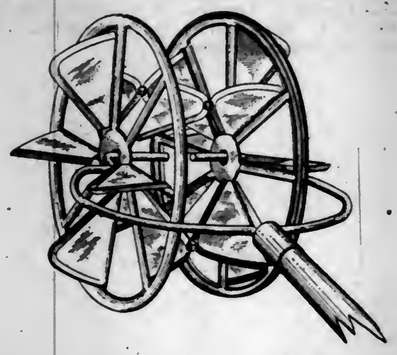
The ornamental design for a pencil, as shown.

62,199. HAND BAG. MAX BRILL, New York, N. Y. Filed Apr. 7, 1922. Serial No. 1,627. Term of patent 3½ years.



The ornamental design for a handbag as shown.

62,200. VANITY CASE. THEODORE W. FOSTER, Providence, R. I., assignor to Theodore W. Foster & Bro. Co., Providence, R. I., a Corporation of Maine. Filed Oct. 15, 1921. Serial No. 508,025. Term of patent 7 years.



The ornamental design for a vanity case, as shown.

62,201. COMBINED ASH TRAY, MATCH HOLDER, AND CIGAR CUTTER. JOSEPH GOSSNER, New York, N. Y. Filed Aug. 23, 1922. Serial No. 3,534. Term of patent 7 years.

The ornamental design for a combined ash-tray, match-holder and cigar-cutter as shown.

62,202. WHEELED TOY. GEORGE G. GREGER, Detroit, Mich. Filed Nov. 7, 1921. Serial No. 513,610. Term of patent 7 years.

The ornamental design for a wheeled toy, as shown.

62,203. STATUETTE LAMP STAND. AUGUSTUS T. GUILBERT, Pasadena, Calif. Filed Nov. 26, 1921. Serial No. 518,105. Term of patent 3½ years.

The ornamental design for a statuette lamp stand as shown.

62,204. ELECTRIC FIXTURE. MAX L. HAAS, Cleveland, Ohio, assignor to The Haas Electric Sales Company, Cleveland, Ohio. Filed Feb. 3, 1922. Serial No. 525. Term of patent 3½ years.

The ornamental design for an electric fixture, as shown.

62,205. BURGLAR-ALARM HOUSING. EARLE M. JONES, Minneapolis, Minn., assignor to O. B. McClintock Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Feb. 2, 1922. Serial No. 498. Term of patent 14 years.

The ornamental design for a burglar alarm housing, as shown.

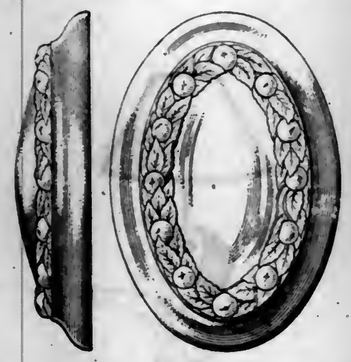
62,206. FORK OR SIMILAR ARTICLE. JOHN LEECH, Bridgeport, Conn., assignor to International Silver Company, Meriden, Conn., a Corporation of New Jersey. Filed Aug. 21, 1922. Serial No. 3,486. Term of patent 7 years.

The ornamental design for a fork or similar article substantially as shown.

62,207. BOWL FOR LIGHTING FIXTURES. LOUIS B. LONDON, New York, N. Y. Filed Dec. 27, 1921. Serial No. 525,249. Term of patent 7 years.

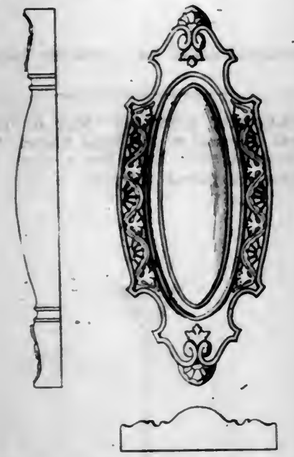
The ornamental design for a bowl for lighting fixtures, as shown.

62,208. PLATE OR SIMILAR ARTICLE. CHARLES A. MAY, Trenton, N. J., assignor to Maddock Pottery Company, Trenton, N. J. Filed Apr. 22, 1922. Serial No. 1,913. Term of patent 14 years.



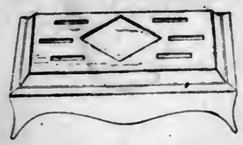
The ornamental design for a plate or similar article, as shown.

62,209. TRAFFIC SIGNAL. STEVE MILLER, San Antonio, Tex. Filed July 1, 1922. Serial No. 2,910. Term of patent 14 years.



The ornamental design for a traffic signal, as shown.

62,210. BRACKET BACK FOR LIGHTING FIXTURES. PAUL MOHRMANN, Chicago, Ill., assignor to Friedley Voshardt Co., Chicago, Ill., a Corporation of Illinois. Filed Mar. 20, 1922. Serial No. 1,251. Term of patent 7 years.

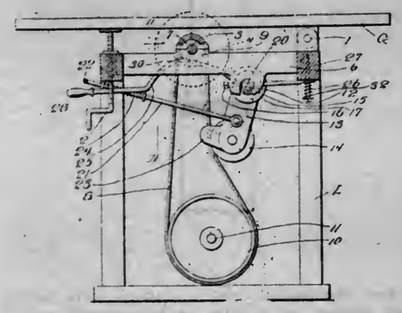


The ornamental design for a bracket back for lighting fixtures, as shown.

62,211. PLATE FOR LIGHTING FIXTURES. KARL NACKE, Brooklyn, N. Y., assignor to United Metal Spinning Co., Brooklyn, N. Y., a Corporation of New York. Filed May 19, 1922. Serial No. 2,317. Term of patent 3½ years.

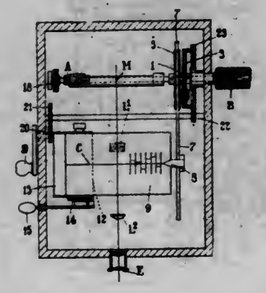
The ornamental design for a plate for lighting fixtures, as shown.

62,212. DISPLAY TRAY. MAURICE J. SCHLESS, New York, N. Y. Filed May 31, 1922. Serial No. 2,474. Term of patent 7 years.



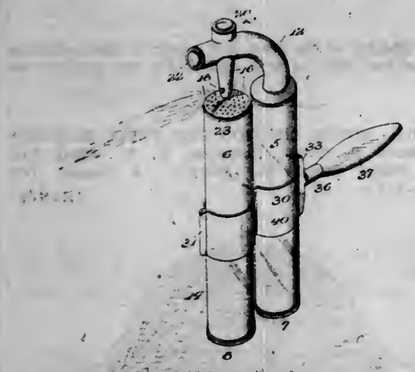
The ornamental design for a display tray, as shown.

PATENTS



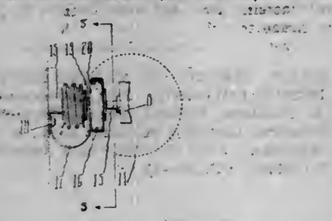
GRANTED APRIL 10, 1923.

1,450,906. POWER CONTROL FOR SAW TABLES AND THE LIKE. CHARLES W. ANDERSON, Brooklyn, N. Y. Filed July 28, 1919. Serial No. 313,888. 5 Claims. (Cl. 192—11.)



3. The combination with a drive pulley, a driven pulley and connections between said two pulleys, of a single control lever, means whereby said control lever is pivotally supported to swing in two planes, and means whereby swinging of said lever in one of said planes will render said connections inoperative while swinging of said lever in said other plane will brake rotation of the driven pulley.

1,450,907. APPARATUS FOR TESTING AND RECORDING THE EFFICIENCY OF RANGE-FINDER OPERATORS. ARCHIBALD BARR and WILLIAM STROUD, Anniesland, Glasgow, Scotland, assignors to Barr and Stroud, Limited, Anniesland, Glasgow, Scotland. Filed Aug. 26, 1921. Serial No. 495,550. 4 Claims. (Cl. 234—1.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat L., 1313.)

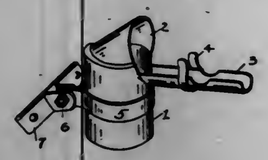


1. An instrument comprising marks, one a movable mark, movable from a fiducial position, optical means for viewing the marks and for producing a reduced image of the marks, means for moving the movable mark, and means for recording on an enlarged scale the position of the movable mark relative to the fiducial position, for the purposes set forth.

1,450,908. TORCH. THOMAS H. BELL and JOHN G. SCHOENLEBER, New York, N. Y. Filed Apr. 5, 1922. Serial No. 549,936. 5 Claims. (Cl. 158—35.)

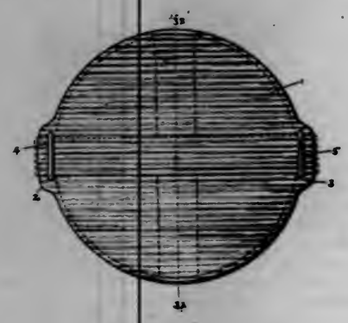
1. A device of the character described comprising a pair of tubular containers, an elbow connected to the upper end of one of the containers and having a depending branch arranged in longitudinal alignment with the other tubular container and formed with a discharge orifice, and a heating element arranged in the tubular container directly beneath said depending branch for highly heating the fuel within the same.

1,450,909. TEMPERATURE COMPENSATING MEANS FOR SPEEDOMETERS. JOSEPH BEECH, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Corporation of Michigan. Filed Mar. 31, 1920. Serial No. 370,164. 8 Claims. (Cl. 264—4.)



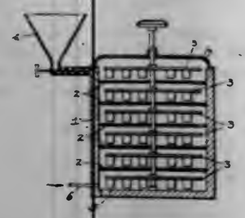
1. A speedometer comprising two members, one a magnet and the other a magnetic mass, one of said members being arranged for rotation, a non-magnetic drag element in the field of said magnet, a driving member for driving the rotatable member, and temperature controlled means for varying the speed ratio between the driven and driving members for compensating for changes in magnetic permeability of said magnetic mass due to variations in temperature.

1,450,910. CIGAR HOLDER AND ASH RECEPTACLE. MICHAEL H. BIALICK, Saginaw, Mich. Filed Oct. 3, 1921. Serial No. 504,899. 3 Claims. (Cl. 131—51.)



3. In combination, a tiltable bracket having a loop, an ash receptacle removably and rotatably secured in

said loop, a wind-deflecting hood on said receptacle, said hood having an opening at one side of said receptacle, a horizontally disposed trough secured to the receptacle

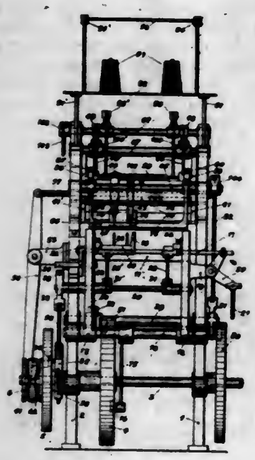


at the opening of the hood, and a pair of cigar-retaining clips on the sides of said trough, for the purposes set forth.

1,450,911. COVER CUSHION FOR FRUIT BASKETS. RAYMOND P. CLARK, Rochester, N. Y. Filed Aug. 28, 1922. Serial No. 584,735. 4 Claims. (Cl. 217—122.)

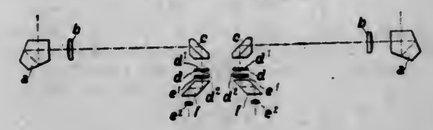
1. A cover cushion for fruit baskets, comprising a pad, horizontal extensions formed at two diametrically opposite points on the periphery of said pad to form a pair of handles for said pad, said handles having slots provided therein into which the handles of a fruit basket can engage to hold the cover cushion in place on top of the basket.

1,450,912. METHOD OF MAKING ANHYDROUS MAGNESIUM CHLORIDE. PAUL COTTRINGER and WILLIAM R. COLLINGS, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed July 31, 1920. Serial No. 400,444. 9 Claims. (Cl. 23—13.)



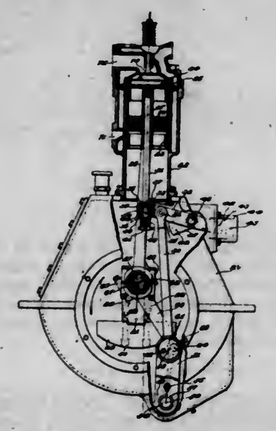
1. The method of making anhydrous magnesium chloride which consists in causing a reaction between magnesium oxide and hydrochloric acid gas, substantially as described.

1,450,913. HOSIERY FORM. THOMAS H. DE LACY, Trenton, N. J. Filed Nov. 5, 1921. Serial No. 513,157. 4 Claims. (Cl. 223—17.)



1. The combination with a hosiery form having a smooth surface, of a strip of foraminated metal attached to the face of the hosiery form, the strip being roughened upon its outer surface.

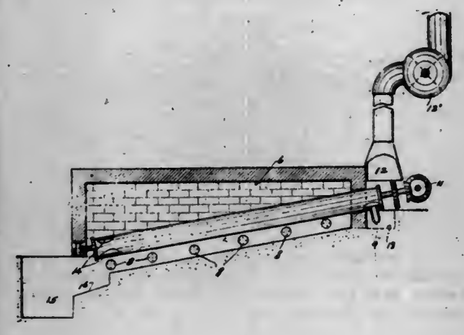
1,450,914. BOOK-SEWING MACHINE. LOUIS EGGER, Sumiswald-Grunen, Berne, Switzerland. Filed Dec. 21, 1921. Serial No. 523,989. 5 Claims. (Cl. 112—21.)



1. In a book sewing machine, a work table, means rockingly supporting the same, a perforator, means for latching the table in an operative position for perforating operation, and means operable by and during actuation of the perforator for rendering said second means operative.

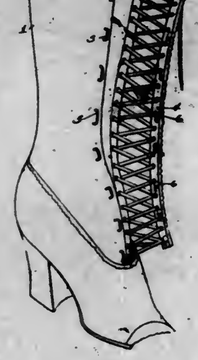
1,450,915. STEREOSCOPIC TELEMETER. OTTO EPPENSTEIN, Jena, Germany, assignor to the Firm of Carl Zeiss, Jena, Germany. Filed Aug. 13, 1921. Serial No. 492,102. 1 Claim. (Cl. 88—2.6.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

In a stereoscopic telemeter containing two objectives, stereoscopic measuring marks arranged in the focal planes of the said objectives and two oculars for observing both the object, the distance of which is to be measured, and the measuring marks, and two other marks disposed each behind the focal plane of the appertaining objective for producing a subsidiary stereoscopic mark.



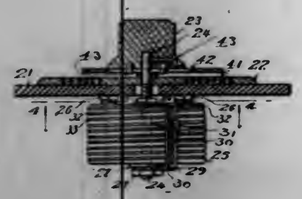
1,450,916. INTERNAL-COMBUSTION ENGINE. WILLIAM A. GILB, Stoneham, Mass., assignor to Gilb Engine Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 26, 1922. Serial No. 584,455. 10 Claims. (Cl. 123—66.)

1. An internal combustion engine comprising a cylinder, a power piston and an imperforate sub-piston both arranged to reciprocate within said cylinder, said sub-piston being located between the combustion chamber and said power piston, a rod for said sub-piston, a main shaft provided with a crank, means for controlling said sub-piston positively throughout the entire cycle, said means comprising a link, a slidable, spring-pressed, pivotal connection between said rod and said link, a member connecting said means directly to said crank, and means pivotally connecting said power piston to said crank.



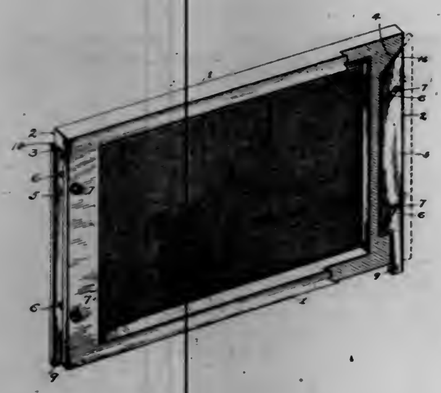
1,450,917. DRIER. EDWIN T. GOLDTHORPE, Chicago, Ill., assignor to Elastic Paint Co., Chicago, Ill. Filed Sept. 23, 1920. Serial No. 412,321. 6 Claims. (Cl. 34—6.)

5. A drier comprising a heating chamber; a rotatable tubular container mounted therein at an inclination to the horizontal; a scoop carried by the upper end of said container, there being an opening in said container at the base of said scoop adapted to discharge material from said scoop into said container; means for supplying material to said scoop, there being a discharge opening in



the lower end of said container; means for rotating said container; and an exhaust hood located over the upper end of said container, substantially as described.

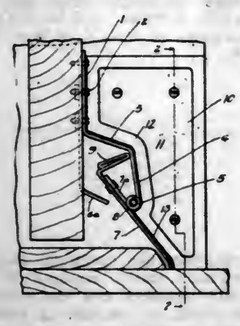
1,450,918. SHOE LACING. OSCAR GRAFF, Philadelphia, Pa. Filed July 13, 1921. Serial No. 484,329. 1 Claim. (Cl. 24—140.)



In combination with a high laced boot or shoe provided with an open front gap, each marginal edge of the gap being straight and extending throughout the length of the shoe, a strip removably fixed to one marginal edge of the gap and provided with eyelets, a detachable strip provided with hooks, loops mounted on the marginal edge of the other side of the gap and adapted to be engaged by the hooks on the detachable strip, the latter being provided with eyelets, and a shoe string adapted to be inserted in the eyelets for drawing the two strips together when the hooks are engaged with the loops.

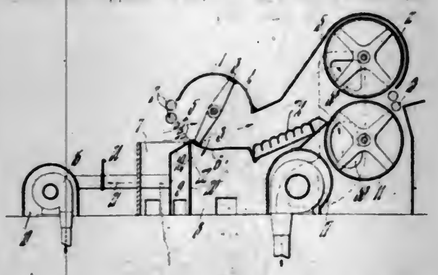
1,450,919. RHEOSTAT. PAUL HARRIS, New York, N. Y. Filed July 15, 1922. Serial No. 575,154. 5 Claims. (Cl. 219—52.)

1. A rheostat provided with a spool with a double thread thereon, two wires, one in each thread and means for connecting said two wires at any desired points, whereby more or less resistance may be cut in or out.



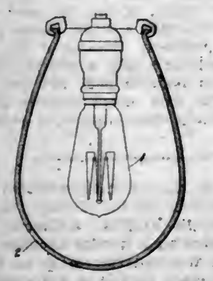
1,450,920. WINDOW SCREEN. WILLIAM M. HUTCHINSON, New Kensington, Pa. Filed Mar. 5, 1921. Serial No. 449,617. 1 Claim. (Cl. 156—38.)

In a window screen comprising a top, bottom and end rails, the one securely attached to the other to form a rectangular frame, grooves formed along the length of said end rails, said grooves being of greater depth along their middle portion than at either end, slidable members operating in said grooves adapted to move vertically and horizontally, a means comprising angularly-arranged slots formed in each of said members, and fixed pins projecting through said slots for attaching said members in position and to permit free movement of the same in the direction of the length of the slot.



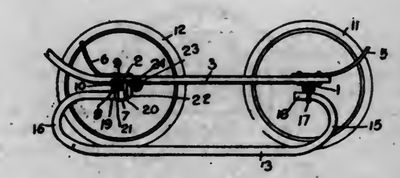
1,450,921. WEATHER STRIP. WILLIAM C. JARMER, Chicago, Ill. Filed Apr. 30, 1921. Serial No. 465,647. 1 Claim. (Cl. 20—69.)

The combination with a weather strip comprising a supporting member having closure engaging means, and a main portion bent intermediate its width; an over-balanced plate pivotally supported by the free edge portion of said main portion and provided with an upstanding weighted portion adapted to swing against said supporting member at the angle of said bend; of a stop plate having a recess therein conforming to said supporting member, and means for guiding said over-balanced plate to



operative position, said stop plate acting to reinforce the end of said supporting member when said over-balanced plate swings into operative position.

1,450,922. PICKER OR FIBER-CLEANING MACHINE. JOHN E. O'CONNELL, Springfield, Mass. Filed Apr. 29, 1921. Serial No. 465,363. 14 Claims. (Cl. 19—89.)



10. A cotton cleaning machine including in combination a beater casing and a condenser casing connected together, said beater casing having a grid-bar section, and separate and independently controllable means to take air out of each casing, said grid-bar section affording an air inlet for both casings.

1,450,923. LIGHTING FIXTURE AND PROCESS FOR PRODUCING SAME. EBEN F. OLIVER, Jersey City, N. J., assignor, by direct and mesne assignments, to Korrectolite Company, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 27, 1920. Serial No. 361,882. 5 Claims. (Cl. 240—1.)

5. A lighting fixture comprising: an open mouth reflector, an incandescent lamp having a translucent bulb within said reflector, and a light corrective medium, closing the mouth of said reflector, consisting of a glass member having irregular interstices throughout its surface, said interstices being filled with a coloring agent of such value as to uniformly color the medium to thereby correct the light of the incandescent lamp to approximate daylight value.

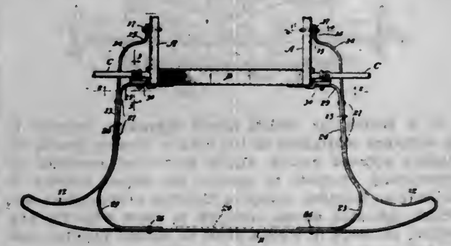
1,450,924. RUNNER ATTACHMENT FOR WHEELED CARRIAGES. CRAVEN ROBERT OAD, Guelph, Ontario, Canada. Filed Oct. 22, 1921. Serial No. 509,653. 3 Claims. (Cl. 280—11.)

1. In a runner attachment for wheeled carriages, the combination with the frame structure and front and rear wheels, of runner members swung upon the frame structure, a crank arm carried by an end of each of the runner members, a tension spring extending between the crank arms, the cranks and spring being so disposed as to force the runner members outward against the aforesaid wheels when the runner members are spread apart and to draw such runner members inward when the runner members are manually forced inward and upward towards the carriage frame.

1,450,925. BRAKE-BAND LINING. ARTHUR L. RENNIE, Jamaica, N. Y. Filed Mar. 7, 1922. Serial No. 541,647. 8 Claims. (Cl. 188—249.)

4. The combination with a brake band provided at its free end with brackets, of a lining strip for said band, said lining strip being provided at predetermined points with guide clips adapted to engage the side edges of said brake band for holding said lining strip against lateral movement thereon, an attaching plate at one end of said lining strip, said attaching plate being adapted to be secured to one of said brackets, and a reinforcing strip mounted upon and secured to the outer face of said lining strip and extending longitudinally thereof, said strip being independent of said clips and being of considerably less transverse dimensions than said lining strip.

1,450,926. COMPOSITION OF MATTER FOR SILVER-PLATING METALS. LINDOLPH MINOR SHEROW, Ossining, N. Y. Filed June 6, 1922. Serial No. 566,411. 11 Claims. (Cl. 134—24.5.)

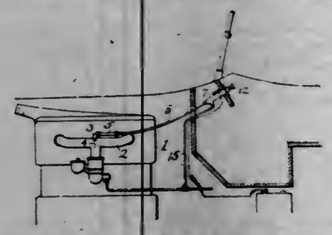


1. A composition of the class described containing silver nitrate, camphor, a cyanide solution and whiting.

1,450,927. ANTIRATTLING DEVICE. CHARLES J. SOSS, New York, N. Y., assignor of one-third to Henry Soss and one-third to Samuel Soss, both of New York, N. Y. Filed July 11, 1921. Serial No. 483,671. 5 Claims. (Cl. 292—155.)

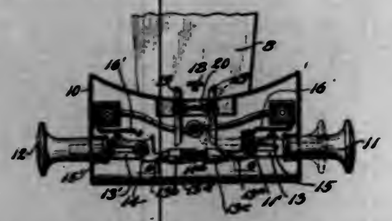
1. A device of the class described comprising a suitably supported member, an anti-rattling element adjustably mounted in connection with said member, means whereby said member may be moved into different positions to move said rattling element into operative and inoperative position, and tensional means cooperating with said member for holding the same in different positions of adjustment.

1,450,928. AUTOMOBILE BUMPER. LEWIS F. STAFFORD, Chicago, Ill., assignor to Stafford Spring Guard Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 6, 1922. Serial No. 534,581. 8 Claims. (Cl. 293—55.)



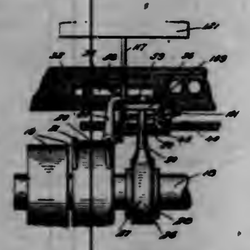
6. A bumper comprising an impact member extending across the end of a vehicle, arms at the ends of said impact member and extending therefrom toward the vehicle, and supplementary supporting arms extending from said impact member toward the vehicle, the intermediate portions of said supplementary arms being disposed alongside said bumper arms and provided with spring bends at their outer and inner end portions whereby yielding areas are provided therein between the bumper arms and the impact member and between the bumper arms and the points of attachment of the supplementary supporting arms.

1,450,929. ENGINE-PRIMING DEVICE. FREDERICK D. SWEET, Cleveland, Ohio, assignor to Instant Hot Primer Company, a Partnership comprising Frederick D. Sweet and Henry Grombacher, Cleveland, Ohio. Filed Mar. 9, 1918. Serial No. 221,393. 1 Claim. (Cl. 123—180.)



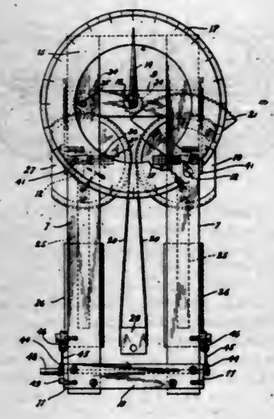
The combination with an internal combustion engine, of a receptacle adapted to contain fluid fuel, a movable member controlling the passage of fuel from said receptacle, means for returning the movable member to its initial position after being moved, a conduit connecting

the receptacle with the engine, a portion of said conduit being composed of electrically non-conducting material, a heating element within the said non-conducting portion of a conduit, the ends of said heating element being connected with the conduit upon either side of the non-conducting portion, a switch controlling the passage of current through the conduit, and the heating element, said



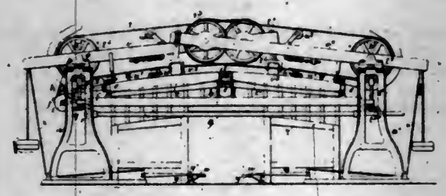
switch being spring pressed and having a portion which engages with the aforesaid movable member whereby the switch is held in non-operative position under normal conditions, the movement of the movable member permitting the switch to move to operative position to close the circuit through the heating element, the movement of the movable member to its initial position moving the switch to inoperative position.

1,450,930. DIRECTION SIGNAL FOR VEHICLES. JOHN E. WALTER, Waukegan, Ill. Filed Apr. 29, 1922. Serial No. 557,300. 6 Claims. (Cl. 200—59.)



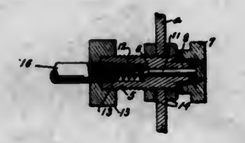
1. A switch for vehicle signal apparatus adapted to be arranged contiguous to the vehicle steering means, including opposed axially alined presenting members independently operable to operate the signal member to indicate an intended change of direction of movement, and vehicle operated means arranged to coact with the presetting members to restore them to normal position incident to turning movement, one of said members being movable to actuate the other to effect normalization of the set member in the event the contemplated movement is not executed.

1,450,931. STOP MOTION. VINCENT WANTE, Woonsocket, R. I. Filed July 18, 1922. Serial No. 575,786. 5 Claims. (Cl. 19—165.)



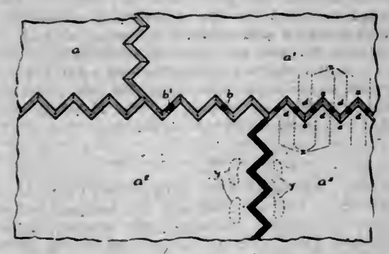
1. In a gill box, the combination with the main shaft and shifter fork, of a reciprocatory finger carried by the shaft, a resilient shifting arm seated adjacent the finger adapted when unseated to swing against the fork, and a laterally yielding spacer movable into and out of the path of the finger adjacent the lever, and means controlled by a sliver for actuating the spacer to receive the impact of the finger and unseat the lever.

1,450,932. AUTOMATIC WEIGHING MECHANISM. JOHN W. WESLEY, Chicago, Ill. Filed Mar. 15, 1922. Serial No. 543,858. 6 Claims. (Cl. 265—62.)



1. A mechanism of the class described including in combination with a supporting frame, a pivot bar horizontally and fixedly mounted thereon, a disk-like weighted governor mounted on said bar for oscillatory movement, and a peripherally channeled roller journaled on said frame and located in close proximity to but out of contact with the periphery and faces of said governor.

1,450,933. LEATHER-FINISHING MACHINE. GEOFFREY LOVELL WILKS, Surbiton, London, England. Filed Mar. 1, 1922. Serial No. 540,199. 15 Claims. (Cl. 149—19.)

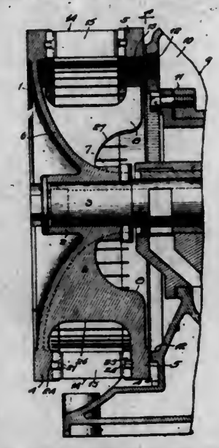


8. In a leather finishing machine, the combination with a bed curved convexly, longitudinally and transversely, of a pair of pivoted frames supported adjacent to the lateral portions of the bed and extending inwardly past the central portion thereof, supporting pulleys carried by said frames at their inner and outer ends, endless bands engaging said pulleys and provided with leather finishing devices, said bands being located in different transverse planes and having their inner portions extending side by side adjacent to the central portion of the bed, and means for driving said bands in a direction to cause the portions thereof adjacent to the bed to be moved outwardly toward the lateral edges of the bed.

1,450,934. AIR CONFINING AND RELEASING VALVE. JESSE E. WILSON, Oxford Junction, Iowa. Filed Sept. 26, 1921. Serial No. 503,210. 1 Claim. (Cl. 158—50.1.)

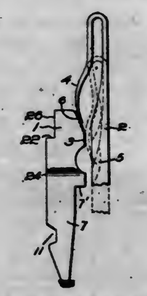
A valve for fuel supply systems of motor vehicles comprising a body portion provided with a reduced threaded end adapted to be engaged by an air hose coupling, and with a bore, a counterbore, and a valve seat at the junction of said bore and counterbore; a valve adapted to engage said seat, provided with a stem passing through said bore; a spring seat within said counterbore; a spring interposed between said spring seat and said valve, normally tending to seat said valve; and a perforated cap normally threaded on said reduced end, and adapted to engage the end of said valve stem to unseat said valve against the action of said spring.

1,450,935. PERMANENT JOINT IN FABRICATED FORM AND METHOD OF MAKING THE SAME. JAMES L. ANDERSON, Bayonne, N. J., assignor, by mesne assignments, to Air Reduction Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 12, 1918. Serial No. 266,407. 13 Claims. (Cl. 113—112.)



1. The method of obtaining permanent butt joints in fabricated forms, which comprises providing the parts to be united with interfitting indented edges consisting of tapering, substantially triangular projections and alternating recesses, and uniting said edges by fusion, whereby a saw-toothed welded joint is obtained consisting of multiple diagonals running in alternately angularly related directions across the neutral or center line of the seam.

13. A fabricated structure comprising plates having saw-toothed edges interfitted and fused together, presenting a welded seam substantially all portions of which are diagonal to the general direction of the seam.

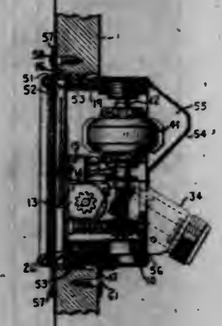


1,450,936. COMBINED FLYWHEEL AND SUCTION FAN. ROBERT W. BARTON, Chicago, Ill. Filed Mar. 30, 1922. Serial No. 548,265. 4 Claims. (Cl. 230—11.)

1. In a device of the kind described, two opposed peripheral rings of equal diameter and separated axially, expelling blades made of thin sheet metal and longer than the space between the rings, the rings having registering narrow transverse grooves for receiving the ends of the blades, the opposed faces of the rings provided with circumferential grooves, the middle portions of the blades dished radially for stiffening the blades, and the ends of the blades pre-formed with bendable projections adapted

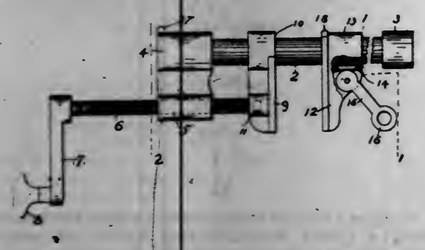
to be formed into said grooves after the blades have been arranged in position, to engage the sides of the grooves, as and for the purpose specified.

1,450,937. SPRING NEEDLE PRESSER. GEORGE P. BOSWORTH, Central Falls, R. I., assignor to Hemphill Company, Central Falls, R. I., a Corporation of Massachusetts. Filed May 26, 1919. Serial No. 299,972. 12 Claims. (Cl. 66—21.)



1. As an article of manufacture, a needle beard presser having a ground, beard-depressing surface, the grinding lines whereof extend transversely to the direction of movement of the needle beard during the depressing operations.

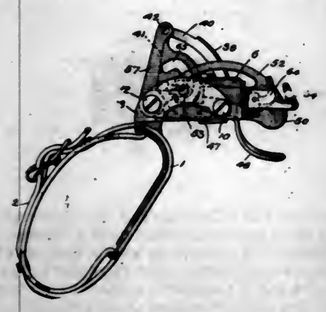
1,450,938. SNAP FASTENER. JULIUS J. BRELL, New York, N. Y. Filed Apr. 11, 1919. Serial No. 289,248. 1 Claim. (Cl. 24—218.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



A snap fastener element having a continuous rolled edge and sewing apertures, said edge being non-circular and nearer the center of the fastener element at those parts thereof which are located between the sewing apertures, the configuration and location of the said rolled edge being such that it is closely adjacent to both the outer and lateral edges of the sewing apertures.

1,450,930. SPEEDOMETER. CLARENCE CARSON, New Rochelle, N. Y., assignor to Johns-Manville, Incorporated, a Corporation of New York. Filed Aug. 25, 1920. Serial No. 405,999. 5 Claims. (Cl. 235—96.)

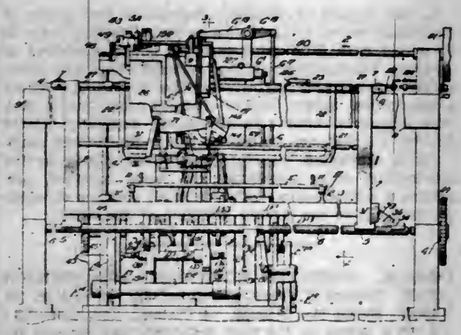
1. A device of the class described for mounting an indicating mechanism including a front mounting ring provided with means for securing the same to the mechanism and including an outstanding flange for engaging the front side of the support for the device and a rear cover provided with separate means for securing the same to the mechanism and also provided with an outstanding flange for engaging the rear side of the support whereby the support is disposed between two flanges projecting independently of each other from the mechanism.



1,450,940. DOOR CLAMP. ISAAC W. COBB, Portland, Me. Filed Feb. 12, 1921. Serial No. 444,373. 2 Claims. (Cl. 144—303.)

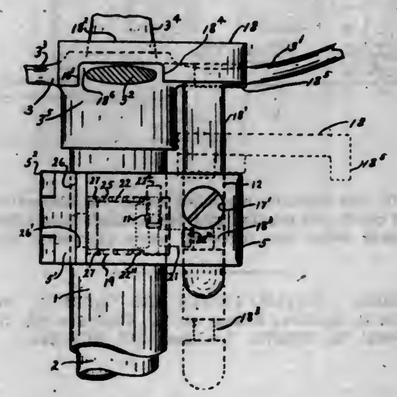
1. In a door clamp, the combination of a cylindrical rod, a nut secured to the end of the rod and offset from the center thereof, a sliding jaw adjacent to said nut, a screw engaging said nut and acting to move said sliding jaw on the rod, a free jaw on said rod opposed to said sliding jaw, a cam on said free jaw, a toothed clamping block between the rod and the free jaw positioned to be forced against said rod by said cam to hold the jaw in any radial position with respect to the fixed jaw.

1,450,941. KNOTTER. HOWARD D. COLMAN, Rockford, Ill., assignor to Barber-Colman Company, Rockford, Ill., a Corporation of Illinois. Filed Mar. 9, 1916, Serial No. 83,008. Renewed June 14, 1920. Serial No. 389,004. 19 Claims. (Cl. 289—5.)



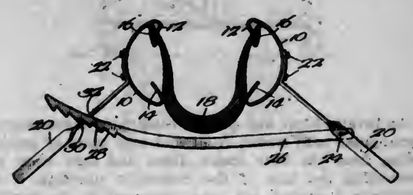
1. A knotter having, in combination, a rotary tying bill, a pivoted arm having a hook, a gear-part rigid with the arm, a coacting driving gear-part, a slide on said arm adapted to coact with the hook to clamp the threads, a plate having a cam slot, said driving gear-part and plate being rigidly secured together, a stud on the slide lying in said slot, and means for oscillating said driving gear-part and cam plate and for rotating the tying bill.

5. A knotter having, in combination, a frame, a pivot in said frame, a tying bill rotatably mounted in the frame, a hooked arm pivoted in the frame, a slide supported on the said arm for movement longitudinally of the arm to clamp and release threads lying in the hook of said arm, a gear segment mounted to swing on said pivot, a gear segment on said arm meshing with the first mentioned gear segment, a digitally-actuated arm also mounted to swing on said pivot and fixed to the first mentioned gear segment, connections between said last mentioned arm and the tying bill for rotating the latter, and connections between the digitally-actuated arm and said slide for reciprocating the latter.



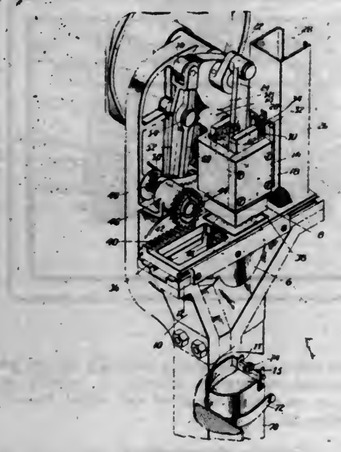
9. A knotter having, in combination, a frame, a pivot in said frame, a tying bill rotatably mounted in the frame, a hooked arm pivoted in the frame, a member arranged to clamp threads in the hook of said arm, a digitally-actuated arm mounted to swing on said pivot, connections between said arms for swinging the hooked arms, a plate mounted to swing on said pivot and rigidly connected to the digitally-actuated arm, said plate having a cam formation, and a part on said clamping member arranged to engage said cam formation.

1,450,942. MACHINE FOR OPERATING UPON WARPS. HOWARD D. COLMAN, Rockford, Ill., assignor to Barber-Colman Company, Rockford, Ill., a Corporation of Illinois. Filed Apr. 18, 1919. Serial No. 291,061. 11 Claims. (Cl. 28—44.)



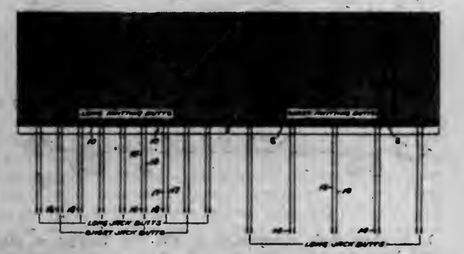
1. A warp-drawing machine having, in combination, an operating mechanism, means for supporting the warp, means for supporting the harnesses, means for supporting the reed, means for causing relative traversing movement between the operating mechanism on the one hand and the several supporting means on the other, said movement being approximately proportionate to the sley of the harnesses, and means for adjusting the position of a portion of the operating mechanism with reference to the remainder of said operating mechanism to compensate for the difference in the width of the warp and the harnesses.

1,450,943. AUTOMOBILE LOCK. GEORGE WILLIAM DANIELS, Hamilton, Ontario, Canada. Filed July 15, 1921. Serial No. 484,990. 7 Claims. (Cl. 70—129.)



1. In a device of the class described, a clamping member comprising a flat head portion of substantially the shape of a right angle triangle, a shank portion depending from the head portion and situated adjacent to the right angle, the shank provided with an annular recess adjacent to the lower end thereof, an enlarged boss carried by the upper end of the shank at its junction with the head, depending lugs carried by the head at the acute angular points thereof, the aforesaid boss and the depending lugs forming between them recesses in the under face of the head.

1,450,944. TIRE SPREADER. WILLIAM B. ECKER, Chicago, Ill., assignor of one-fourth to Dwight B. Cheever, Chicago, Ill. Filed Aug. 2, 1917. Serial No. 184,020. 6 Claims. (Cl. 152—27.)

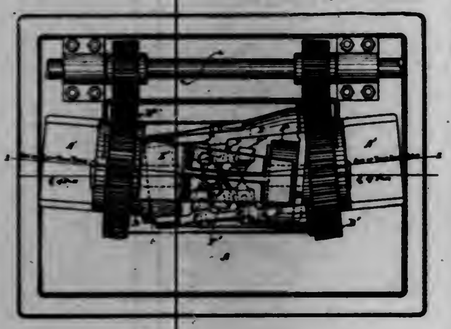


6. In combination with a pneumatic tire to be spread open, a pair of engaging members each equipped with a hook for the lip of the tire, a fulcrum portion adapted to bear against the outside of the tire at a point remote from the edge of the lip, an arm on each engaging member extending away from the tire, and a rigid connecting member extending across the tread of the tire, detachably connected to said arms, the angularity of the arms to the engaging members being such that a substantially straight connecting member can be used without deflecting the lips of the tire below the tread of the tire.

1,450,945. MACHINE AND METHOD APPLICABLE IN THE CUTTING OF SHEET MATERIAL. FREDERICK M. FURBER, Revere, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 31, 1919, Serial No. 274,210. Renewed Nov. 12, 1920. Serial No. 423,750. 24 Claims. (Cl. 164—10.6.)

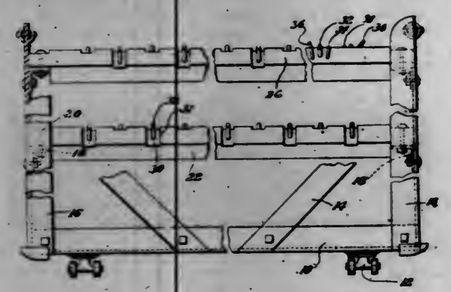
1. In a cutting machine, means for cutting blanks from sheet material, and means for insuring the removal of scrap material surrounding the cutting means simultaneously with the cutting of each blank.

1,450,946. OPEN OR LACE WORK KNITTING MACHINE. AUGUSTIN GAGNÉ, Central Falls, R. I., assignor to Hemphill Company, Central Falls, R. I., a Corporation of Massachusetts. Filed May 6, 1919. Serial No. 295,120. 24 Claims. (Cl. 66—21.)



1. Knitting mechanism adapted to produce so-called open or lace-work effects comprising in combination, a needle carrier, needles provided with contrasting length formations, knitting cams, means to impart relative movement to said parts, a tuck stitch elevating cam adapted to move needles out of action of the knitting cams, means to place said tuck stitch cam in a plurality of radial positions for action or non-action upon certain of said formations, and a second tuck stitch elevating cam active upon certain needles only.

1,450,947. FORGING PRESS. DAVID R. GILL, Erie, Pa., assignor of one-half to Harold M. Sturgeon, Erie, Pa. Filed Nov. 28, 1921. Serial No. 518,291. 13 Claims. (Cl. 80—13.)

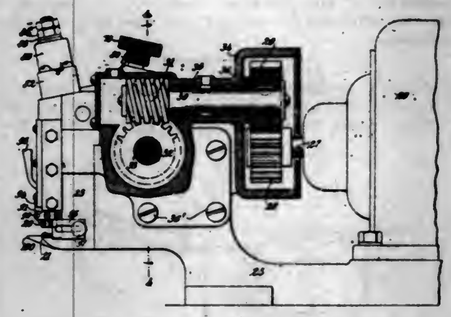


1. In a machine of the class described, a plurality of forging dies each having forging surfaces encircling

the axis of the pass, one end of said forging surface being out of the plane of the other end thereof and the radius thereof progressively decreasing from the entrance end of the exit end thereof, said dies being inter-

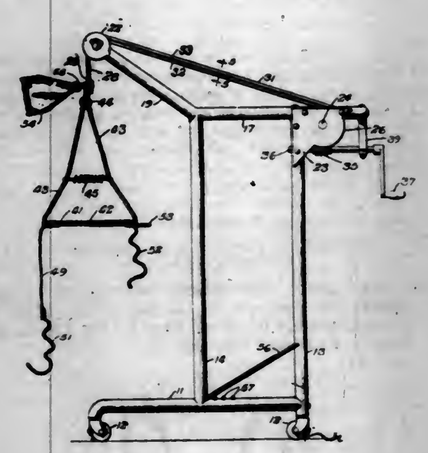
jacent of each other and forming a conically shaped pass therethrough, and mechanism adapted to support said dies and rotate each die around an axis offset from the axis of the other die.

1,450,948. SHOE RACK. HARVEY L. GLIDDEN, Needham Heights, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 18, 1921. Serial No. 478,569. 6 Claims. (Cl. 211—34.)



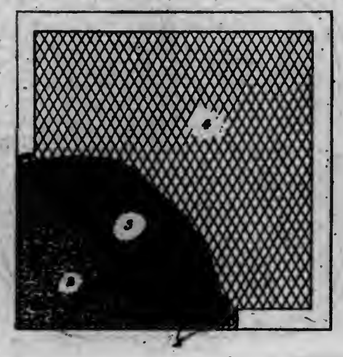
1. A shoe rack comprising a pin bar having a pin adapted to enter the jack pin hole of a last to support it, the bar being also equipped with a member arranged to contact with the cone of the last to prevent rotation on the pin.

2. A shoe rack comprising a pin bar having a pin adapted to enter the jack pin hole of a last to support it, the bar being also equipped with an outwardly projecting shoulder arranged to prevent rotation of the last on the pin.



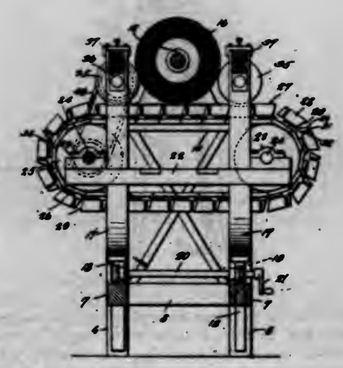
1,450,949. IMPRINTING MACHINE. LEONARD HOPKINS, Pittsfield, Mass., assignor, by mesne assignments, to Eaton, Crane & Pike Company, Pittsfield, Mass., a Corporation of Massachusetts. Filed Sept. 23, 1921. Serial No. 502,650. 15 Claims. (Cl. 101—3.)

4. A compact, self-contained, portable, imprinting machine comprising a reciprocating die carrier, a drive shaft, an operating connection between said shaft and said carrier, a motor, a worm having a driving connection from said motor, a worm wheel journaled on said driving shaft, a clutch connecting said worm wheel with said



shaft, and manually controlled means for disconnecting said clutch and rotating said driving shaft independently of said motor and connected worm and worm wheel.

1,450,950. INVALID LIFTER AND CARRIER. STANLEY S. JENKINS, Buffalo, N. Y. Filed Apr. 21, 1922. Serial No. 555,897. 1 Claim. (Cl. 212—142.)

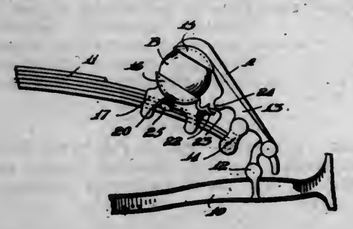


An invalid lifter and carrier, comprising a substantially rectangular base frame, front and rear pairs of uprights rising from the base frame, front and rear cross bars connecting the tops of the respective uprights, a substantially U-shaped top yoke connected to the uprights and cross bars with its arched end projecting beyond the front uprights, the sides of the yoke constituting arms extending upwardly and rearwardly from the rear uprights, pulleys at the upper ends of the arms, a shaft mounted across the arched end of the yoke, drums on the shaft, flexible elements depending from and trained over said pulleys and connected to the drums, tubular casings housing the flexible elements between the pulleys and the drums and constituting arm braces, a worm gear on the shaft, a worm engaging the gear and mounted in brackets on the front cross bar and the arched end of the yoke, and operating means for the worm.

1,450,951. WET-FILTER SCREEN. LUCIEN CHARLES CRUYT, London, England, assignor to Heenan & Froude, Limited, Worcester, England. Filed July 22, 1919. Serial No. 312,624. 1 Claim. (Cl. 261—95.)

A wet-filter for gas comprising a screen and a filling medium associated therewith and composed of a mass of smooth, nonporous, filamentous elements adapted to be wet by liquid flow thereover and matted together to form interstices for the passage of gas therethrough.

1,450,952. CONVEYER. OLIVER P. FIKE, Findlay, Ohio, assignor of one-half to Ernest M. Hoppenberg, Findlay, Ohio. Filed Dec. 31, 1920. Serial No. 434,305. 3 Claims. (Cl. 198—179.)



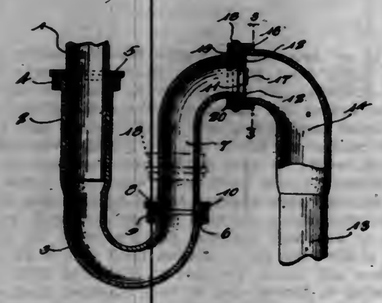
1. In a device of the character described, a frame, sprocket wheels supported by the frame, an endless conveyer operating over the sprocket wheels, said conveyer including chains, bars supported by the chains, each of the bars including a body portion and a movable section, the movable section of one bar adapted to move into clamping relation with one edge of the adjacent bar to clamp an article therebetween, and said movable sections adapted to move out of clamping relation with the adjacent bar when the bars pass over the sprocket wheels.

1,450,953. ABDOMINAL SUPPORTER. MARIE ALIDA FONTAINE, Manchester, N. H. Filed Sept. 30, 1921. Serial No. 504,384. 5 Claims. (Cl. 2—188.)

3. In an abdominal supporter the combination of a wide inside band of knitted material having a vertical examining slit at a line to be proximate the side of the wearer and having eyelets for lacing said slit, said inside band having ends which approach each other at the back of the wearer and are provided with stiffeners and eyelets for back lacings, said back lacings, and slit lacings for said inside band, with thigh straps and stocking supporters attached to the bottom edges of the inside band, and a narrower outside band made at the front of nonelastic material so attached to the inside band at the front and at another point that it will stay in place and having two sets of tightening straps, one set being so located and of such character that when released the slit lacing of the inside band is exposed.

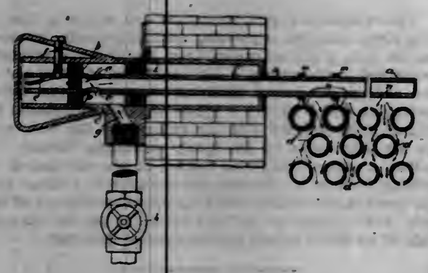
1,450,954. SHOCK ABSORBER. STEPHEN GAVEL and EBER FROST, Olds, Alberta, Canada. Filed June 24, 1921. Serial No. 480,121. 1 Claim. (Cl. 267—18.)

The combination with the spring and axle of a vehicle, of a shock absorber comprising an arm pivotally mounted on the axle, a lug extending from the arm and pivotally connected to the spring, a cup formed on the free end of the arm, a cup-shaped receiving member on the spring having an orifice therein, a sphere of resilient material designed to be inflated with air engaged by the two cups, an air inlet valve on the sphere extending through the orifice, a concave extension formed on the cup-shaped receiving member, a spherical lug designed to engage with the concave extension to limit the pivotal movement of the arm, and a finger on the arm extending on the opposite side of its pivot, as and for the purpose described.



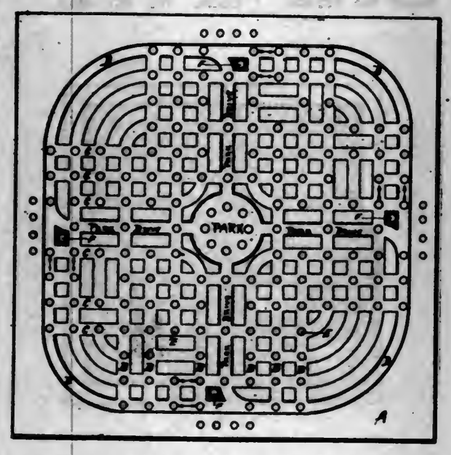
1,450,955. BOUQUET HOLDER. ALLAN GLASSMAN, New York, N. Y. Filed Nov. 20, 1920. Serial No. 425,400. 2 Claims. (Cl. 24—6.)

1. A bouquet holder including a base portion, a circular element secured thereto having a gap therein, said circular



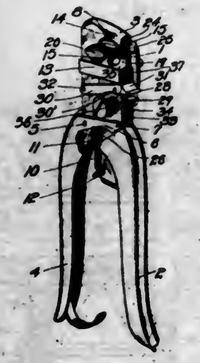
element being channeled at one end, a movable element operating in said channel to close the gap, and a spring means for urging said movable element to a closed position.

1,450,956. DRAINPIPE TRAP. CHRISTIAN H. GOTTSCH, New Hyde Park, N. Y. Filed June 12, 1922. Serial No. 567,648. 3 Claims. (Cl. 182—12.)



1. In a drain pipe trap construction, a trap member, a pipe section connected with said trap member and having a curved end portion, a second pipe section having a curved end portion conforming to the curvature of the curved end portion of the first mentioned pipe section and adapted for telescopic engagement therewith, and means for securing the curved end portions of said pipe sections with the second pipe section selectively extended either parallel to the first pipe section or in diverging relation thereto.

1,450,957. CLEANER FOR WATER-TUBE BOILERS. PERCY GILBERT HANDOLL, Battersea, London, England. Filed Nov. 1, 1918. Serial No. 260,709. 8 Claims. (Cl. 132—392.)

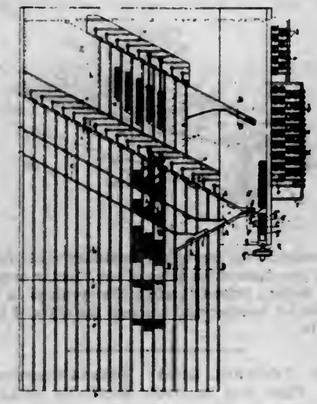


1. A cleaner for water tube boilers comprising a steam blower tube mounted to extend transversely of the boiler tubes and formed with steam outlet orifices in the portion adjacent the boiler tubes, a cylinder mounted outside of the boiler, a steam supply means connected with the forward end of the cylinder, and guiding and actuating means for the blower tube including a piston adapted to reciprocate in said cylinder to rotate said blower tube, said piston having a vent adapted to admit steam slowly from the front to the back of the piston and rear end of the blower tube.

1,450,958. GAME BOARD. CONRAD A. JOHANNESEN, Erie, Pa. Filed Apr. 7, 1921. Serial No. 459,211. 2 Claims. (Cl. 46—21.)

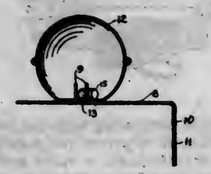
1. A game apparatus comprising a board having a central space, a marginal pathway, radial path-ways connecting said central space with said marginal path-ways, and a series of intersecting pathways connecting and intersecting said radial pathways and marginal path-way.

1,450,959. OPTICIAN'S TOOL. JAMES M. LAWLOR, Topeka, Kans., assignor of one-half to T. H. Cutsinger, Topeka, Kans. Filed May 20, 1921. Serial No. 471,138. 5 Claims. (Cl. 81—15.)



1. In a tool of the class described, a rigid jaw member, a movable jaw member slidable with respect to the rigid jaw member, means for actuating the slidable jaw member to bring the effective parts of the jaw members together to clamp the frame clamps of an eye-glass mounting, and a frame positioning and holding means carried by the rigid jaw member for holding the frame in the groove in the clamp of the eye-glass mounting.

1,450,960. PRINTING-TYPE-COMPOSING APPARATUS. ALFRED LUBAC, Paris, France. Filed July 26, 1921. Serial No. 487,601. 5 Claims. (Cl. 276—15.)



1. Printing type assembly or composing apparatus characterized by type magazine comprising two superposed platforms inclined at 45° and supported on a base, the said platforms being divided by horizontal bars so

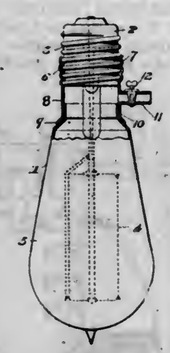
as to form spaces for the type the bottom of the type being supported on the horizontal bars so that the types are ready to hand, the said bars being provided with a

space adjacent the slides or chutes which lead to a collector, a space or slot sufficient to allow of the passage of the flat type on their release by mechanism, actuated by keys from a keyboard or by hand.

1,450,961. PROCESS OF MOUNTING BELLS ON TOYS OR OTHER ARTICLES. ARTHUR OTTERBEIN, Middletown, Conn., assignor to The Kirby Manufacturing Company, Middletown, Conn., a Corporation of Connecticut. Filed Feb. 24, 1921. Serial No. 447,577. 2 Claims. (Cl. 29—148.2.)

1. The process of mounting bells on toys, which consists in throwing up out of the metal strip to which the bells are to be secured a pair of prongs for each bell adapted to fit a hole in the base of the bells, and clamping said prongs rigidly to said bells on the inside.

1,450,962. SHEATHING BOARD. SAMUEL R. SHOUP, Weehawken, N. J. Filed Jan. 20, 1922. Serial No. 530,715. 9 Claims. (Cl. 72—116.)

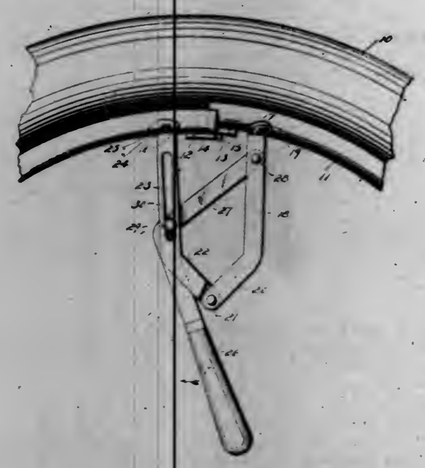


8. In combination a parallel series of strips of wood having undercut edges, a sheet of fireproof sheathing board, backing wires on the back of said sheathing board at an angle to said strips of wood, and fastening means for securing said back wires and said fireproof sheathing board to said strips of wood.

1,450,963. MATCH BOX. STANLEY SZASTALO, New York, N. Y. Filed Jan. 25, 1922. Serial No. 531,525. 4 Claims. (Cl. 206—33.)

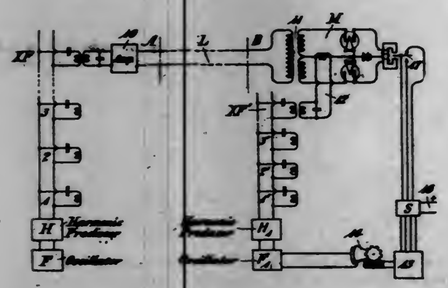
1. A match box comprising an open-faced receptacle, a door of less longitudinal dimension than the said open face extending thereacross, and an outer door adapted to close the open face of said receptacle, a guide element on the face of the door opposite the said open face and adapted to receive a card and a door covering said card, said two last mentioned doors being of greater area than the said receptacle, for the purpose specified.

1,450,964. INCANDESCENT ELECTRIC LAMP. GEORGE WASHINGTON TURNER, Cleveland, Ohio. Filed Feb. 4, 1921. Serial No. 442,472. 1 Claim. (Cl. 176—37.)



In an incandescent lamp, a screwthreaded plug carrying a filament, a bulb in which the filament is located and a thin metal sleeve having an upper screwthreaded portion forming a socket for receiving the plug, a lower portion having a neck, said neck receiving the upper end of the bulb and a tube intermediate the screwthreaded and neck portions of said sleeve communicating with the interior thereof and provided with a valve controlling the passage through said tube to the interior of the sleeve for maintaining and destroying a vacuum in said bulb.

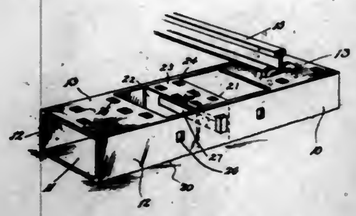
1,450,965. TOOL FOR TIRE RIMS. BENJAMIN V. UNGER, New Haven, Conn. Filed Mar. 19, 1921. Serial No. 453,726. 2 Claims. (Cl. 157—1.)



1. In a tire rim tool, the combination with companion legs; each of said legs having a base portion and an angular portion, these latter portions being movably secured to each other, and one of said legs having a slot therein; of a handle member movably connected with the non-slotted leg and having an operative connection with

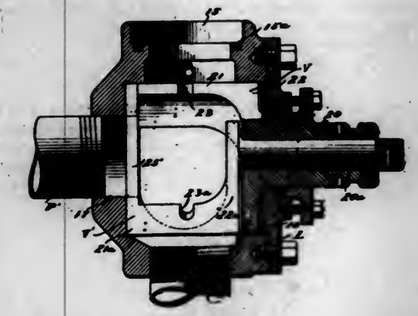
the other leg by means of said slot, whereby the said base portions will move toward and away from each other upon their common securing means, while that portion of said handle member is moving through said slot and

whereby one of said legs will move through an arc, the center of which is the outer end of the other of said legs, when said handle portion has engaged either end of said slot.



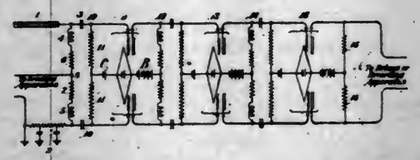
1,450,966. SYNCHRONIZING SYSTEM. HERMAN A. AFFEL, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 30, 1919. Serial No. 327,459. 7 Claims. (Cl. 178—44.)

1. The method of synchronization which consists in producing a first frequency, generating a second frequency, producing a harmonic from said second frequency, said harmonic having a frequency in the neighborhood of the first frequency, beating said first frequency with said harmonic and controlling said second frequency by the resultant difference frequency.



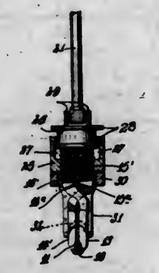
1,450,967. METALLIC RAILWAY TIE AND CHAIR. REUBEN R. ALLSHOUSE, Freedom, Pa. Filed Mar. 15, 1922. Serial No. 543,890. 1 Claim. (Cl. 238—274.)

A tie consisting of a tubular member having bridging portions at its ends, the top of the member being open between said bridging portions and the sides of the member between said bridging portions having openings therethrough, rail-securing clamps fitted through and secured in the bridging portions, an auxiliary chair consisting of an inverted channel member fitted through the open top of the tubular member with its sides bearing against the sides of the tubular member and resting on the bottom



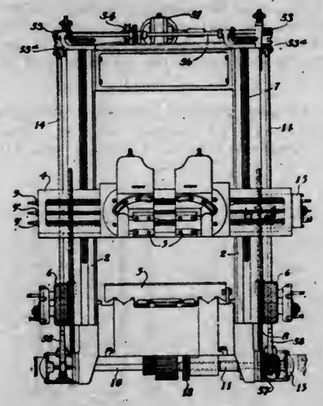
of said member, the top of the auxiliary chair being flush with the top edges of the sides of the tubular member, and securing wedges driven through the openings in the sides of the tubular member and through the sides of the auxiliary chair.

1,450,968. CONTROL HEAD. DELSON BREEDING, Tulsa, Okla. Filed May 26, 1920, Serial No. 384,441. Renewed Sept. 13, 1922. Serial No. 588,080. 5 Claims. (Cl. 166—15.)



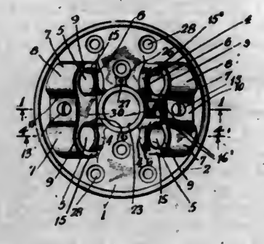
1. A control head comprising a casing having apertures formed therein adapted to permit the passage of a drilling cable and tools therethrough, a valve within the casing movable to prevent the passage of fluid through one of said apertures, and a second valve movable within the casing and adapted to coact with the first valve to also prevent the passage of fluid through said aperture, said valves being movable in arcs of the same circle and having their confronting edges formed with recesses adapted to receive the drilling cable when the valves are moved to restrain the flow of fluid through said aperture.

1,450,969. RECEIVING CIRCUITS FOR WEAK SIGNAL CURRENTS. JOHN R. CARSON, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed June 18, 1918. Serial No. 240,632. 7 Claims. (Cl. 178—63.)



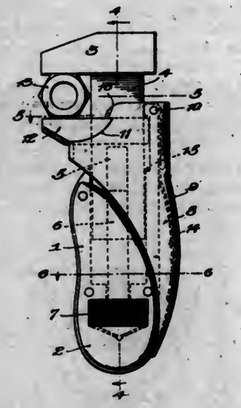
1. In a signal transmitting system a main line, an artificial line, means for correcting the form of received impulses, comprising a plurality of elements symmetrically connected between said main and artificial lines and an amplifier connected to said correcting means and having both its input and output circuits symmetrically arranged with respect to the opposite terminals of said correcting means.

1,450,970. TROLLEY HANGER. FRANK CHESZNEKY, Yukon, W. Va. Filed Dec. 8, 1922. Serial No. 605,577. 5 Claims. (Cl. 191—40.)



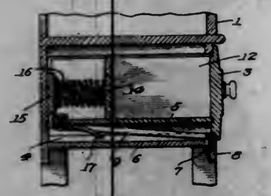
1. A trolley wire support comprising a pair of vertical plates adapted to grip the sides of the wire and formed with semi-cylindrical screw-threaded upward extensions jointly forming a stud, said extensions being transversely offset from their respective plates, one of them extending through an aperture in the other, abutting fulcrum ribs formed on adjacent faces of said extensions, and a member screwed on said extensions, and a device adapted to be pressed downwardly by said member to press said plates against the wire.

1,450,971. PLANER. ALFRED W. DRAEGEKE and ALBERT W. PARKES, Dundas, Ontario, Canada, assignors to Niles Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 2, 1921. Serial No. 441,846. 32 Claims. (Cl. 90—49.)



1. In a planer, the combination of a reciprocating table, a tool head adjacent the table, a feed screw for moving the head, mechanism including a shaft intermittently operated from the table reciprocating means for feeding the tool through the feed screw at each table reciprocation, and a separate power means for traversing the tool, the feeding and traversing mechanism being adapted to operate through the same means to move the tool.

1,450,972. OUTLET BOX. LEWIS H. CHURCH, Roselle, and GEORGE C. THOMAS, Jr., Elizabeth, N. J., assignors to The Thomas & Betts Co., Elizabeth, N. J., a Corporation of New Jersey. Filed Aug. 19, 1921. Serial No. 493,572. 11 Claims. (Cl. 247—25.)

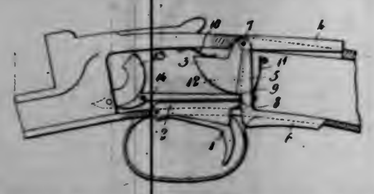


1. In an outlet box, the combination with an inlet opening, a seat member adjacent said opening, a clamp member adjacent said opening, and means for forcing said clamp member toward said seat member to clamp a cable therebetween, of a shoulder on the inner end of said seat member and a shoulder on the inner end of said clamping member, one of said shoulders being extended to laterally overlap the other of said shoulders, and said shoulders being adapted to cooperate to form a substantially continuous shoulder for any one of a number of different sized cables secured by said clamping means.

1,450,973. WRENCH. WILLIAM H. CLOPTON, Jr., Camp Meade, Md. Filed Sept. 18, 1919. Serial No. 324,500. 1 Claim. (Cl. 81—87.)

A wrench comprising a handle having therein a socket that opens through one end, a relatively fixed jaw having a shank or stem extending into said socket and adjustable longitudinally therein, a lever having spaced side members embracing the handle and pivotally connected thereto in rear of the stem of the fixed jaw, adjacent the outer end of the socket in the handle, the side members of the lever extending beyond the front edge of said stem and provided in their edges with jaw receiving seats, a movable jaw supported in said seats and embracing the stem of the fixed jaw, the movable jaw being situated entirely in planes on the opposite side of the plane of the pivot between the handle and lever from the fixed jaw, and a spring arranged between the handle and lever and acting to turn the latter to carry the movable jaw away from the fixed jaw.

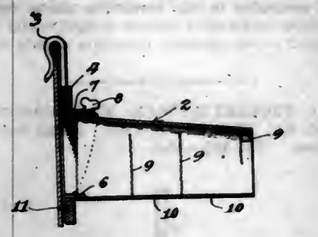
1,450,974. SLIDING DRAWER AND LOCKING MEANS THEREFOR. JOHN BOOTES, Tomahawk, Wis. Filed Apr. 12, 1922. Serial No. 552,003. 1 Claim. (Cl. 45—94.)



The combination with a cabinet or similar article of furniture having a drawer opening, a drawer slidable through the opening, a bottom below the drawer whose outer edge is spaced from the frame of the cabinet, said drawer divided into an outer and inner compartment, spring means in the cabinet contacting the drawer for influencing the same to open position, downwardly inclined spring bars secured to the bottom of the drawer in contact with the outer member of the frame of the cabinet for holding the drawer from opening, and said members designed to be moved to releasing position by the insertion of an instrument through the space between the bottom and frame of the cabinet to move the bars out of contact with the cabinet, and a downwardly inclined spring stop member secured to the bottom of the drawer for contacting the frame of the cabinet when the drawer has been moved a distance to uncover the outer compartment, and wherein a flat instrument must be inserted in the referred to space to influence the last mentioned stop to permit of the full opening of the drawer.

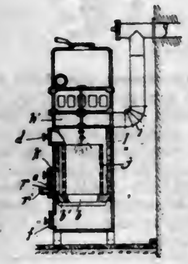
1,450,975. PROCESS FOR THE MANUFACTURE OF BORAX AND BORIC ACID. ANDREW KELLY, London, England, assignor to Borax Consolidated Limited, London, England. Filed Apr. 12, 1921. Serial No. 460,806. 4 Claims. (Cl. 23—13.)

1. A process for the manufacture of borax characterized by treating sodium pentaborate by adding thereto a sodium salt and ammonia.



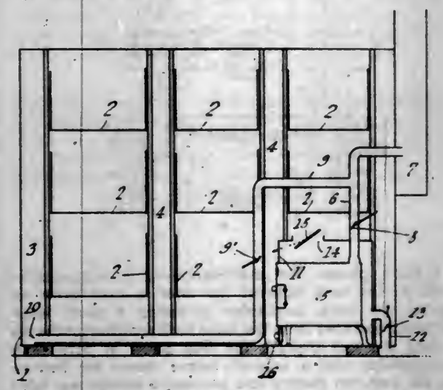
1,450,976. SAFETY DEVICE FOR PORTABLE FIREARMS. EDWARD LARSON, Lerdala, Sweden. Filed Feb. 10, 1921. Serial No. 443,989. 10 Claims. (Cl. 42—70.)

1. A safety device for guns, including a frame, a hammer, means for holding the hammer in the cocking position, a trigger, two members for locking said trigger independently of each other, said locking members each having a part projecting outside of the handle of the stock so that the locking members are released on seizing the stock at firing, and means for causing said locking members to be locked automatically in the released position after the discharge.



1,450,977. CLEAR-VISION RAIN GUARD FOR WINDSHIELDS. WILLIAM S. LUCKETT, Chestnut Hill, Pa. Filed Feb. 24, 1922. Serial No. 539,023. 3 Claims. (Cl. 20—40.5.)

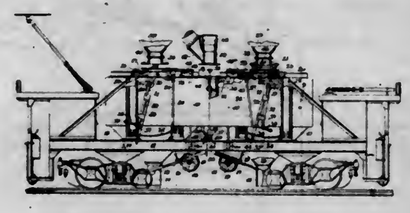
1. A clear vision rain guard including an attaching frame, a casing associated therewith, and wire mesh baffles projecting from the top and bottom of the casing and terminating short of that portion toward which each



extends and arranged so that one at least is always in the driver's line of vision.

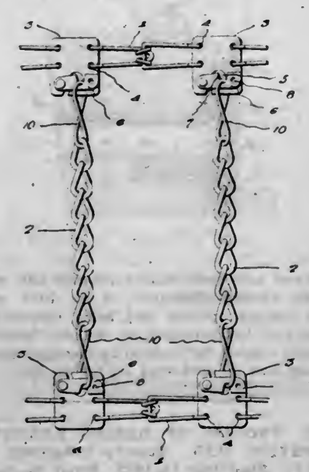
1,450,978. STOVE. KARL LÜSKE, Budapest, and ANDOR MOUSSONG and PAUL MOUSSONG, Toina-Hogyesz, Hungary. Filed Aug. 29, 1921. Serial No. 496,671. 3 Claims. (Cl. 126—77.)

1. In a down-draft stove, the combination of a substantially air-tight casing, an apertured fire pot, grate and ash-pit, an exit flue communicating with the said ash-pit, means to admit air to the bottom of the fuel shaft and means to keep free of fuel a part of the grate adjacent to the discharge end of the air admission, permitting part of the air to flow directly through the said free part of the grate and part of the air to pass through the fuel before reaching the grate, said free part of the grate being provided with openings for the passage of the air.



1,450,979. SWEET-POTATO-CURING APPARATUS. HENRY THOMAS LITTLETON, Marshall, Tex. Filed Apr. 15, 1920. Serial No. 374,121. 2 Claims. (Cl. 34—19.)

1. The combination with a structure having airtight walls, of means therein for curing sweet potatoes or the



like to retard bacterial action, said means including a heater for raising the temperature within the structure above the temperature of the external atmosphere, means for directing air from the external atmosphere into the structure to be heated by said heater and to rise within the structure, said heated air constituting means for absorbing moisture from the contents of the structure and conveying it toward the bottom of the structure during the cooling of the air, and means controlled by the heater for directing the moisture laden air out of the structure.

1,450,980. CALCINE CAR. ALEXANDER GRANT MCGREGOR, Warren, Ariz. Filed Sept. 17, 1921. Serial No. 501,383. 15 Claims. (Cl. 214—18.)

1. A calcine car provided with a receptacle having a closed top with a filling opening therein, and vertically extensible means mounted on said receptacle for forming a laterally closed conduit between said filling opening and a chute at the bottom of a storage bin.

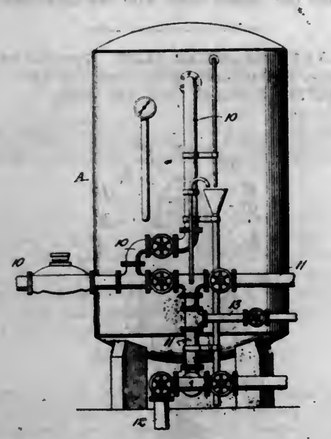
1,450,981. CHAIN. PATRICK MCLOUHLIN, Worcester, Mass. Filed Apr. 10, 1922. Serial No. 551,089. 2 Claims. (Cl. 152—14.)

1. An anti-skid device comprising a pair of holding chains, cross chains, means for detachably connecting the cross chains with the holding chains, such means comprising a plurality of plates forming portions of the holding chains and having hook-shaped slots therein for receiving the end links of the cross chains.

1,450,982. PROCESS FOR REMOVING DESTRUCTIVE SUBSTANCES FROM NONAQUEOUS MEDIA. MELVILLE J. MARSHALL and GEORGE S. SHAW, Shawinigan Falls, Canada, assignors to Shawinigan Laboratories, Limited, Montreal, Quebec, Canada, a Corporation. Filed Sept. 17, 1920. Serial No. 410,934. 15 Claims. (Cl. 260—106.)

12. In the manufacture of ethylidene diacetate, the addition to the reaction liquor comprising chiefly ethylidene diacetate, acetic acid and a mineral acid, of an acetate in quantity sufficient to precipitate all the mineral acid, and subsequently separating ethylidene diacetate from the mixture by distillation.

14. In the manufacture of esters by processes in which a mineral acid remains admixed with the ester and which will decompose the ester during purification, the step of adding a metal salt in quantity sufficient to precipitate all the mineral acid, the said salt being capable of combining with substantially no liberation of water and of producing a compound inactive and insoluble in the ester.

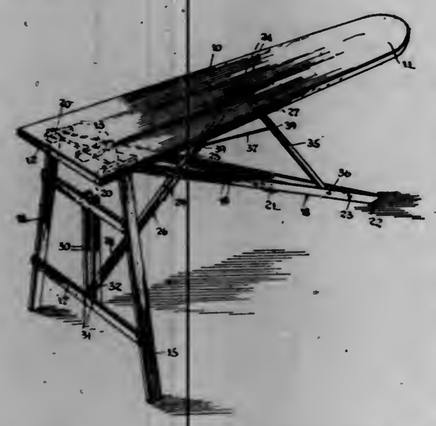


1,450,983. MANUFACTURE OF ALDEHYDE-AMMONIA. HOWARD W. MATHESON, Montreal, Quebec, Canada, assignor to Shawinigan Laboratories, Limited, Montreal, Quebec, Canada. Filed Oct. 18, 1919. Serial No. 331,657. 10 Claims. (Cl. 260—141.)

1. A process for the manufacture of aldehyde-ammonia comprising bringing together acetaldehyde vapor and gaseous ammonia.

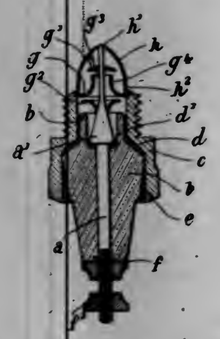
1,450,984. PROCESS OF MAKING CONDENSATION PRODUCTS OF ALIPHATIC ALDEHYDES. HOWARD W. MATHESON, Montreal, Quebec, Canada, assignor to Canadian Electro Products Company, Limited, Montreal, Quebec, Canada. Filed Feb. 7, 1921. Serial No. 443,230. 12 Claims. (Cl. 260—140.)

8. A process of making a condensation product of acetaldehyde, which comprises adding to the aldehyde approximately 0.5% by weight of caustic alkali in aqueous solution.



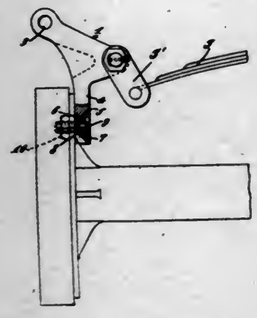
1,450,985. PROCESS OF REGENERATING BEDS OF EXCHANGE SILICATES. JOSEPH M. MAXWELL, Wichita, Kans. Filed June 27, 1922. Serial No. 571,329. 4 Claims. (Cl. 23—13.)

1. The process of regenerating after use a bed of water softening exchange silicates contained in a water softening apparatus, which comprises passing fresh water through said bed in an upward direction under pressure sufficient to cause a disturbance of the granular material, then draining the bed, then flooding the bed with a salt



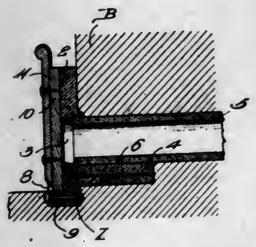
solution and subsequently draining off said solution to substantially the top of the bed, again flooding said bed with a corresponding salt solution and subsequently draining said solution off to substantially the top of the bed, and finally washing out the remaining contaminated salt solution with a supply of fresh water.

1,450,986. IRONING BOARD. ROBERT ANGUS MORRISON and FRANKLIN LAURENCE OSWALD, Portland, Oreg. Filed Mar. 10, 1922. Serial No. 542,793. 1 Claim. (Cl. 68—10.)



An ironing board or table comprising a board, a frame pivoted beneath the board at one end, a supporting member pivoted to the board at the said one end of the latter and adapted to extend forwardly and downwardly, a collapsible brace between the frame and the board in spaced relation to the pivotal connection of the frame and supporting member with the board, a brace pivotally connected to the supporting member near the lower end thereof and movably associated with the board adjacent the upper end of the collapsible brace, and a link connecting the last named brace with the collapsible brace.

1,450,987. SPARKING PLUG. EDOUARD PETHOUD, Lausanne, Switzerland. Filed Sept. 30, 1920. Serial No. 413,771. 5 Claims. (Cl. 123—169.)



1. A spark plug comprising a shell, an insulator within said shell and terminating short of the inner end thereof, a central electrode carried by said insulator projecting from said shell, a cap secured to the end of said shell having an aperture surrounding the central electrode and forming a spark gap therewith and provided with a lateral aperture above said spark gap cooperating with the latter to form a draft passage within said cap, and a baffle within said cap arranged in a plane intermediate said apertures to deflect the draft from said insulator.

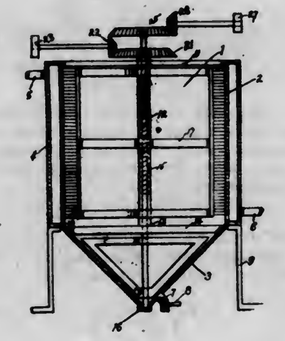
1,450,988. AUTOMOBILE PERCH. GEORGE C. ROEDL, Beaver Dam, Wis. Filed Sept. 14, 1922. Serial No. 588,208. 3 Claims. (Cl. 267—54.)

1. A perch of the class described in the form of a reversible casting having spring attaching means on opposite sides thereof at longitudinally spaced intervals.

1,450,989. WATER GATE. THOMAS SCHUSTER, Phoenix, Ariz. Filed Mar. 17, 1921. Serial No. 453,136. 5 Claims. (Cl. 61—28.)

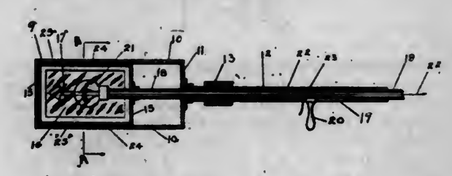
1. A water gate comprising a pre-cast unit embodying a plate for vertical disposition in the ditch, said plate having a central opening and being equipped with a horizontal shelf-like extension on one side forming a rest for the pipe, a guide for facilitating insertion thereof into the opening, and an anchoring leg for the unit.

1,450,990. PROCESS OF MAKING 2-NAPHTHOL 3-CARBOXYLIC ACID. EDMUND C. SHOREY, Washington, D. C. Filed Mar. 14, 1922. Serial No. 543,775. 5 Claims. (Cl. 260—110.)



3. In the process of making 2-naphthol 3-carboxylic acid by subjecting alkali metal beta naphtholate to the action of carbon dioxid under pressure and heating the reaction mixture, the step which consists in withdrawing gas carrying beta naphthol from said reaction mixture and supplying carbon dioxid gas free from beta naphthol to said reaction mixture during the heating operation.

1,450,991. PENCIL-ILLUMINATING DEVICE. HANS STECHER, Brooklyn, N. Y. Filed Mar. 17, 1922. Serial No. 544,437. 1 Claim. (Cl. 240—2.)

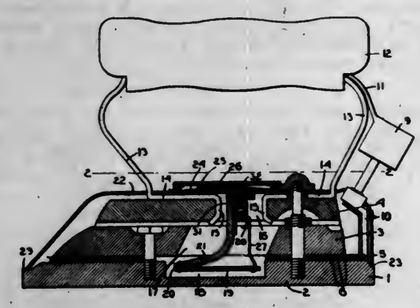


In an illuminating device, the combination with a writing implement, of a spring clip adjustably secured thereon, an arm extending outwardly from said clip, an illuminating bulb, a stem formed with said bulb, curved clip fingers formed with said arm, engaging said stem, a slide mounted on said arm, and a reflector carried by said slide whereby it may be focally adjustable to cause the light rays emanating from the bulb to be directed upon the path of the writing implement.

1,450,992. CRYSTALLIZER. TRUMAN E. STEVENS, Omaha, Nebr., assignor to Potash Reduction Company, Hoffland, Nebr., a Corporation of Nebraska. Filed July 7, 1921. Serial No. 483,006. 6 Claims. (Cl. 23—3.)

1. In a crystallizer, a tank having a jacketed wall provided with a crystallizing surface, means for passing a cooling medium through said jacketed wall and a revolving brush having the bristles thereof engaging said crystallizing surface to remove crystals therefrom.

1,450,993. VEHICLE SIGNAL. HENRY E. THAYER, Portland, Oreg. Filed Jan. 25, 1922. Serial No. 531,659. 4 Claims. (Cl. 116—50.)



1. In a vehicle signal: a hollow casing rotatably mounted and bearing signal devices oppositely disposed thereon; a signal bearing member longitudinally slidably mounted within said casing and adapted to display signals when protruded from said casing; means to rotate said casing; and means to operate said signal bearing member.

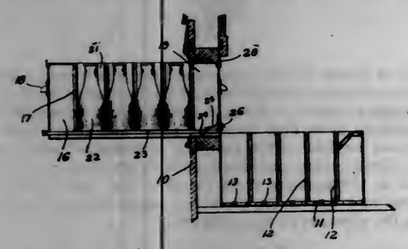
1,450,994. VISIBLE DISPLAY ATTACHMENT FOR MEASURING PUMPS. WILLIAM S. TOWNSEND and FRANK E. DOUGLASS, Rochester, Pa. Filed June 12, 1922. Serial No. 567,836. 3 Claims. (Cl. 221—102.)

1. A visible display attachment for pumps comprising a visible container having an inlet for connecting it with the discharge side of a pump, a closable vent to permit the container to be filed from the pump and then closed to prevent outflow of the contents, a discharge nozzle, and a normally closed outwardly opening discharge valve subject to the pressure from the inlet and past which the liquid may flow to the discharge nozzle without discharging the contents of the container.

1,450,995. FLATIRON. WILFRED J. TURENNE, Danvers, Mass. Filed Dec. 17, 1919. Serial No. 345,479. 5 Claims. (Cl. 68—26.)

1. A flat iron comprising a base section having a central recess, a superimposed section, a heating unit between said base and superimposed section surrounding said recess, a thermostatic instrumentality and means for supporting the same in said recess below the plane of said heating unit and temperature indicating means operable by said thermostatic instrumentality.

1,450,996. TIME INDICATOR. ANDRÉ VARAUD, Geneva, Switzerland, assignor to Societe Anonyme d'Horlogerie et Bijouterie de Geneve, Geneva, Switzerland. Filed Aug. 11, 1920. Serial No. 402,920. 12 Claims. (Cl. 58—128.)

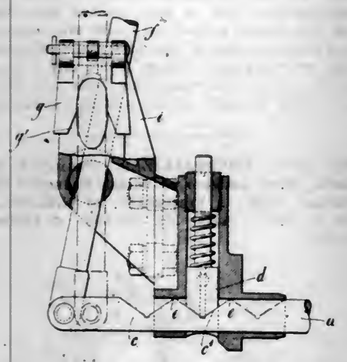


1. In a time indicator and in combination with a casing and a motor mechanism, a fixed dial having an opening therein, a movable dial having chronometric indications thereon visible successively through the opening in

the fixed dial, a sector operated by the said motor mechanism and adapted to periodically operate the said movable dial by imparting a partial revolution thereto to bring the

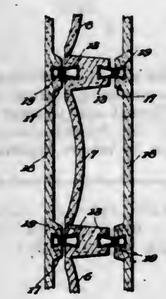
chronometric indication on the movable dial successively in position to be visible through the opening in the fixed dial.

1,450,997. RECEPTACLE FOR HOLDING MILK BOTTLES. FRANK VESCUSO, Providence, R. I. Filed Aug. 27, 1921. Serial No. 495,858. 5 Claims. (Cl. 232—41.)



1. A compound receptacle comprising upper and lower sections of substantially the same capacity, the upper section being movable relatively to the lower section and both having a plurality of compartments registering with each other when the upper section is in normal position, and a false bottom member in the upper section adapted to be withdrawn to drop the contents of the upper into the lower section when desired.

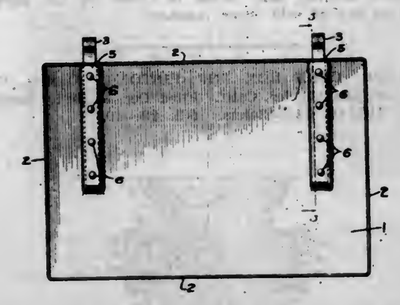
1,450,998. HIGHWAY-CROSSING SIGNAL. EUGENE W. VOGEL, Oak Park, Ill., assignor to Chicago Railway Signal and Supply Company, Carpentersville, Ill., a Corporation of Illinois. Filed Mar. 3, 1920. Serial No. 362,974. 14 Claims. (Cl. 177—320.)



6. A railway crossing signal comprising a movable mounted signal, a concealing cover, means for moving said signal positively back and forth in the clear with respect to the cover, other means for moving said signal positively beyond the limit of its movement by said first named moving means and into position behind said cover, and electrically operated means for controlling the operation of said several signal moving means for causing them to act alternatively.

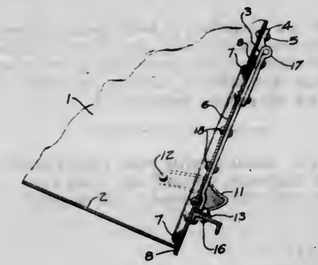
1,450,999. VARIABLE-SPEED GEARING FOR MOTOR ROAD AND OTHER VEHICLES. EDWARD JOHN WADE, St. John's Wood, and GEORGE WILLIAM JACOBS, Purley, London, England. Filed Mar. 25, 1922. Serial No. 546,853. 5 Claims. (Cl. 24—39.)

1. The combination in a motor vehicle having a gear box, of an auxiliary gear box through which driving motion is communicated, and means cooperating with said auxiliary gear box to render a neutral position of the gears thereof unstable.



1,451,000. CONCRETE STRUCTURE. JOSEPH AEGIDIUS WHITE, Berkeley, Calif. Filed May 29, 1920. Serial No. 385,260. 3 Claims. (Cl. 72—16.)

1. A building construction of the character described comprising building slabs consisting of spaced beams and webbing extending between said beams and homogeneous therewith, a finishing slab for each of said building slabs, a metallic sleeper for the building slab and the finishing slab, each formed of a single piece of metal bent to trapezoidal form, and means for cooperating with the metallic sleepers for securing the finishing to the building slab.



1,451,001. CAR DOOR. WILLIAM E. WINE, Toledo, Ohio. Filed Sept. 2, 1922. Serial No. 585,967. 2 Claims. (Cl. 105—280.)

1. A door for the discharge opening of a railway car embodying a plate of sheet metal provided with a marginal flange, a troughlike corrugation pressed in the inner or lading face of the door, the same extending at least

partly across the door and across the said marginal flange, and a hinge member disposed within the trough of the said corrugation.

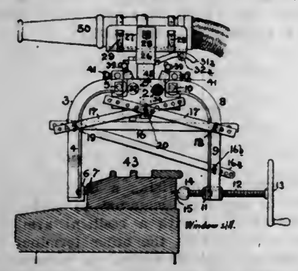
1,451,002. CAR DOOR. WILLIAM E. WINE, Toledo, Ohio. Filed Sept. 2, 1922. Serial No. 585,968. 5 Claims. (Cl. 105—280.)

1. A door for the discharge opening of a railway car, the same being formed of a plate of metal conforming in general shape to the outline of the discharge opening, a corrugation formed around the periphery of the door plate, the same following the lines of the discharge opening, the general plane of the door plate being arranged when closed, to coincide substantially with the face of the discharge opening, the corrugated portion of the same extending inside of the plane defining the face of the discharge opening in a manner to constitute therewith a sealing means.

1,451,003. STORAGE BATTERY. WILLIAM H. WOOD, South Euclid, Ohio. Filed Mar. 28, 1921. Serial No. 456,157. 6 Claims. (Cl. 204—29.)

1. A separator element for storage batteries consisting of a sheet of porous wood impregnated with a water soluble salt of a metal which is at least as electropositive as magnesium.

1,451,004. METHOD OF SEPARATING ZIRCON FROM UNDESIRED SUBSTANCES. LOUIS E. BARTON and CHARLES J. KINZIE, Niagara Falls, N. Y., assignors to The Titanium Alloy Manufacturing Company, Inc., Niagara Falls, N. Y., a Corporation of Maine. Filed July 16, 1921. Serial No. 485,404. 6 Claims. (Cl. 252.)

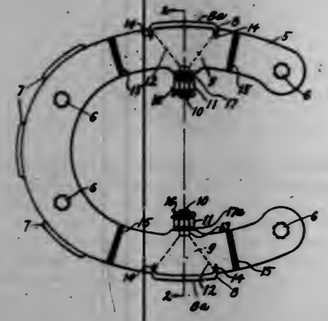


1. The method of treating ores containing zircon and therewith entangled undesired substances which comprises commingling therewith an alkali metal bisulphate, heating the charge, lixiviating the resulting product, and separating its liquids from its zircon residuum.

1,451,005. ARTIFICIAL TEETH. NILSEN BERCKA, Buenos Aires, Argentina. Filed Sept. 24, 1921. Serial No. 503,042. 1 Claim. (Cl. 32—9.)

Tooth attaching means comprising in combination with a fixed plate and one or more artificial teeth, said teeth having flat rear surfaces containing substantially central recesses extending downward from their upper ends to points uniform with the incisal edge of all of the teeth, the mentioned slots being slightly inclined with respect to the rear surfaces of the teeth, the walls of the slots being thicker at the bottom than at the top, ribs extending outward from said plates, beads on said ribs adapted to engage in the slots of the teeth, and serrations on said beads adapted to contain cement to hold said teeth assembled thereon.

1,451,006. ADJUSTABLE FIRE-NOZZLE SUPPORT. JACOB B. BLAW, Atlantic City, N. J. Filed Feb. 18, 1922. Serial No. 537,456. 8 Claims. (Cl. 248—28.)



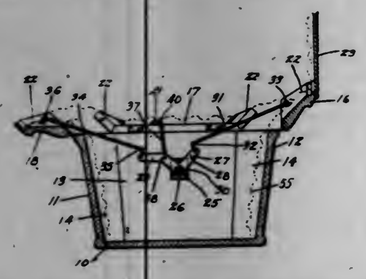
1. In a device of the character stated, a body part having adjustable clamping means whereby it may be detachably clamped in position upon a window sill, door frame, or other object, combined with a plurality of adjustable nozzle supporting means adapted to be used simultaneously, said supporting means being separately pivoted to the body part with capacity for being directed at different angles, whereby separate nozzles may be adjusted to concentrate the streams upon one spot or upon different portions of the conflagration.

5. In a device of the character stated, a body part provided with adjustable clamping means whereby it may be detachably clamped to a window sill, post, door frame or other object, combined with a nozzle support pivoted to the body whereby it may be oscillated in one plane, said support provided with a clamp for positively holding the nozzle, said clamp pivoted to the support for oscillation thereon in a plane at right angles to the plane of oscillation of the support, and a supporting rod adjustably fitting through the body and clamped thereto for sustaining the weight of the body when it overhangs as when being clamped to an upright post or door frame.

1,451,007. HORSESHOE. GEORGE M. BOGIE and ARTHUR SMITHSON, Glenwood, Minn. Filed Mar. 10, 1921. Serial No. 451,273. 3 Claims. (Cl. 168—19.)

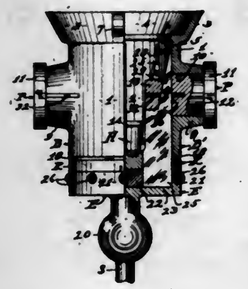
1. A nailless horseshoe comprising an integral rigid body piece with horizontally directed apertures, one in

each side, slidable members one in each aperture and having each at the inner end a threaded nut and the outer end provided with an upwardly directed flat finger adapted to engage the hoof, said apertures being wider



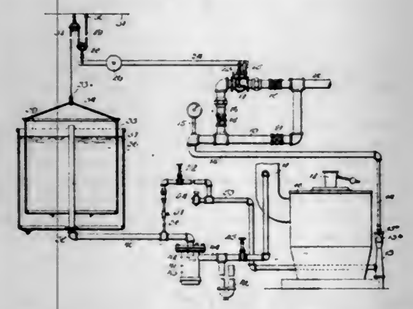
in horizontal direction than in vertical direction toward the outer edge of the shoe and the slidable part of each member placed therein being broadened so as to be strong near the finger, but reduced in width toward the threaded portion.

1,451,008. ELECTRIC SWITCH. WILLIAM BROAD, Beaver Falls, Pa. Filed Mar. 26, 1921. Serial No. 455,722. 1 Claim. (Cl. 200—165.)



An electric switch, comprising a base plate of insulation, a pair of terminals mounted on said plate, one terminal being provided with a resilient arm normally urged toward contact with the other terminal to close the switch, and a finger of insulating material pivoted to said base plate and movable to a position between said terminals to open the switch, said finger being provided with a lug movable over the face of said arm to positively hold the arm in circuit closing position when said finger is moved from its position between said terminals.

1,451,009. CASKET. FRED H. CHARLESWORTH, St. Paul, Minn. Filed Mar. 16, 1922. Serial No. 544,294. 18 Claims. (Cl. 27—14.)

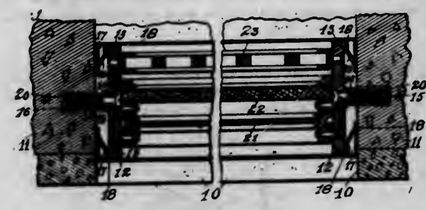


1. A closure for a casket including a plurality of cover members, means adapted to be concealed beneath the upholstery of the casket, said means comprising a member pivotally connected to the wall of the casket and a series of arms connected to said member on one end and the outer ends being connected to said cover members whereby said casket is closed by the movement of one of said cover members.

1,451,010. CORE BOX FOR PISTONS. DANIEL W. CLARK, Los Angeles, Calif. Filed Dec. 3, 1921. Serial No. 519,760. 14 Claims. (Cl. 22—10.)

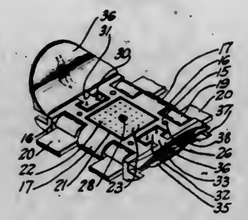
1. A core box comprising a body having diametrically opposite apertures in the wall thereof, plugs detachably held in said apertures, and plates held in the inner ends of said plugs and slidably movable therewith through said body, for the purpose described.

1,451,011. REGULATOR FOR GAS PRODUCERS. HENRY A. DREFFEIN, Chicago, Ill. Filed June 1, 1920. Serial No. 385,479. 8 Claims. (Cl. 48—87.)



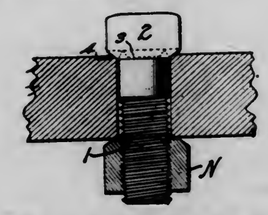
8. In combination with a producer, a gas main leading therefrom, a steam pipe leading thereto, a regulating valve associated with said steam pipe, a gasometer, means operatively interposed between said gasometer and said regulating valve, a fluid trap, a duct leading thereto from said gas main, a second duct leading thereto from said gasometer, and means to supply non-combustible fluid under pressure to said second duct, whereby the flow of gas from said main to said gasometer will be prevented.

1,451,012. METALLIC FRAME FOR WINDOWS, DOORS, ETC. EDWARD H. ELLISON, Jamestown, N. Y. Filed Jan. 29, 1921. Serial No. 440,924. 3 Claims. (Cl. 189—75.)



1. A door or window frame having lengthwise shoulders on the outer sides thereof near the edges of the frame,

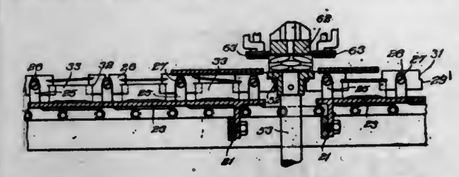
a closure strip for the space between said frame and the surrounding wall, and a series of spaced spring lugs on



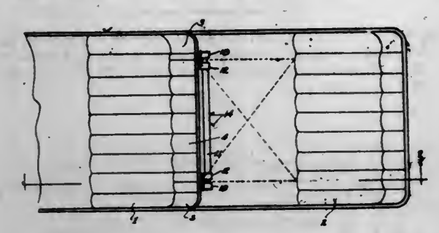
said closure strip adapted to spring into holding engagement with said shoulders when pressed into said space between said frame and wall.

1,451,013. ARTICULATED TIRE GUARD. HENRY S. ESCH, New York, N. Y. Filed July 7, 1920. Serial No. 394,488. 8 Claims. (Cl. 152—16.)

8. A tire guard comprising a plurality of hollow frames, pairs of articulating links engaging adjacent frames, lateral wings pivoted in the sides of the frames, perforated lugs on the exterior of said wings, inverted pans disposed in central openings in said frames, corrugations on the outer surface of said pans adapted to impinge on the tire, resilient blocks in said pans, spurred plate, removably engaged on said frames over said block, and means adapted to pass through the perforations in said lugs whereby the guards are constrained to the tire.



1,451,014. NUT AND BOLT LOCK. GEORGE A. FETHER, El Dorado, Pa. Filed Sept. 3, 1919. Serial No. 321,374. 2 Claims. (Cl. 151—19.)



1. A lock nut for threaded bolts having a bearing face provided with a plurality of stepped bearing projections for progressively engaging directly with the part receiving the bolt.

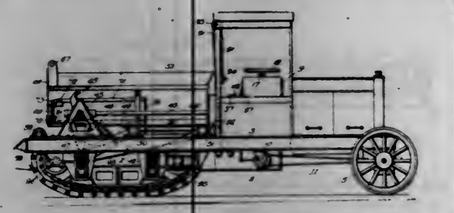
1,451,015. AUTOMATIC CHAIN-FEED ATTACHMENT. PAUL W. FLEISCHER, Weehawken Heights, N. J., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 31, 1919. Serial No. 348,642. 21 Claims. (Cl. 113—14.)

1. In a machine for closing filled cans, the combination of seaming mechanism and endless chain conveyers movable therepast, and having speed means which support the cans and ends in spaced relation, said conveyers having means for preventing the ends rotating with respect to the bodies.

1,451,016. CONVERTIBLE VEHICLE BODY. WILLIAM C. FOWLER, Birmingham, Ala. Filed May 24, 1922. Serial No. 563,391. 2 Claims. (Cl. 155—7.)

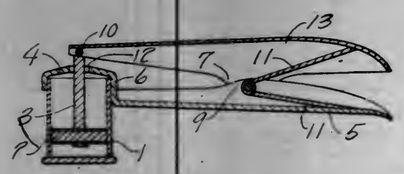
1. A vehicle body having a seat with a back comprising two rigid end sections and a hinged rearwardly folding intermediate section, a tubular robe rail on the back of said folding section, latch keepers on said end sections, and latches concealed in the robe rail and projecting from the ends thereof to engage said keepers.

1,451,017. LIGHT SHIELD AND REFLECTING DEVICE. STERLING B. FRANKLIN and GAVIN S. YOUNKIN, Arkansas City, Kans. Filed Aug. 15, 1921. Serial No. 492,414. 1 Claim. (Cl. 240—48.2.)



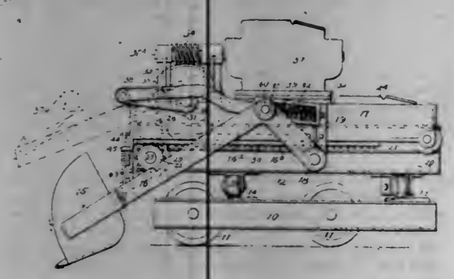
In a device of the kind described, the combination with the usual parabolic reflector, a lamp therein, and a ring releasably engaging the reflector, of a second reflector located within the first and having a concave reflecting surface arranged to reflect light from the lamp against the reflecting surface of the first reflector, which is below the lamp, and having its rear edge fitted to the reflecting surface of the first reflector, the second reflector extending to the horizontal plane of the top of the lamp, and a supporting plate secured to the second reflector and arranged to hold the rear edge of the latter against the first reflector and releasably held by the ring between the latter and the first reflector, substantially as set forth.

1,451,018. MOTOR-TRUCK DUMPING VEHICLE. JAMES C. FRENCH, Chicago, Ill., assignor, by mesne assignments, to F. C. Austin Machinery Company, a Corporation of Illinois. Original application filed Mar. 13, 1918, Serial No. 222,242. Divided and this application filed Oct. 7, 1918. Serial No. 257,132. 16 Claims. (Cl. 298—21.)



1. A motoor truck dumping vehicle comprising a chassis, a load-carrier, mechanism on said chassis to raise the load-carrier and shift it backward over the rear end of the chassis, means on said mechanism to provide a

transverse axis of tilting motion for said load-carrier, and devices supported by said mechanism to prevent the load

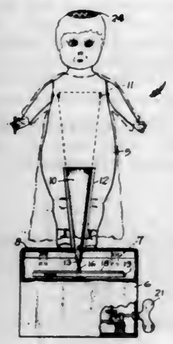


carrier from tilting while rising and for causing the load-carrier to tilt into a dumping position after being elevated by said mechanism.

1,451,019. VACUUM MASSAGER. HENRY P. GRABER, St. Louis, Mo., assignor to Adam Fisher Mfg. Co., St. Louis, Mo. Filed Oct. 29, 1921. Serial No. 511,385. 2 Claims. (Cl. 128—297.)

1. A vacuum massager, comprising the combination of a suction cylinder and piston and connecting rod therein; an integrally formed cylinder cap and lower handle stamped and formed from a single piece of sheet metal, the said cap having an aperture to accommodate the piston rod, and being adapted to frictionally engage the cylinder, and the handle being cylindrical in form next the cap and extended in a form U shaped in cross section; an upper handle likewise U-shaped in cross section, said upper handle being pivoted to the extended end of the piston connecting rod, and medially to the lower handle; and a spring set between the handles as means for normally holding the piston depressed in the cylinder.

1,451,020. LOADING MACHINE. ROBERT P. GREENLEAF, Cleveland, Ohio, assignor to Frank Billings, Cleveland, Ohio. Filed July 17, 1919. Serial No. 311,592. Renewed Sept. 6, 1921. Serial No. 498,935. 11 Claims. (Cl. 214—134.)

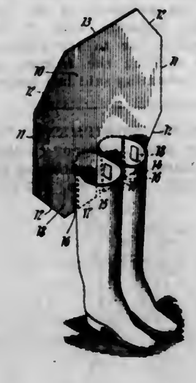


1. In a loading machine, a frame, a shovel actuating member supported by the frame and movable forwardly and rearwardly, a shovel adapted to be filled at the front of the machine and to be swung upwardly and rearwardly over the same to dumping position, an arm connecting the shovel to said member, a link connected to said arm for swinging the same relative to said member, and means for actuating the link.

1,451,021. WATER DRAIN FOR WINDOWS. JOHN HANSON, Alderson, Alberta, Canada. Filed Apr. 25, 1921. Serial No. 464,482. 3 Claims. (Cl. 20—70.)

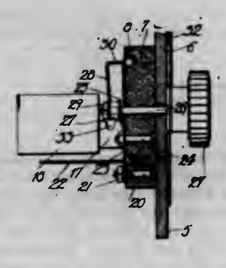
1. The combination with a window sash of a water tank arranged thereon along the inner side of the window glass so as to receive water running down therefrom, said tank having an outlet extending downward and outward through the lower rail of the sash, a valve normally closing the inner end of said outlet and a float in the tank operatively connected with the valve to open it automatically when the water reaches a predetermined height in the tank and close it when the water has escaped, and a valve operated by the said water valve for closing out chill and frost from the outer end of the outlet.

1,451,022. PHONOGRAPH DOLL. SAMUEL HASKELL, Brooklyn, N. Y. Filed Oct. 23, 1922. Serial No. 596,364. 8 Claims. (Cl. 274—2.)



1. In a device of the character described, a cabinet containing a sound producing mechanism, a support associated with said cabinet having a cut out portion, and a sound projecting member extending from within said cabinet and pivotally mounted in said support so as to swing back and forth through its cut out portion.

1,451,023. DISPLAY DEVICE. WILLIAM L. HOPKINS, Roslyn, N. Y., assignor to American Lithographic Company, New York, N. Y., a Corporation of New York. Filed Mar. 17, 1922. Serial No. 544,441. 4 Claims. (Cl. 40—2.)



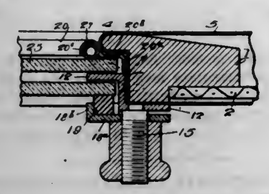
1. In a display device for top-boots or the like the combination of a member of sheet material having a

plurality of down-reaching feet arranged in a lateral row, the opposite end feet of said row being adapted for engagement with the opposite outfacing walls respectively of the boot-legs, the intermediate feet being

adapted for entry within said boot-legs respectively, the distance between said opposite end feet being less than the greatest transverse width of the legs engaged thereby and the width of said intermediate feet being less respectively than the greatest width of the leg engaged thereby.

1,451,024. COMBINED RHEOSTAT AND SOCKET. CONRAD KLEMMER and WALTER P. KOECHEL, Bogota, N. J.; said Koechel assignor to said Klemmer. Filed Apr. 4, 1922. Serial No. 549,601. 5 Claims. (Cl. 219—48.)

3. A device of the class described comprising an insulated rheostat base, a rheostat, a vacuum bulb mounting having a lateral extension rigidly secured in the body of the base and disposed so that the contact points of the vacuum bulb will make proper contact with the contact arms of the rheostat, and means for securing the base to a panel.

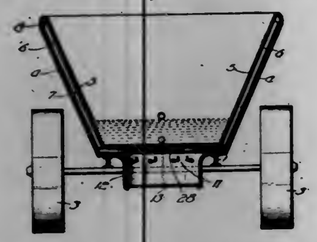


1,451,025. VULCANIZING VALVE. HENRY PHILLIP KRAFT, Ridgewood, N. J. Filed Sept. 20, 1918. Serial No. 254,903. 8 Claims. (Cl. 251—8.)

8. A vulcanizing valve or the like, comprising a valve seat, a hollow valve stem, and a conical valve member having a swivelled connection with the stem so that the valve member is adapted for only relative rotational

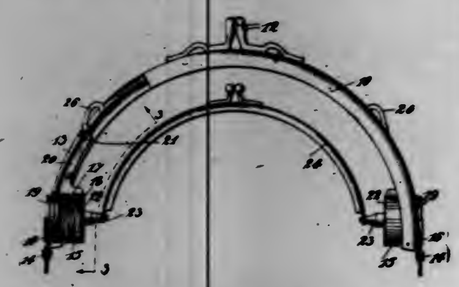
movement with respect thereto, the stem having lateral openings in its walls communicating with its interior to provide for the passage of a fluid through the interior.

1,451,026. CARRIAGE CURTAIN WINDOW FRAME. LAWRENCE C. NELSON, Chicago, Ill., assignor to Stewart Manufacturing Corporation, Chicago, Ill., a Corporation of Delaware. Filed Sept. 9, 1922. Serial No. 587,138. 6 Claims. (Cl. 296—145.)



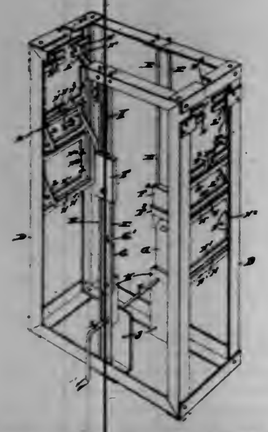
2. In a carriage window frame in combination with a rigid frame member encompassing the window opening; channel guideways for a lower sliding inner side glass extending for guiding the sash both at the lower and at the upper part of the opening; a seating member for a fixed upper outer side glass mounted adjacent to and outward from the zone of the channel guideways, said seating member having an inwardly hollow bead encompassing the frame opening and a cushion member engaged in the hollow of of said bead for seating on the outer face of the upper glass, said cushion having a wing occupying said seating member from the lower edge of the outer sash downwardly affording a lower stop for the upper glass.

1,451,027. SNOW-MELTING APPARATUS. HALFTEN EUGENE OLSEN, Chicago, Ill., assignor, by mesne assignments, to F. C. Austin Machinery Company, a Corporation of Illinois. Filed July 15, 1918. Serial No. 244,999. 8 Claims. (Cl. 126—343.5.)



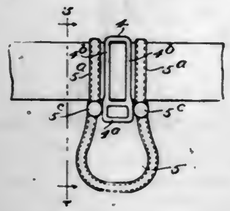
1. In a portable snow-melting apparatus, the combination of a vehicle, an open top receptacle having watertight and continuous bottom and sides mounted on said vehicle to receive the snow, instrumentalities for heating the bottom and sides of said receptacle, and means for drawing off the water resulting from the melting of the

snow, said receptacle having a combustion chamber at the bottom thereof, and having double walls forming



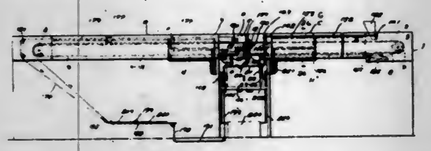
separate spaces which communicate with said combustion chamber, the upper ends of said spaces communicating with each other to provide free circulation of the heat.

1,451,028. BAG FRAME. ROBERT L. PRAHAR, Brooklyn, N. Y. Filed Dec. 30, 1921. Serial No. 525,923. 12 Claims. (Cl. 150—29.)



1. A bag frame member including a pair of jaw members and an intermediate member spacing them apart at their lower ends but permitting their upper ends to lie closely adjacent to each other, whereby the jaw members lie in converging planes when in closed position.

1,451,029. PHOTOGRAPH-DISPLAY CABINET. HARRY ROTH, Detroit, Mich. Filed Feb. 27, 1922. Serial No. 539,440. 7 Claims. (Cl. 40—36.)

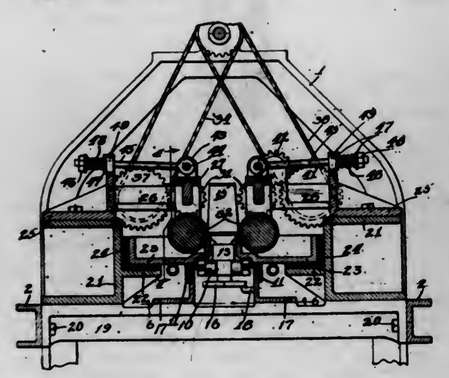


1. In a device of the character described, a cabinet provided with windows in its opposing walls, a plurality of movable frames adapted for the display of photographs or the like placed back to back in said frames, means for guiding said frames vertically and transversely within the cabinet, whereby they may be delivered to the respective windows in the opposing walls of the cabinet, means adapted to urge the passage of the frames from one wall to the opposite wall of the cabinet, means adapted to remove the frame adjacent the window in one wall of the cabinet while the movement of the frame adjacent the window in the opposing wall of the cabinet is momentarily suspended due to the alternate operation of the means for shifting the frames, and manually operated means for actuating said last named means.

1,451,030. MILITARY EQUIPMENT. CLARENCE E. SMITH, Worcester, Mass., assignor to Mills Belt Company, Worcester, Mass., a Corporation of Massachusetts. Filed July 26, 1921. Serial No. 487,772. 2 Claims. (Cl. 224—3.)

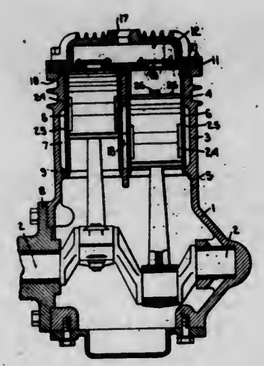
2. Military equipment comprising, in combination with a belt, an attachment supporting slide mounted thereon, and a slide-safe or shield provided with a pair of attaching straps which embrace the belt at opposite sides laterally of the slide, and detachable fastenings securing the said straps around the belt and adapted to permit the slide-safe to be removed without removing the slide.

1,451,031. CONFECTION-MAKING APPARATUS. CLIFFORD P. SPECK, Oakland, Calif. Filed May 17, 1920. Serial No. 381,849. 25 Claims. (Cl. 107—1.)



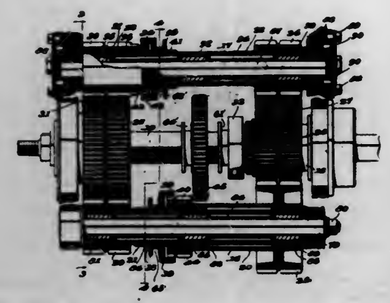
1. A confection making apparatus including a movable mold, means for supplying the same with a charge of flowing shell forming material less than the capacity of the mold upwardly through the opening in the base thereof, means receivable in and movable with the mold for a portion of its travel for forcibly distributing the supplied charge over the inner wall of the mold to form a hollow shell thereof within the mold, means for filling the shell, means for closing the opening therein, and means for receiving the confection as discharged from the mold.

19. A confection making apparatus comprising a vessel for containing confection forming material in a plastic condition, a mold, a conveyer for mounting and moving the mold, means for continuously removing confection forming material from the vessel, a plurality of receptacles into which said material is delivered, and within the path of movement of the mold, means for conducting the overflow material from said receptacles back to said vessel, and means associated with each of said receptacles for discharging a quantity of confection forming material into said mold.



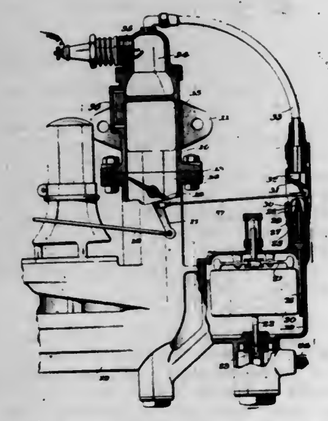
24. A confection making apparatus consisting of an endless conveyer, a mold bar carried thereby and provided with an opening therethrough, a mold positioned in said opening and open at its opposite ends and consisting of a plurality of separable sections adapted to contact at adjacent edges, a closure plate movable to and from one end of said mold for normally closing the same, a member associated with said mold sections for operating the same to open and close the mold, means for filling the mold with plastic confection forming material, and means in the path of movement of the conveyer for engaging said mold operating member to actuate the same to separate the mold sections to permit the discharge of the molded confection therefrom.

1,451,032. SOLDERING MACHINE. CHARLES STECHER, Chicago, Ill. Filed Oct. 2, 1919. Serial No. 327,873. 1 Claim. (Cl. 113—78.)



In a can soldering machine, a soldering mechanism comprising a solder tank, a support therefor, a bracket pivotally supported on said support above said tank, a soldering roller journalled in said bracket, means for rotating the roller, a rod pivotally connected to said bracket and slidable through said support, and a spring engaged around said rod for swinging said bracket to resiliently hold the roller in a soldering position against a can to be soldered.

1,451,033. COMPRESSOR. SAMUEL H. TODD, Detroit, Mich. Filed June 28, 1921. Serial No. 481,011. 3 Claims. (Cl. 230—34.)



1. In a compressor of the reciprocating piston type, in combination, a cylinder having a head formed with an axial outlet port, a valve covering the upper end of said port, a piston having a flat end wall and ports traversing the same at one or more points between its center and circumference, a flat circular valve disc mounted upon such end wall and extending substantially to the edges of the same so as to fill the cylinder completely upon the end of the compression stroke, and a screw mounted in the center of the piston to hold the disc in place, said screw having a head which enters said outlet port at the end of such compression stroke.

1,451,034. MOTOR VEHICLE. JESSE G. VINCENT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed May 27, 1921. Serial No. 473,095. 7 Claims. (Cl. 74—57.)

1. In a transmission mechanism, the combination of three shafts triangularly arranged, each of said shafts comprising two coaxial relatively rotatable members, a positive clutch device for each of said shafts so that the members of said shafts may be made to rotate together or independently, a sprocket on each member of said shafts, chains for said sprockets, a gear rigidly secured to a member of one shaft, and a sliding gear keyed to a member of another shaft and adapted to be mover into mesh with the first said gear.

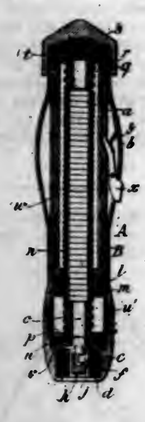
1,451,035. HYDROCARBON MOTOR. LIONEL M. WOOLSON, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 2, 1919. Serial No. 328,029. 10 Claims. (Cl. 123—122.)

1. The combination with the mixture conduit of a hydrocarbon motor, of a main carburetor for supplying mix-

ture thereto, an independent secondary carburetor connected to said conduit, means for igniting the mixture from said secondary carburetor before it reaches said conduit to thereby heat the main carburetor mixture in said mixture conduit, and interconnected throttle valves between the carburetors and said mixture conduit.

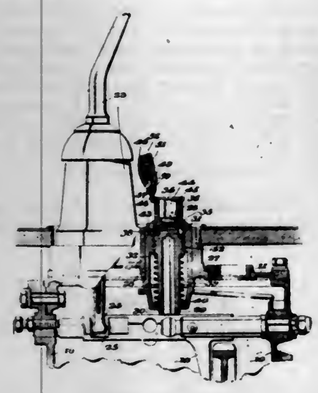
1,451,036. COMBINATION LOCK. WILLIAM T. BENHAM, Norwood, Ohio, assignor to The Mosler Lock Company, Covington, Ky., a Corporation of Ohio. Filed July 11, 1921. Serial No. 483,675. 5 Claims. (Cl. 70—53.)

1. In a combination lock of the character described, in combination, an arbor, a rotatable tumbler, a pawl engaging said tumbler and adjustable in fixed position thereon for rotation therewith, a second pawl journaled directly on said arbor for rotation substantially concentrically with respect to said pawl and tumbler, a lost motion connection between said two pawls, and means adapted to engage and to rotate said second pawl to effect rotation of said tumbler.



1,451,037. VALVE. WILLIAM N. BLANCHARD, East St. Louis, Ill. Filed Jan. 8, 1921. Serial No. 436,003. 1 Claim. (Cl. 284—18.)

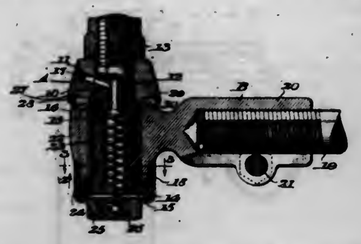
A valve comprising a valve-casing consisting of a pipe nipple reamed on its inner surface and countersunk at one end to form a valve-seat, said casing being threaded at each end and provided with coupling members, a valve slidably mounted within said casing comprising an upset closed head and an integral valve stem, said valve stem being provided with a longitudinal bore throughout its greater length and terminating in a lateral bore, means for opening said valve comprising a brass nipple insertable in said valve casing and an external coupling member for operating said brass nipple to open the valve when the coupling is made.



1,451,038. PRESSURE GAUGE. ROBERT FARIES, Williamsport, Pa., assignor to A. Schrader's Son, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 11, 1910. Serial No. 543,222. 36 Claims. (Cl. 73—111.)

1. A portable pressure gauge for pneumatic tires comprising a press-on seat for engaging a tire valve, a tire valve depressor adapted to unseat the tire valve and permit air from the tire to enter the gauge, means for indicating the pressure, and means for retaining said indicating means in indicating position after the gauge is removed from the tire.

26. A pressure gauge comprising a casing, a portion adapted to make a tight joint with a tire valve or the like, a tire valve depressor, a pressure responsive member, and an indicating sleeve telescoping with said casing.

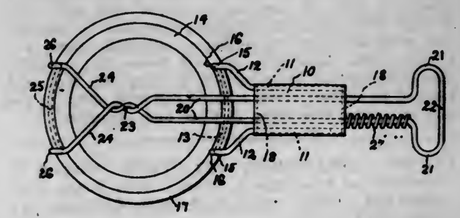


1,451,039. LOCK FOR MOTOR VEHICLES. ARA GILSON, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed June 1, 1920. Serial No. 385,465. 5 Claims. (Cl. 70—126.)

3. In a gear shifting mechanism, the combination with a plurality of longitudinally shiftable rods, of locking means therefor, comprising a two-part sleeve, a locking bolt mounted in the sleeve, means for locking and unlocking said bolt, and means securing the parts of the sleeve together and to the casing.

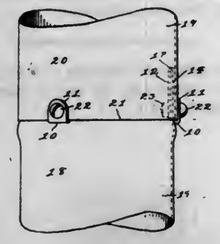
1,451,040. STEERING-ROD CONNECTION. EDWARD J. GULICK, Elkhart, Ind., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 30, 1917. Serial No. 204,662. 7 Claims. (Cl. 287—93.)

1. In a steering connection, in combination, a steering member, a laterally extending stud thereon, a second steering member having an eye surrounding and forming a bearing for said stud, said stud having means



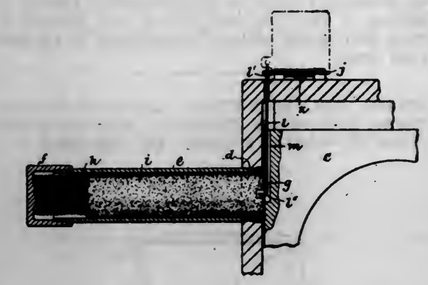
for distributing lubricant to said eye, a spring tending to separate the members, means limiting such separation, and packing between said members.

1,451,041. METHOD OF PRODUCING DISTINCTIVE ARTICLES. BURDON P. HYDE, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Dec. 15, 1919. Serial No. 344,990. 8 Claims. (Cl. 29—189.)



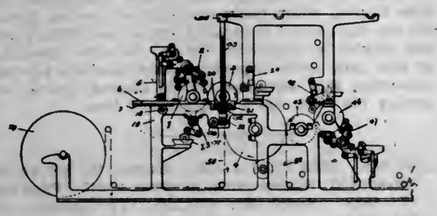
1. The herein described method of producing a distinctive article which consists in forming grooves in a block of metal, soldering wires in the grooves, rolling down the assembled block to the desired thickness, and forming the article therefrom.

1,451,042. PAN LIFTER. JAMES R. JOHNSON, Omaha, Nebr. Filed Sept. 6, 1921. Serial No. 498,681. 1 Claim. (Cl. 294—34.)



A pan or plate lifter, comprising a pair of jaw members arranged to grip the opposite edges of a pan and having handle portions composed of substantially parallel wire rod members extending beyond one of said jaw members and with the rod members of the remote jaw of greater length than the other rod members and terminating in a head, a connecting plate arranged across all of said rod members and having end flanges with openings therein through which said rod members pass, the shorter rod members terminating in said flanges of the plate and being secured thereto and the longer rod members being slidable through said flanges, and a spring carried by the longer rod members between said head and the plate for urging the latter and the adjacent jaw member toward the remote jaw member.

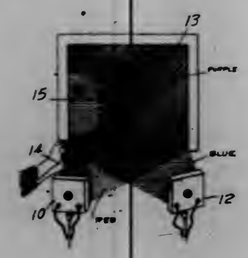
1,451,043. STOVEPIPE FASTENER. HARRY J. LE COMPTE, Oklahoma, Oklahoma. Filed Dec. 24, 1920. Serial No. 432,950. 1 Claim. (Cl. 285—185.)



A stove pipe fastener comprising a metal strap shaped to form oppositely disposed open ended crotches arranged to receive the ends of telescoped stove pipe sections and removable and replacable means for extension through the fastener for drawing its elements to clamp the ends of the pipe sections.

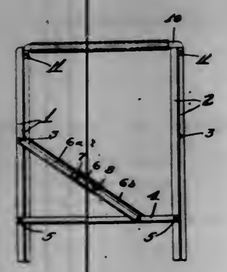
1,451,044. DEVICE FOR DETECTING OVERHEATED BEARINGS. JOSEPH P. LEONARD, Paterson, N. J. Filed Nov. 5, 1921. Serial No. 513,103. 2 Claims. (Cl. 116—114.)

1. In combination, with a bearing, signal means normally moved to display position and having a catch, and a controller for the signal means including a holder on the bearing and a fusible member on the holder having the catch removably connected thereto and thereby resisting movement of the signal means.



1,451,045. PRINTING PRESS. WILLIAM H. LONG, New York, N. Y. Filed Feb. 26, 1919. Serial No. 279,234. 21 Claims. (Cl. 101—137.)

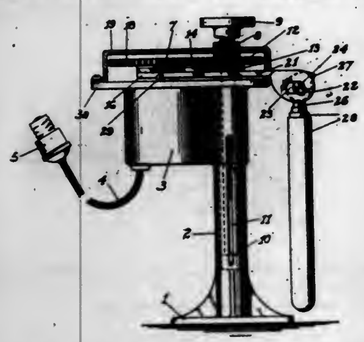
1. A printing press including in combination an impression cylinder, an offset cylinder, a plate cylinder, and



means for moving the offset cylinder into and out of printing relation with the impression cylinder and plate cylinder and for moving the plate cylinder into printing relation either with the impression cylinder or with the offset cylinder to print either directly from the plates or from the offset cylinder.

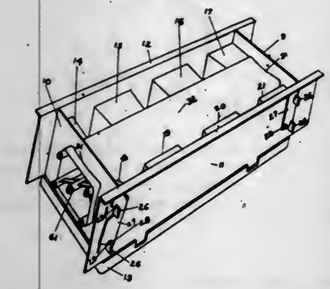
1,451,046. SCENIC EFFECT. WILLIAM MAXWELL, Revere, Mass. Filed Aug. 22, 1921. Serial No. 494,241. 2 Claims. (Cl. 88—1.)

1. The method of producing scenic effects consisting in commingling upon the same screen area differently colored lights from a plurality of illuminating elements and producing a figure on said illuminated area by interposing in the rays from one of said elements an opaque body having outlines corresponding in miniature to the figure.



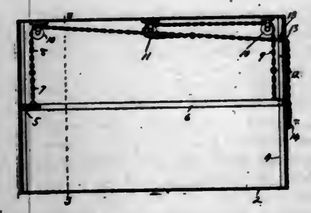
1,451,047. FOLDABLE STOOL. ROBERT P. MEAD and ROBERT B. THOMPSON, Chicago, Ill. Filed Apr. 8, 1921. Serial No. 459,657. 2 Claims. (Cl. 155—150.)

1. A foldable camp stool comprising two pair of crossed legs, each pair being pivoted together intermediate the ends thereof, upper transverse members having depending end lugs pivoted to opposite legs of the different pairs and adapted for supporting the seat above the upper ends of said legs, lower transverse brace members pivotally connecting said legs, and flexible diagonal braces connecting the lower brace members and legs.



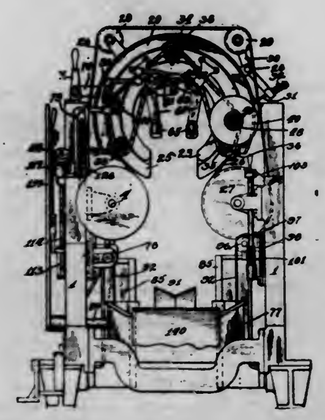
1,451,048. ELECTRIC JACK. HARVEY W. MOORE and CHARLES H. SCHUMACHER, Stockton, Calif. Filed Feb. 17, 1922. Serial No. 537,209. 13 Claims. (Cl. 254—103.)

1. A jack including a pedestal, a raising-stem mounted therein for vertical movement, electrically operated means for moving the stem, a handle for the jack permanently mounted thereon, and means controlled by



movement of the handle for causing the stem to be moved in either direction.

1,451,049. MECHANISM FOR MOLDING CONCRETE BLOCKS. DANIEL C. NEWMAN, Elyria, Ohio. Filed Mar. 17, 1922. Serial No. 544,420. 11 Claims. (Cl. 25—121.)



3. In a concrete block permanent mold mechanism, the combination with side and end walls, a bottom wall, a collapsible core, an opening in one of said end walls through which the said collapsible core may be inserted, said collapsible core comprising a collapsible frame, and a fabric tube placed over the said frame, and inwardly extending tapered cores carried by each side wall and adapted to contact at its reduced end with sides of the said collapsible core when in place and expanded.

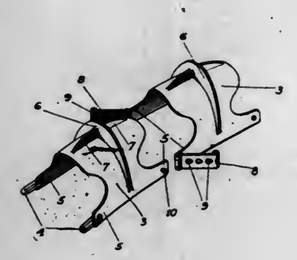
1,451,050. ATTACHMENT FOR OVENS. WILLIAM B. PAINTER and ELIZABETH A. REEVES, River Rouge, Mich. Filed Mar. 6, 1922. Serial No. 541,292. 6 Claims. (Cl. 126—337.)

1. The combination with an oven, of guide members secured directly to the walls of said oven, a movable tray located in said oven and having slots formed therein engaging said guide members, flexible members secured to said tray, pulleys secured to one wall of said oven, flexible members secured to the flexible members aforesaid and trained over said pulleys, a pulley secured to one wall of said oven and supporting one of the last mentioned flexible members, and a flexible member secured to both of the last mentioned flexible members and extending through said oven.

1,451,051. WRAPPING AND UNWRAPPING MACHINE. FRANK M. PIERCE, Chicago, Ill., assignor to Pierce Wrapping Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 11, 1917. Serial No. 190,782. 25 Claims. (Cl. 242—6.)

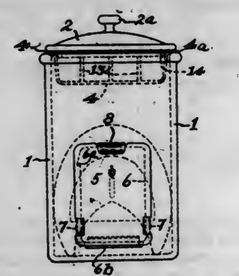
1. In a machine of the class described, a rotatable shuttle, a spool rotatably mounted on the shuttle, mechanism operated by rotation of the shuttle for rotating the spool independently of the rotation of the shuttle and means for saturating the material unwound from the spool.

1,451,052. TREATMENT OF HYDROCARBONS. HELIODOR ROSTIN, Vallo, Norway. Filed Aug. 29, 1916. Serial No. 117,410. 2 Claims. (Cl. 196—26.)



1. The method of hydrogenating unsaturated hydrocarbons, which comprises vaporizing the hydrocarbons and reacting upon said vapors with hydrogen sulphide in the presence of a metal capable of combining with the sulphide at a temperature of approximately 300° C., whereby nascent hydrogen will be liberated and combine with the hydrocarbons.

1,451,053. SIGNAL. JOHN A. RUAN, Beacon, Iowa. Filed Jan. 9, 1922. Serial No. 527,967. 3 Claims. (Cl. 116—51.)

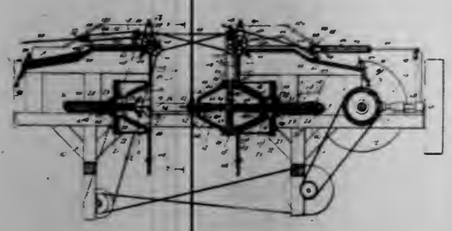


1. In a device of the class described, a base member; means for mounting the ends of the base member on a vehicle, signal arms pivoted at their lower ends to the base member; a link pivoted to the signal arms and located directly above the base member, whereby when the link is moved longitudinally, the link will come into contact with the base member, thereby limiting the lateral swinging movement of the signal arms; and means for operating the link.

1,451,054. NONSKID TIRE PROTECTOR. BATTISTA SANTINI, Roseville, Calif. Filed May 3, 1922. Serial No. 558,202. 1 Claim. (Cl. 152—14.)

A tire protector comprising a plurality of shoes connected together and forming a continuous structure adapted to be placed about a tire, two adjacent shoes being normally disconnected from each other, plates hinged to the free ends of one of said shoes for lateral swinging movement relative thereto and provided with orifices spaced lengthwise thereof and pins fixed to and projecting outwardly from the free ends of the other shoe and adapted to project through any at a time of said orifices.

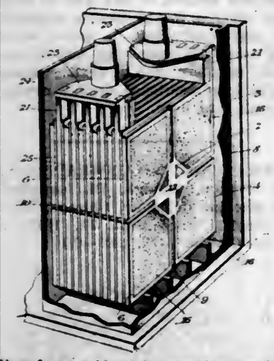
1,451,055. DISPLAY CASE. LESTER MONROE SAWIN, Chicago, Ill. Filed June 11, 1920, Serial No. 388,262. Renewed Aug. 16, 1922. Serial No. 582,300. 6 Claims. (Cl. 215—6.)



6. In a display case the combination of a glass container having an aperture near the bottom thereof and being open at the top, a door slidable vertically on the sides of said aperture, a removable diaphragm dividing said container into two compartments, a passageway in said diaphragm, an adjustable gate for said passageway and a cover for the top of said container.

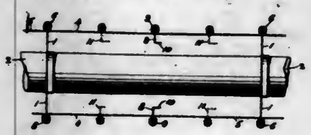
1,451,056. IRRIGATION SIGNAL. WALTER R. SCHINDLER, Los Angeles, Calif. Filed June 1, 1921. Serial No. 474,288. 15 Claims. (Cl. 116—118.)

13. In a device of the character described, a standard adapted to be arranged at a fluid conduct, a signal carried by the standard, the signal comprising a stationary part carried in a vertical position by the standard, a movable part pivotally connected to the lower edge of the stationary part adapted to be set in a substantially vertical position at the stationary part and to be actuated by gravity to a vertical position extending from the lower edge of the stationary part, and means to positively prevent the movable part being moved to a truly vertical position at the stationary part, and float means for releasing the movable part of the signal from its set position.



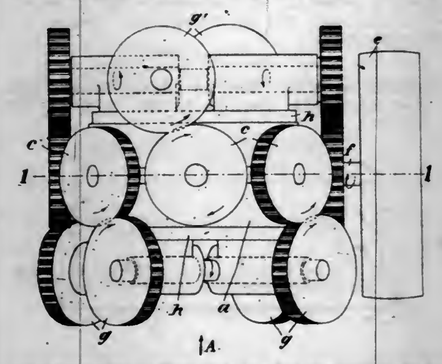
1,451,057. PAPER-CUPPING MACHINE. WALTER R. SCHINDLER, Los Angeles, Calif. Filed June 15, 1921. Serial No. 477,752. 15 Claims. (Cl. 93—60.)

1. In a machine for cupping paper, two cooperating die parts, one of the die parts including two relatively movable paper cupping portions normally spaced apart and adapted to fit together, and means for moving the die parts together so that said portions cooperate with the other die part to successively cup different portions of the paper in a single operation of the machine.



1,451,058. GRID PLATE FOR ELECTRIC CURRENT STORAGE BATTERIES. REASON P. SHATZKE, Denver, Colo. Filed Feb. 6, 1922. Serial No. 534,386. 6 Claims. (Cl. 204—29.)

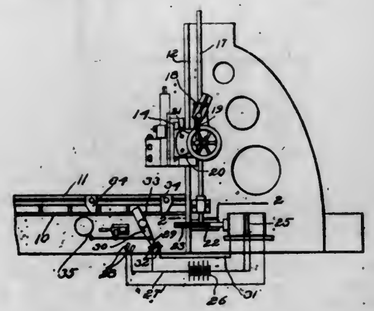
1. A grid-plate, consisting of a thin square plate divided into four corner portions that are separated from each other by quarterly arranged radiating spaces, and that have a center stiffening member, and diagonally arranged



ribs extending from said center member to the corners of said plate.

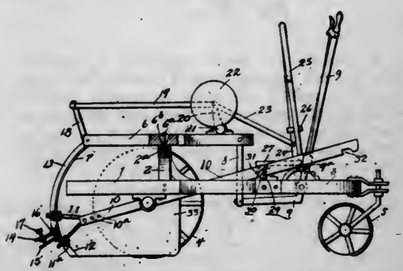
1,451,059. WING AND LIKE MEMBER CONSTRUCTED OF METAL FOR AEROPLANE FLYING MACHINES AND OTHER AIRCRAFT. HUGH OSWALD SHORT, Rochester, England. Filed Sept. 11, 1922. Serial No. 587,561. 4 Claims. (Cl. 244—31.)

1. In wings and the like members constructed of sheet metal for aeroplane flying machines and other aircraft; the combination with a framework comprising metal ribs, and means for connecting together said ribs; of an external sheet metal covering, means for connecting said sheet metal covering to said ribs, said sheet metal covering having a division between each two of said ribs of said framework, the adjacent edges of said sheet metal covering at said division having flanges at right angles to its surface, a fin of sheet metal located between said flanges of said covering and extending a short distance into the interior of said wing, and means for connecting together the flanges of said sheet metal covering and the edge of said fin interposed between same.



1,451,060. ROLLING MILL. HEINRICH STÜTING, Witten-on-the-Ruhr, Germany. Filed Apr. 8, 1922. Serial No. 550,860. 1 Claim. (Cl. 80—36.)

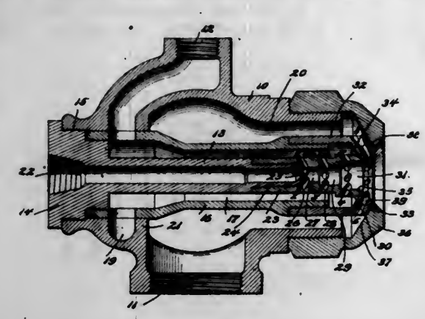
A rolling mill comprising in combination, a spindle housing, a plurality of substantially radially arranged



pinion shafts located in said housing, spur wheels on the outer ends of said shafts and a set of substantially radially arranged rolls on either side of said set of pinion shafts, alternate spur wheels meshing with rolls of one and the other set, respectively.

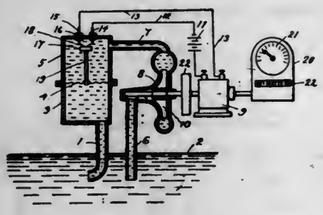
1,451,061. FEED MECHANISM FOR MACHINE TOOLS. ALFRED TROSCH, Rochester, N. Y., assignor to Arthur H. Ingle, Rochester, N. Y. Filed Oct. 15, 1919. Serial No. 330,816. 3 Claims. (Cl. 90—49.)

1. A planer, comprising a work table, a tool holder mounted for movement with respect thereto, a solenoid connected for control by the movement of said work table, and having a movable core, means for imparting feed movement to the tool holder, and a connection from said core to said means to actuate the same.



1,451,062. EARTH SCRAPER. GEORGE L. WILCOX, Escalon, Calif. Filed Feb. 18, 1921. Serial No. 446,104. 21 Claims. (Cl. 37—153.)

1. In an earth scraper, an end gate hinged along its upper edge and mechanical means mounted in connection with the gate and acting thereon for raising or lowering the same in a substantially vertical plane and for independently opening said end gate to the rear.



1,451,063. BURNER. ALFRED R. ANTHONY, Detroit, Mich. Filed Nov. 12, 1920. Serial No. 423,707. 16 Claims. (Cl. 158—76.)

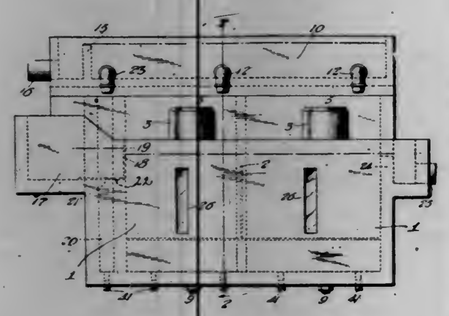
1. An oil burner including in combination, a body, a fuel tube therein said tube having a chamber at its forward end open at the tip of the tube and said tube also having an aperture for discharging a jet into said chamber, the wall of the fuel tube surrounding the chamber having a plurality of series of holes therethrough spaced along the length of the chamber, each series comprising a plurality of holes spaced circumferentially of the wall one series being inclined forwardly toward the axis of the

chamber and one series being inclined in a circumferential direction to discharge the air into the chamber with a whirling motion.

1,451,064. SPEED INDICATOR. LEONID A. DUNAJEFF, New York, N. Y. Filed Jan. 31, 1922. Serial No. 533,069. 8 Claims. (Cl. 73—167.)

1. In a speed indicator, the combination with two chambers, a yielding separator between said chambers, a Pitot tube connected with one of said chambers, a balancing tube connected with the other chamber, a rotating device adapted to produce a pressure in said second chamber equivalent to the pressure in said Pitot tube, an indicating device in a cooperative relation to said pressure producing device, and means to regulate the rotation of said pressure producing device, said means being controlled by said yielding separator.

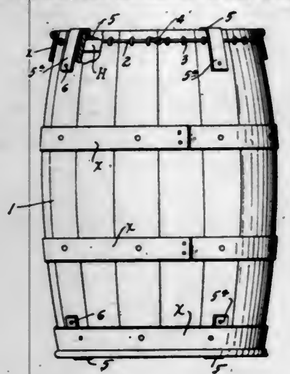
1,451,065. PHOTOGRAPHIC-DEVELOPING APPARATUS AND METHOD. GLEN M. DYE, Minneapolis, Minn. Filed Sept. 13, 1919. Serial No. 323,593. 16 Claims. (Cl. 95—90.5.)



1. In a photographic developing apparatus, a carrier for the films arranged to carry the films past developing and fixing zones, and spraying means in said developing and fixing zones operative to spray the sensitized surfaces of the films, respectively, with the developing and fixing liquids.

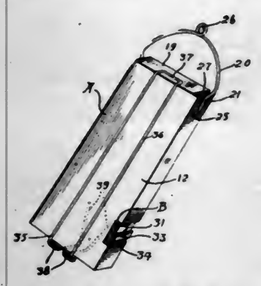
1,451,066. METHOD AND DEVICE FOR HANDLING PHOTOGRAPHIC FILMS. GLEN M. DYE, Minneapolis, Minn. Original application filed May 5, 1919, Serial No. 294,673. Divided and this application filed May 27, 1921. Serial No. 473,027. 12 Claims. (Cl. 95—100.)

1. A device of the kind described comprising a supporting bar; and a plurality of flat sheet metal holder plates having perforations through which said bar is passed, said perforations being formed by partly cutting lips from said plates and turning the same into horizontal positions so that they are adapted to rest on said bar.



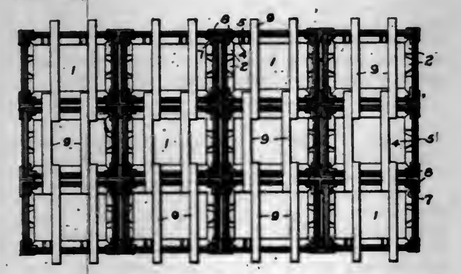
1,451,067. HYDRAULIC CLASSIFIER. ROBERT BAXTER ELDER, Denver, Colo., assignor to Andrew Darwin Elder, Denver, Colo. Filed Dec. 6, 1918. Serial No. 265,614. 28 Claims. (Cl. 83—82.)

1. In a classifier having an outlet for the discharge of pulp, means for varying the capacity of the outlet controlled by the density of the pulp, said means comprising a gate or valve, a float for operating the gate or valve and balanced between a column of water and a column of pulp in the container, said valve being a hollow cylindrical body vertical or nearly so, open at top and bottom, integrally connected with the float and of smaller cross section than the float.



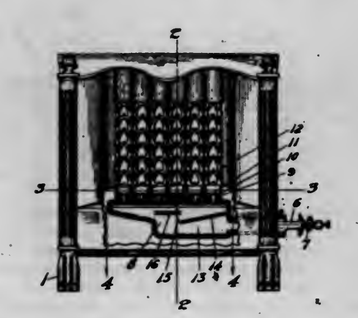
1,451,068. BARREL. CHARLES O. EWELL, Dyer, Tenn. Filed May 6, 1922. Serial No. 558,928. 2 Claims. (Cl. 217—89.)

1. As an article of manufacture, a knockdown barrel comprising a plurality of staves, a wire connecting the staves at each end portion thereof, hoops for holding the staves, retaining hoops co-acting with the staves, each of said staves having its longitudinal marginal portion disposed on outward curves, the adjacent marginal portions of the staves overlapping when the staves are in flattened relation, the extremities of the wires being free



when the staves are in flattened relation, said extremities being directly connected one with the other when the staves are assembled to form the barrel.

1,451,069. SEAL CASE AND EJECTOR. JOHN A. HANSON, Harwood, N. Dak. Filed Apr. 17, 1920. Serial No. 374,632. 6 Claims. (Cl. 206—39.)



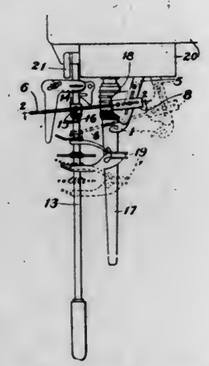
1. A case for car seals comprising a sectional body having an exit opening formed therein, the body being arranged to receive car seals, an ejector plate slidably mounted in the body, a resilient bail arranged to hold the sections of the body together at one end thereof, and a spring clip arranged to hold the sections of the body together at the opposite end thereof.

1,451,070. MEANS FOR SHIPPING FRUIT, ETC. FLOYD A. HIGERD, Bellevue, Pa., and GEORGE BECKER, Silver Creek, N. Y., assignors to H. J. Heinz Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 17, 1922. Serial No. 553,655. 4 Claims. (Cl. 217—40.)

1. A container for fragile articles having side walls formed of strips of sheet material, bound at the rim by a transversely extending band, the strips of sheet material extending interruptedly beyond and above the band and forming with the band a notched rim.

1,451,071. STOVE. CARL H. HOFFSTETTER, Erie, Pa., assignor to Odin Stove Manufacturing Company, Erie, Pa., a Corporation of Pennsylvania. Filed July 1, 1921. Serial No. 481,796. 5 Claims. (Cl. 158—104.)

1. A burner having a burner chamber, the chamber having a mixture inlet passage at one end extending from the burner and in alinement therewith; and a baffle over the inlet end extending into the chamber forming an upturned passage intermediate the ends of the chamber.

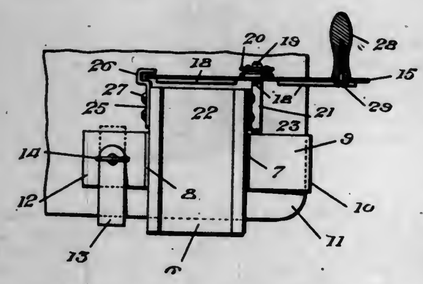


1,451,072. BURNER. CARL H. HOFFSTETTER, Erie, Pa., assignor to Odin Stove Manufacturing Company, Erie, Pa., a Corporation of Pennsylvania. Filed July 1, 1921. Serial No. 481,798. 5 Claims. (Cl. 158—104.)

5. A burner having a burner chamber with jet openings leading therefrom and with a depression at the inlet end to which the inlet leads; a baffle extending from the end of the chamber over the depression and forming an upturned passage nearer the inlet end of the burner than the center of the burner; a second baffle over the upturned passage; and a shoulder at the bottom of the chamber in advance of the opening between the second baffle and the wall of the chamber at the end of the depression.

1,451,073. BUNCH BUILDER. ERNEST KORTEN, Sunbury, Pa., assignor to Susquehanna Silk Mills, New York, N. Y., a Corporation of New York. Filed Oct. 3, 1921. Serial No. 505,062. 10 Claims. (Cl. 242—27.)

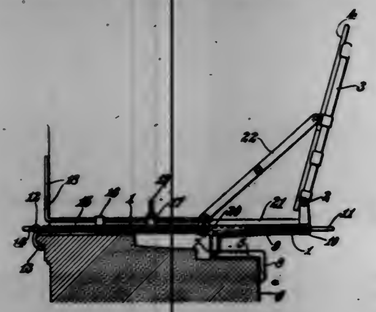
1. In a machine of the class described, the combination with a bunch builder provided with a thread guide, of a traverse bar associated with said bunch builder, bobbin-supporting means contiguous to said bunch builder, and means cooperating with said thread guide and said traverse bar whereby movement of the traverse bar will



be imparted to the thread guide for affecting its position with respect to said bobbin-supporting means.

1,451,074. NONSKIDDING TIRE SHOE. JOSEPH ARTHUR LE BLANC, Salem, Mass. Filed Mar. 15, 1922. Serial No. 543,943. 1 Claim. (Cl. 152—16.)

A non-skidding shoe for pneumatic tires comprising a series of traversely curved, rectangular plates spaced from each other throughout their entire length, the forward and rear edges of the plates being parallel to each other, the opposite ends of each plate extending tangential to the curved middle portion of the plate and the plates having a width such that when in place upon a tire they will extend beyond the largest diameter thereof, chain links connecting the like ends of the plates to each other, and a detachable link connecting the end plates of the shoe.

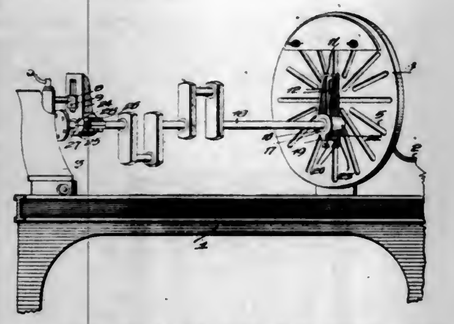


1,451,075. VEGETABLE SLICER. CASWELL L. LEONARD, Corinth, Miss. Filed Aug. 17, 1920. Serial No. 404,182. 1 Claim. (Cl. 146—11.)

A slicer comprising a channel-shaped holder, a cutter disk having cutter blades movable across one end of the

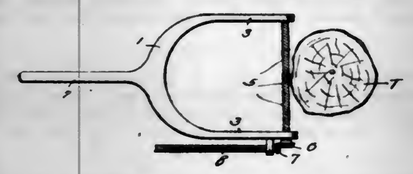
holder, a bearing at one side of the holder supporting said disk for rotation, a guide member at the opposite side of the holder engaging the edge of the disk, and clamping members carried by the opposite sides of the holder, said bearing and guide member having slotted portions engaging said clamping members for the longitudinal adjustment of said bearing, disk and guide member when the clamping members are loosened.

1,451,076. WINDOW-CLEANER'S SEAT. LOUIS H. LOEPPE, St. Louis, Mo. Filed July 18, 1921. Serial No. 485,662. 5 Claims. (Cl. 304—24.)



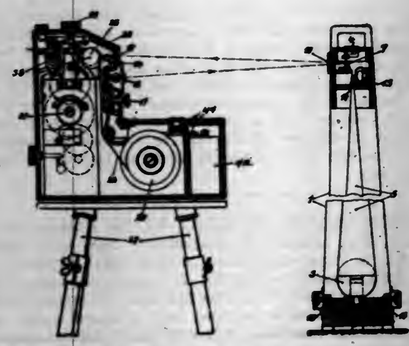
1. A window seat, comprising, a frame adapted to support the seat, a yielding abutment mounted on said frame and adapted to engage the outer sill, securing means adapted to engage the inner sill, and means for yieldingly retaining said securing means in such engagement.

1,451,077. WINDOW. EDMUND H. LUNKEN, Cincinnati, Ohio. Filed Nov. 15, 1918. Serial No. 262,647. 3 Claims. (Cl. 20—52.1.)



1, In a pocket window construction, a window frame with sashes therefor, and a wall pocket adjacent the window opening for the reception of the sashes, and a sheet metal strip forming a continuation of one of the side stops, clamped between the edges of the stile and the inside pocket wall, extending into the pocket and with its outer edge curved over to form a brake and guide for the sides of the lower sash when raised into the pocket.

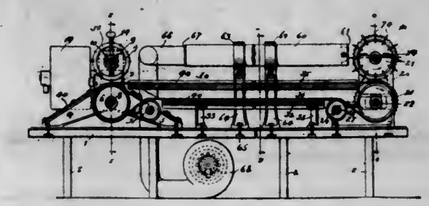
1,451,078. ADJUSTABLE HOLDER FOR TURNING CRANK SHAFTS. WILLIAM L. MANTHA, Bayport, N. Y. Filed Mar. 4, 1922. Serial No. 541,140. 6 Claims. (Cl. 82—9.)



1. A holder for use on crank shafts having a longitudinal slot provided with closed ends, a body having a reduced shoulder slidably mounted within said slot, an externally threaded bolt passing through said shoulder, the ends of said bolt being anchored within said holder, whereby upon the rotation of said bolt, said shoulder will be moved to the anchored ends of said bolt holding the same against displacement.

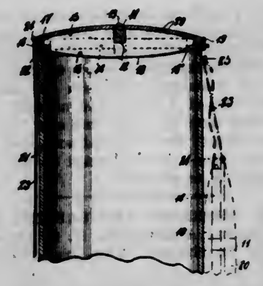
1,451,079. LUMBER-SAWING IMPLEMENT. JEFFERSON H. MILLSAPS, Chicago, Ill. Filed June 16, 1921. Serial No. 477,960. 2 Claims. (Cl. 144—34.)

1. In a sawing implement of the class described, a wishbone-shaped holder, a shaft rotatably mounted on the holder, a mandrel mounted on said shaft, said mandrel being formed of removable sections having slanting abutting end faces, a flexible driving shaft operatively connected with the rotatable shaft, and power means for driving said rotatable shaft.



1,451,080. FIELD SEISMOGRAPH. LUDGER MINTROP, Hanover, Germany. Filed May 15, 1922. Serial No. 561,226. 11 Claims. (Cl. 234—1.)

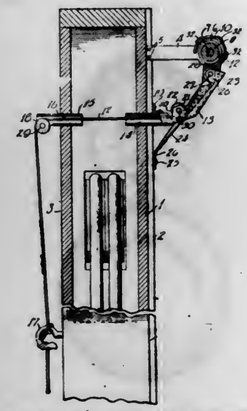
1. Recording means for terrestrial vibrations, comprising in combination, a stationarily secured spring, a weight



yieldingly supported on said spring, a long comparatively light-weighted lever secured to said weight, a rotatable mirror, operatively associated with said lever, a source of light operatively related to said mirror, and a movable light sensitive web adapted to cooperate with said mirror, and to be influenced by the rays reflected from said mirror.

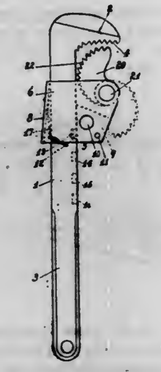
1,451,081. HONEYCOMB-CANDY CUTTING AND COOLING MACHINE. EDWARD J. MOMENEE, Lima, Ohio. Filed Aug. 10, 1920. Serial No. 402,542. 1 Claim. (Cl. 107—4.)

In a machine for making candy of the type described having an endless belt conveyer supported by a pulley which is driven thereby, a breaker wheel carrying a plurality of flexible peripheral flaps, said breaker wheel being mounted perpendicularly above the conveyer driven pulley so that the flaps will only contact the candy while it is still on the flat part of the conveyer and means for driving said breaker wheel from the said driven pulley.



1,451,082. REMOVABLE SILO COVER. JOHN S. NEHER, North Manchester, Ind. Filed Mar. 17, 1922. Serial No. 544,549. 2 Claims. (Cl. 217—76.)

1. A top for silos comprising a frame of double convex construction, and a cover portion on said frame substantially as described.



1,451,083. AWNING CONSTRUCTION. WILLIAM F. O'DONNELL and CHANCY SEYBOLD, Chicago, Ill. Filed July 1, 1921. Serial No. 481,860. 4 Claims. (Cl. 156—44.)

2. In a building, the combination with a frame for an aperture, of an awning construction, said awning construction comprising a flexible fabric, a roller for the flexible fabric, means secured to the outer face of the frame for rotatably supporting the roller, a cable secured to the roller, combination guiding and housing means extending from said roller and being projected transversely through the frame for conducting the operating cable from the outer face of the frame through the frame to the inner face thereof, and means for securing the outer end of

the guiding and housing means in adjusted position relative to the adjacent end of the roller.

1,451,084. PIPE WRENCH. ERNEST AARON PETERSON, Oakland, Calif. Filed Feb. 9, 1922. Serial No. 535,284. 1 Claim. (Cl. 81—97.)

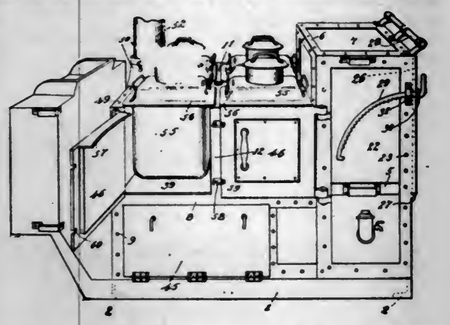
A pipe wrench including a shank, a fixed jaw on one end of said shank formed with a concaved toothed engaging surface, a handle on the other end of said shank, said shank having a plurality of sockets along its forward edge, a slide on said shank, a stud on said slide for engaging any of said sockets, the rear wall of said slide inclining from the back edge of said shank opposite said stud so that said slide may be swung to cause said stud to engage or disengage any of said sockets, a spring between said back wall of said slide and the back edge of said shank for normally holding said stud in one of said sockets, and a jaw pivoted in said slide formed with a convexed tooth engaging surface cooperating with the concaved toothed engaging surface of said fixed jaw.

1,451,085. TOY. JOSEPH POPPER, Brooklyn, N. Y., assignor of one-half, by direct and mesne assignments, to Baird-Daniels Co., Inc., New York, N. Y., a Corporation of New York, and one-half to Ruby H. Popper, Brooklyn, N. Y. Filed July 7, 1921. Serial No. 482,963. 7 Claims. (Cl. 46—40.)

1. A toy comprising an element formed with eye sockets and having the general appearance of a head

of a person or animal, a pair of loosely mounted balls representing eyes arranged in said eye sockets, said element

being provided with a passage-way extending to said eye sockets, and a tube for directing a stream of air into said passage-way for moving said balls.



1,451,086. METHOD OF MAKING AND EXHIBITING MOVING PICTURES. ISAAC T. PURCELL, Wakeeney, Kans. Filed Nov. 2, 1921. Serial No. 512,281. 1 Claim. (Cl. 88—16.2.)

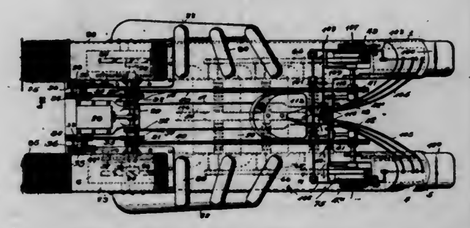
In an apparatus of the class described, the combination of a traveling support adapted to pass along a desired course, of a sound recording machine and a motion picture camera in parallel position upon and carried by said traveling support contiguous to each other and pointing in the same direction for photographing and recording an object or scene simultaneously, parallel driving mechanisms projecting rearwardly from said sound recording machine and motion picture camera, a belt connecting said driving mechanisms, a power shaft to one side of said sound recording machine, and a belt in parallelism with said first-mentioned belt and connecting said power shaft and the driving mechanism of the sound recording machine, substantially as shown and described.

1,451,087. ARMY FIELD KITCHEN. HUBBARD W. STEINER, CALEB W. SHIPLEY, and JAMES MORRISON, Cincinnati, Ohio, assignors to The Trailmobile Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Apr. 14, 1921. Serial No. 461,209. 11 Claims. (Cl. 126—276.)

1. In an army field kitchen, a framework comprising base pieces forming an integral part of the wagon body of a vehicle, upright pieces and cross pieces to form vertical frames lengthwise and cross-wise above said base, said pieces welded together into a unit, a cruciform member set into said assembly and welded together with it, and plates riveted into the frame formed by the base,

upright and cross pieces to form an enclosed wagon body to serve as a cooking stove.

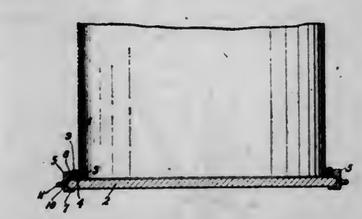
1,451,088. BRACE FOR TRACTORS. ROBERT LEE TOLSON, Memphis, Tenn., assignor to John W. Farley, trustee, Memphis, Tenn. Filed Nov. 23, 1921. Serial No 517,288. 1 Claim. (Cl. 280—112.)



In a tractor, a body, an inverted U-shaped axle, a horizontal pivot connecting the axle from the body at each V-shaped bracket extending down from the body at each side, said bracket being firmly bolted to the tracter-body framework, and connections between the axle and the brackets, consisting of a radius rod at each side of the tractor extending from the lower end of a bracket to the corresponding part of the U-shaped axle, the rods being connected to the axle and the bracket by ball and socket joints, substantially as set forth.

1,451,089. GRINDING AND LAPPING MACHINE. FLOYD C. WEAVER, Washington, D. C. Filed May 10, 1922. Serial No. 559,882. 7 Claims. (Cl. 51—56.)

1. In a grinding and lapping machine of the character described, the combination of a work carrying plate,

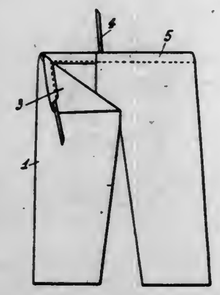


means for supporting said work carrying plate, a lapping plate positioned above said work carrying plate, a pin engaging said lapping plate, a bar connected to said pin, means for oscillating said bar, driving means connected to the rear end of said bar, whereby said lapping plate may be moved in a variable manner over said work carrying plate, and means for bodily advancing or retracting said driving means, whereby said lapping plate may be caused to work only upon certain portions of the work carrying plate, as and for the purposes set forth.

1,451,090. COTTON HARVESTER. JOHN J. WILSON, Columbia, Tenn. Filed Apr. 2, 1920. Serial No. 370,789. 17 Claims. (Cl. 56—14.)

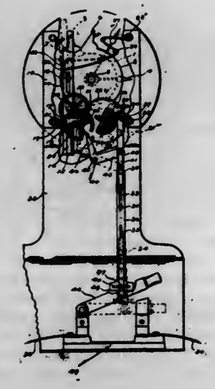
6. In a cotton harvester, a frame, a picker comprising a casing extending transversely of the direction of travel of the harvester, said casing having a plurality of narrow openings in its front face for the admission of cotton fiber and an air conduit extending through said casing, rotary toothed disks journalled within the casing in planes intersecting said openings lengthwise, the teeth of said disks being disposed within said openings and adapted to draw cotton fiber through said openings, a doffer adapted to strip the fiber from the disks and to discharge it into the air conduit, and means for creating an air current in said air conduit for removing the fiber.

1,451,091. CLAMP. GIBBONS J. DENNIS, Kiefer, Okla. Filed May 27, 1922. Serial No. 564,217. 2 Claims. (Cl. 220—5.)



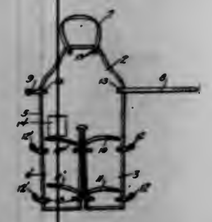
1. A tank comprising a bottom, side walls having flanges at their lower ends, arc-shaped clamping members, each having a groove therein for receiving a part of the bottom and a recess above the groove for receiving the flange and clamping bolts for holding the parts in assembled position.

1,451,092. CUMARON PAINT. CARLETON ELLIS, Montclair, N. J., assignor to Ellis-Foster Company, a Corporation of New Jersey. Filed Jan. 4, 1919. Serial No. 269,664. 4 Claims. (Cl. 134—39.)



4. A paint comprising a pigment, cumaron resin of melting point about 90° C., a paraffin hydrocarbon solvent and a liquid aromatic hydrocarbon.

1,451,093. PYJAMAS. JAMES C. EWING, Oakland, Calif. Filed Jan. 31, 1921. Serial No. 441,255. 1 Claim. (Cl. 2—122.)



In a pyjamas trousers having a fly extending to the upper edge of said trousers, a hem around the waist and on the inside of said trousers, a draw string extending through said hem, the ends of the hem being located at a distance from the top of the fly so that the ends of the draw string may be tied together on the inside of the garment.

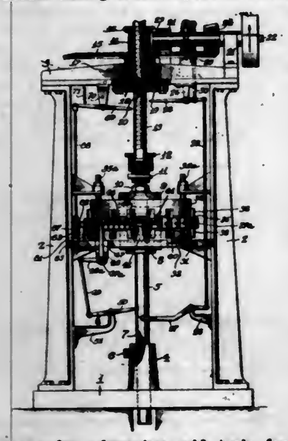
1,451,094. TIME SWITCH. ELMER E. FREY, Long Beach, Calif. Filed May 17, 1920. Serial No. 382,679. 2 Claims. (Cl. 200—40.)

1. An automatic switch consisting, in combination with an alarm clock, the gear train for operating same and the hour hand carrying shaft, of two fingered disks frictionally mounted on said shaft, a fulcrumed bar provided with a pin disposed in the path of said fingered disks, said bar formed with means to lock the gear train against revolution and with means actuable by members on one of the gears of the train to operate said bar when the train is released by engagement of the fingered disks with the bar, and cause the pin on said bar to be lifted above and behind the fingers of said disks, a stud on one of the gears of the train, a switch operating lever having its upper end disposed in the path of said stud and arranged to close the switch when the gears are released, and a resetting and switch opening lever pivotally connected to said switch lever and having one end thereof in line with the travel of said stud.

1,451,095. APRON. GUSTAVE F. GREENE, South Manchester, Conn. Filed Sept. 3, 1921. Serial No. 498,248. 1 Claim. (Cl. 2—54.)

A device of the class described for human wear, comprising a body portion in one piece, and of rubberized textile material having a loop to fit around the neck of the wearer and also a strap by which the body portion can be detachably held to the body of the wearer, said body portion also having separate leg portions to fit around the front portions and sides of the legs of the wearer, each leg portion having straps to fit around the back side of the legs of the wearer, below the crotch, said leg portions having additional straps near the lower ends thereof, the garment having a hem throughout the entire extension of the same on the inner face and along the edge thereof, which is adhesively held in position, and eyelets for fastening the straps to the body portion.

1,451,096. TELESCOPE. OSCAR A. HAGEN, Fargo, N. Dak. Filed July 23, 1920. Serial No. 398,355. 2 Claims. (Cl. 88—1.)



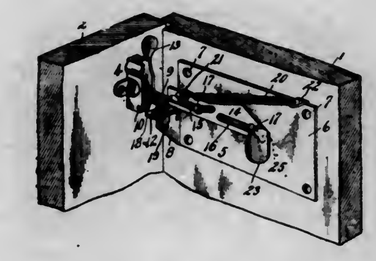
1. A device of the class described comprising a tapered body formed of two sections, a bayonet joint detachably securing said sections together, an eye piece at the small end of the tapered body and a lens at the large end thereof, a handle provided on the exterior of the body and a flash light within the body, means for operating the switch of the flash light from the exterior of the body consisting of conductors passing through an opening formed in the small end of the device and a plug arranged in said body to which the wires are connected, a plurality of rings arranged on the device to prevent the reflection of the light upon the smooth inner walls thereof.

1,451,097. GEAR-CUTTING MACHINE. WILLIAM HENRY KITTO, Jr., and STANLEY B. MOILES, Detroit, Mich.; said Kitto assignor to said Moiles. Filed Mar. 29, 1920. Serial No. 369,454. 12 Claims. (Cl. 90—8.)

1. Means for operating on the periphery of a blank or blanks, consisting of a reciprocatory holder for a blank or superposed blanks, circumferentially disposed cutters about said holder, means for moving said reciprocatory holder at different speeds so that said blanks are carried into engagement with said cutters, means at one side of said holder controlling the speeds of said reciprocatory holder, and means at the opposite side of said holder controlled by movement of said holder for advancing and retracting said cutters.

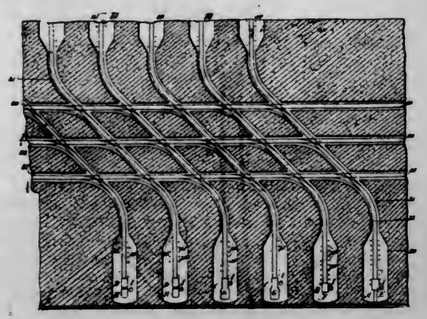
5. A multi-blank cutting machine comprising a work holder having a slow speed work stroke and a fast speed non-work stroke, a multiplicity of tools in the path of the work holder during a slow speed work stroke, thereof, and means for advancing said tools for fresh cuts during a fast speed non-work stroke of said work holder.

1,451,098. OPHTHALMIC MOUNTING. WILLIAM E. MCDONELL, Rochester, N. Y., assignor to Shur-On Optical Company, Inc., Rochester, N. Y., a Corporation of New York. Filed May 10, 1922. Serial No. 559,838. 7 Claims. (Cl. 88—48.)



1. In an ophthalmic mounting, the combination with an ophthalmic frame formed of non-metallic material and having two rings with lens receiving grooves and a bridge connecting said rings and provided with pockets communicating with said grooves, of nose rests having supporting arms provided with anchoring portions extending into said pockets.

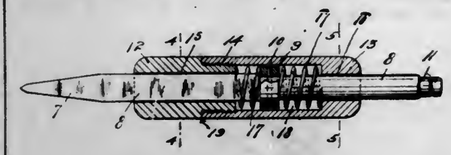
1,451,099. AMALGAMATOR. WILLIAM CORDICE MCLAUGHLIN, Oakland, Calif. Filed Feb. 15, 1922. Serial No. 536,674. 4 Claims. (Cl. 83—67.)



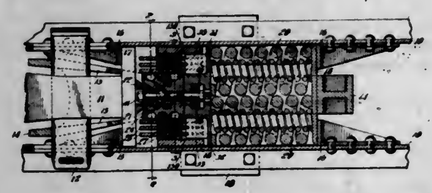
1. A gold separator including a plurality of superimposed communicating drums, a chute communicating with the uppermost drum, a sump communicating with the lowermost drum, a coarse screen extending vertically through said drums and said sump, and a plurality of fine concentric screens of different diameters secured to said coarse screen in each of said drums.

1,451,100. LOCK FOR MILK CABINETS. LEO O. MILLER, Detroit, Mich. Filed Apr. 10, 1922. Serial No. 550,971. 11 Claims. (Cl. 292—128.)

1. A device of the character described comprising a movable member adapted to be secured to a closure, a fixed member adapted to be secured to the wall of a receptacle to be engaged by the member on the closure and lock the closure in closed position, and means operable from within the receptacle to disengage said member on the closure from said fixed member and to be engaged by said member on the closure to hold said closure in closed position and permit the closure to be opened from the outside.



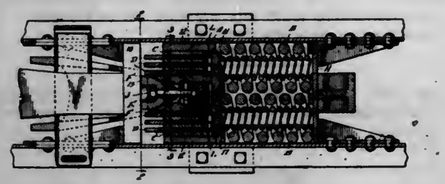
1,451,101. APPARATUS FOR MINING. EDMUND C. MORGAN, Richmond Hill, N. Y. Filed Sept. 16, 1918. Serial No. 254,266. 40 Claims. (Cl. 104—5.)



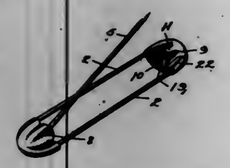
1. In mining apparatus, the combination with a pair of trucks, of means for coupling said trucks together, means adjustable in elevation and carried at one end of the forward truck in position to guide track sections onto and off said forward truck, and rope-winding mechanism comprising a rope adapted to have its free end connected to a track section while being guided onto or off said forward truck.

1,451,102. NONVIBRATORY TOOL GUIDE. CHARLES C. NEALE, Toledo, Ohio, assignor of one-half to Philip T. Ulmer, St. Paul, Minn. Filed Apr. 17, 1922. Serial No. 554,280. 3 Claims. (Cl. 145—61.)

1. A vibratory tool having a sleeve-like hand-piece with closed ends, said hand-piece being transversely divided and the sections thereof detachably connected, said tool being slidably mounted in apertures in the ends of said hand piece and held for common rotation therewith, and opposing springs in the hand-piece arranged to be compressed between an abutment on the tool and the closed ends of said hand-piece.

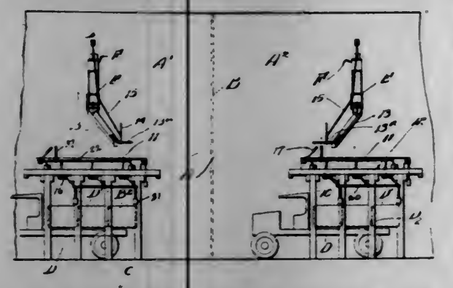


1,451,103. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Sept. 8, 1921, Serial No. 499,209. Renewed Feb. 16, 1923. 5 Claims. (Cl. 213—33.)



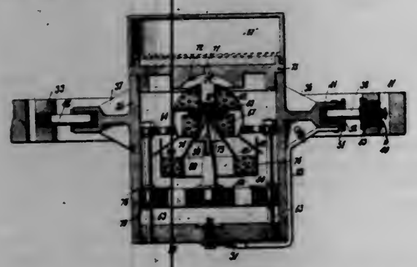
1. In a friction shock absorbing mechanism, having friction, spring and wedging elements, including anti-friction members associated with said wedging elements, the combination therewith of a spring follower having a pair of flanges embracing the wedging elements and forming stops for the ends of the anti friction rollers.

1,451,104. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Oct. 17, 1921, Serial No. 508,336. Renewed Feb. 16, 1923. 3 Claims. (Cl. 213—33.)



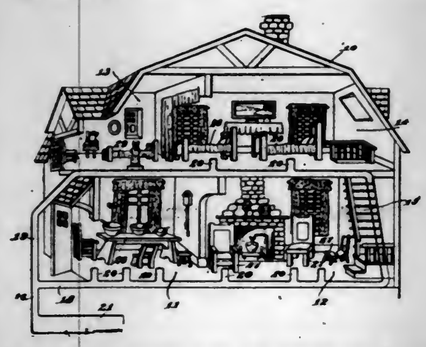
1. In a friction shock absorbing mechanism, the combination with a follower-acting member; of a plurality of relatively stationary friction plates anchored to said member against movement longitudinally thereof but responsive to laterally applied pressure; a plurality of relatively movable friction plates intercalated with said stationary plates; the inner ends of said movable plates terminating intermediate the ends of the stationary plates; lateral-pressure-creating means cooperable with said intercalated plates; a spring resistance; a spring follower interposed between said resistance and the inner ends of the intercallated plates; and a plurality of independent column-pressure-transmitting elements interposed between the inner ends of said movable plates and said spring follower.

1,451,105. SAFETY PIN. STEPHEN OLOF, Denver, Colo., assignor of one-third to Austin L. Cunningham, St. Paul, Minn. Filed Feb. 16, 1920, Serial No. 359,144. Renewed July 6, 1922. Serial No. 573,190. 9 Claims. (Cl. 24—161.)



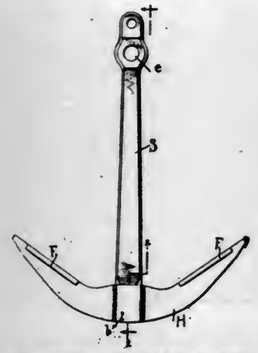
1. In a safety-pin, a frame comprising two side-bars and a resilient pin arranged between said side-bars and hinged to the frame by a coil, in combination with a housing at one end of the frame and comprising a catch for the pin-point, the bottom of said housing being dished away from the frame.

1,451,106. APPARATUS FOR MEASURING MATERIALS IN CONCRETE CONSTRUCTION. HERMAN D. PALMER and JOHN W. BAHEL, Hartford, Wis., assignors to The Kissel Motor Car Company, Hartford, Wis., a Corporation of Wisconsin. Filed Oct. 17, 1921. Serial No. 508,409. 13 Claims. (Cl. 214—41.)



1. In an apparatus of the character described, the combination of a supporting structure having a plurality of measuring units, a plurality of hinged counterbalanced doors normally closing the lower ends of said units, means for locking said doors in closed position, and means for releasing the doors for effecting the discharge of the material from said units into separate compartments of a vehicle body positioned therebeneath.

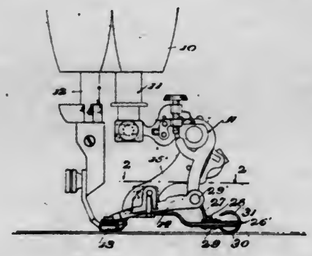
1,451,107. SUBMARINE MINE. WAYNE F. PALMER, Washington, D. C. Filed May 13, 1920. Serial No. 381,286. 13 Claims. (Cl. 102—3.)



1. In a submarine mine, in combination, a main casing having a diaphragm subjected to hydraulic pressure on launching and means for cutting out the action of hydraulic pressure on said diaphragm after the mine has been submerged a predetermined time.

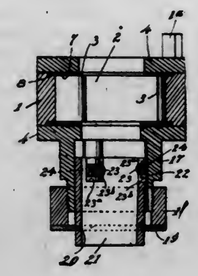
1,451,108. GAME. GEORGIA A. POST, Forest Hills, N. Y. Filed Mar. 24, 1921. Serial No. 455,277. 2 Claims. (Cl. 35—12.)

1. In an educational game, the combination of a pictorial illustration of a scene from a story, suitable fittings in said illustration to visually set forth the scene from the story, a path leading through the scene, a plurality of sidings leading from said path, characters to simulate the characters in the story, and means for retaining said characters in the path.



1,451,109. ANCHOR. NORRIS D. POWELL, Chester, Pa., assignor, by mesne assignments, to Baldt Anchor & Chain Company, a Corporation of Pennsylvania. Filed Oct. 4, 1919, Serial No. 328,445. Renewed Dec. 1, 1922. 2 Claims. (Cl. 114—207.)

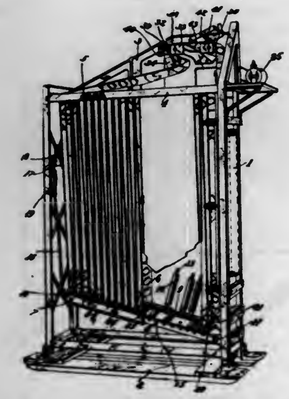
1. Anchor structure comprising a head provided with an opening therein, and a separate shank having its lower end inserted in the opening in the head and having a depression into which the head at its opening is fitted to rigidly connect the head and shank.



1,451,110. ATTACHMENT FOR GATHERERS ON SEWING MACHINES. HERBERT A. PULLIAM, Eustis, Fla., assignor of one-half to L. J. Taylor, Eustis, Fla. Filed June 10, 1921. Serial No. 476,435. 9 Claims. (Cl. 164—17.5.)

1. In a sewing machine provided with a gatherer, a reciprocating member for the gatherer, a seam ripping attachment comprising a base plate connected to said gatherer and extending rearwardly therefrom, an elongated blade having its one end pivoted to said base plate and its other end extending rearwardly therefrom, said

extended end of the blade being formed with a cutting edge, and connecting means between said blade and the reciprocating member of said gatherer whereby the free end of said cutting blade may be oscillated.

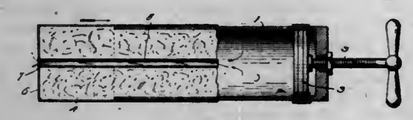


1,451,111. DRIVING COLLAR. JOHN H. REEDY, Hamilton, Ohio. Filed May 27, 1920. Serial No. 384,616. 6 Claims. (Cl. 242—18.)

1. In a driving collar for automatically clutching a shaft, the combination of an element for engaging a shaft formed with roller clearance within it, comprising a series of circumferential cam grooves, a series of rollers set into said grooves and riding therein, and plates independently movable with relation to the shaft and the engaging element, for retaining the rollers in position and serving to cause their movement as a unit, said rollers constituting the sole grasping element between the shaft and the engaging element.

1,451,112. CONTROLLER FOR ELECTRIC SIGNS. FRANK C. REILLY, New York, N. Y., assignor to Joseph I. Kopperl, New York, N. Y. Filed Oct. 15, 1918. Serial No. 258,286. 2 Claims. (Cl. 200—46.)

1. In controlling apparatus for electric signs, the combination with switching apparatus provided with a plurality of contacts, of an endless perforated band adapted selectively to determine the operation of the contacts of said switching apparatus, means for moving said band through said switching apparatus, a plurality or series of rolls which support and hold the unused or slack portion of said band in convolute form as it passes toward or from said switching apparatus, a fixed support for one of said series of rolls, and a movable support for another of said series of rolls, the individual

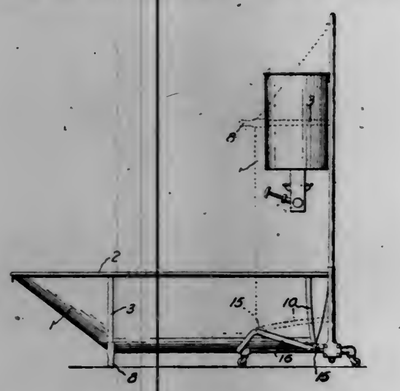


members of said last named series of rolls being bodily movable, whereby they may be disengaged from the convoluted portions of said band.

1,451,113. PROCESS OF PRODUCING CATALYTIC MATERIAL. GEORGE A. RICHTER, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Sept. 13, 1921. Serial No. 500,857. 3 Claims. (Cl. 23—28.)

1. The method of producing a catalytic material, which comprises precipitating metallic nickel from a nickel salt solution by the addition of zinc and simultaneously grinding the mass, and separating out the precipitated nickel.

1,451,114. LOADING CARTRIDGE FOR GREASE GUNS. CLARENCE E. ROBERTS, Hagerstown, Md. Filed Sept. 13, 1920. Serial No. 409,882. 6 Claims. (Cl. 206—56.)



1. A grease cartridge for a lubricating gun comprising a shell having a closed end, and adapted to telescope with the body of the gun, the closed end being provided with means permitting the escape of air from the gun as the gun and shell are being telescoped.

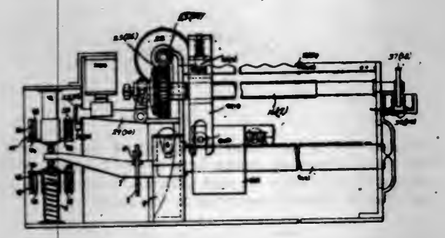
1,451,115. FRAME FOR SHEET-METAL TUBS. RANDY J. ROBERTS, Detroit, Mich. Filed July 14, 1921. Serial No. 484,618. 4 Claims. (Cl. 4—27.)

1. The combination with a sheet metal tub formed of several parts secured together by seams and provided with a peripheral rail, of a pair of frame members curved in cross section to engage against both the seam and the wall of the tub each side of the seam, said frames being secured to the rail at the upper end and the lower ends being outwardly bent out of contact with the tub, a connecting member extending across the bottom of the tub and engaging the same in like manner to the first named parts and having downwardly bent ends secured

to the outwardly bent ends respectively of the frame members, the said connecting bent ends being secured

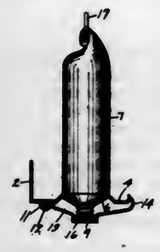
together and the curved ends providing a flexible connection whereby the fastening means may bind the frames to tight engagement with the seam and tub.

1,451,116. GAS BURNER. JACOB I. ROBIN, New York, N. Y. Filed Jan. 21, 1920. Serial No. 352,959. 4 Claims. (Cl. 158—118.)



2. In a gas burner, a bunsen, a conducting tube composed of two superposed and separated sections and a mixing chamber interposed between said sections, said mixing chamber having its upper part made in form of a converted cone formed with a plurality of air holes, so that the air drawn into said chamber during the flow of the gas will be directed into the path of the latter and become thoroughly mixed with it before passing into the upper section of the conducting tube.

1,451,117. LANDING GEAR FOR AEROPLANES. EDWARD W. ROUNDS, Washington, D. C. Filed Oct. 24, 1921. Serial No. 510,186. 7 Claims. (Cl. 244—2.)

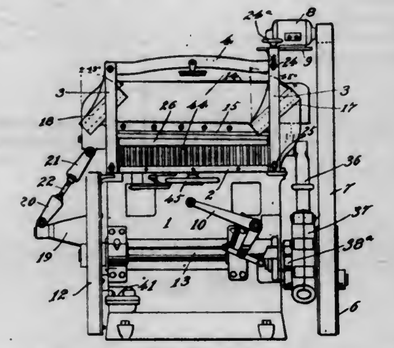


7. In an aeroplane provided with landing wheels, in combination, axles upon which said wheels are mounted, means for locking said wheels to the axle, and means for insuring the equal angular rotation of said wheels when desired, said means comprising a clutch member, means for throwing said clutch into and out of engagement, a lever operable from the pilot's seat and intervening mechanism between the lever and the clutch for actuating the latter whereby the wheels may rotate at different angular velocities.

1,451,118. ELECTRIC STEELYARD WEIGHING MACHINE. KORNELIUS SCHEMBER, Atzgersdorf, near Vienna, Austria, and Rudolf Joksch, Prague, Karolinenthal, Czechoslovakia. Filed Oct. 21, 1920. Serial No. 418,599. 2 Claims. (Cl. 265—56.)

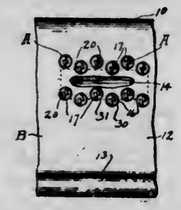
1. In an automatic electric steelyard weighing machine the combination with a plurality of steelyards simultaneously acted upon by the load, and travelling poises, the scales of the said steelyard starting from zero and corresponding to different ranges of weight according to the weighing system used, of electric circuits, contacts therein, a drawing mechanism for the poises and testing device (selector) comprising a pressure balancing device which is inoperative in the position of equilibrium of the weighing mechanism and occupies a position of adjustment differing according to the magnitude of the load and which serves for the selective actuation of the said contacts, whereby the circuits for the movement of the several travelling poises are automatically controlled.

1,451,119. TUBE BRACKET. ERNST R. SCHROEDER and CHARLES M. MILLER, Alameda, Calif. Filed Apr. 27, 1921. Serial No. 464,886. 2 Claims. (Cl. 221—60.)



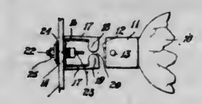
1. A tube bracket comprising a socket in which the inverted tube is secured, a resilient plate pivotally mounted on the bracket below the mouth of the tube, a latch for holding the plate to the bracket, and means on the plate and alined with the mouth of the tube for closing the tube.

1,451,120. PAPER-CUTTING MACHINE. CHARLES SEYBOLD, Dayton, Ohio. Filed Feb. 9, 1921. Serial No. 443,685. 7 Claims. (Cl. 164—54.)



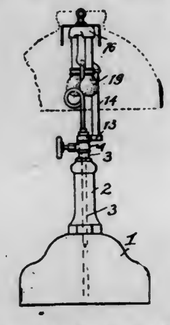
1. In a paper cutting machine, the combination with the frame and reciprocating knife carrier, with mechanism for

actuating said carrier from one end only, of diagonal guides for the knife carrier at each side of the frame, said guides arranged at a slight angle to each other with



slide blocks swiveled to the knife carrier sliding in said guides whereby a double shearing cut may be obtained for the knife in its passage through the paper pile.

1,451,121. TIRE-REPAIR DEVICE. EDITH M. SIMPSON and JAMES H. BUCKLES, Nighthawk, Wash. Filed May 11, 1922. Serial No. 560,176. 7 Claims. (Cl. 152—26.)



4. The combination with a tire casing having a blow out opening therein, of a repair device for the casing including a longitudinally extending plate weakened at predetermined intervals, a plurality of penetrating prongs formed on the longitudinal edges of the plate, retaining means for the prongs adapted to be disposed in engagement with the tire casing for receiving the terminals of the prongs, the terminals of the prongs having longitudinally extending slots therein defining bendable portions, the portions being bent into engagement with said means and extended in opposite directions in relation to each other.

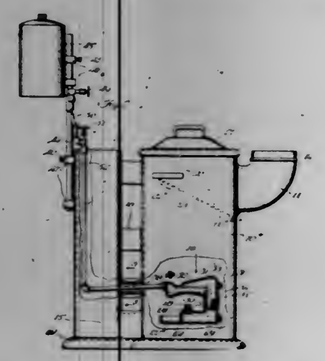
1,451,122. ELECTRIC-LAMP SOCKET. CHARLES E. STAHL, Meriden, Conn., assignor to The Connecticut Telephone & Electric Co., Inc., Meriden, Conn., a Corporation of Connecticut. Filed Jan. 22, 1920. Serial No. 353,270. 3 Claims. (Cl. 113—328.)

3. In a socket for a lamp stem having a pin thereon, a base, a jaw forming a pin holding shoulder, means for supporting said jaw from said base, a member supported from said base and extending into proximity to the free end of said jaw, said jaw member being adapted to substantially encircle a lamp stem, the distance between the free end of said jaw and the adjacent member being less than the thickness of the pin on the lamp stem, whereby when a lamp stem is inserted in the socket the pin on the stem will enter the space between the jaw and the adjacent member and spring the jaw and member apart to permit the insertion of the stem and thereafter the parts will spring back to a distance apart less than the thickness of the pin on the lamp stem to prevent the accidental withdrawal of the stem.

1,451,123. LAMP. JAY C. STEESE and CHESTER A. HOFF, Akron, Ohio., assignors to The Akron Lamp Company, Akron, Ohio, a Corporation of Ohio. Filed July 23, 1921. Serial No. 486,991. 6 Claims. (Cl. 67—94.)

2. In a device of the character described, the combination with a base having an upstanding pipe, a fixture threaded upon said pipe, a generator tube having one end secured in said fixture, a mixing head, burners carried by said mixing head, an offset member co-operating with the head, an opening through said offset member into which an end of the generator tube extends, an upright member secured to the offset member, a bracket to which the upright member is secured, said bracket having a sliding contact with the said fixture, and means for holding the bracket to the fixture.

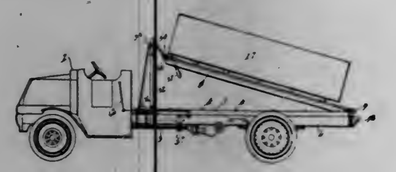
1,451,124. AUTOMATIC DEVICE FOR FISHING THROUGH ICE. WILLIAM OTTO STOLZE, Newport, R. I. Filed Oct. 3, 1922. Serial No. 592,161. 6 Claims. (Cl. 43—16.)



1. A fishing device of the character described comprising in combination, a support, a reel, a reel supporting

rod pivotally attached to the support, a flexible signalling staff attached to the support, a ring on the staff adapted when in set position to engage a trip finger on the reel, a flexible tensioning metal strip mounted adjacent the reel on the supporting rod, a nut on the tension end of the rod adapted to vary the tension on the metal strip and to adjustably increase the resistance to the unwinding of the reel, and a metal bearing between the reel and the supporting rod.

1,451,125. PROCESS FOR THE PRODUCTION OF PAPER PULP AND THE LIKE. BERTRAND S. SUMMERS, Port Huron, Mich. Filed Apr. 21, 1922. Serial No. 555,898. 6 Claims. (Cl. 92—11.)

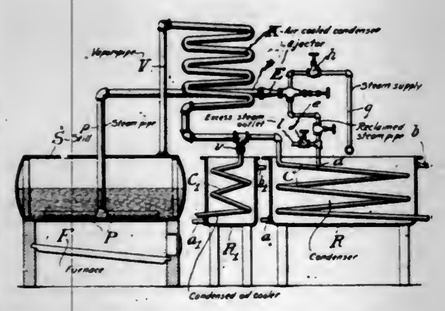


2. A process of producing sulfite wood pulp, which consists in cooking the wood in a solution containing a bi-sulfite and a material capable of producing hydro-sulfurous acid.

1,451,126. HEATER. GUSTAF DAVID SUNDSTRAND, Rockford, Ill., assignor to Sundstrand Engineering Company, Rockford, Ill., a Corporation of Illinois. Filed Apr. 5, 1920. Serial No. 371,433. 22 Claims. (Cl. 126—360.)

1. A heater of the class described comprising a base, a combustion chamber and an intake tube cast integrally with said base and rising therefrom in spaced relation, with the lower end of said tube communicating with the lower end of said chamber, a fuel supply tank mounted above said tube, a supply duct leading downwardly from said tank to said tube and having a portion extending laterally from the tube into said chamber, means for rigidly securing said laterally extending portion against movement, a burner mounted upon the inner end of said horizontal portion of the supply duct so as to be supported thereby, and an outlet duct leading from the upper end of said chamber.

1,451,127. TRUCK AND TRAILER CARRIER. DANIEL N. THORNTON, Waitsburg, Wash. Filed Dec. 17, 1921. Serial No. 523,173. 5 Claims. (Cl. 214—38.)

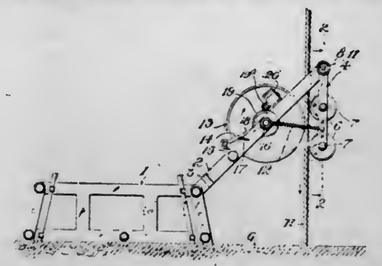


1. In a truck and trailer carrier, in combination, a track, rigidly attached to the frame of a truck, guide members hingeably attached to said track, a trailer carrier separable from said truck, guide members rigidly attached to said trailer carrier, a box, flanges adjustably attached to the bottom of said box and positioned to register with either of said guide members, and operating means attached to said frame, and operable by means of the propeller shaft of said truck, for dumping said box and for moving said box from the truck to the trailer carrier and vice versa.

1,451,128. CARVING TOOL. KONSTANTINE THULANDER, Rockford, Ill., assignor to L-T-L Company, Rockford, Ill., a Corporation of Illinois. Filed Oct. 29, 1920. Serial No. 420,354. 6 Claims. (Cl. 90—62.)

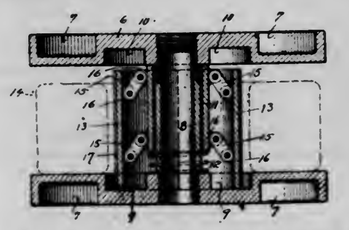
1. A bit for carving machines comprising a shank having a head with flat sides, a carving blade the base of which has a slot and is shaped to embrace said flat sides, and a nut threadingly engaging the shank for clamping the blade to the head.

1,451,129. METHOD OF AND APPAPARATUS FOR OIL DISTILLATION. JOHN W. VAN DYKE, Philadelphia, Pa., assignor to The Atlantic Refining Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 15, 1919. Serial No. 317,693. 12 Claims. (Cl. 196—27.)



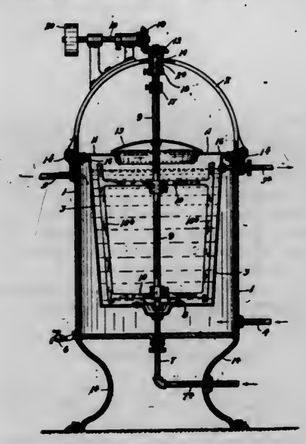
1. The method of distilling oil, which consists in raising the oil to distilling temperature in the presence of steam of lower temperature, withdrawing steam from the resultant mixture of steam and distillate, impelling the withdrawn steam by motive fluid steam in contact therewith, and introducing the mixture of steam into oil undergoing distillation at a temperature higher than the temperature of said mixture.

1,451,130. APPARATUS FOR MEASURING DEPTHS OF WELLS. CHARLES E. VAN ORSTRAND, Washington, D. C. Filed June 26, 1920. Serial No. 391,890. 12 Claims. (Cl. 33—134.)



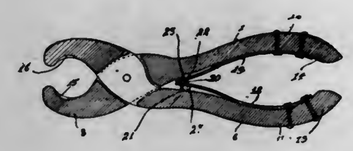
1. In an apparatus for measuring depths of wells, a support, a frame hinged thereto and constrained to substantially vertical, plane movement, a recording wheel on said frame and means pivotally connected to said frame for maintaining a cable subject to vibrations in continuous

contact with and at substantially a straight tangent to said recording wheel, said means admitting movement of



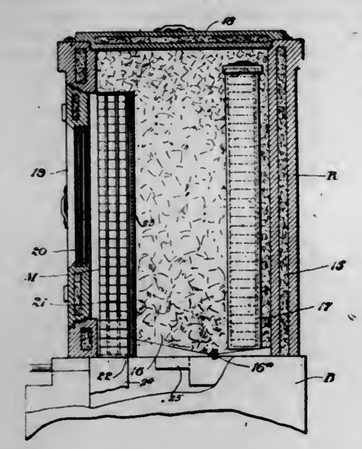
said cable across said recording wheel without changing the relative positions of said recording wheel and said means.

1,451,131. ADJUSTABLE REEL. HENRY WEBER, Chicago, Ill. Filed June 26, 1920. Serial No. 391,944. 11 Claims. (Cl. 242—111.)



2. A wire spool comprising end plates having annular recesses in adjacent sides concentric with the axis thereof; a member joining the end plates together; a tube over said member and shorter than the distance between said end plates; a plurality of plates disposed around said tube having their ends extending into said recesses; links connecting said tube with the last mentioned plates; and a compression spring between one end plate and said tube.

1,451,132. MILK AND CREAM PASTEURIZER. CARL J. WESTERGAARD, Minneapolis, Minn. Filed June 24, 1921. Serial No. 480,016. 4 Claims. (Cl. 257—108.)

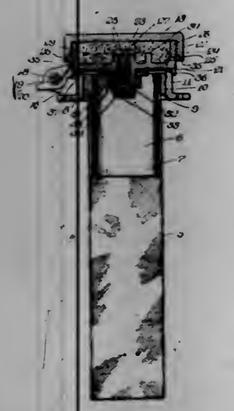


2. A pasteurizing device having in combination of cylindrical casing, a frusto-conical vessel supported therein and spaced from the sides thereof with its larger end uppermost and forming with the casing a steam chamber, an inlet opening at the bottom of said vessel, a step bearing substantially flush with said bottom, a vertical shaft support for said bearing, a stirrer in said vessel secured to aid shaft, a cover on said vessel having a central aperture therein, said cover having a downwardly curved flange surrounding said aperture, a removable lid on said cover support for said aperture, said lid having a central opening therein through which the said vertical shaft passes.

1,451,133. HOG PINCERS. GEORGE H. WILSON, Coleman Alberta, Canada. Filed Mar. 11, 1921. Serial No. 451,615. 1 Claim. (Cl. 128—332.)

Hog pincers comprising lever handles pivotally united and having jaws, said handles adjacent their pivot being provided with grooves, springs secured to said handles, a pin connecting said springs near their inner ends, and studs carried by said pin and seated in said grooves.

1,451,134. ICE-CREAM-VENDING CABINET. ERNST WISROTH, Los Angeles, Calif., assignor of one-half to Reginald D. Raphael, Los Angeles, Calif. Filed Oct. 31, 1921. Serial No. 511,702. 2 Claims. (Cl. 211—9.)



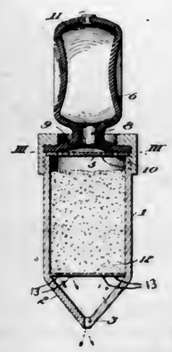
1. In an ice cream vending apparatus, a receptacle constructed to provide an ice compartment, storage magazines arranged within said compartment, a door controlled opening for gaining access to the compartment and to said magazines, dispensing magazines within the compartment, a door controlled opening for gaining access to the dispensing magazines, said dispensing magazines being formed of rods arranged in spaced relation to each other and having an open side through which the bricks of cream are adapted to be placed into and removed from the magazines.

1,451,135. FOOD PRODUCT AND PROCESS OF PRODUCTION. ALBERT W. WRIGHT and ELISABETH H. WRIGHT, San Francisco, Calif. Filed Mar. 17, 1920. Serial No. 366,634. 4 Claims. (Cl. 99—11.)

3. The process of producing a new food product which consists in removing and discarding the entire rind and seeds from melons, thereafter adding sugar and cooking the mass comprising the juices and inner fleshy portion of the melon until the consistency of syrup has been reached.

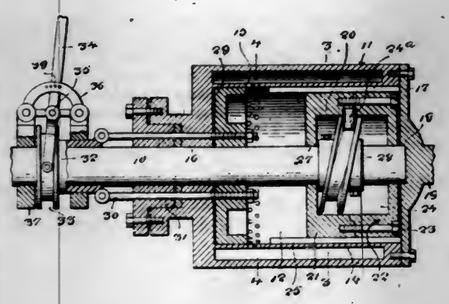
1,451,136. FILLING TUBE FOR LIQUID RECEPTACLES. BENJAMIN F. ALLNUTT, Chicago, Ill. Filed Aug. 10, 1921. Serial No. 491,078. 1 Claim. (Cl. 220—86.)

A filling structure for a liquid receptacle comprising a flanged internally threaded collar for permanent attachment to a receptacle, a closure cap hinged thereto providing an inwardly extending concentric hollow hub; an inwardly opening check valve within the hub; means within the hub to adjust the valve; a screw cap closing the outer end of the closure cap; a foraminous tube insertible within the tank through said collar and an imperforate guard tube within the foraminous tube attached thereto and having a threaded head for threaded engagement with the threads of the flanged collar.



1,451,137. VENTILATED HAND PROTECTOR FOR GUNS. FRANKLIN L. BAILY, Los Angeles, Calif. Filed Nov. 1, 1921. Serial No. 512,162. 3 Claims. (Cl. 42—1.)

1. A gun hand protector, comprising a single piece metal handle, composed of an inner portion formed to fit the barrel snugly but shiftable longitudinally thereon, and an outer portion in spaced relation thereto intermediate its sides.

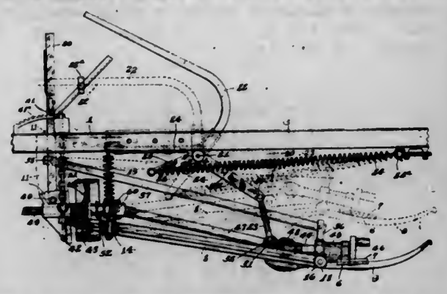


1,451,138. INSECT-POWDER GUN. SAMUEL BERNSTEIN, New York, N. Y. Filed July 26, 1922. Serial No. 577,554. 7 Claims. (Cl. 43—146.)

4. The combination with a powder container having a nozzle at one end, of a bellows bulb attached to the other end of the container and having a central air-delivery opening and a flexible valve portion around said opening, and a closure disk in the container adjacent said bulb, said disk having perforations normally covered by said

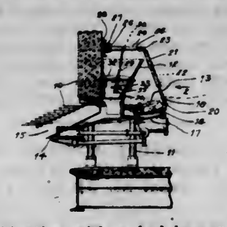
valve portion of the bulb, the central portion of said disk in line with the air-delivery opening in the bulb being imperforate.

1,451,139. FLUID CLUTCH MECHANISM. WILLIAM BROTHER, Salt Lake City, Utah. Filed May 21, 1920. Serial No. 383,209. 1 Claim. (Cl. 192—59.)



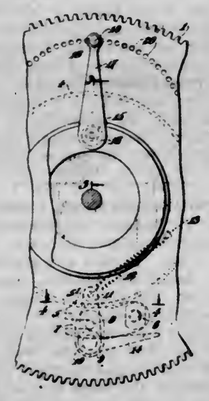
A fluid transmission device comprising a cylinder divided into separate fluid containing compartments, having communicating openings therebetween, a shaft connected to one end of the cylinder, a drive shaft rotatably mounted within the cylinder, a piston formed of separate cup shaped sections, means by which said sections may be secured together to provide a chamber within the piston, means located within the chamber and operated by the drive shaft for moving the piston longitudinally of the cylinder and means for controlling communication between the cylinder compartments to regulate the passage of fluid therebetween.

1,451,140. AGRICULTURAL MACHINE. ALEXANDER T. BROWN, Syracuse, N. Y. Filed Aug. 31, 1918. Serial No. 252,215. 17 Claims. (Cl. 56—25.)



1. In an agricultural machine, a frame, a horizontally extending implement shiftable up and down relatively to the frame and a support for the implement connected

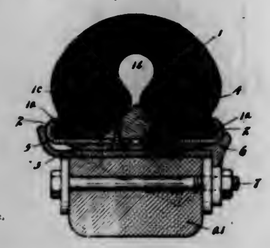
to the frame at a plurality of points and being hinged to the frame to have a universal action at one of



said points and spring means connecting the frame and the support at another point, substantially as and for the purpose described.

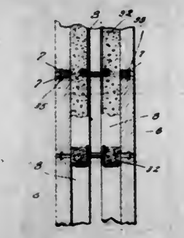
1,451,141. AGITATOR FOR MECHANICAL STOKERS. HAROLD G. BURRILL, Baltimore, Md. Filed Nov. 18, 1921. Serial No. 516,022. 6 Claims. (Cl. 259—39.)

1. The combination with a fuel hopper, of means for positively moving fuel from said hopper, said means comprising a thrust shaft reciprocating in the direction of movement of said fuel from said hopper and in the opposite direction, and means on said shaft shaped to move said fuel when said shaft is moved in said first named direction and to cut through said fuel when said shaft is moved in the opposite direction.



1,451,142. DUPLICATING MACHINE. WALTER CHIPPERFIELD, Hornchurch, England, assignor to A. B. Dick Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 13, 1921. Serial No. 461,017. 6 Claims. (Cl. 101—248.)

1. In duplicating machines, the combination of a printing cylinder, a gear in the driving train therefor, a lever

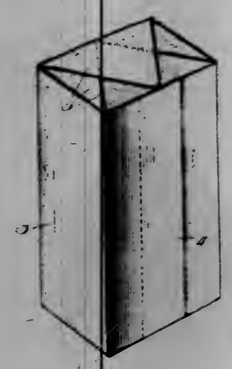


pivoted to said cylinder, having rack teeth thereon, adapted to mesh with said gear, spring means for holding said teeth in mesh with said gear, a hand lever on the exterior of said cylinder, and means operated by said hand lever for swinging said rack lever away from said gear.

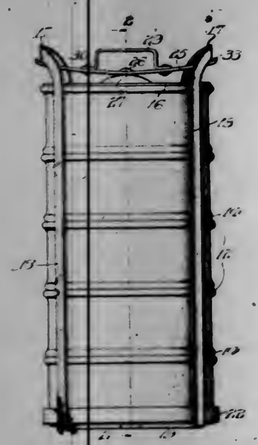
1,451,143. DEMOUNTABLE HARD-RUBBER CUSHIONED TIRE AND RIM. JAMES H. CLARK, Portage, Wis., assignor of one-half to J. M. Russell, Portland, Oreg. Filed May 9, 1921. Serial No. 467,859. 3 Claims. (Cl. 301—20.)

1. A cushion tire structure having in combination, a tire having a central longitudinal channel extending therethrough, said tire being divided along a plane extending therefrom to the inside of the tire centrally thereof, a wedge-shaped expanding member disposed between said divisions, a rim comprising two circumferentially extending sections, each disposed under the tire and formed to embrace the tire at one side thereof, and securing means for said sections and the expanding member.

1,451,144. BUILDING CONSTRUCTION. FRANK L. DECKER, Kimble, Pa. Filed Mar. 31, 1922. Serial No. 548,438. 9 Claims. (Cl. 72—30.)



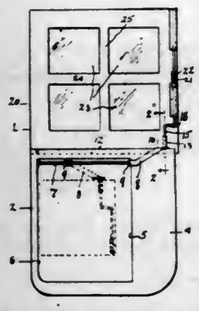
1. A wall construction in which slabs arranged in superimposed courses provide the inner and outer walls therefor, comprising vertical members in contacting engagement with the inner faces of the opposed slabs, spacing means for said vertical members, tie means engaging both the spaced means and the vertical members, means at the confronting ends of the superimposed first mentioned means for securing the tie means thereto, and means on the tie means disposed between the superimposed slabs and engaging therewith to hold the latter on the frame work.



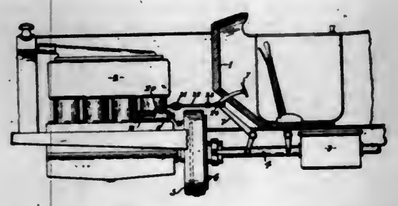
1,451,145. MANUFACTURE OF MOISTUREPROOF PACKAGES. HENRY G. ECKSTEIN, Chicago, Ill., assignor, by mesne assignments, to The Cracker Jack Co., a Corporation of Illinois. Filed Sept. 26, 1919. Serial No. 326,551. 5 Claims. (Cl. 229—3.1.)

1. The method of vapor-proofing packages which consists in enfolding the goods in a flexible waxed paper wrapper the wax on which may at times be partially de-

stroyed in the operation of sealing the package, then applying heat and pressure to the overlapping folds of the wrapper to seal the same by the wax thereon, and subsequently restoring a film of wax to any such denuded surfaces of the wrapper to provide a substantial, continuous film over all portions of the package.



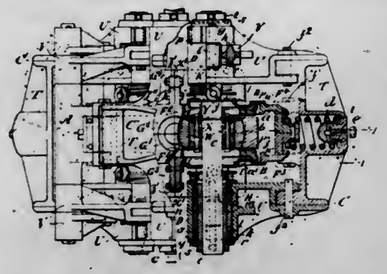
1,451,146. RACK FOR STACKED CONTAINERS. JOHN L. FATE, Chicago, Ill.; Daisy L. Fate, executrix of said John L. Fate, deceased, assignor, by mesne assignments, to C. Roy Gleason, Chicago, Ill. Filed Apr. 12, 1919. Serial No. 289,709. 2 Claims. (Cl. 220—57.)



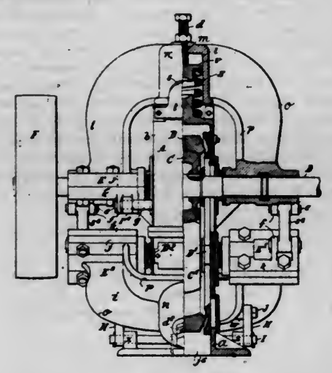
1. A rack for a stack of individual containers comprising a bottom support, consisting of crossed members, upstanding members rising therefrom, and clamping means coacting with said upstanding members to effect clamping pressure on the upper container of a stack of individual containers contained in the rack and resting on said support, said upstanding members being arranged in pairs with the members of each pair formed to provide a loop and the clamping means comprising a cross bar extending between and movably locked to said loops and adapted to bear between its ends upon the upper container of a stack within said rack.

1,451,147. CURTAIN-SUPPORTING MEANS FOR AUTOMOBILE DOORS. LOUIS H. FEDER, Cleveland, Ohio, assignor of one-half to Richard S. Bondy, Cleveland, Ohio. Filed May 6, 1922. Serial No. 558,906. 7 Claims. (Cl. 296—139.)

1. In a device of the character described, the combination of a vehicle door having a top frame member and a pocket below said member, of a rod mounted in said pocket below said frame member, a support member slidably mounted on said rod and rotatable thereabout and a curtain support rod carried by said support member and movable therewith from a position above said top frame member to a position below the same within said pocket.



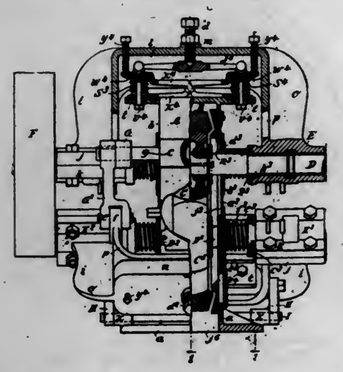
1,451,148. CLUTCH-PEDAL CONTROL FOR MOTOR VEHICLES. FRANK H. FLORING, Syracuse, N. Y. Filed Nov. 28, 1919. Serial No. 341,139. 1 Claim. (Cl. 188—94.)



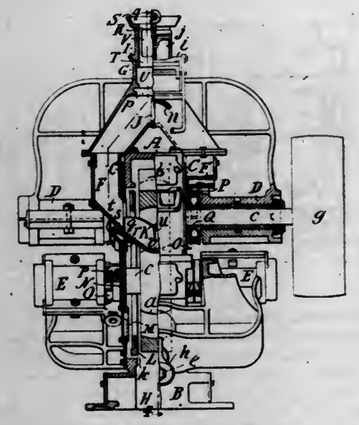
A clutch pedal control for motor vehicles comprising a cylinder, a piston movable in the cylinder, means for fixedly securing the cylinder to a support, the piston being provided with a rod having a cross-head at its end remote from the piston, and the cylinder being formed with a guide for the cross-head, a link pivoted to the cross-head on opposite sides of the cylinder and connected to the clutch pedal of the motor vehicle and the cylinder being provided with a plurality of air outlets operating to increase the resistance of the air on the piston as the piston moves inwardly into the cylinder, substantially as and for the purpose described.

1,451,149. CRUSHING MACHINE. GEORGE HOLT FRASER, Brooklyn, N. Y. Original application filed Dec. 31, 1907, Serial No. 408,773. Renewed June 12, 1916, Serial No. 103,341. Divided and this application filed Feb. 2, 1917, Serial No. 146,220. Renewed June 14, 1922. Serial No. 568,237. 12 Claims. (Cl. 83—9.)

1. In combination, an annular die revolving in an approximately vertical plane and having an internal crushing face, a movable and rotatable crushing roll within and eccentric of said die and having a peripheral crushing face reciprocal to the inner face of said die, means for revolving one of said parts, a casing supporting said parts, a movable member movably mounted on said casing, non-rotative movable means on which said roll is rotatably mounted and movably mounted on and held outwardly by said movable member, and pressing means opposite and reacting on said movable member and said casing for holding said non-rotative means outwardly to hold said roll outwardly toward the inner face of said die to resist a crushing pressure therefrom.



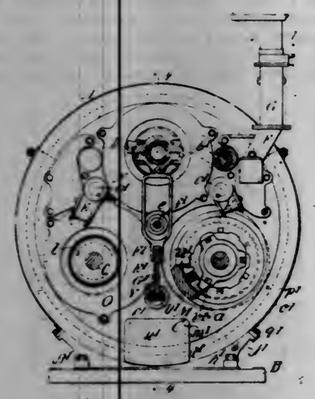
1,451,150. MACHINE FOR CRUSHING OR GRINDING. GEORGE H. FRASER, Brooklyn, N. Y. Original application filed Mar. 16, 1905. Serial No. 250,474. Divided and this application filed Jan. 31, 1917, Serial No. 145,690. Renewed Dec. 15, 1922. 24 Claims. (Cl. 83—9.)



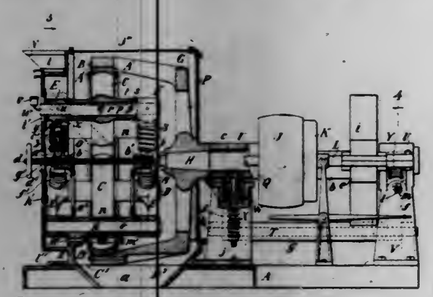
1. In combination, an annular crushing die revolving in an approximately vertical plane and having an internal crushing face, a movable and rotatable crushing roll disposed within the upper part of and eccentric of said die and having a peripheral crushing face reciprocal to the internal face of said die, means for revolving one of said parts, movable non-rotative means on which said roll is rotatably mounted, upper roll movable upholding means disposed below the axis of said roll and opposite and beneath said non-rotative means and acting on the latter to hold said roll upwardly toward the inner face of said die to resist a crushing pressure from the latter, and nonrotative supporting means for sustaining said upholding means and from which said upholding means are movably supported.

1,451,151. MACHINE FOR CRUSHING OR GRINDING. GEORGE H. FRASER, Brooklyn, N. Y. Original application filed Mar. 16, 1905, Serial No. 250,474. Divided and this application filed Feb. 2, 1917, Serial No. 146,221. Renewed June 8, 1922. Serial No. 566,899. 10 Claims. (Cl. 83—9.)

1. In combination, an annular crushing die revolving in an approximately vertical plane and having an internal crushing face, a movable and rotatable crushing roll within and eccentric of said die and having a peripheral crushing face reciprocal to the internal face of said die, means for revolving one of said parts, a casing comprising a wall at the side of and enclosing said die and roll and having a spring sustaining projection extended outward beyond the outer side of said side wall, a movable non-rotative member on which said roll is rotatably mounted disposed outwardly of the outer side of said side wall and spaced apart from and movable relatively to said projection, a spring disposed outwardly of the outer side of said side wall and inwardly of said non-rotative member and between the latter and said projection for pressing said roll outwardly toward the inner face of said die to resist a crushing pressure therefrom reacting toward and sustained by said projection.

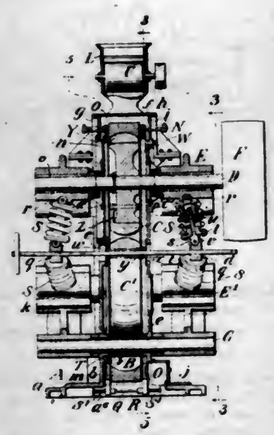


1,451,152. PULVERIZING MILL. GEORGE HOLT FRASER, Brooklyn, N. Y. Filed Mar. 17, 1917, Serial No. 155,390. Renewed Dec. 15, 1922. 15 Claims. (Cl. 83—9.)



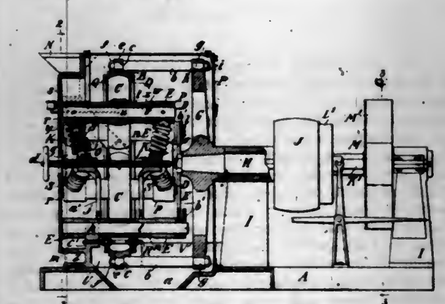
1. In a mill of the type described, a grinding roll and a die, in combination with a casing for the same having a side aperture, a roll axle in said aperture having a bearing without the casing, a cover for said aperture surrounding the axle, a dust guard on said axle adjacent the said cover, and a revolving collar on said axle between said dust guard and said bearing.

1,451,153. PULVERIZING MILL. GEORGE HOLT FRASER, Brooklyn, N. Y. Filed Mar. 20, 1917. Serial No. 156,175. Renewed Dec. 15, 1922. 20 Claims. (Cl. 83—9.)



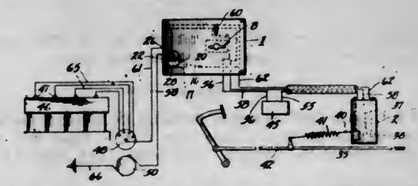
1. In combination, an annular crushing die revolving in an approximately vertical plane and having an internal crushing face, a rotatable crushing roll within and eccentric of said die and having a peripheral crushing face reciprocal to the inner face of said die, means for revolving one of said parts, means for supporting said parts, non-rotative movable means at each side of said roll on which said roll is rotatably mounted, and movable aligning means extending through said die for maintaining alignment of said non-rotative means.

1,451,154. MACHINE FOR GRINDING AND CRUSHING. GEORGE H. FRASER, Brooklyn, N. Y. Filed Mar. 31, 1917, Serial No. 158,823. Renewed Aug. 9, 1922, Serial No. 580,808. 24 Claims. (Cl. 83—9.)



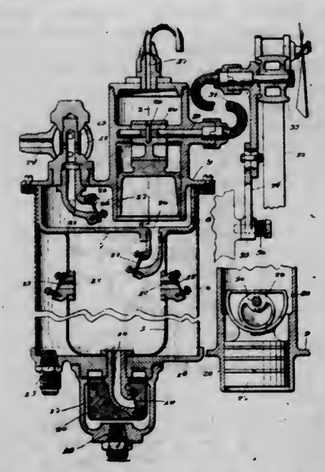
1. In combination, an annular externally driven crushing die having an internal crushing face, a movable and rotatable crushing roll within and eccentric of said die and having a peripheral crushing face reciprocal to the inner face of said die, means for revolving said die, and a support on which said roll is movably and rotatably mounted comprising an outer supporting portion mounted exteriorly of said die and having a portion extending past one side of said die affording an aperture at the side of said roll through which the latter can be passed and having projecting inwardly from and sustained by said outer portion a rigid inner roll supporting portion within and extending through said die and movably and rotatably sustaining said roll within said die opposite said recess.

1,451,155. MACHINE FOR CRUSHING OR GRINDING. GEORGE H. FRASER, Brooklyn, N. Y. Filed Mar. 31, 1917, Serial No. 158,824. Renewed Aug. 15, 1922. Serial No. 582,071. 21 Claims. (Cl. 83—9.)



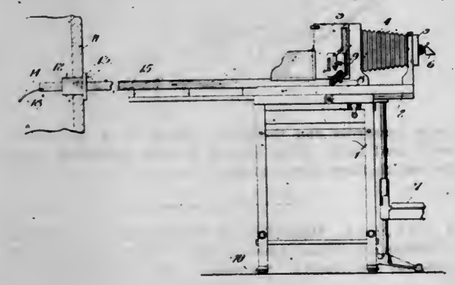
1. In combination, an annular crushing die, revolving in an approximately vertical plane and having an internal crushing face, a rotatable crushing roll within and eccentric of said die and having a peripheral crushing face reciprocal to the inner face of said die, means for revolving one of said parts, non-rotative means on which said roll is rotatably mounted, and supporting means supporting said die and mounted exteriorly thereof comprising a portion extending past one side of said die and a stationary portion extending through the interior of said die and internally supporting the latter and of less size than the internal diameter of said die, said supporting means affording a space at the other side of said die through which the latter may be removed.

1,451,156. MACHINE FOR CRUSHING AND GRINDING. GEORGE H. FRASER, Brooklyn, N. Y. Filed Mar. 31, 1917, Serial No. 158,825. Renewed Dec. 15, 1922. 16 Claims. (Cl. 83—9.)



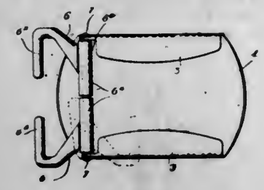
1. In combination, an annular crushing die revolving in an approximately vertical plane on a fixed axis and having an internal crushing face, a movable and rotatable crushing roll within and eccentric of said die and having a peripheral crushing face reciprocal to the inner face of said die, means for revolving one of said parts, a revolving head at one side and rotatably sustaining said die, movable non-rotative means on which said roll is rotatably mounted in parallelism with and movable at right angles to the axis of said die, a one sided support for said roll mounted exteriorly of said die and having a portion extending past one side of said die movably sustaining said non-rotative means solely from such side of said die, and a pivotal connection between said non-rotative means and said supporting means axially parallel with the axis of said die.

1,451,157. CIRCUIT BREAKER. BERT G. GERMIG, Seattle, Wash. Filed May 23, 1921. Serial No. 471,578. 7 Claims. (Cl. 123—146.5.)



7. In a motor driven vehicle, the combination with the electric circuit for the spark plugs of the vehicle's engine and a brake rod for the vehicle, of a circuit breaking device comprising a motor driven shaft, a wheel fixed on said shaft provided with radially extending arms, a rocker shaft provided with an arm adapted to be engaged by the arms of said wheel when the latter is rotated to effect the rocking of the shaft, a switch arm fixed to the rocker shaft having electrical connection with one terminal of the spark plug circuit and movable by the shaft between the contact block and an adjustable arm that are electrically connected with the other terminal of the spark plug circuit, a yieldable latch bar normally engageable with arms of the wheel, to prevent rotation thereof, a solenoid adapted, when energized, to magnetically move the latch to releasing position, an electric circuit for the solenoid, a switch arm in said circuit operatively connected with said brake rod, whereby movement of the latter to effect braking of the vehicle will move the arm to close the solenoid circuit.

1,451,158. LIQUID-ELEVATING DEVICE FOR MOTOR-VEHICLE ENGINES. HUGO B. GRANT, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Dec. 18, 1920, Serial No. 431,798. Renewed Sept. 7, 1922. Serial No. 586,803. 2 Claims. (Cl. 158—36.)



1. In a vacuum liquid supply apparatus, a liquid receiving vessel having a liquid outlet and an overflow outlet, a vacuum chamber carried by and located above said vessel, and having a liquid outlet thereinto and a liquid inlet, and an air pump having its cylinder opening into the vacuum chamber.

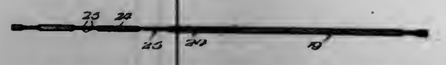
1,451,159. PHOTOGRAPHIC DARK ROOM. JOHN S. GREENE, Rochester, N. Y., assignor to Commercial Camera Company, Providence, R. I., a Corporation of Rhode Island. Filed Oct. 8, 1920. Serial No. 415,504. 3 Claims. (Cl. 95—90.)

1. In a photographic apparatus, the combination with a dark room of a light tight conveying chute extending into the same, an exposing mechanism arranged exteriorly of the dark room and adapted to discharge exposed photographic material into the chute, and a light seal surrounding the chute within a wall of the dark room said light seal comprising a tubular member provided with elastic ribs adapted to press against the walls of the chute and to yield sufficiently to permit the insertion and withdrawal of the latter.

1,451,160. BELT BUCKLE. JOHN HEBERLING, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed June 13, 1922. Serial No. 568,031. 3 Claims. (Cl. 24—191.)

3. A buckle comprising a buckle frame having a clamping surface, a shaft supported by said buckle frame, two belt anchoring members mounted to turn relatively to each other on said shaft, and each having a belt engaging portion extending toward the belt engaging portion of the other member, and two clamping surfaces each arranged on one of the belt anchoring members to swing with the latter about their axis toward and from the clamping surface on the buckle frame.

1,451,161. HEADLIGHT FOR AUTOMOBILES. EMERSON B. HELM, Cleveland, Ohio, assignor of one-third to Charles L. Gebauer and one-third to James Benner, both of Cleveland, Ohio. Filed Dec. 1, 1920. Serial No. 427,519. 2 Claims. (Cl. 240—41.)



1. In an automobile headlight, in combination, a paraboloid reflector arranged with its axis substantially horizontal, a pair of light sources supported substantially on the axis of said reflector on opposite sides of its focal point, and individual reflectors for said sources, one of

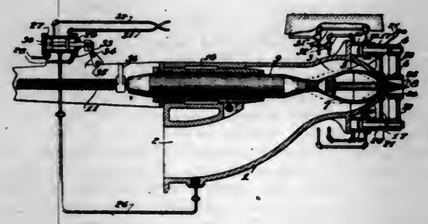
said individual reflectors facing upwardly and the other facing downwardly, the source which is forward of the focal point being located in that individual reflector which

faces upwardly and the source which is at the rear of said focal point being located in that individual reflector which faces downwardly.

1,451,162. METHOD OF PRODUCING A MATRIX. HENRY A. HEBB, Chicago, Ill. Filed Jan. 2, 1923. Serial No. 610,212. 2 Claims. (Cl. 101—401.3.)

1. The method of producing a matrix for use in the treatment of a printing plate which consists in printing from a printing plate the design thereon upon the surface of a metallic sheet, then from the printing plate and upon another sheet of material pulling another copy of the design, then placing the proof face of the second sheet against the back of the metallic sheet so that the design on the proof face will register with the design on the obverse face of the metallic plate, then causing the design on the second sheet to offset on the back of the metallic sheet, and then etching both faces of the metallic sheet.

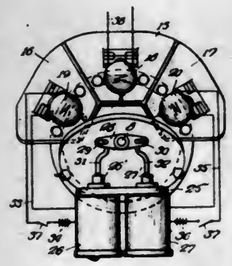
1,451,163. CANDLE POINTER. ALFRED S. HOPE, Chicago, Ill. Filed Apr. 12, 1922. Serial No. 552,058. 2 Claims. (Cl. 18—1.)



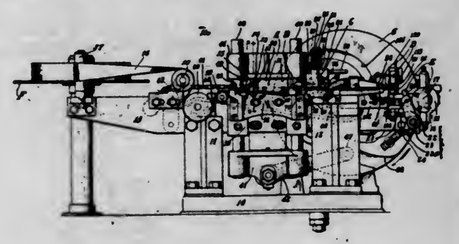
1. In a candle pointer, the combination of a tubular body, an apertured hollow cone integral therewith, a cutter blade shaped to produce a compound curved candle tip and fitted to the hollow cone member in such a way that the axis of the cutter diverges from the axis of the cone and has an increasing angle of rake from the point of the cone to the junction with the tubular body portion.

1,451,164. CANE-CRUSHING APPARATUS. HENRY HURTER, St. Louis, Mo., assignor to Fulton Iron Works Company, St. Louis, Mo., a Corporation of Delaware. Filed May 10, 1920. Serial No. 380,331. 1 Claim. (Cl. 100—47.)

In an apparatus for expressing juice from cane, a pair of cooperating rolls each having peripheral ribs and grooves adapted to receive the cane, the peripheral grooves at the ends of one roll being of less depth than the intermediate grooves, and the end ribs of the other roll being of less depth than the intermediate ribs.

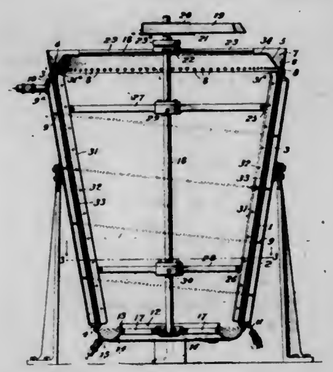


1,451,165. HYDRAULIC-NOZZLE CONSTRUCTION. CHESTER B. MCAULAY, Palo Alto, Calif. Filed Feb. 8, 1922. Serial No. 534,865. 14 Claims. (Cl. 253—24.)



13. In combination with a hydraulic nozzle, a needle valve movably mounted therein to control the stream flow issuing from the orifice thereof, a tip at the discharged end of the nozzle and formed with an orifice of a contour differing from that of the nozzle orifice, a pair of pistons operatively supporting said tip in position, a cylinder within which each piston operates, a fluid pressure supply connected with opposite ends of each cylinder, a valve for controlling the pressure flow through said connection, and a valve trip adjustably mounted on the needle valve stem for actuating said valve, dependent on the position of the needle valve.

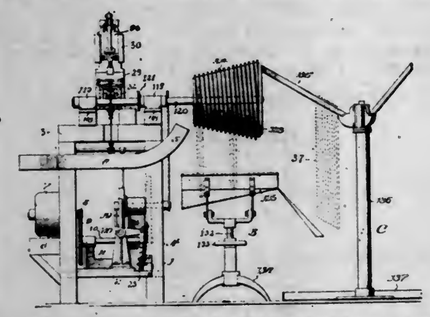
1,451,166. SIGNAL DEVICE. DANIEL J. MCCARTHY, Elgin, Ill., assignor to Chicago Railway Signal and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed May 27, 1920. Serial No. 384,560. 3 Claims. (Cl. 177—337.)



1. A signal device having a lens; a plurality of lamps arranged around the lens, a reflector, movable to project the light thru the lens from a selected lamp and a solenoid, in series with the selected lamp to move the reflector to appropriate cooperative position with respect to said lamp.

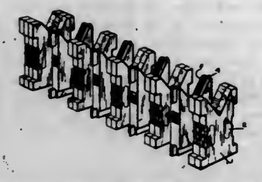
1,451,167. METHOD AND APPARATUS FOR FORMING STRAPS AND APPLYING THE SAME TO ARTICLES. FRANK J. MACDONALD, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed June 9, 1921. Serial No. 476,335. 67 Claims. (Cl. 12—1.)

18. Apparatus of the class described comprising means for longitudinally folding a strip of material, means for intermittently advancing said folded strip and severing a length therefrom, and means for presenting an article in position to receive said strip as it is advanced.



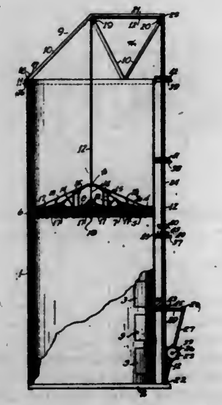
1,451,168. APPARATUS FOR TREATING MATERIALS. MAY C. MABEE, Toledo, Ohio. Filed Sept. 11, 1915, Serial No. 50,225. Renewed June 29, 1922. Serial No. 571,766. 18 Claims. (Cl. 127—9.)

5. In an apparatus of the character described, the combination of a vertically disposed tubular container, the wall of which tapers inwardly from the top to the bottom thereof, said container having an inlet in its side wall for the material adjacent said enlarged top and an outlet for the treated material adjacent the bottom thereof, means whereby the material is caused to move downwardly over the treating surface while subjected to a positive rotatable movement in layer formation circumferentially over said surface, means for applying to the wall of the container a heat transmitting medium of high temperature, and said container being open at opposite ends for the escape of vapors.



1,451,169. APPARATUS FOR THE PREPARATION OF TIRE BEADS. HARVEY F. MARANVILLE, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed July 22, 1919. Serial No. 312,474. 8 Claims. (Cl. 154—9.)

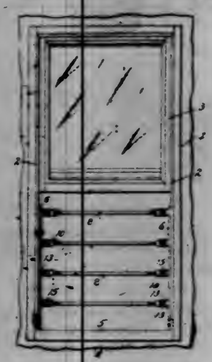
1. In an apparatus for the preparation of tire beads, the combination of means for uniting the ends of a bead strip to form a ring, a support projecting from said means and around which the ring is formed, a conveyor carried by said support and disposed to receive the rings formed



by the ring forming means, and a coating bath disposed in the path of travel of the rings on the conveyor for coating the rings.

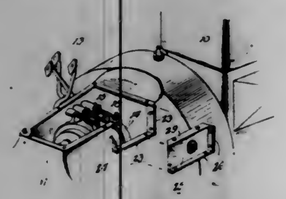
1,451,170. TYPOGRAPHIC MATRIX AND PRODUCTION OF SAME. GEORGE E. MARLATT, Pasadena, Calif. Filed May 26, 1921. Serial No. 472,833. 12 Claims. (Cl. 109—66.)

1. A typographic matrix having characters in regular and auxiliary positions on the body portion thereof, a recess between said regular and auxiliary positions capable of receiving an insert part, and an insert part for said recess having characters in position to co-operate with the characters on the body portion of the matrix for forming composite characters in both of said regular and auxiliary positions.



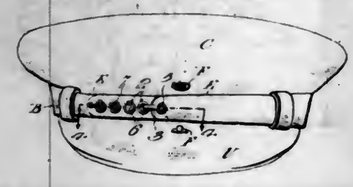
1,451,171. SILO. JULIUS MATTSON, Chicago, Ill. Filed Aug. 25, 1921. Serial No. 495,160. 4 Claims. (Cl. 20—1.4.)

1. In a silo having a vertically disposed casing, a closure movably disposed in said casing and comprising a



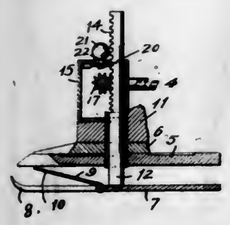
case of porous flexible material, a filling of heat impervious material disposed in said case, and a cover of wire netting over said case.

1,451,172. WINDOW GUARD. GROVER C. F. MAYER, Brooklyn, N. Y. Filed Oct. 27, 1921. Serial No. 510,961. 1 Claim. (Cl. 20—71.)



A guard for windows, comprising members having holes therein and adapted to fit within the sash guideways of the casement, guard rods shorter than the distance between said members when said members are within the sash guideways, flanged nuts on the ends of said rods capable of being screwed onto said rods so that the distance between the outer ends of the heads of said nuts on the rods will be shorter than the distance between the members when said members are in position in the casement, and portions on the outer end of said nuts adapted to fit within the holes in said members when the nuts are screwed outward on said guard rods permitting the flanges on said nuts to engage the members and hold said rods and members firmly in desired position.

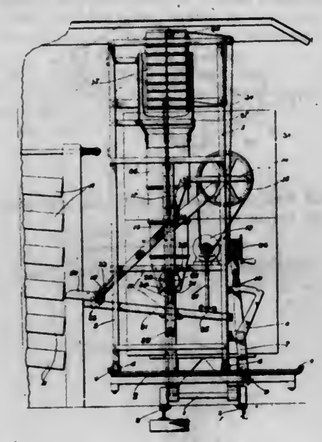
1,451,173. TRANSMISSION-CASE COVER. HARRY E. MIEBACH and ARNOTT S. CAUGHEY, Lethbridge, Alberta, Canada. Original application filed Oct. 1, 1920, Serial No. 414,100. Divided and this application filed Nov. 16, 1921. Serial No. 515,652. 2 Claims. (Cl. 74—56.)



1. In a transmission cover having a top door opening, and a top door normally closing said opening, a side door opening in the cover merging at its top in the side of the top door opening, the cover being provided with flanges on the bottom and rear side wall of the side door opening, a side door closing the side door opening and having outwardly projecting flanges mating with the flanges on the bottom and rear side wall of the side door opening, means engaged through said flanges securing the side door in position, the side door being provided at its top edge with an inwardly projecting flange engaging under the edge of the top door, the side door and side door opening having mating transversely beveled front edges, fastening means inserted in the mating beveled edges of the side door and side door opening to effect binding of the bottom and rear side flanges of the side door upon the mating flanges of the side door opening, and fastening means inserted through the top door into the inwardly projecting top flange of the side door.

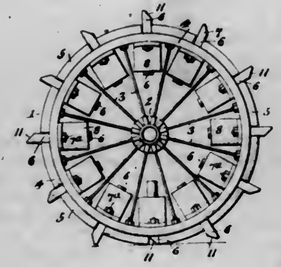
1,451,174. ADJUSTABLE CAP. CHARLES H. MIRUS, Louisville, Ky. Filed Aug. 1, 1922. Serial No. 578,932. 2 Claims. (Cl. 2—106.)

1. In an adjustable cap, means for varying the size of the head opening, comprising head band extension straps adapted to have their free ends overlap, a rigid plate arranged on one of said extension straps and formed with a row of openings disposed at predetermined spaced size intervals, a strip of flexible material arranged between said plate and its extension strap and bearing a row of hat-size numbers which are exposed to view through said openings in the plate, fasteners uniting said plate, said strip and said extension strap and a hook secured to the other extension strap to be selectively engaged with any of said openings in the plate.



1,451,175. HAIR CLIPPER. CHERUBINO NANNINI, Manhattan, Nev. Filed May 29, 1922. Serial No. 564,417. 7 Claims. (Cl. 30—1.)

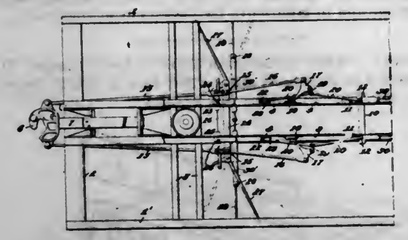
1. In a hair clipper having a fixed and slidably movable cutting blade, means positioned beneath the fixed blade adapted to be moved to and from the same for adjusting the cutting effect of the blades, and comprising a plate having a plurality of teeth corresponding to the lower cutting blade, upstanding posts on said blade, opening through the clipper made to receive said posts, each of said posts having a rack face, a transverse shaft mounted across said rack faces, pinions on said shaft meshing with said rack faces, and means for rotating said shaft whereby the said plate may be adjustably moved to and from the lower cutting blade by raising or lowering said posts.



1,451,176. MACHINE FOR CHARGING FURNACE RETORTS. JOHN EDWIN PEDERSEN, Hillsboro, Ill., assignor to American Zinc, Lead & Smelting Company, St. Louis, Mo., a Corporation of Maine. Filed June 24, 1921. Serial No. 480,014. 16 Claims. (Cl. 214—18.)

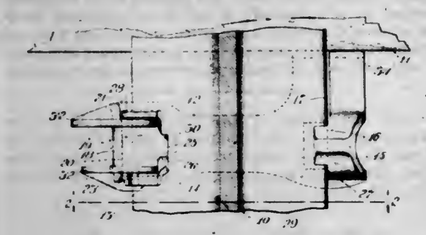
1. A machine of the character described, comprising a supporting frame located adjacent to the charging ends of retorts, movable throwers carried by the frame for throwing material into the retorts, means for supporting the throwers at different heights necessary to throw material into retorts at different heights, and mechanism for moving the throwers rapidly toward the open ends

of the retorts with sufficient momentum to throw the material to the inner ends of the retorts when the throwers are stopped near the ends of the retorts.



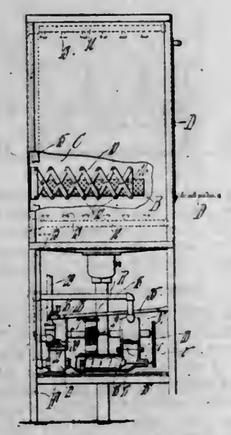
1,451,177. TRACTION WHEEL. JAMES H. PIERCE, Shelburn, Ind. Filed Feb. 8, 1922. Serial No. 534,958. 2 Claims. (Cl. 301—51.)

2. A traction wheel comprising a rim upon which the wheel may travel, filling blocks extending peripherally of the exterior of the rim and spaced apart at their ends to provide guide spaces, lugs or cleats movable into and out of the guide spaces between the filling blocks and also spaced apart circumferentially of the wheel, the cleats or lugs being provided with spaced stems at their ends movable radially through the guide spaces and provided with expansion springs having a normal tendency to project the lugs, and said springs being of a resistance to yield to the weight of the traction wheel.



1,451,178. PULL MECHANISM FOR RAILWAY CARS. CHARLES V. ROTE, Lancaster, Pa., assignor of one-half to E. W. Brown, Lancaster, Pa. Filed July 27, 1920. Serial No. 399,307. 4 Claims. (Cl. 213—8.)

2. The combination with a railway car frame, having a draft coupler at each end, of two toggles each having both members pivotally connected to the car frame, the connection between each of said members and the frame being movable in the direction of the length of the frame, a rigid connection between adjacent members of the toggles, a connection between each toggle and the adjacent coupler, and adjustable means for preventing



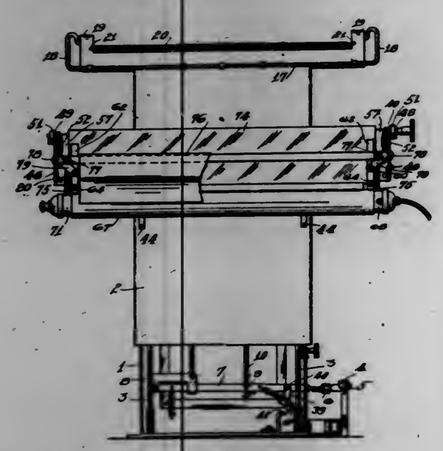
relative movement between one of the members of each toggle and the frame.

1,451,179. RAIL ANCHOR. WILLIAM B. RUNYAN, Dayton, Ohio, assignor to Mitchell Rail Anchor Company, Inc., Dayton, Ohio, a Corporation of Kentucky. Filed June 5, 1922. Serial No. 565,873. 22 Claims. (Cl. 238—324.)

1. A rail anchor comprising a rail base engaging member and a wedge adapted to have a wedging engagement between said member and the upper surface of the rail base, said member and wedge being formed with coengaging means for maintaining the wedge in alignment with said member when the wedge is being driven to its operative position.

1,451,180. WASHING MACHINE. ANTON C. SCHMELZER, Springfield, Mass., assignor, by mesne assignments, to Century Machinery Corporation, Holyoke, Mass., a Corporation of Delaware. Filed Aug. 29, 1919. Serial No. 320,716. 11 Claims. (Cl. 141—9.)

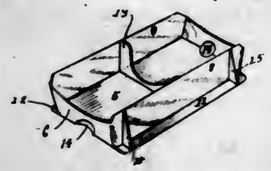
1. In a washing machine, a washing compartment, an inlet conductor to supply water thereto, a movably



mounted containing device for soap or the like, and means controlled by the flow of the water to move said device into the path of the water passing through said conductor and to later move the device out of such path.

1,451,181. BED CONSTRUCTION. LA FORREST D. SCOTT, Los Angeles, Calif. Filed July 5, 1922. Serial No. 572,857. 7 Claims. (Cl. 5—37.)

1. In a foldable structure having a carriage and a member pivotally secured thereto, a support for said carriage adapted to rest on the floor, said support being extensibly mounted on said carriage so as to be projected therefrom upon said carriage being lifted, and an arm actuated by projection of said support to be moved under said member and lock said carriage and member in open position.

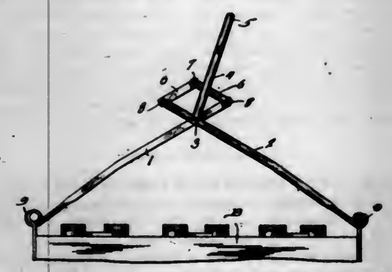


1,451,182. READING APPLIANCE. ROBERT M. SEARLE, Rochester, N. Y. Continuation in part of application Serial No. 368,311, filed Mar. 24, 1920. This application filed Apr. 8, 1921. Serial No. 459,741. 44 Claims. (Cl. 120—29.)

1. In a copy holder, the combination with a work support and a line guide, one of which is movable vertically relatively to the other; of an ironing device for flattening the work directly above the line guide, and an elongated lens for viewing the work flattened by the ironing device.

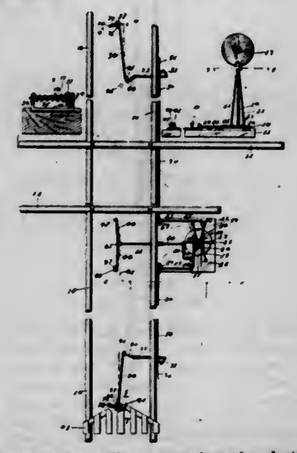
1,451,183. TRACTION ATTACHMENT FOR WHEELS. JOHN W. SHROCK, Akron, Ohio. Filed June 25, 1920. Serial No. 391,670. 1 Claim. (Cl. 152—2.)

In a device of the class described, an integral box-like structure, comprising a bottom plate, arched laterally to conform to the circumferential outline of a wheel; parallel side walls, outwardly bulged, relatively low end walls; an opening in each end wall, a centrally positioned, laterally extending, strengthening partition; said bottom plate extending outwardly beyond said side walls; each of said openings being positioned at the base of an end wall so



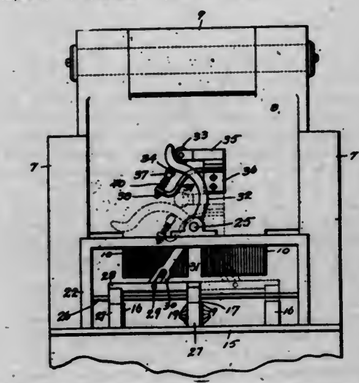
as to extend into both the end wall and base plate, substantially as herein set forth.

1,451,184. WRENCH. HERVEY W. SMALL, Small, Idaho. Filed Apr. 1, 1921. Serial No. 457,677. 3 Claims. (Cl. 81—139.)



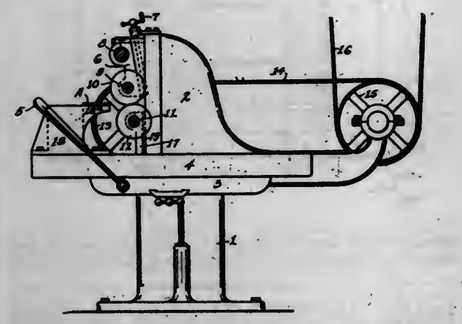
1. A wrench including a shank, a toothed shank slidable in the first shank, a rockable toothed member mounted in the first shank and engaging the teeth of the second shank, an angle lever mounted in the first shank, and a resilient means secured to the rockable member and loosely engaged with one arm of the lever for moving the rockable member into and out of engagement with the toothed shank.

1,451,185. TONGS FOR LIFTING BATTERIES. WILLIAM F. STAGGERS, Mannington, W. Va. Filed May 12, 1921. Serial No. 468,916. 3 Claims. (Cl. 294—118.)



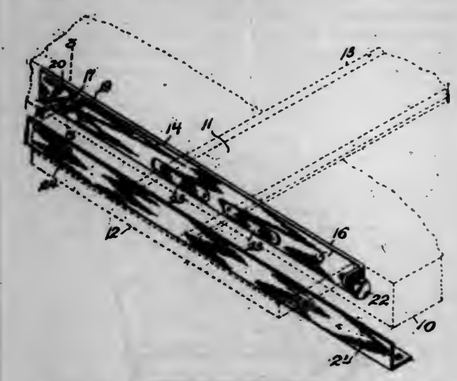
1. In tongs of the class described, the combination of tong members having outwardly turned hook ends, a handle on which the tong arms are pivotally mounted, and a lazy tongs extension on the ends of the tong elements by means of which the tongs may be readily adjusted for picking up articles of different size said tong arms having only one point of pivotal attachment to the handle and permitting the handle to be swung free from the outer portion of the lazy tongs extension.

1,451,186. RAILWAY-CROSSING SIGNAL. EDWIN H. STALEY, Burt, and CHAUNCY I. MANSMITH, Algona, Iowa. Filed Sept. 12, 1922. Serial No. 587,648. 5 Claims. (Cl. 246—293.)



1. In an improved railway crossing signal, the combination of a signal device, a rod extended substantially parallel with the railway track and connected with the signal device when a pull is exerted upon it, a signal actuating bar adjacent to the railway track and normally extended in a direction slightly divergent from a position parallel with the rails, one end being pivotally supported, the other end being free to swing laterally, means whereby the lateral movement of the free end of the actuating bar will exert a pull on said rod, and means for yieldingly supporting the pivoted end of the actuating bar to permit lateral movement thereof, and an actuating lug designed to be attached to a train for engagement with the actuating bar.

1,451,187. BRICK-SURFACING MACHINE. JACOB STOCKE, Jr., St. Louis, Mo., assignor to Progress Press Brick and Machine Company, St. Louis, Mo., a Corporation of Missouri. Filed Mar. 11, 1922. Serial No. 542,991. 7 Claims. (Cl. 25—20.)

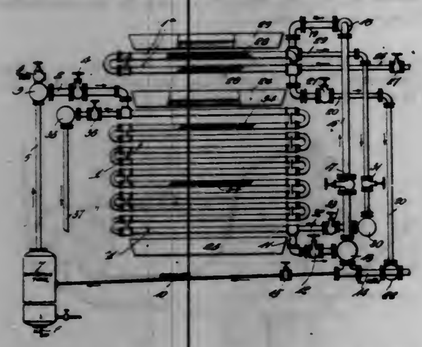


1. A brick surfacing machine comprising a brick press having a ram, a table secured to said press, strips secured to said table, cutters secured in one of said strips and extending therefrom, a movable end scoring blade adapted to be moved across the ends of a brick by the downward movement of the ram.

1,451,188. MILLING MACHINE. WILLIAM A. STUDY, Richmond, Ind. Filed June 10, 1921. Serial No. 476,425. 1 Claim. (Cl. 90—16.)

A milling machine having a bracket with a vertical face, an upper cutter-shaft and a lower cutter-shaft both adjustably connected to said face, means whereby one of said shafts may be adjusted laterally with relation to the other shaft, means for revolving said shafts by power, a bed plate, a carriage adapted to travel horizontally on said bed-plate, a work supporting block having a horizontal upper face with means whereby said block is carried by said carriage, and a milling cutter mounted on each of said shafts whereby each may engage material resting on the surface of said block, all substantially as shown and described.

1,451,189. GUIDE FOR T SQUARES. ALBION A. VANDERPOOL, Newark, N. J. Filed Aug. 12, 1922. Serial No. 581,293. 5 Claims. (Cl. 33—76.)

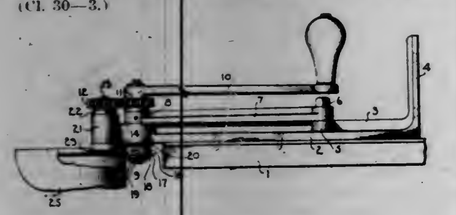


1. A guide for T-squares comprising a slide for attachment to the guiding edge of the head of the T-square, a strip adapted to be secured to a drawing board, and yielding means adapted to be interposed between the slide and the strip for holding the guide against the drawing board.

1,451,190. GAS CONDENSER. FREDERICK E. VOORHIES, Tulsa, Okla. Filed Apr. 28, 1921. Serial No. 465,165. 3 Claims. (Cl. 257—40.)

1. A condensing apparatus comprising a pair of independent condensers of relatively low and high efficiency respectively, a condensate outlet from the low efficiency

condenser, a gas passage leading from said condensing outlet to said high efficiency condenser, and an outlet

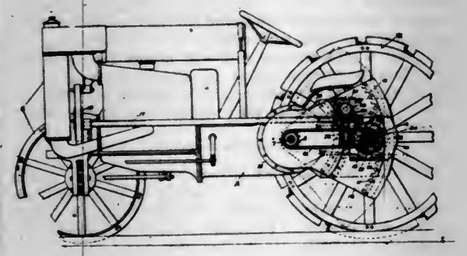


from the last named condenser independent of the low efficiency condenser and leading to said condensate outlet.

1,451,191. AUTOMATICALLY-OPERATING FABRIC CLAMPING AND GRIPPING BUCKLE. JEM R. WADE, Denver, Colo., assignor of one-half to The New England Electric Company, Denver, Colo., a Corporation of Colorado. Filed Oct. 2, 1922. Serial No. 591,994. 4 Claims. (Cl. 24—193.)

1. A fabric clamping device of the character described, consisting of a wire framelike member comprising a horizontal bar portion of suitable length, which is bent at points defining the length of the bar, to form inwardly extending members which lie beneath and are parallel with the bar, said members being bent in reverse directions, and then around to form an incomplete ringlike member, and a second incomplete ringlike member, of substantially the same size and shape as the first ring-like member, the free ends of which are bent around the said inwardly extending members to form a hinge connection therewith.

1,451,192. CAN OPENER. ROBERT H. WALLER, Nashville, Tenn., assignor to Quicksafe Manufacturing Company, Nashville, Tenn., a Corporation of Tennessee. Filed May 17, 1922. Serial No. 561,651. 14 Claims. (Cl. 30—3.)



3. In a can opener, a rotary cutter or knife, a gage roller for engagement with the inner wall of the bead of the can, intermeshing gears for causing the cutter and roller to be simultaneously rotated in opposite directions and means for positively throwing one of the gears out of mesh with the other gear when said cutter is rotated in a reverse direction.

1,451,193. PENCIL. PAUL WM. WERNER, Niota, Ill. Filed July 30, 1921. Serial No. 488,563. 1 Claim. (Cl. 120—18.)

In a device of the class described, a body; a rotatable member journaled in the body; a bearing threaded into the body, the bearing having a kerf, the rotatable member being journaled in the bearing; an abutment on the rotatable member and coacting with the bearing, the abutment being cut away to give access to the kerf; a plunger having threaded connection with the rotatable member; and means for holding the plunger against rotation.

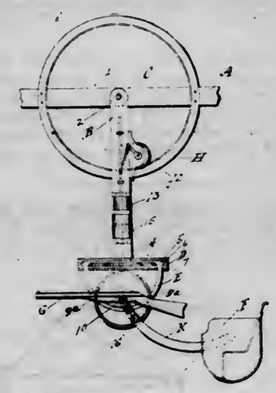
1,451,194. TRACTOR. EDWIN G. ADAMS, The Dalles, Oreg. Filed Aug. 4, 1922. Serial No. 579,720. 4 Claims. (Cl. 180—41.)

1. In a tractor of common type, the combination of, independent members pivoted in their forward parts in the chassis and extending rearwardly, one having a rigid forward facing rack, the other a like reverse facing rack, also containing tractor wheels mounted on stub shafts rotatable in the free parts of said members, a transverse shaft rotatably mounted in the chassis, having rigid pinions on each end, positioned to mesh constantly with the opposing racks above mentioned, and mechanism arranged and adapted and by means of which said shaft and its pinions may be caused to rotate in either direction and thereby cause the tractor wheels to rise or descend desired distances in vertically opposite directions, without changing a substantially horizontal position of the chassis.

1,451,195. COMBINED SHOVEL, TORCH, AND MATCH HOLDER. JOSEPH C. BAGLEY, Beloit, Ala. Filed Jan. 6, 1922. Serial No. 527,420. 2 Claims. (Cl. 158—10.)

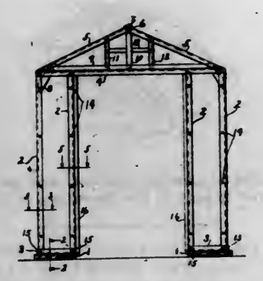
2. The combination with a blade having a recess and a passage communicating with said recess, of a shank connected to said blade and having communication with said

passage, a combined reservoir and handle connected to said shank, a valve interposed between said shank and reservoir, a wick received in said recess, a flange extinguishing plate slidable over said wick, and a combined



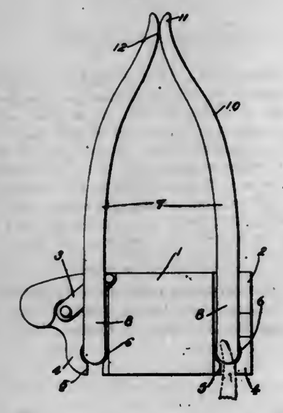
baller and supporting member connected to the rear portion of said handle and constituting a means for supporting the reservoir and said shank in an inclined position.

1,451,196. POCKET LOCK FOR GARMENTS. JOSEPH C. BAHR, St. Louis, Mo. Filed Aug. 8, 1921. Serial No. 490,515. 4 Claims. (Cl. 24—201.)



1. A pocket lock for a garment comprising a pair of interengaging members, and a forcing element carried by one of said members for forcing said other member into an interlocked position.

1,451,197. AEROPLANE GUN MOUNTING. JOHN P. BALL, Chicago, Ill. Filed July 13, 1921. Serial No. 484,389. 3 Claims. (Cl. 89—40.)

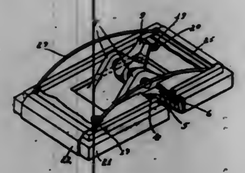


3. In a flying machine, main longitudinal frame members disposed lengthwise of the body of the machine in the same plane, supplementary pivoted bars spaced apart and hinged at one end to said main longitudinal frame members and adapted to swing in a vertical circle, an auxiliary operator's chair independent of the main operator's chair, and pivotally secured to the other end adapted to rotate in a circle, means for revolving said supplementary bars, means for rotating said auxiliary operator's chair and means of communication between said auxiliary operation and the main machine operator.

1,451,198. BUILDING CONSTRUCTION. VICTOR A. BENSON, San Jose, Calif. Filed Nov. 1, 1921. Serial No. 512,155. 6 Claims. (Cl. 189—1.)

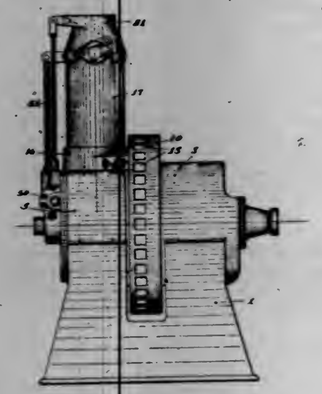
1. A building construction comprising a framework built up of angle irons L shaped in transverse cross section and sheet metal covering said framework, said framework having a door opening formed therein, each side element of said opening being formed of a pair of vertically extending and horizontally spaced angle irons each arranged with one flange parallel with the wall in which it is placed and the other flange arranged at right angles thereto and extending toward the interior of the structure and a third angle iron arranged with one flange inserted between the inwardly extending flanges of said parallelly arranged angle irons and another flange extending laterally to form a door stop.

1,451,199. CASING ELEVATOR. FRANK M. BLAIR, Newark, Ohio, assignor to The Cree-Becker Oil Tool Company, Newark, Ohio. Filed Mar. 30, 1922. Serial No. 548,058. 3 Claims. (Cl. 294—90.)



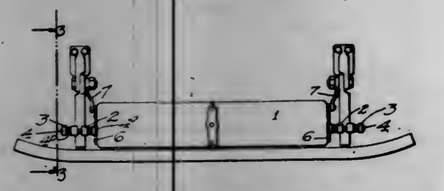
1. The combination with an elevator having oppositely extending lugs, there being transverse openings in the lower portions of the lugs and slots extending upwardly to said openings from the lower ends of the lugs, of links of variable thickness removably seated in the openings.

1,451,200. FLOOR WAXER AND POLISHER. ALFRED S. BOYLE, Cincinnati, Ohio. Filed Feb. 25, 1922. Serial No. 539,309. 3 Claims. (Cl. 15—231.)



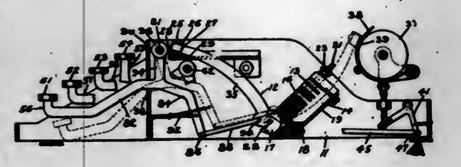
1. In a floor waxer and polisher, the combination of a base comprising a top and a bottom plate both of which

have depressed upper faces, the top plate being adapted to seat in the depression in the bottom plate, means to



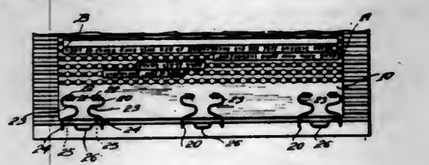
secure the plates upon one another, and an arched wire frame adapted to seat in the depression in the top plate.

1,451,201. AIR-COOLED INTERNAL-COMBUSTION ENGINE AND ELECTRIC GENERATOR PLANT. ALEXANDER T. BROWN and CHARLES S. BROWN, Syracuse, N. Y. Filed Feb. 18, 1919. Serial No. 277,874. 3 Claims. (Cl. 123—171.)



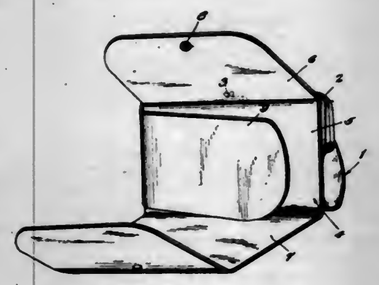
3. In an internal combustion engine, a crank case, a cylinder mounted on the case, an air chamber in the form of a box mounted on the crank case, around and spaced apart from the lower end of the engine cylinder, the chamber having an outlet in one side, a jacket surrounding the cylinder having its lower end engaged with the top of the air chamber, and a fan mounted on the crank shaft and running across said outlet and having an inlet communicating with the outlet of said chamber, substantially as and for the purpose set forth.

1,451,202. AUTOMOBILE TOOL-BOX SUPPORT. JAMES WILLIAM BROWN, San Diego, Calif. Filed Nov. 26, 1920. Serial No. 425,444. 6 Claims. (Cl. 293—55.)



2. In a device of the class described, the combination with a conventional automobile, of brackets secured to the automobile wheel base, bumper supports shiftably mounted on said brackets, a bumper secured near the ends of said bumper supports, a container positioned between said bumper supports contiguous to said bumper, adjustable supporting means connected to said container and said bumper support for supporting said container in certain spaced relation from said support for various widths of the vehicle wheel base and adjustable bracing means connecting with the lower side of said container and with the bumper supports for bracing said container.

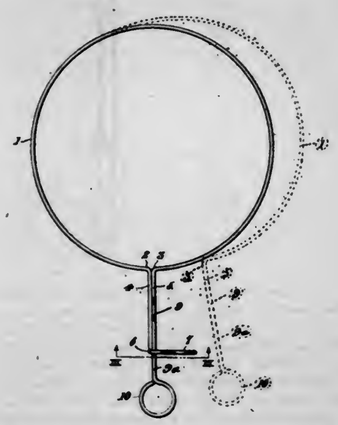
1,451,203. TYPEWRITING MACHINE. CHARLES U. CARPENTER, Dayton, Ohio. Filed May 3, 1922. Serial No. 558,052. 20 Claims. (Cl. 197—22.)



1. In a typewriting machine, a key lever pivoted approximately at the top of the machine, and having one portion extended forwardly and another portion extending downwardly to approximately the bottom of the machine, a type bar pivoted near the bottom of the machine and extending upwardly to approximately the top thereof, and a link connecting the end of the key lever with the type bar.

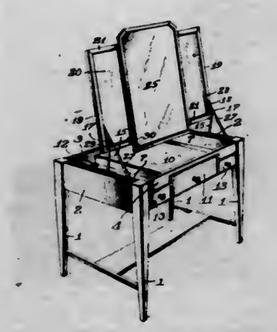
1,451,204. FLEXIBLE PRINTING FORM. CLIFTON CHISHOLM, Cleveland, Ohio, assignor to The American Multigraph Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 8, 1922. Serial No. 550,802. 16 Claims. (Cl. 101—375.)

1. In combination with a printing bed, of a printing member mounted on the bed and having fastening means secured to it, said means including one portion which engages the member beneath the printing surface and another portion which engages the bed beneath the surface thereof which supports the printing member.



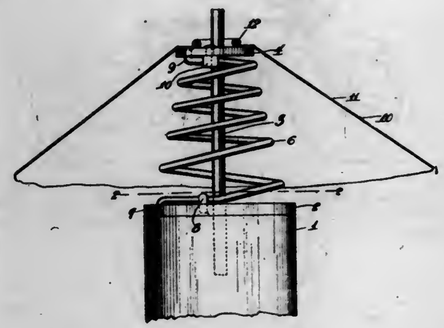
1,451,205. COMBINED PURSE AND BILL FOLD. ADOLFO DE CLAIRMONT, Toledo, Ohio. Filed Feb. 10, 1921. Serial No. 443,934. 2 Claims. (Cl. 150—35.)

1. As a new article of manufacture, a purse, and a bill fold, comprising relatively foldable portions, the purse



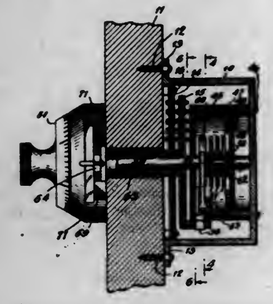
and bill fold having a dividing wall in common, means upon the said wall and the opposite wall of the purse for closing the mouth of the purse, and means upon the said dividing wall and one of the said portions of the bill fold for closing the bill fold and retaining the same in folded condition.

1,451,206. STRAINER-CLOTH CLAMP. VERNON E. DOW, Muskegon, Mich. Filed Mar. 30, 1922. Serial No. 548,203. 2 Claims. (Cl. 24—256.)



1. In a strainer cloth clamp, a resilient loop portion, clamping arms carried by the adjacent ends of the loop portion, the outer end of one arm being bent at right angles with said end and further bent to provide a reversely looped portion and said other clamping arm being offset upwardly and adapted for interlocking engagement with the reversely looped portion of the first named clamping arm for holding the resilient loop portion in clamping position.

1,451,207. DRESSING TABLE. THOMAS B. DRAPER, Toronto, Ontario, Canada. Filed Sept. 7, 1920. Serial No. 408,650. 5 Claims. (Cl. 45—70.)



1. In a dressing table having drawers and trays, a table top normally closing said tray, means connecting said table top to said table so that it may be raised to expose its inner wall, and a mirror pivoted off center on the inner wall of said table top to swing by gravity.

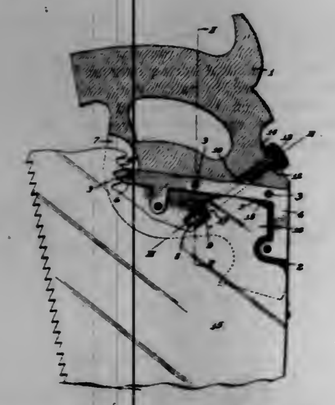
1,451,208. TENT-TENSION EQUALIZER. BENJAMIN F. DUNN, St. Paul, Minn. Filed May 15, 1920. Serial No. 381,576. 1 Claim. (Cl. 135—15.)

In a tent, the combination of a support for the top of the tent including a stationary plate adapted to be mounted on the tent pole, a standard extending vertically from the plate, a helical spring surrounding the standard and rigidly fastened to said plate, and a second plate slidably mounted on the standard and secured to the upper end of the spring for movement therewith, said plate being engaged by the top of the tent.

1,451,209. LOCKING SYSTEM FOR AUTOMOBILES. RICHARD E. ELMORE, New York, N. Y. Filed July 1, 1921. Serial No. 481,803. 16 Claims. (Cl. 200—45.)

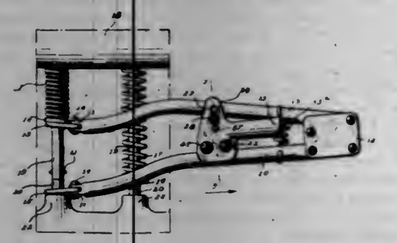
1. In an electrical switch mechanism for automobiles and the like, in combination with a series of automobile circuits controlling a series of distinct devices, a stationary switch member, having contact elements, a rotatable plate-like switch member provided with opposite wing portions, one carrying contact elements and the other including locking elements, the contact elements of the switch members comprising sets of make and break elements, a set for each of said circuits, means for moving the rotatable member into a series of successive positions; the said sets of make and break contact elements being so predetermined as to provide, in any of the successive positions of the said rotatable member, for the closing or opening of any desired permutation or combination of said series of circuits and locking means cooperating with said locking elements.

1,451,210. MOTOR CYCLE SUPPORT. JOSEPH S. ESLICK, San Jose, Calif. Filed Nov. 28, 1921. Serial No. 518,387. 4 Claims. (208—77.)



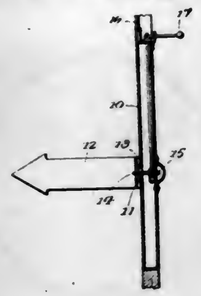
1. A motorcycle support comprising guides adapted to be vertically mounted upon each side thereof, a leg mem-

ber slidably mounted in each guide, a resilient connection between each leg and guide, means for locking each leg



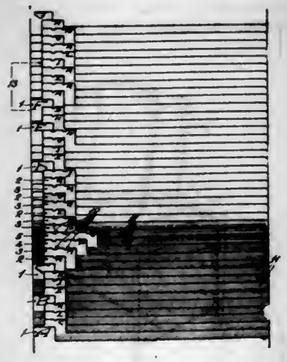
in a given position with relation to its guide, and foot actuated means for simultaneously unlocking said leg members.

1,451,211. HANDSAW. GEORGE FORTON, Detroit, Mich. Filed Aug. 24, 1922. Serial No. 583,957. 4 Claims. (Cl. 145—113.)



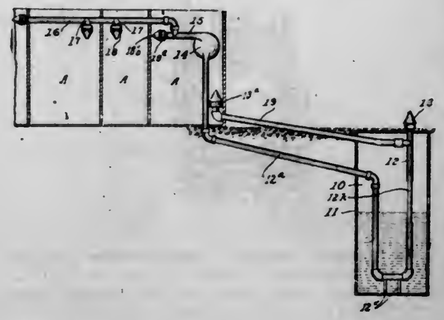
1. A hand saw comprising a handle having a groove, a frame in the groove of said handle, a saw blade extending into the groove of said handle and engaging one end of said frame, and means adjustable in said handle and engaging said saw blade for adjusting said saw blade so as to tilt it relative to said handle.

1,451,212. VALVE-SPRING-LIFTING DEVICE. JOHN GILBERT FYE, Ollie, Iowa. Filed Apr. 19, 1921. Serial No. 462,533. 3 Claims. (Cl. 29—86.3.)



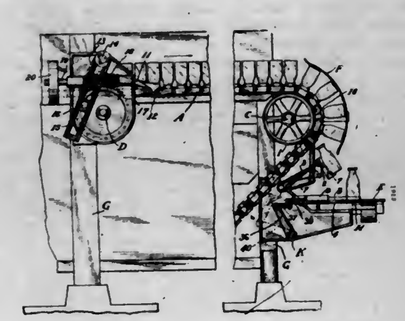
1. An improved valve spring lifting device comprising two arms pivoted together near one end, and a spreader for said arms comprising a handle and a body portion, the body portion being formed with two plates spaced apart from each other and capable of being inserted between the arms when they are spread and to receive the arms between the plates when the arms are brought toward each other, a fixed arm engaging member between said plates to engage one of the arms, and an adjustable arm engaging member between said plates to engage the other one of said arms, the adjustable member being capable of movement toward and from the fixed member.

1,451,213. DIRECTION SIGNAL FOR AUTOMOBILES. HAROLD K. GILBERT, Garner, Iowa. Filed Jan. 26, 1921. Serial No. 440,085. 1 Claim. (Cl. 116—52.)



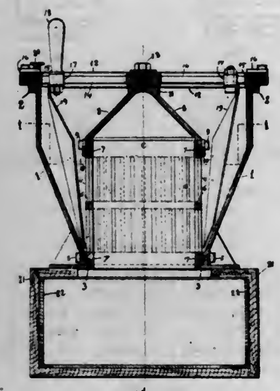
In a direction signal for automobiles, the combination with the double-walled door of an automobile, the wall portions of the door having aligned openings, a bearing bracket mounted on one of the wall portions within the door and adjacent the opening thereof, a bracket on the upper end of the door, a vertical shaft disposed between the wall portions of the door and rotatably supported in said brackets, a gear on the shaft partially protruding through the opening of the adjacent wall portion, a housing on the door covering the said opening and gear, means for rotating the shaft, a signal arm mounted on the outer face of the outer wall portion of the door adjacent the opening thereof and having a gear projecting through the opening and engaging the gear of the shaft.

1,451,214. TAB OF GUIDE CARDS FOR CARD INDEXES AND THE LIKE. MARIO GOITRE, Turin, Italy. Filed Apr. 16, 1921, Serial No. 461,824. Renewed Sept. 5, 1922. Serial No. 586,356. 4 Claims. (Cl. 129—16.5.)



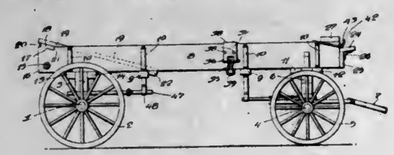
3. A card index comprising a plurality of primary guide cards having tabs of a width equal to twice the size of a modulus of a pre-established measure arranged in a row parallel to the side of the card index, and secondary guide cards having tabs starting from the middle of the tabs of the primary guide cards and extending towards the right in multiples of the modulus.

1,451,215. COOLING SYSTEM FOR HOUSES OR ROOMS. LEWIS A. GOODWIN, Cora, Mo. Filed Sept. 24, 1921. Serial No. 502,917. 2 Claims. (Cl. 98—27.)



1. The combination with a building, of an underground chamber, a pipe extending from the lower end of the underground chamber up through said chamber and then out into said building and having a plurality of discharge openings, means disposed in the length of the pipe and inward of said discharge end of the pipe for positively drawing air through the pipe from the intake end thereof and discharging it out through said discharge openings, a pipe section leading downward into said underground chamber and having an inlet opening above the ground, and a pipe leading from said building adjacent the floor thereof, extending into the upper end of the underground chamber and discharging into said second named pipe adjacent the inlet end thereof.

1,451,216. DISCHARGE MECHANISM. JOHN R. GRUETTER, Cleveland, Ohio. Filed Apr. 6, 1922. Serial No. 550,074. 21 Claims. (Cl. 198—20.)

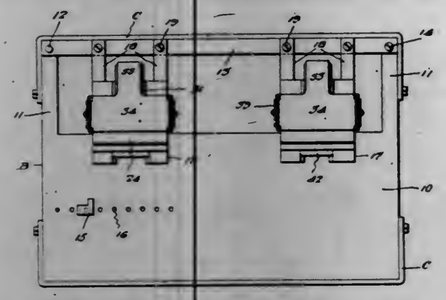


1. In a discharge mechanism for bottles, a support having a row of sockets therein, a swinging member comprising a series of trays arranged side by side, stops at the lower ends of the several trays for supporting the bottoms of bottles thereon, the said trays having slots therein just above the said stops, and the said sockets being of a depth sufficient to receive the stops but not the bottles, a composite transversely reciprocating thrust mechanism including a base member resting on the surface of said support and parallel with the row of sockets but transverse of the plane of said swinging member, lugs at one edge of said base member for attachment of actuating means thereto, and a series of thrust rods extending from the opposite edge of the base and registering with and movable through the slots in said trays when the latter are in the down position, means for actuating the swinging member when the rods are in their withdrawn position, and means connected with said lugs for actuating the thrust members when the trays are in the down position, substantially as set forth.

1,451,217. GRAIN-CUTTING MACHINE. DAVID GUELBAUM, Syracuse, N. Y. Filed Oct. 21, 1922. Serial No. 596,176. 8 Claims. (Cl. 83—6.)

1. A grain cutting machine, comprising a grain hopper with an offset flanged top and a tapered open flanged bottom, a stationary slotted cylinder fastened inside of said hopper, a rotating slotted cylinder with sharp cutting edges telescoping inside of said stationary slotted cylinder, a cone shaped cover holding fast in its bottom the top of said inner cutting cylinder, a hand wheel with its hub fastened to the top of said cone shaped cover and with its rim fitting into the offset flanged top of said hopper and with radial arms connecting said rim and hub, shoveling and thrusting scoops fastened to the radial arms of said handwheel, means for supporting said hopper and for collecting the discharge grain cuttings, substantially as and for the purpose specified.

1,451,218. DUMPING WAGON. JOHN MELUS GLYNN, Newport, Ark., assignor of one-half to John David McLain, Newport, Ark. Filed Mar. 13, 1922. Serial No. 543,504. 8 Claims. (Cl. 298—26.)

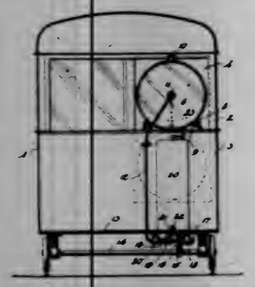


1. In a dumping wagon, a tiltable bed detachably supported for bodily removal downward, suspension means therefor detachably connected with said bed, and means for fastening the front end of said bed against pivotal movement.

1,451,219. AUTOMATIC PUNCHING DEVICE. AUGUST HANSEN, Aberdeen, S. Dak. Filed Nov. 5, 1921. Serial No. 513,117. 5 Claims. (Cl. 164—90.)

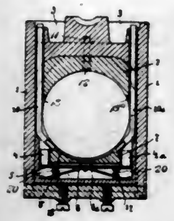
1. In combination with the platen of a printing press a punch device comprising a base member secured at a desired location upon the platen and formed with a hole constituting a female die, an offset bracket member carried by the base and defining therewith a paper receiv-

ing slot, said bracket member being formed with a hole registering with said first named hole, an impression plate slidably mounted upon the bracket member and carrying



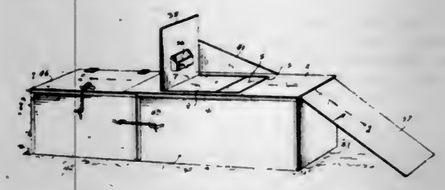
a male die passing through said second named opening and adapted to be projected through said first named opening.

1,451,220. PLAIT FOLDER FOR SEWING MACHINES. JESSE J. HEAP, New York, N. Y., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 11, 1919. Serial No. 337,121. Renewed Mar. 2, 1923. 4 Claims. (Cl. 2—45.)



1. A folder for sewing machines including upper and lower guiding members shaped so as to receive, direct and turn underneath the edge portions of a facing strip, the upper member being formed with a recess centrally thereof which increases in width toward the delivery end of the folder, a rib carried by the lower guiding member and located in said recess, a plate carried thereby, said plate and rib being shaped so as to form a plait from the body portion of the facing strip passing through the folder.

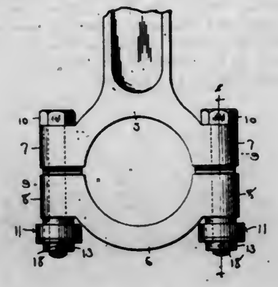
1,451,221. WINDOW-CLEANING DEVICE. CLARENCE O. HOFFMAN, Detroit, Mich., assignor of one-half to Louis Schulman, Detroit, Mich. Filed Dec. 1, 1921. Serial No. 519,061. 1 Claim. (Cl. 15—250.)



The combination of a window frame, a movable sash therein adapted to be raised and lowered relative to said window frame; a pane of glass rotatably mounted in said sash, a wiper member carried by said sash and engaging said rotary pane of glass, and a driven flexible shaft adapted to have an end thereof inserted in said rotary pane of glass when said sash is in a raised position for rotating said pane of glass.

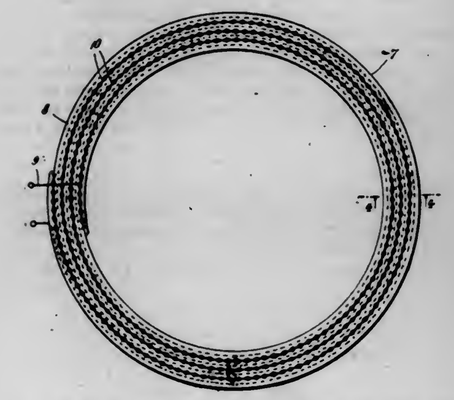
1,451,222. BEARING. WILHELM HOLTORP, Hamburg, Germany. Filed July 2, 1920. Serial No. 393,746. 6 Claims. (Cl. 64—24.)

3. In a journal bearing, a main lubricant container, means for conducting the lubricant from the container onto the journal, a shoe below the journal having wiping edges engaging the journal, collectors arranged to receive the lubricant from said edges and communicating with the shoe through apertures formed in the latter, and conduits through which the lubricant is conducted from the shoe to the container.



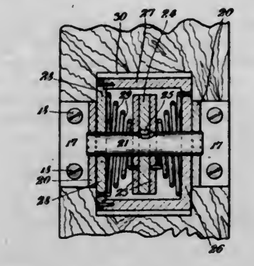
1,451,223. ANIMAL TRAP. ROWLAND G. HOWARD, Jackson, Tenn. Filed Jan. 8, 1921. Serial No. 435,925. 1 Claim. (Cl. 43—70.)

In an animal trap, a housing including a top piece provided with an opening therein, an animal guide extending the full length of said opening, an end wall at one end of the guide, a trap door hingedly mounted at the end of the opening opposite said end wall and having its free unattached end engaging under the top piece at a point beyond the end wall, a gravity actuated latch mounted on and operatively depending through the top piece beyond the end wall for limited movement, and having a shoulder engaging the underlapping part of the trap door to support it closed, gravity means to restore the trap door to its initial position, said trap door having a depression therein equal in width to the animal guide, an animal operated trip hingedly mounted at one end in the depression and adjacent the end wall, a gravity actuated bell crank member pivotally supported on the under face of the depression and operatively connecting with the trip, a latch releasing plunger operatively guided on the under part of the depression and connecting with the bell crank lever, the latch having a cam edge against which the trap door engages to restore it in engagement with the shoulder of the latch, and means to prevent hindering the restoration of the trip when pressure is relieved, when the trap door returns to its initial latched position.



1,451,224. ADJUSTABLE BEARING. ELVY E. JOHNS, Heppner, Oreg. Filed Dec. 28, 1920. Serial No. 433,605. 5 Claims. (Cl. 64—55.)

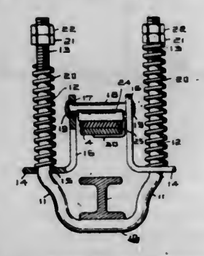
1. An adjustable bearing comprising a pair of opposed relatively movable bearing parts, a pair of bolts connecting said parts, two pair of resilient elements interposed between said bearing parts and normally tending to separate the latter, the elements of each pair being in abutting engagement and oppositely disposed with respect to each other, said bolts extending through said elements, a sectional nut fitted upon each of said bolts and a resilient



element inclosed by the sections of the nut normally tending to advance one of the sections to draw said parts together.

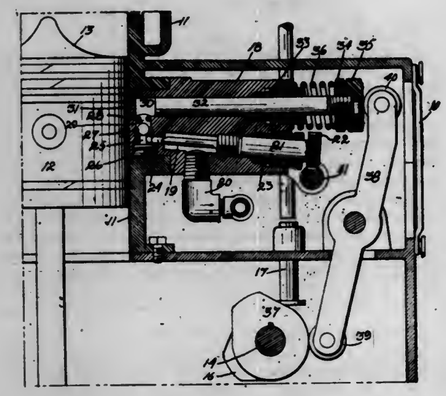
1,451,225. SEALING RING. ROBERT J. KRAUSE, Japatul, Calif. Filed July 16, 1919. Serial No. 311,196. 8 Claims. (Cl. 215—37.)

1. As an article of manufacture, a sealing ring comprising a spirally wound cord, and a spiral series of stitching entering and connecting the adjacent contacting sides only of the spiral convolutions of said spirally wound cord.



1,451,226. WINDOW-SASH HOLDER. STANLEY LADINSKY, Newark, N. J. Filed June 19, 1922. Serial No. 569,365. 3 Claims. (Cl. 16—201.)

3. In a window sash holder, the combination with a recessed frame and a sash slidable therein, of a rack



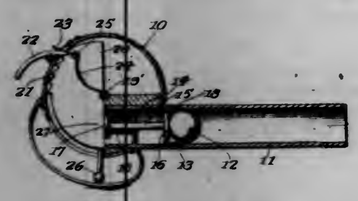
fixed in said frame at the bottom of the recess, one or more brackets carried by said sash, a spindle fixed in said bracket, a hollow gear rotatable on said spindle meshing with said rack, a disc keyed centrally of said spindle, discs rotatable on said spindle engaging the sides of said fixed discs, and opposed torsional springs abutting the outer sides of said loose discs and the inner sides of said gear.

1,451,227. REBOUND ABSORBER. CHARLES H. LANGO, Detroit, Mich., assignor to The Noshok Co., Detroit, Mich., a Corporation of Michigan. Filed Sept. 2, 1922. Serial No. 585,989. 5 Claims. (Cl. 267—28.)

1. The combination with a load carrying axle, a load to be carried, a spring therebetween, of a U-bolt having its U-portion rockably engage the axle, the legs of the U-bolt upstanding from said axle, a pair of L-brackets having eyes therethrough, said L-brackets oppositely disposed between the legs of the U-bolt with a leg of the U-bolt through an eye of each thereof, a ricker pin through the upstanding opposing L-bracket portions, said pin to ride upon the opposite side of the spring from the axle, and a spring for each leg of the U-bolt for resiliently maintaining axle position as to the leaf spring.

1,451,228. FUEL-FEEDING DEVICE FOR INTERNAL-COMBUSTION ENGINES. ARVID G. LARSON, Grinnell, Iowa, assignor to Dodge Tool Company, Grinnell, Iowa. Filed July 26, 1919. Serial No. 313,642. 7 Claims. (Cl. 123—32.)

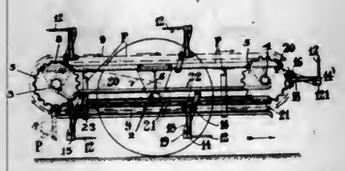
1. The combination with an internal combustion engine of the piston type, of a means for forming a fuel chamber adjacent to the engine cylinder, there being a restricted passageway leading from said fuel chamber to the interior of the cylinder, the arrangement of said passageway being such that it is normally closed by the piston except when the piston is at the lower or outer end of its stroke, a plunger in said fuel chamber for positively forcing



fuel therein through said restricted passageway when the plunger is operated, a means for supplying liquid fuel to said fuel chamber, a one-way valve between the fuel supply and said compartment, normally closed when the plunger moves toward the cylinder, means actuated by the engine for operating the plunger, controllable means for admitting air to the engine, and means for controlling the flow of fuel to the fuel chamber, and means for simultaneously actuating said last means and said controllable means.

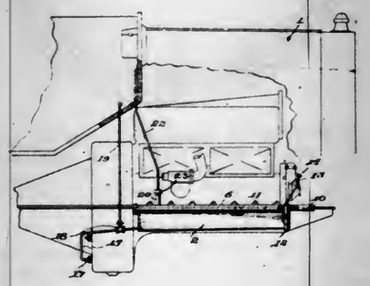
1,451,229. TILE MANUFACTURE. EDGAR LEROY LOUDENSLAGER, Toledo, Ohio. Filed June 22, 1921. Serial No. 479,527. 24 Claims. (Cl. 25—42.)

1. The method of producing tiles of the described character, which consists in forming of partially liquefied cement a plurality of closely adjoining symmetrically arranged tile-shaped plaquettes, then, while said material is still soft, connecting such plaquettes by embedding therein a suitable flexible fabric, and then supporting the plaquettes, so connected, in undisturbed relation until sufficiently hardened for use.



1,451,230. MARBLE SHOOTER. THOMAS J. MAHONEY, Colorado Springs, Colo. Filed Mar. 10, 1921. Serial No. 451,218. 1 Claim. (Cl. 124—1.)

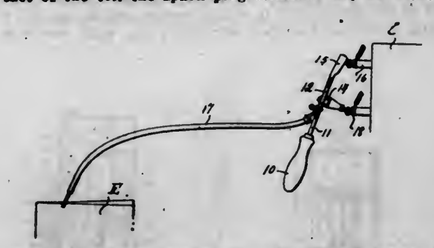
A marble shooter comprising a circular casing having a tube extending from the curved side thereof and intersecting the same, a spring pressed plunger mounted in the tube and extending into the casing, one portion of the curved side of the casing having a slot, a segmental disk mounted for partial rotation within the casing with one end of its flat edge portion disposed for striking engagement with the said plunger, a spring for normally urging the disk into engagement with the plunger, notches in the curved portion of the edge of the disk, and a pivoted spring pressed detent mounted on the casing and releasably engaging the notches, and a handle on the curved portion of the disk movable in said slot.



1,451,231. FLAX-PULLING MACHINE. GEORGES MICHOT, Dromara, Ireland, assignor to Fibre Corporation Limited, London, England. Filed July 15, 1920. Serial No. 396,389. 2 Claims. (Cl. 55—66.)

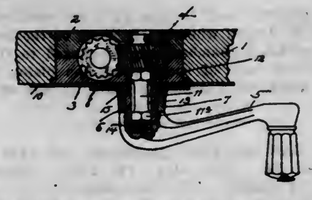
1. A flax pulling machine including a single pair of road wheels, an axle supported by said wheels, a frame carried by the axle and projecting laterally beyond the road wheels, a pair of parallel endless chain belts mounted on the projecting portion of said frame, a plurality of combs carried by the chain belts in such manner that when at the lower side of the chain belts they are disposed for engaging with the stalks of the flax to be pulled, driving means arranged between the axle and chain belts arranged in such manner that the movement of the combs when engaging with the stalks is forward relatively to the ground but rearward relatively to the frame, clearing frames for the combs also carried by the chain belts, and means for effecting movement of the combs relatively to their respective clearing frames when near the rear of the machine for the purpose of depositing the pulled flax on the ground.

2. Means for clearing the pulled flax from the combs of a flax pulling machine as set forth in claim 1, comprising a comb clearing frame in rigid relationship to two opposite links one on each of the two chains, straight guide rails for the lower portions of the chains fixed to the frame of the machine, a pair of levers jointed respectively to the said two links, a comb having its prongs slidable and swingable through the comb clearing frame, pivot joints between the backbone of the comb and the outer ends of the said levers, guide rollers mounted on the inner ends of the said levers, and guide rails for the said rollers fixed to the frame adapted to constrain the comb to move relative to the clearing frame as and when desired.



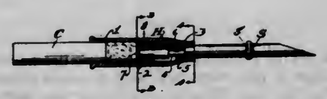
1,451,232. RESERVE OIL TANK AND GAUGE FOR AUTOMOBILES. ALBERT O. MURDOCK, Fort Payne, Ala. Filed Dec. 1, 1921. Serial No. 519,152. 3 Claims. (Cl. 184—105.)

3. The combination with an automobile engine of a reserve oil tank located at the side of the engine, the upper wall of the tank being of greater area than the tank body and extending beyond the same at one side and end, means for attaching the upper wall of the tank to the engine, and a strap for supporting one end of the tank from the timer bolt.



1,451,233. TESTING PROD. WILMER M. NEAR, New Era, Mich. Filed May 18, 1921. Serial No. 470,728. 2 Claims. (Cl. 175—183.)

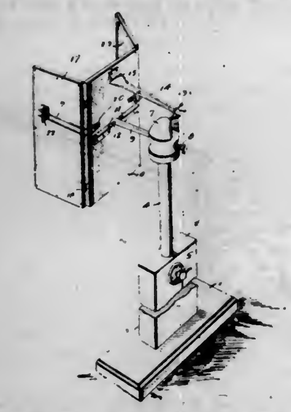
1. In a device for testing coils and spark plugs, a testing prod comprising a body portion having a threaded opening formed therein adapted for the reception of the threaded portion of the spark plug and so arranged that when an end of the prod is engaged with a primary contact of the coil the spark plug terminal may be engaged



with a secondary contact of the coil, and means for electrically connecting the body portion with the ground of the car.

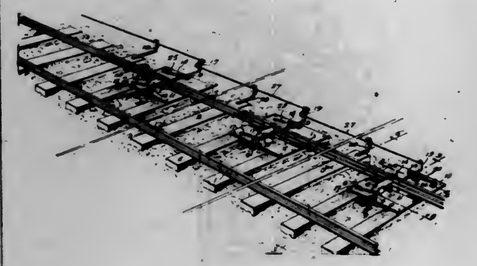
1,451,234. HANDLE MOUNTING FOR WINDOW REGULATORS. STANLEY W. NICHOLSON, Toledo, Ohio, assignor to The Dura Company, Toledo, Ohio, a Corporation of Delaware. Filed May 20, 1921. Serial No. 471,222. 3 Claims. (Cl. 74—33.)

1. In a device of the character described, the combination with a handle and a member rotatably actuable by said handle, said handle and member being formed with opposed polygonal sockets, of a coupling member having polygonal ends loosely engaging in said sockets, reduced in diameter intermediate said polygonal ends, and means independent of said coupling member maintaining the opposed relation of said handle and actuable member.



1,451,235. CIGARETTE HOLDER. THOR RAJE, Los Angeles, Calif. Filed Sept. 22, 1920. Serial No. 412,064. 1 Claim. (Cl. 131—10.)

A cigarette holder, comprising a body open at both ends and having one end thereof reduced, a stem slidably held in the reduced end of said body and having an enlargement thereon for engaging the reduced end of said body for preventing the withdrawal of the stem therethrough, and a projection extending inwardly from said enlargement, the opposite end of said body being adpated to receive and hold a cigarette, a member supported within said body and having a sleeve frictionally held on the inner end of said stem, and a lip spaced therefrom for engagement with the inner end of the cigarette, whereby an absorbent element may be held between said lip and the inner end of said stem for filtering the smoke and for ejecting the cigarette from said body when said stem is moved inwardly thereof.

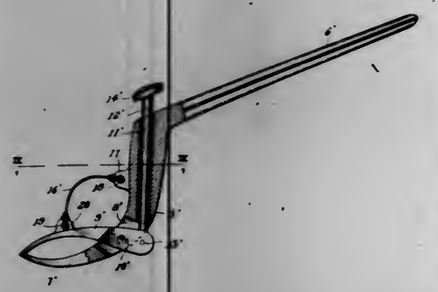


1,451,236. HAIR-DRESSING-MIRROR DEVICE. EARL E. STANFIELD, Helena, Mont. Filed Apr. 8, 1922. Serial No. 550,735. 4 Claims. (Cl. 45—99.)

1. In combination, a main frame, a pair of side frames hinged thereto, a pair of resilient U-shaped braces pivotally mounted on the main frame, and a pair of apertured plates mounted on the side frames for receiving

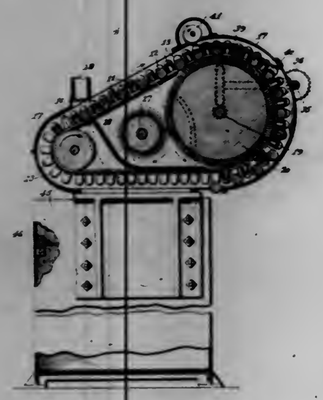
the braces whereby the side frames may be held in adjusted position in relation to the main frame due to resiliency of the braces.

1,451,237. TRAFFIC SIGNAL. DANIEL SWEENEY, Clarksburg, W. Va., assignor of one-half to Harry B. Kincaid, Clarksburg, W. Va. Filed Nov. 3, 1922. Serial No. 598,787. 4 Claims. (Cl. 246—294.)



1. In a railroad crossing signal, a signal member shaped to simulate a man, said member being provided with pivoted arms, means for raising said arms, said means comprising an actuating member arranged on the track at a distance from said signal member, connections between said actuating member and said arms, and a bell disposed in the path of said connecting means whereby an audible signal is given when the arms are raised.

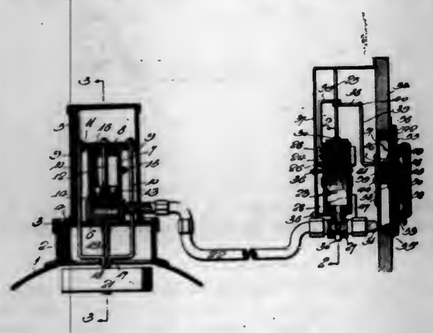
1,451,238. STOVE-LID LIFTER. CHARLES SZALAI, Easton, Pa. Filed Apr. 14, 1922. Serial No. 552,694. 4 Claims. (Cl. 294—13.)



1. A stove lid lifter comprising a body portion having a longitudinal bore with a push rod slidably disposed therein and terminating above the upper end of the body portion and below the lower end of said body portion, a handle integral with and extending rearwardly from one end of the body portion in one direction, a jaw member rigid with the opposite end of the body portion and extending laterally from the latter in the opposite direction, said jaw

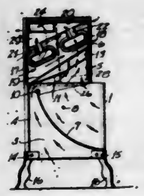
member having a transverse recess, a second jaw member pivotally mounted in the recess of the first named jaw member and arranged so that the free ends of said jaw members may clampingly engage opposite faces of the top wall of the under cut grooves of a stove lid, the lower end of the push rod being pivotally attached to the inner

end of said pivoted jaw whereby depression of the push rod will cause swinging movement of the pivoted jaw away from the first named jaw, and yieldable means normally urging the pivoted jaw toward said first named jaw.



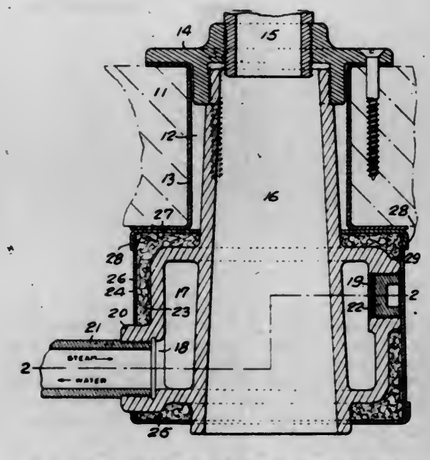
1,451,239. BOBBIN CLEANER. EDGAR ALLEN TERRELL, Charlotte, N. C. Filed Dec. 18, 1920. Serial No. 431,756. 9 Claims. (Cl. 28—19.)

1. In a bobbin-stripping machine, a delinting-device having a curved surface of flexible teeth, means for driving the same, an endless carrier passing around said surface and having compartments for carrying the bobbins, a flexible pressure-device engaging a plurality of the bobbins as they pass around said curved surface to press them lightly against the teeth carried thereby, whereby the bobbins are caused to rotate and the waste yarn delinted therefrom, and means for continuously driving the carrier.



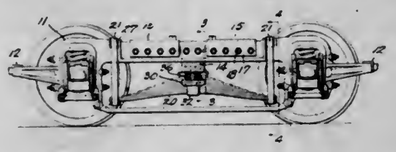
1,451,240. LIQUID GAUGE. WILLIAM M. TULLY, Corpus Christi, Tex. Filed Oct. 27, 1921. Serial No. 510,744. 13 Claims. (Cl. 73—82.)

1. A liquid gauge comprising a pump including a liquid carrying cylinder and a piston therein moving from one end of the cylinder to the other, a chamber supplied with liquid from said pump, an indicator operated by rise and fall of the liquid level in said chamber, and an auxiliary liquid receiving chamber communicating with the first



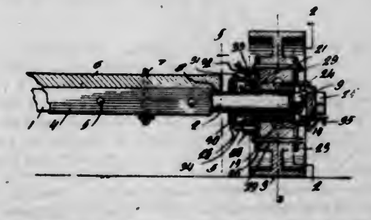
mentioned chamber and varying in cross sectional area throughout its length whereby the level of the liquid in the last mentioned chamber may be caused to rise and fall at an even rate of speed when the piston in the cylinder is moved at a gradually changing rate of speed.

1,451,241. GAS HEATER. CONSTANT VAN SANTVOORT, Waukegan, Ill. Filed Jan. 16, 1922. Serial No. 529,582. 1 Claim. (Cl. 126—86.)



A gas heater comprising two side walls, having openings therein, a heat retaining hood disposed between said walls, legs for supporting said walls, a rear wall extending from the bottom of said side walls and terminating adjacent to the hood, a curved deflector plate extending from the lower front side of said side walls and terminating adjacent to said hood, said plate and rear wall forming an air passage extending from the bottom of the heater to the hood, a gas pipe extending between said side walls and parallel with the upper inner end of said plate, a heat retaining chamber disposed above said hood and between said side walls, two pipes disposed in the transverse air passage formed by the hood and chamber, and having their ends secured to the side walls so as to be alined with the openings in the side walls, stub pipes communicating with the centers of said first named pipes and with the heat retaining chamber, and side heat retaining and conducting compartments carried by said side walls and covering the openings in said side walls, said side walls having other openings placing said side compartments in communication with said hood, with said first named pipes, and with said heat retaining chamber, whereby the heat will take a circuitous path through said heater, said first named chamber having gas outlet openings therein.

1,451,242. NONFREEZING WASTE OUTLET. ERNEST R. VIBERG, Montreal, Quebec, Canada. Filed Nov. 23, 1920. Serial No. 425,980. 10 Claims. (Cl. 137—72.)

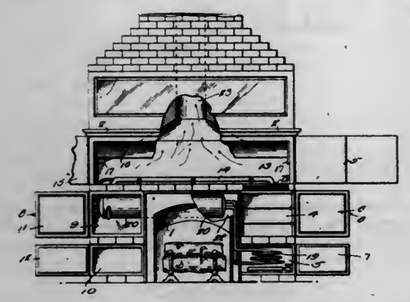


1. A waste pipe outlet having a circumferentially disposed jacket at the lower part thereof, entirely enclosed except for a steam inlet at the lower part of said jacket.

1,451,243. TRUCK CONSTRUCTION. ERNEST R. VIBERG, Montreal, Quebec, Canada. Filed May 2, 1922. Serial No. 557,987. 15 Claims. (Cl. 105—192.)

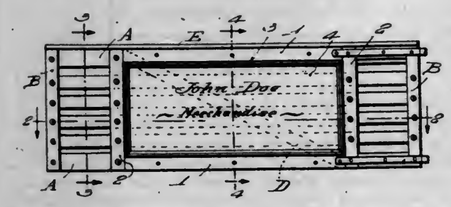
4. In a device of the class described, the combination of a truck side frame and a semi-elliptic spring disposed in the plane of the side frame, of hangers connecting the ends of said springs to the side frame, said hangers being oscillatable transversely of the plane of the side frame and comprising each a strip of metal bent intermediate its ends over the side frame, the ends of the said strip being bent toward one another and upwardly and a spring saddle supported on the forwardly turned ends of each hanger and supporting the end of the spring.

1,451,244. WHEEL HUB AND AXLE CONSTRUCTION. HARRY WALLACE, Newark, N. J. Filed Oct. 18, 1919. Serial No. 331,558. 3 Claims. (Cl. 301—110.)



1. In a wheel construction, a hub having an angular opening and a T-way in a wall of the opening, an axle box substantially square in cross section, removably fitted in the opening of the hub and having an L-way to match with a portion of the T-way, a pin insertable in a portion of the matching ways and a key insertable transversely to the wheel in another portion of the matching ways.

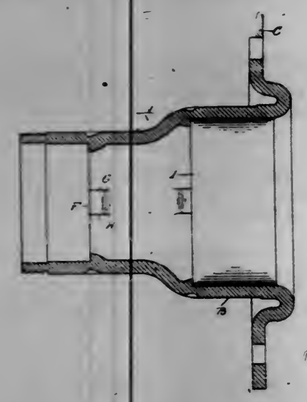
1,451,245. GUARD RAIL. ALONZO H. WESTON, Yonkers, N. Y., assignor to American Chain Company, Inc., a Corporation of New York. Filed June 30, 1922. Serial No. 572,102. 11 Claims. (Cl. 238—19.)



1. In a guard rail structure, a guard rail, means for causing the traffic rail to oppose lateral thrusts on the guard rail and a stop adapted to limit the proximity of the said thrust opposing means to the traffic rail.

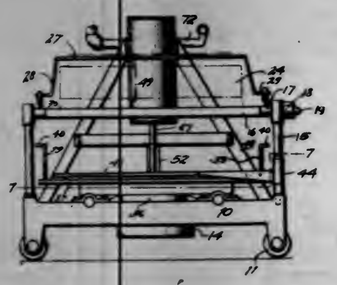
1,451,246. SECTIONAL STOVE. EMMA A. WETZEL, Jamaica, N. Y. Filed Apr. 18, 1922. Serial No. 554,452. 2 Claims. (Cl. 126—137.)

1. In a sectional stove and fireplace combined, the combination of a fireplace, compartments arranged adjacent the fireplace, a range compartment positioned over the fireplace, one of the first mentioned compartments functioning as an oven, openings from said oven into the range compartment, a flue disposed directly over the range compartment to dispose of odors from the oven, and a removable screen arranged to conceal the flue, substantially as shown.



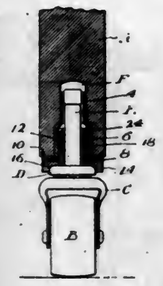
1,451,247. GATE. BENJAMIN F. WEYMER, Cedar Rapids, Iowa. Filed July 13, 1922. Serial No. 574,656. 1 Claim. (Cl. 256—73.)

A gate comprising a plurality of horizontal vertically spaced pieces connected together by pairs of opposite vertically disposed intermediate and end bars, upper and



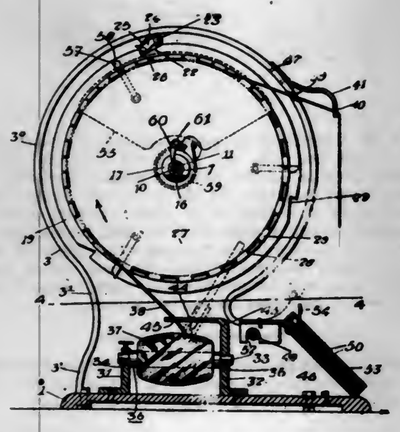
lower horizontal supplemental strips arranged between the intermediate bars on one side of the gate, thus forming a rectangular frame on this side, a sheet of metal arranged in the frame and having its edges directed at right angles to form flanges bearing against the frame members, and a second frame constructed of pieces of molding engaging the flanges to reinforce them.

1,451,248. WHEEL HUB. JOHN R. WINTER, Lansing, Mich., assignor to Kelsey Wheel Company, Detroit, Mich., a Corporation of New York. Original application filed Aug. 31, 1914, Serial No. 859,571. Divided and this application filed Jan. 30, 1920. Serial No. 355,130. 4 Claims. (Cl. 301—105.)



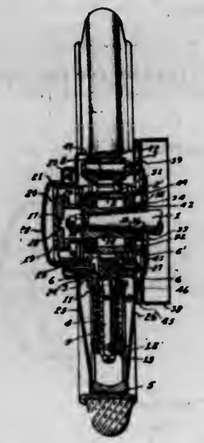
1. A wheel hub comprising a cylindrical shell having an inwardly offset segment forming at one end a square shoulder and at all sides a sealing connection with the adjacent portions of the shell.

1,451,249. MOLDING MACHINE. FRANZ J. WOOD, Des Moines, Iowa. Filed Jan. 2, 1920. Serial No. 349,039. 8 Claims. (Cl. 22—26.)



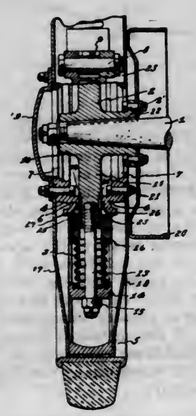
1. In a molding machine; a frame; means at the upper part of said frame for supporting patterns in inverted position; a mold table below said means; and mechanism for raising and lowering said mold table, said mechanism being adapted to move said table upwardly with relatively less speed and greater power during the latter part of its upward movement, and including adjustable means for regulating the speed of the lowering movement of the table.

1,451,250. CASTER. LOUIS M. BEEBE, Kansas City, Mo. Filed Mar. 22, 1922. Serial No. 545,720. 1 Claim. (Cl. 16—19.)



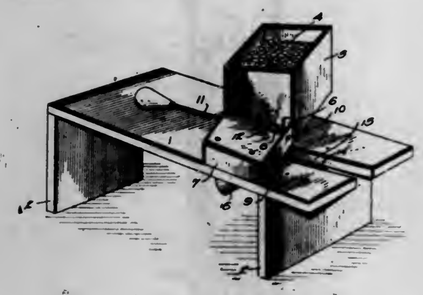
In combination with a piece of furniture equipped with casters having vertically extending shanks and ball-bearings, a tubular member adapted to seat in a counterbore in the furniture and having a reduced upper portion to snugly embrace the shank of the caster and an enlarged internally threaded lower portion, an adjustable member threaded into the enlarged lower portion of said tubular member, and a marginal flange at the lower end of said adjustable member provided with a seat to receive the upper portion of the ball-bearing of the caster, substantially as described.

1,451,251. COMBINATION STRING HOLDER AND ADVERTISING DEVICE. ROBERT HOWARD BIGGS, St. Catharines, Canada. Filed Aug. 3, 1922. Serial No. 579,468. 7 Claims. (Cl. 40—71.)



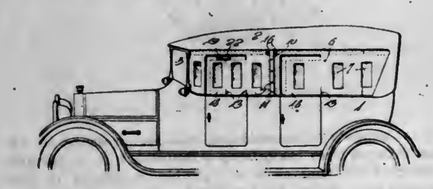
1. In a combination string holder and advertising device, a casing, a mounting located within the casing and upon which a ball of string is turnably carried, a pulley member mounted within the casing to rotate in a vertical plane above the mounting of the ball of string and over which the free strand of the string is adapted to pass, a turnable member having a face set vertically and bearing a series of advertisements on such face adapted to be successively carried by the turnable member from an unexposed to an exposed position, and means for automatically operating the turnable member as each length of string is drawn off the ball around the pulley.

1,451,252. VEHICLE WHEEL. NOAH CORNFIELD, Detroit, Mich., assignor to Acme Cushion Wheel Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 11, 1920. Serial No. 416,133. 19 Claims. (Cl. 152—44.)



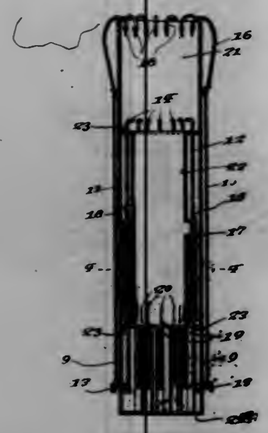
1. The combination with a driven spindle, of a wheel, comprising a rim, coil springs within said rim and rotatable therewith, a support fixedly secured to said rim, a spider block upon said driven spindle and slidably engaging said support, said spider block having arms surrounded by said coil springs, abutments at the outer ends of said coil springs sleeved upon said arms, and abutments at the inner ends of said coil springs sleeved upon said arms and slidably engaging the periphery of said support.

1,451,253. VEHICLE WHEEL. NOAH CORNFIELD, Detroit, Mich., assignor to Acme Cushion Wheel Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 11, 1920. Serial No. 416,134. 3 Claims. (Cl. 152—44.)



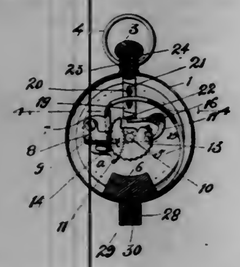
1. The combination with an axle, of a wheel, comprising a rim, a spider block keyed upon said axle and having outwardly extending arms, coil springs within said rim, support plates upon opposite sides of said block, disks connecting said plates to said rim, abutments for the inner ends of said springs slidably engaging said plates and sleeved upon said arms, and abutments for the outer ends of said springs connected to said arms.

1,451,254. FRUIT PITTER. WAYNE M. CRUZAN, Eureka, Kans. Filed Sept. 21, 1922. Serial No. 589,630. 2 Claims. (Cl. 146—5.)



1. A fruit pitter comprising a receptacle provided with a discharge opening in one side and having a sloping bottom whereby fruit is fed toward said opening, a block arranged adjacent said receptacle and provided with a pitting chamber arranged adjacent said discharge opening to receive the fruit therefrom, a plate forming a closure for the forward end of said pitting chamber and provided with an opening, and a plunger journaled in said block in alinement with the opening in said plate, said plunger being provided with prongs adapted to retain the fruit thereon upon removal of the pit, said prongs being adapted to project through the opening in said plate upon inward movement of said plunger to eject the pit and to contact with the rear wall of said pitting chamber upon outward movement of said plunger to limit the movement of the plunger and remove the pitted fruit therefrom, said pitting chamber being provided in its bottom with an opening adjacent the rear wall of said pitting chamber for the passage of the pitted fruit.

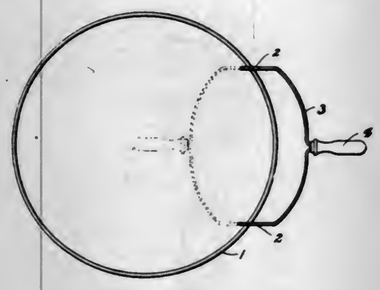
1,451,255. AUTOMOBILE CURTAIN. FREDERICK J. DREKMEIER, Beloit, Wis. Filed Sept. 26, 1921. Serial No. 503,306. 2 Claims. (Cl. 296—138.)



1. The combination with a vehicle body provided with an upwardly opening curtain pocket, of a flexible side curtain normally folded and positioned in said pocket, an arm attached to said curtain and normally lying horizontally at the upper end of said pocket, said arm being hinged at one end to the vehicle body at a point adjacent said pocket so as to swing upwardly and withdraw said curtain from said pocket, means for holding said arm in upright position to permit easy unfolding of said curtain, a rod carried by said arm adjacent the other end thereof, said rod extending laterally from said arm and having said curtain secured thereto whereby to support said curtain in an upright position when said arm is in its upright position, and means for securing said curtain in place at the side of the vehicle.

1,451,256. FISHHOOK HOLDER. WILLIAM C. GARDNER, Ardmore, Okla. Filed May 15, 1922. Serial No. 561,180. 4 Claims. (Cl. 43—22.)

1. A fish-hook holder comprising a body portion having longitudinal slots adjacent one end thereof, spring actuated rods carried by one side of said body portion, inwardly directed hooks at one end of said rods and extending through said slots, and a fish-hook engaging portion at the other end of said body portion.



1,451,257. PRESSURE GAUGE. WILLIAM P. HAMMOND, Passaic, N. J., assignor to A. Schrader's Son, Incorporated, Brooklyn, N. Y., a Corporation of New York. Filed June 20, 1911. Serial No. 634,225. 6 Claims. (Cl. 73—109.)

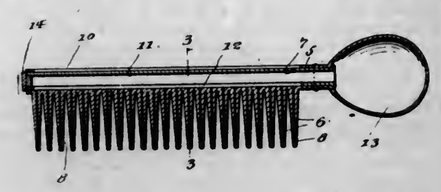
1. A gauge for ascertaining the air pressure in applied inflated tires comprising a Bourdon tube, a movable pressure indicating element operably connected to said Bourdon tube, means for retaining said indicating element in a position in which it is moved by said Bourdon tube, means for temporarily establishing a pressure communicating connection between the tire valve and Bourdon tube, said means including a press on resilient member, adapted to form a substantially air tight connection with the tire valve casing when pressed against it, a fixed presser foot associated with said resilient seat and adapted to depress the tire valve plunger and means operable to cause the restoration of said indicating element to zero position, said latter means including a push member operable from the exterior of the gauge casing.

3. A portable pressure gauge for pneumatic tires, including a casing, a seat projecting from one side of the casing and adapted to engage the valve casing of a pneumatic tire, means upon the seat for automatically opening the tire valve when the gauge is applied thereto, a tubular stem projecting from the opposite side of the casing, a cap upon the tubular stem, indicating means within the casing, means responding to pressure for operating the indicating means, means for holding the indicating means against backward movement, and a slide passing through the tubular stem and connected to the cap for releasing the indicating means.

1,451,258. HOOP. EDWARD HANNER, Philadelphia, Pa. Filed Nov. 1, 1920. Serial No. 421,036. 1 Claim. (Cl. 46—38.)

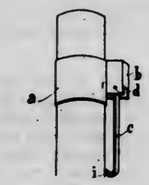
The combination with a toy hoop of a one piece handle comprising a yoke having parallel arms with comparatively large terminal eyes loosely engaged by the hoop, said eyes being adapted to be opened and closed to provide for the application and removal of the yoke, and a rigid hand grip extending from the yoke in a direction opposite to the arms and equi-distant between them and in a plane parallel therewith, said hand grip, yoke and arms lying in the same plane.

1,451,259. TOWER. NORMAN T. HARRINGTON, Cleveland, Ohio. Filed June 14, 1920. Serial No. 388,909. 27 Claims. (Cl. 212—73.)



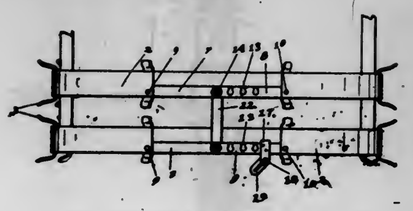
1. The combination of an angularly movable tower, a cable way attached at one end to the tower and anchored at its other end, the line extending through the anchorage and the center of rotation of the tower forming an appreciable angle with the ground line, and a hold-down cable extending from a bearing point on the tower to points on opposite sides of the central vertical plane on the tower, the anchoring points of the cable way and the anchoring points of the holddown cable being so disposed relatively to the tower that the distance between the anchoring point of the cable way and its point of attachment to the tower remains substantially invariable, and that the sum of the distances between the anchoring points of the hold-down cable and its bearing point on the tower remains substantially constant for all angular positions of the latter.

1,451,260. COMB. HENRY TUFFTS HOLLAND, Winfield, N. Y. Filed Nov. 17, 1921. Serial No. 515,897. 1 Claim. (Cl. 132—13.)



A comb comprising a hollow back having a longitudinal slit, teeth extending from the back and provided with

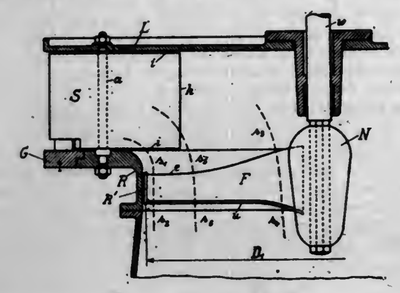
ducts opening at one end into the back and at their other ends through the outer ends of the teeth, the aforesaid slit



being in line with the first-mentioned ends of the ducts, and a reservoir removably mounted in the comb back and discharging into the ducts.

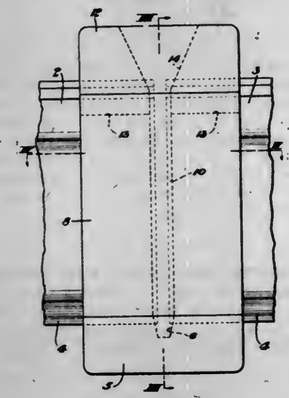
1,451,261. FOUNTAIN-PEN SPRING SAFETY CLIP. GUSTAVE PIERRE JALLIER, Paris, France. Filed Aug. 31, 1920. Serial No. 407,241. 2 Claims. (Cl. 24—11.)

1. A safety clip for fountain pens and the like, comprising a ring having a box on one side, an arcuate spring in the side of said box next the ring, and a lever pivotally mounted near its inner end, in said box, said lever having an engaging point at its outer end and having at its inner end an arm, arranged at an angle thereto and bearing against said spring.



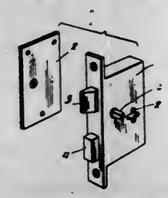
1,451,262. TIRE CARRIER. ABEN E. JOHNSON and LEO H. TAFFEE, Hastings, Mich., assignors to Hastings Manufacturing Company, Hastings, Mich. Filed Apr. 30, 1920. Serial No. 377,954. 7 Claims. (Cl. 224—29.)

6. In a tire carrier, the combination of split tire supporting rings, a support on which said rings are mounted to permit their being contracted and expanded, pairs of links pivotally connected to the ends of said rings and to each other, and a link connecting said pairs of links engaged with the connecting pivots thereof whereby they are simultaneously operated.



1,451,263. WATER TURBINE. VICTOR KAPLAN, Brunn, Czechoslovakia. Filed Sept. 1, 1921. Serial No. 497,749. 8 Claims. (Cl. 253—155.)

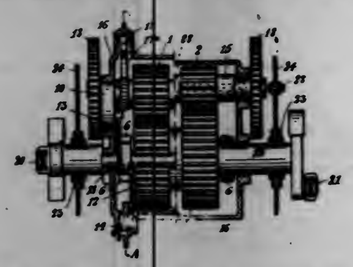
1. In a water turbine, a runner wheel comprising a hub of small diameter and a plurality of blades secured to said hub, the outer portions of said blades having wing-shape and the inner portions cell-shape, in combination with a



guide wheel of any desired construction and inflow direction.

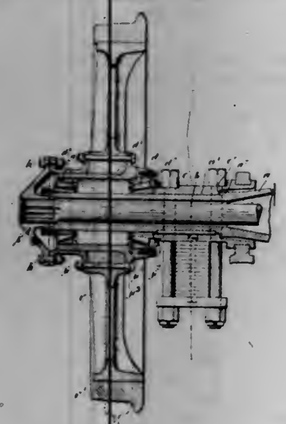
1,451,264. MOLD OR FORM. HENRY F. A. KLEINSCHMIDT, Johnstown, Pa., assignor to The Lorain Steel Company, a Corporation of Pennsylvania. Filed June 4, 1921. Serial No. 475,071. 4 Claims. (Cl. 219—4.)

1. A mold adapted to surround two spaced apart pieces at their approximate ends and having a vertically disposed transverse slot, open at its upper end and in communication with the space between said pieces, said slot having its back wall shaped to the approximate contour of the side walls of said pieces and spaced therefrom.



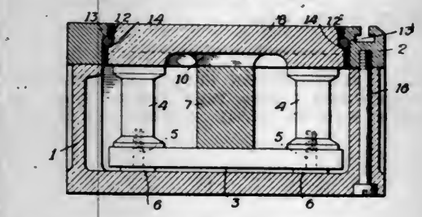
1,451,265. LOCK. WILLIAM H. LANDING, Santa Ana, Calif., assignor of one-half to Al Lindsey, Santa Ana, Calif. Filed Apr. 4, 1922. Serial No. 549,583. 4 Claims. (Cl. 70—74.)

1. In a lock, the combination of a lock case provided with a cruciform keyhole, a latch mounted in the lock



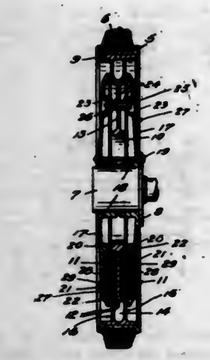
case above said keyhole, a bolt slidably mounted in the case below the keyhole, said bolt when retracted being adapted to partly cover the keyhole, means for projecting the latch, yieldable means for holding the latch projected, and yieldable means for holding the latch and the bolt normally retracted, the means for holding the latch projected being releasable by a key fitted in the keyhole in one position and the bolt being constructed to be projected by the same key inserted in the keyhole in another position.

1,451,266. REVERSIBLE GEARING. FREDRIK LJUNGSTROM, ISIDOR BROBERG, and ERIK OTTO ERIKSSON, Stockholm, Sweden, assignors to Aktiebolaget Ljungströms Angturbin, Stockholm, Sweden. Filed Nov. 4, 1921. Serial No. 512,998. 5 Claims. (Cl. 74—58.)



1. In a reversible gearing, a relatively stationary frame, a housing, arms swingably mounted in said housing, a lay- shaft journaled in said arms, a driven gear on said shaft, bearing links for said shaft pivoted to said frame and mounted for awinging movement, a driving gear adapted to be operatively engaged by the first mentioned gear, and an intermediate gear associated with the first and second named gears, the several gears being arranged within said housing.

1,451,267. WHEEL MOUNTING FOR MOTOR-PROPELLED RAILWAY CARS. ALFRED F. MASURY, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 5, 1921. Serial No. 519,836. 2 Claims. (Cl. 295—36.)

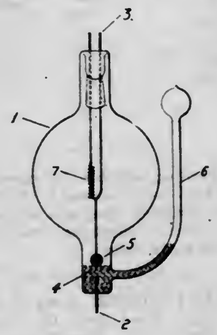


1. In a self-propelled motor-railway car, a dead axle tube of conventional automobile design, a live axle section mounted rotatably therein, said tube and section being shortened to adapt them to car rails of standard gage, means carried on the tube for seating a spring, wheel bearings mounted outside of said seat on the dead axle tube, one of said bearings having its inner race in abutment with the edge of said seat, a flanged car wheel mounted on said wheel bearings and means to connect the car wheel operatively with the live axle section.

1,451,268. MAGNETIC CHUCK. RALPH L. MORGAN, WINFRED S. GRIFFITH, and EDWIN CHURCHILL, Jr., Worcester, Mass., assignors, by mesne assignments, to Greenfield Tap and Die Corporation, Greenfield, Mass., a Corporation of Massachusetts. Filed Mar. 5, 1919. Serial No. 280,795. 2 Claims. (Cl. 175—367.)

1. In a magnetic chuck, a work holding face comprising a framework, a plurality of pole pieces disposed within said framework, non-magnetic filling material separating said pole pieces from each other and from said framework, and a locking and spacing member of non-magnetic material embedded in said filling material and interposed between the ends of said pole pieces and said framework, said framework and said pole pieces having opposite shoulders in contact with said member.

1,451,269. RESILIENT WHEEL. HARRY M. PATCH and RICHARD R. ROMNEY, Seattle, Wash., assignors to Ellis Resilient Wheel Corporation, Seattle, Wash., a Corporation of Washington. Filed Oct. 4, 1920. Serial No. 414,625. 6 Claims. (Cl. 152—28.)



2. In a vehicle wheel, the combination with a casing comprising two outer plates, a hub rigidly secured to said plates, and a felly member having a web element interposed between said casing plates, said plates and web element being provided with opposing cavities, of means extending through said web element and disposed adjacent to the outer peripheries of said plates for maintaining the latter at definite distances apart and resilient disks provided within the complementary cavities of the plate and web member and bearing against the end walls of said cavities and tending to maintain said member midway between the adjacent plates.

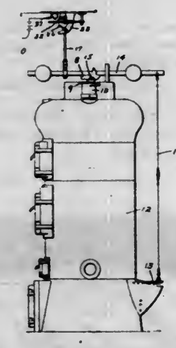
1,451,270. PRODUCTION OF COLORING MATTERS. WILLIAM JACKSON POPE, Holmesdale, Cambridge, England, assignor of one-half to Scottish Dyes Limited, Carlisle, Cumberland, England. Filed Sept. 17, 1920. Serial No. 410,913. 10 Claims. (Cl. 260—31.)

1. A process for the manufacture of N-dihydro-1 : 2 : 1' : 2'-anthraquinoneazine which consists in acting on 2-aminoanthraquinone by fused caustic potash in the presence of a salt of an organic acid which is miscible in a fused state with the alkali and subsequently isolating the dyestuff by oxidation.

1,451,271. VAPOR ARC LAMP. HARVEY C. RENTSCHLER, Wilkinsburg, Pa., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Feb. 27, 1919. Serial No. 279,583. 9 Claims. (Cl. 176—1.)

1. An arc device comprising an evacuated envelope containing argon and including a mercury cathode and a refractory anode, whereby an arc is obtained having a rising characteristic.

1,451,272. DELIVERY PIPE FOR HYDRAULIC DREDGING MACHINES. ARTHUR W. ROBINSON, Montreal, Quebec, Canada. Filed Oct. 1, 1921. Serial No. 504,809. 1 Claim. (Cl. 137—75.)



In a delivery pipe for hydraulic dredges a radially and spirally arranged rifling rib made of rolled angle iron and extending from end to end of the pipe, one angle arranged radially of the pipe, the other acting as a base and immovably fastened to the interior of the pipe, the front end of the radial angle being beveled off.

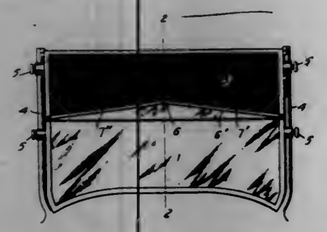
1,451,273. LOOSE-LEAF BINDER. HERMAN RUBIN, New York, N. Y. Filed Apr. 15, 1922. Serial No. 552,994. 1 Claim. (Cl. 129—13.)

A loose leaf binder comprising a sectional transversely expandible frame, telescoping sheet retaining spring-actuated members carried by the sections of said frame, a rack formed with ratchet teeth on one of the sections of said frame, a casing fixed to said section to envelop said rack, a spring-actuated pawl pivotally suspended from the other section to cooperate with said ratchet and a rod extending through said casing and outwardly from said frame and formed at its inner end with a shoulder capable of engaging said pawl when moved inwardly to thrust said pawl away from said rack and permit the sections of said frame and said members to instantaneously expand.

1,451,274. AUTOMATIC BOILER CONTROL. EDMUND G. SHADER, Brockton, Mass. Filed Apr. 25, 1922. Serial No. 556,444. 7 Claims. (Cl. 236—51.)

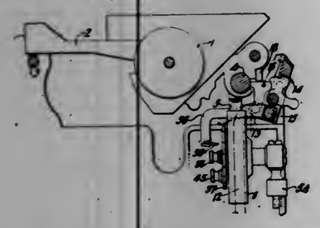
1. Locking and releasing mechanism for the damper-operating lever of an automatic boiler control, said mechanism comprising a holder adapted to be attached to a support above a boiler, a movable detent and a movable tripping device, each pivoted on the holder, the detent being normally held in position to lock the tripping device, and displaceable from said position, a bar having means at one end for engagement with said lever, guided in a vertical path by the holder, and yieldingly pressed toward the tripping device, the detent and the tripping device having complemental interengaging means whereby the tripping device may be locked when the detent is in its normal position, the bar and the tripping device having complemental interengaging means adapted to lock the bar against downward movement when the tripping device is locked, and to permit free upward movement of the bar, and detent displacing means operable from a distant point to displace the detent, and thereby release the tripping device and the bar, the arrangement being such that when the tripping device is locked and the bar raised, the lever is locking in its damper-closing position, and when the tripping device is released, the bar drops and permits the lever to open the damper.

1,451,275. SUCKER-ROD SLIP SOCKET. ERNEST J. SHAFFER, Tulsa, Okla. Filed Dec. 24, 1921. Serial No. 524,689. 5 Claims. (Cl. 294—102.)



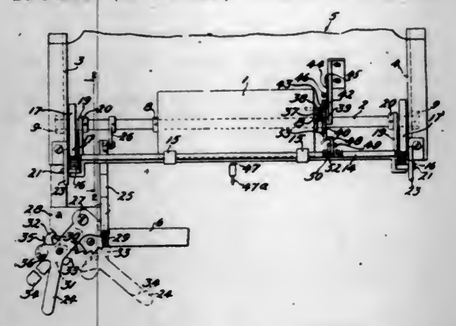
1. A slip socket comprising, in combination, a cylindrical barrel, a fixed jaw secured within the barrel along one side thereof, a guide plate secured within the barrel in opposed relation to the fixed jaw, the guide plate hav-

ing a portion that is inclined downwardly and inwardly toward the jaw, a slip having a tapered portion co operating with the inclined portion of the guide plate and



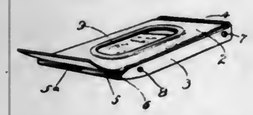
provided with means interlocking with a slot in the guide plate whereby the slip is retained against dislodgment from said plate.

1,451,276. RAIN SHIELD. WALTER L. SMITH, New York, N. Y. Filed Feb. 19, 1921. Serial No. 446,482. 6 Claims. (Cl. 296—97.)



1. In a front shield for automobiles, in combination, a substantially vertical wind shield, an auxiliary rain shield arranged at an angle thereto, said auxiliary shield having a lower edge inclined downwardly from an intermediate point toward the ends of said shield, and gutter means fixed closely adjacent said lower edge to prevent the drip of rain therefrom.

1,451,277. TYPEWRITING MACHINE. BURNHAM C. STICKNEY, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed May 7, 1921. Serial No. 467,717. 21 Claims. (Cl. 197—64.)

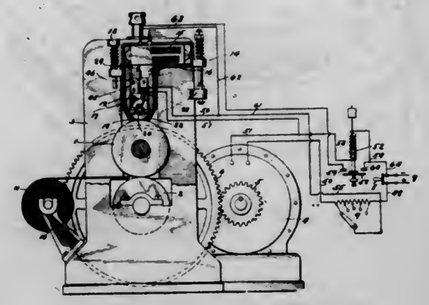


1. In a typewriting machine, in combination, a carriage, letter-feeding means therefor comprising a spring-drum having a cup-shaped compartment in its front wall, a retarding device mounted in said compartment, tabulating means, and means whereby said retarding device may be made effective by said tabulating means.

1,451,278. TYPEWRITING MACHINE. BURNHAM C. STICKNEY, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed May 12, 1921. Serial No. 468,822. 24 Claims. (Cl. 197—135.)

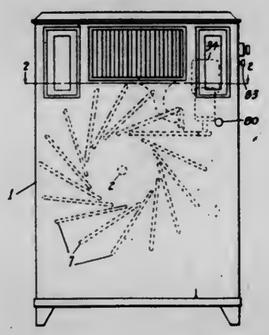
1. In a typewriting machine, in combination, a rotatable platen, a work-holder, means for feeding said work-holder past the printing line, and normally ineffective means effective upon a return movement of said holder to cause the platen to creep.

1,451,279. TICKET HOLDER. JOHN E. STRIETELMEIER, Cincinnati, Ohio. Filed June 19, 1919. Serial No. 305,238. 1 Claim. (Cl. 206—39.)



In a ticket box, two sections therefor, each made up of one piece and having a delivery orifice left between them at one end, a sloping wall leading to said orifice in one of the sections, a slot in the other section for pushing on the tickets, with the material of the portion having the sloping wall provided with sides cut away adjacent the orifice to allow for the roughened edge tickets.

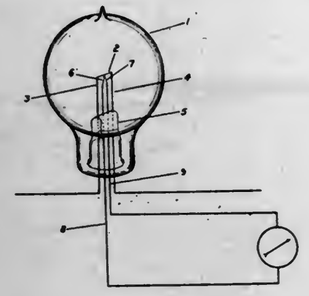
1,451,280. MILL. AUGUST SUNDH, Hastings-upon-Hudson, N. Y., and WILLIAM WESTERMAN, Detroit, Mich. Filed Oct. 8, 1920. Serial No. 415,513. 9 Claims. (Cl. 235—92.)



1. In combination, an indicating device for indicating the travel of a moving part of a mill, an indicating device for indicating the amount of material passed through said mill, said last-named indicating device being provided with an electric clutch adapted to be energized by closing of a circuit due to movement of a part of a mill when the material is passed into said mill.

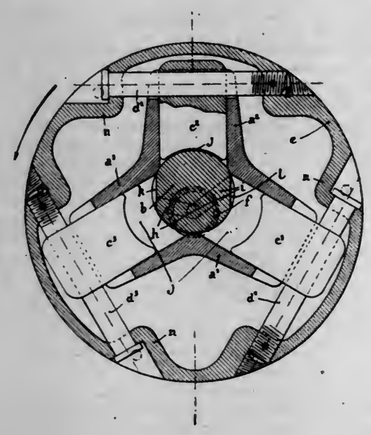
1,451,281. INDICATOR. AUGUST SUNDH, Hastings-upon-Hudson, N. Y., and WILLIAM WESTERMAN, Detroit, Mich. Original application filed Oct. 8, 1920, Serial No. 415,512. Divided and this application filed Dec. 24, 1921. Serial No. 524,620. 5 Claims. (Cl. 235—92.)

3. An indicator, comprising indicating elements, a drive shaft, permanent connections between said drive shaft and one of said indicating elements, an electric clutch for connecting the other of said indicating elements to said drive shaft, a magnetizable device for connecting said drive shaft to the driving means for said indicating elements, said clutch and magnetizable device receiving their energy from a common source.



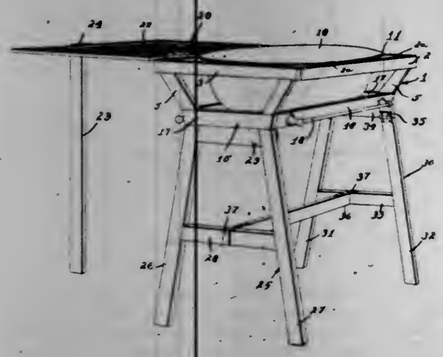
1,451,282. MAGAZINE PHONOGRAPH. LOUIS J. THON, Marshfield, Wis. Filed June 16, 1921. Serial No. 477,963. 23 Claims. (Cl. 274—10.)

11. A disk record magazine for phonographs comprising a wheel and a plurality of turn tables mounted thereon in a tangential overlapping stepped relation.



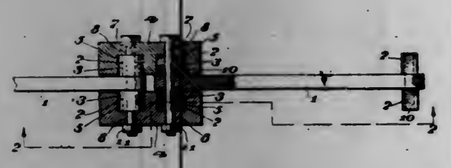
1,451,283. THERMOCELL. JAMES L. WEATHERWAX, Wilkinsburg, Pa., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Feb. 27, 1919. Serial No. 279,506. 6 Claims. (Cl. 171—95.)

1. The method of controlling the functioning of a thermo-cell which consists in regulating the temperature of a heater element in contact with a thermo-couple by adjusting the pressure of an inert gas surrounding said element.



5. The combination with a source of current and a meter, of a thermo-cell comprising an envelope having a heater element mounted therein and adapted to be electrically heated, a thermo-couple connected to said heater element and a gas within said envelope capable of quickly establishing a thermal equilibrium by rapidly conducting the heat away from the heater element, thereby quickly effecting a steady deflection upon a meter included in a circuit energized by the thermal electro-motive force resulting from an electric current traversing the heater element.

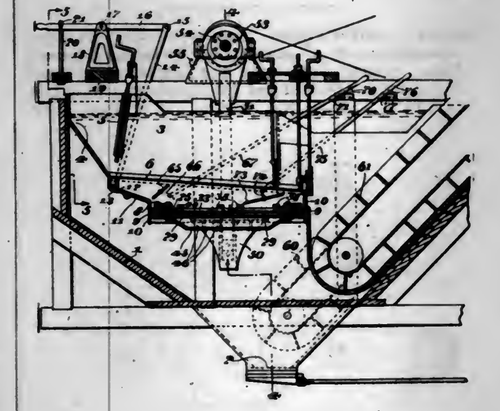
1,451,284. ROTARY APPARATUS OPERATING AS PUMP OR MOTOR. PAUL VOREAUX and RAYMOND BABEL, Paris, France. Filed Aug. 10, 1920. Serial No. 402,726. 1 Claim. (Cl. 103—161.)



A rotary apparatus operating either as compressor or motor, comprising a fan-shaped cylinder combination, a stationary hollow shaft having the said cylinder combination rotatable thereon, intake and delivery passages provided in the stationary shaft, a main casing rotatable about an axis having an eccentric disposition with reference to the axis of rotation of the said cylinder combination, rods rigidly secured to the said casing and having the said pistons slidable thereon, a valve disposed at the end of the delivery passage of the said stationary hollow shaft, an auxiliary intake passage disposed within the hollow shaft and provided with valves, and an auxiliary delivery passage disposed within the hollow shaft and provided with valves.

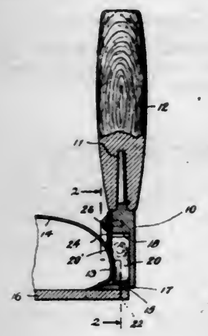
1,451,285. FOLDABLE NURSERY TABLE. DE WITT CLINTON WARD, Rochester, N. Y. Filed Apr. 6, 1922. Serial No. 550,044. 1 Claim. (Cl. 45—38.)

In a table of the class described, a frame including a rectangular skeleton top having triangular corner plates to form combined top braces and article supports, a similarly shaped smaller top located below and spaced from the first mentioned top, brace bars connecting said tops, a cover hinged at one side edge to one side of the first mentioned top, said cover having a flexible central portion, a detachable leg for holding said cover in operative position, folding legs hinged to the ends of said smaller top and a detachable brace engaging said legs to hold them in operative position.



1,451,286. DRIVE CHAIN. GEORGE W. WILMOT, Hazleton, Pa., assignor to Wilmot Engineering Company, Hazleton, Pa., a Corporation of Pennsylvania. Filed Sept. 1, 1920. Serial No. 407,364. 5 Claims. (Cl. 74—32.)

1. A drive chain comprising links, each of which consists of a single bar having laterally extending projections at its opposite ends, connecting blocks situated on opposite sides of adjacent end portions of adjoining links, said blocks having adjacent sockets into which the said projections extend, and bolts extending through said connecting blocks and said projections for connecting the said blocks and adjacent ends of adjoining links.

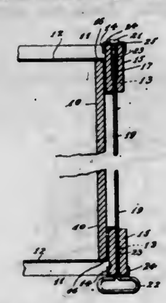


1,451,287. COAL JIG. GEORGE W. WILMOT and FRANCIS H. BLATCH, Hazleton, Pa., assignors to Wilmot Engineering Company, Hazleton, Pa., a Corporation of Pennsylvania. Filed Sept. 26, 1922. Serial No. 590,593. 9 Claims. (Cl. 83—79.)

1. A coal or ore washing machine comprising a reciprocating plunger for causing a flow of water upwardly through the coal or ore to be washed, the said plunger including a plurality of bars arranged in spaced parallel relation to each other, the upper and lower edges of which

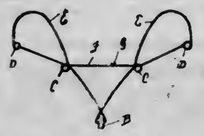
bars are wedge-shaped, and tubular valves situated between the opposing tapered sides of the upper edges of adjacent bars, substantially as described.

1,451,288. SHOE TOOL. LOUIS BONELLI, Upper Montclair, N. J. Filed June 7, 1922. Serial No. 566,530. 6 Claims. (Cl. 12—103.)



1. A shoe tool of the nature set forth comprising a rigid body having a guide lip projecting downward along one side and beyond the main portion thereof, said body having a slot formed therein at an angle to the lipped side thereof, and a cutting blade fitted in said slot with its edge projecting below the body and terminating in a plane between the bottom of the main portion of the body and the free edge of the lip.

1,451,289. DRUM. WILLIAM CHRISTIAN, Bridgeport, Conn. Filed Aug. 19, 1921. Serial No. 493,564. 2 Claims. (Cl. 84—411.)

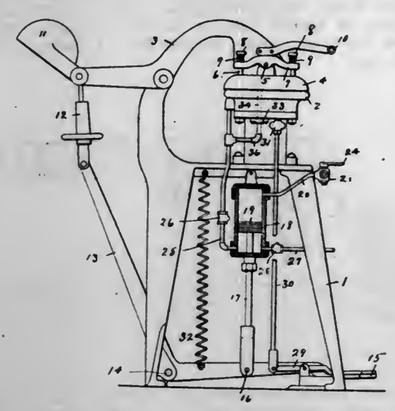


1. A drum comprising a shell, drum heads upon the ends thereof, each of said drum heads consisting of a piece of drum head material having slack therein and a rim constituted by a pair of rings between which the

marginal edge of said material is permanently secured, and clamp devices for fastening the rims upon the shell

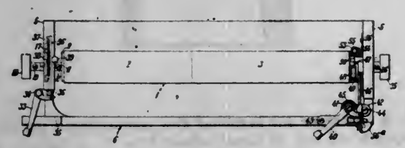
and for removing the slack from the drum head material, said clamp devices extending through the material of the rims.

1,451,290. NECKTIE HOLDER. JOHN T. CLARK, Provo, Utah. Filed Dec. 27, 1921. Serial No. 524,840. 1 Claim. (Cl. 24—56.)



A neck tie holder comprising a piece of spring wire having a button engaging loop medially therein and with the sides of said loop spaced apart to engage the shank of a collar button, the end portion of said loop extended and bent forwardly and inclined downwardly, a side loop in each free end of said wire, an eye loop on each end of said wire, a curve formed in each end portion of said wire between each of said side loops and the respective eye loops, and a flexible cord passed through each of said side loops and engaging the eye loops and on which a neck tie is to be knotted.

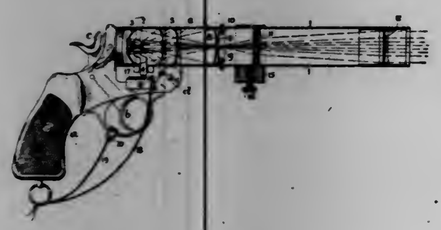
1,451,291. TIRE ALARM. ELMER E. DARLING, Salt Lake City, Utah. Filed June 14, 1920. Serial No. 389,049. 2 Claims. (Cl. 116—34.)



2. In a tire alarm the combination with a pneumatic tire and rim on which it is used, of a spring flexibly connected at one end to said rim, and a thin metal strip flexibly connected to the other end of said spring, and adapted to have a portion held between said tire and rim when the tire is inflated, and to be released by the tension of said spring and rotation of the wheel of the vehicle when the tire is deflated in order that the released portion of spring and strip may contact with parts of the vehicle as an alarm.

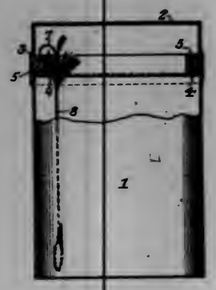
1,451,292. STEAM GARMENT-PRESSING MACHINE. JACOB DASHEW, Baltimore, Md. Filed July 27, 1921. Serial No. 487,831. 1 Claim. (Cl. 68—9.)

A garment pressing machine comprising a frame, a stationary buck secured to the said frame, a chamber removably secured to the lower surface of the stationary buck, pipes leading from said chamber to the upper surface of the stationary buck, an arm pivoted to said frame, a buck secured to the outer end of said arm and adapted to be raised and lowered thereby, a cylinder secured to said frame, a pipe leading from the said stationary buck to the bottom of said cylinder and provided with a check valve, an outlet pipe leading from the bottom of the said cylinder and provided with a check valve, a valve communicating with and adapted to control the admission and discharge of fluid pressure to and from said cylinder, a piston within said cylinder and having its piston stem projecting therefrom, and means connecting said piston stem with the said arm whereby when the said piston is operated the arm will rock on its pivot to reciprocate the buck carried thereby.



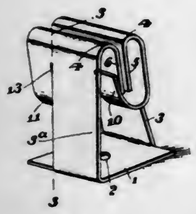
1,451,293. TYPEWRITING MACHINE. JOHN E. DOODY, Toronto, Ontario, Canada, assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed June 29, 1920. Serial No. 392,751. 11 Claims. (Cl. 197—129.)

1. In a typewriting machine, in combination, a platen axle, a platen-section comprising a hollow core, heads



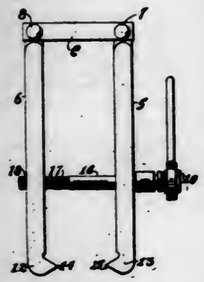
therefor, and tie-rods connecting said heads, one of said heads being adjacent to one end of said axle and supported thereon, a sleeve connected at one end with and extending from the other head of said section to a point adjacent the other end of said axle, said sleeve surrounding said axle but spaced therefrom, a ring near the free end of said sleeve serving to support the same on said axle, and a second platen-section supported at one end on said axle beyond the end of said sleeve, and at the other on the head of the first platen-section to which said sleeve is connected.

1,451,294. FIREARM FOR TEACHING OR PRACTICING THE AIMING THEREOF, AND FOR ADAPTING THE SAME FOR SIGNALING. LOUIS CLAUDE ALEXANDRE DE BRIGNY DOUCET, London, England. Filed Dec. 14, 1920. Serial No. 430,799. 5 Claims. (Cl. 88—24.)



1. In a device for teaching or practicing the aiming of fire arms, the combination of a barrel support, means to permit the detachable connection of a fire-arm barrel to the support, a tubular casing simulating the fire-arm barrel and interchangeable therewith, illuminant means within said casing, a projector combination in operative relation with the illuminant means and adapted for projecting a beam of light through the casing, and trigger mechanism operative for controlling the light projection.

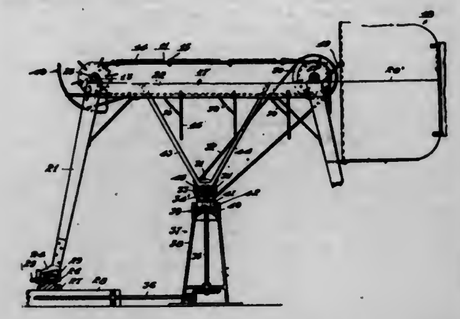
1,451,295. ARTIFICIAL-FLY CONTAINER. ARTHUR S. DRIVER and SUSAN R. DRIVER, Summit, N. J. Filed July 25, 1922. Serial No. 577,308. 3 Claims. (Cl. 43—32.)



2. A container for artificial flies comprising a flattened receptacle or box of metal adapted to be carried in the pocket, a water-tight cover therefor, and a grooved flange or shelf around its edge below the cover filled with cork, into which the points of the hooks may be embedded while the snells hang down in the open space within.

1,451,296. CONTACT FOR ELECTRIC KNIFE SWITCHES. WILLIAM J. GIBBONS, Philadelphia, Pa. Filed Mar. 21, 1921. Serial No. 453,950. 8 Claims. (Cl. 200—166.)

1. An electric contact device comprising oppositely disposed side portions and separate means carried by each portion for engaging the other portion, the said means tending to prevent separation of said portions.

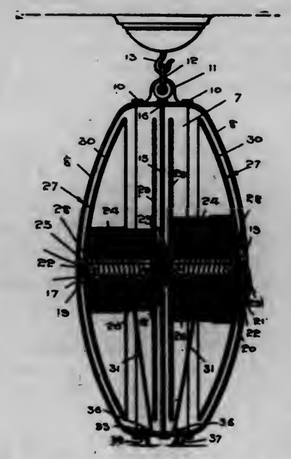


1,451,297. SPRING-LEAF SPREADER. LOUIS M. GREENSLADE, Los Angeles, Calif. Filed Jan. 17, 1921. Serial No. 437,802. 1 Claim. (Cl. 81—15.)

A spring leaf spreading tool comprising a tie member, an arm member pivotally mounted on each end of said tie member, an inturned wedge shaped jaw member on the outer end of each arm member, and a threaded stem turnable in an held against longitudinal movement in one of the arm members, and having a threaded portion turnable in screw engagement with the other arm member whereby rotation of said stem will cause said arms to move forward or away from each other, said stem being located between the tie member and the jaw members adjacent the outer ends of the latter and remote from the tie member.

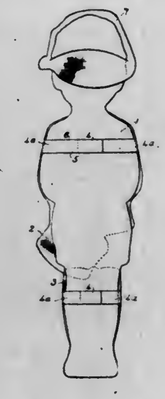
1,451,298. WINDMILL. AUGUST GRETH, Los Angeles, Calif. Filed Mar. 24, 1921. Serial No. 455,226. 4 Claims. (Cl. 170—6.)

1. In a current motor an endless conveyor, a plurality of vanes carried by said conveyor, means for holding said vanes at an angle to the current whereby the current acts upon all depending vanes simultaneously, a driven shaft operatively connected to said conveyor, and



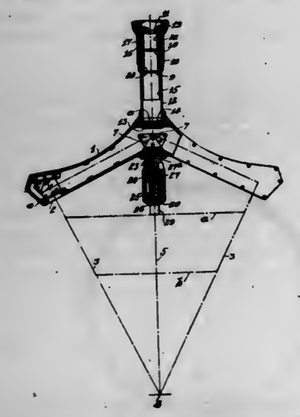
current actuated means for temporarily disconnecting said conveyor operatively from said shaft.

1,451,299. PROCESS FOR THE PRODUCTION OF SHOT EFFECTS, NOT TO BE STAINED IN PIECE DYEING. RICHARD HAYNN and FERDINAND MÜNZ, Fechenheim-on-the-Main, Germany, assignors to Leopold Cassella & Co. Gesellschaft mit Beschränkter Haftung, a Corporation of Germany. Filed May 6, 1922. Serial No. 559,061. 2 Claims. (Cl. 8—20.)



1. A process for the production of shot-effects not to be stained in piece-dyeing, by treating animal fibres in a mixture of acetic anhydride and glacial acetic acid with the addition of catalyzers.

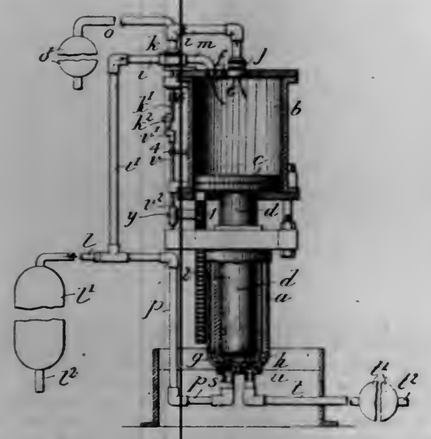
1,451,300. CORD DISPENSER. CALVIN C. HELMAN, Cleveland, Ohio. Filed June 23, 1921. Serial No. 481,304. 10 Claims. (Cl. 242—148.)



10. A cord dispenser comprising a casing having a rim and opposite sides removable from the rim to open position, a double spindle extending through said partition, collars on the spindle at the opposite sides of the partition to secure the spindle to the partition, tubular members on the spindle at the opposite sides of the partition for frictionally holding spools and having their inner ends rotatable on said collars and their outer ends rotatable on the spindle, and springs within said members connected to the spindle and members for rotating said members reversely.

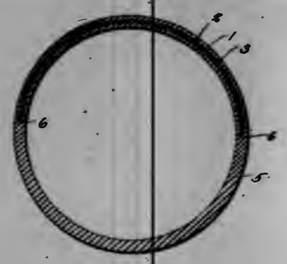
1,451,301. CARDBOARD AND LIKE TOY. THOMAS MATHEWS, Leicester, England; Annie Mathews and Harry W. Buckingham executors of said Thomas Mathews, deceased. Filed July 15, 1920. Serial No. 396,496. 1 Claim. (Cl. 46—40.)

A toy comprising a cut out figure and a plurality of auxiliary pieces for attachment thereto, each auxiliary piece being reinforced at the back by textile threads and provided at the back with a permanently closed loop adapted to pass over the figure, said loop being made of an integral strip formed on each side of said piece, the said strips being folded inwards at the back of the piece at an angle with respect thereto, so that the sides of the loop are relatively inclined and the opening is longer at its lower edge than at its upper edge, whereby it is caused to bind on the inclined sides of the figure to determine the position of and hold the auxiliary piece firmly thereon, and the ends of said strips being permanently secured together.



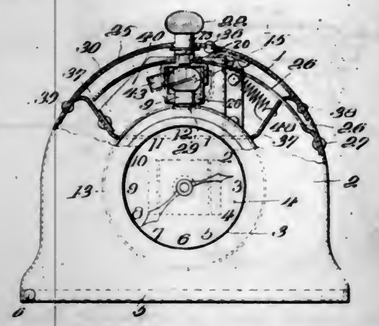
1,451,302. OPTICAL TESTING AND MEASURING INSTRUMENT. JOSEPH MIHALYI, Washington, D. C. Filed May 11, 1920. Serial No. 380,596. 12 Claims. (Cl. 88—202.)

1. An optical instrument of the type described comprising two optical means for providing two images of a single object, the optical axes of which are relatively fixed and are arranged to intersect at the focal point



of the instrument to form two equal angles which are such that a base line connecting said axes at any distance from either side of the focal point and at right angles to the perpendicular of the triangle thus formed will have a length equal to such perpendicular.

1,451,303. GAS-DISTRIBUTING SYSTEM. EDWARD ALBERT MITCHELL, London, England. Filed July 26, 1922. Serial No. 577,673. 5 Claims. (Cl. 230—32.)

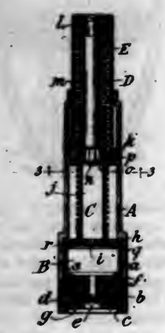


1. In a gas distributing system, the combination with a medium pressure reservoir, a low pressure reservoir and a high pressure reservoir, of a fluid actuated pump comprising a space for actuating fluid and a space for pumped fluid and piston means cooperating with said spaces having a greater area exposed to fluid pressure in the space for actuating fluid and a smaller area exposed to fluid pressure in the space for pumped fluid, a valved inlet connection leading to said space for actuating fluid from the medium pressure reservoir, a valved outlet connection leading from the last mentioned space to the low pressure reservoir, a valved inlet connection leading to said space for pumped fluid from the medium pressure reservoir, and a valved outlet connection leading from the last mentioned space to the high pressure reservoir.

1,451,304. INNER TUBE. MARY PIERSON MITCHELL, Eaton, Ohio. Filed Mar. 25, 1920. Serial No. 368,590. 4 Claims. (Cl. 152—18.)

1. An inner tube for vehicle tires, embodying a layer of wire netting coated with adhesive material which is partially dried prior to the assembly of the tube.

1,451,305. COIN-CONTROLLED CLOCK BANK. JAMES BALLARD MOORE and GEORGE DOMINIC GALLAGHER, Washington, D. C. Filed Feb. 24, 1922. Serial No. 538,908. 16 Claims. (Cl. 194—61.)

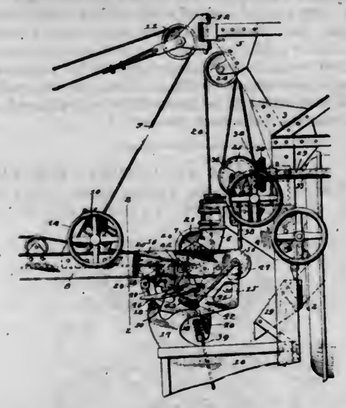


4. In a device of the class described, the combination of an enclosing casing, a time piece oscillatably mounted therein, means for locking the winding arbor of said time piece from rotation and coin controlled means for releasing said locking means on shifting of said time piece.

1,451,306. PROCESS OF TREATING COTTON FABRIC AND PRODUCT OBTAINED THEREBY. CHARLES LEONARD SCHUTTIG, Ridgefield Park, N. J. Filed Sept. 11, 1919. Serial No. 323,206. 9 Claims. (Cl. 8—20.)

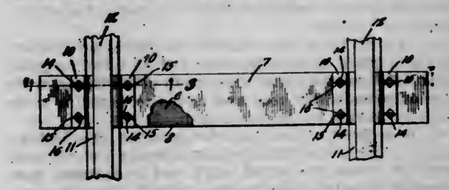
2. A process for imparting a permanent finish to fabric containing celluose fibres, which comprises subjecting the fabric to a solution at a temperature of about 32° Fah. composed of approximately two parts by weight of 43 to 45° Baumé nitric acid, and approximately one part by weight, of 66° Baumé sulphuric acid, for a sufficient period of time to convert the surfaces of the fibres into a lower cellulose nitrate, then arresting the action of the solution by treatment with water, and expressing the water from the fabric, then bathing the fabric in a solution of caustic soda, then washing the fabric to remove the caustic soda, then stretching and drying the fabric.

1,451,307. PRESSURE GAUGE. MAXIMILIAN CHARLES SCHWEINERT, West Hoboken, N. J., and HENRY P. KRAFT, Brooklyn, N. Y., assignors to A. Schrader's Son, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 28, 1910. Serial No. 552,111. 16 Claims. (Cl. 73—111.)



1. A portable gauge for pneumatic tires, comprising a casing, an interior indicating member slidable within said

casing, a pressure-responsive member, said interior indicating member being adapted to be moved to indicating position by said pressure-responsive member, and being adapted to remain in said indicating position, said pressure-responsive member being free to retract without carrying with it said interior indicating member, means for detachably connecting said gauge to a tire valve, and a depressor for the tire valve.



16. A gauge comprising an elongated casing, an indicating sleeve telescoping with said casing and in indicating positions extending beyond said casing, and pressure-responsive means arranged within the gauge and adapted on pressure to move said indicating sleeve to its extended indicating positions, said sleeve sliding along the interior of said casing and being disconnected from said pressure-responsive member so that it moves only outwardly therewith.

1,451,308. CONVEYING AND DISTRIBUTING APPARATUS. SAMUEL SHAFER, Jr., Milwaukee, Wis., assignor to Chain Belt Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 30, 1920. Serial No. 427,325. 7 Claims. (Cl. 214—50.)

1. In a conveying and distributing apparatus, the combination with a track, and a discharging conveyor supported on the track, of means for causing the traverse of the conveyor backward and forward along the track, means for causing the automatic discharge of the conveyor when the desired place of discharge is reached, and means adapted to be controlled by the mechanism that causes the traverse of the conveyor, for effecting the discharge of the conveyor at the will of the operator at any desired place.

1,451,309. COVERING FOR RAILROAD TIES. ROBERT SLATER, Paterson, N. J. Filed May 5, 1922. Serial No. 558,805. 1 Claim. (Cl. 238—99.)

A device of the class described comprising a tie, a plate on the tie, a rail on the plate, and a securing device engaging the rail and extended through the plate into the tie, the plate being provided at its corners with rectangular openings which form wings covering the sides and the ends of the tie, the securing device being spaced from all of the wings whereby the wings may be bent downwardly and shaped to the tie after the plate has been fastened to the tie by the securing device, after the rail is in place, and after the securing device has been permanently mounted and completely secured, the vertical edges of the side wings and the vertical edges of the end wings meeting at the vertical corner edges of the tie, thereby to prevent the end wings from overlapping the side wings.

1,451,310. DOORSTRIP. ADAM L. SMITH and THOMAS F. RUSSELL, Youngstown, Ohio. Filed Sept. 1, 1921. Serial No. 497,502. 2 Claims. (Cl. 20—68.)

1. In combination with a door frame and a door hinged thereto to swing on a vertical axis, a door strip mounted on the lower portion of said door and slidable vertically in relation to the latter, the said strip being provided with vertically elongated openings, pierced brackets fixed to said door and extending into said openings, bolts extending through said brackets and the top walls of said openings in said strip, and helical springs coiled about said bolts between said brackets and the top walls of said openings whereby said door strip is normally held elevated out of contact with the floor, and means actuated by the closing of the door and adapted to depress said door strip into contact with the door sill.

1,451,311. INGROWN-TOENAIL APPLIANCE. GUY WM. SMITH, Paonia, Colo. Filed Sept. 20, 1920. Serial No. 411,356. 1 Claim. (Cl. 128—87.)

An ingrown toenail appliance comprising a pair of resilient strips having their adjacent end portions overlapping and slidably connected for purpose of adjustment and providing an intermediate portion of double thickness to bear on the toenail, the opposite terminals of said strips being adapted to be sprung toward the edges of the nail and having hooks to be engaged under said edges while said opposite terminals are sprung to the edges of the nail.

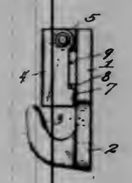
1,451,312. FERTILIZER AND LIME DISTRIBUTOR. HORACE L. SMITH and HORACE L. SMITH, Jr., Petersburg, Va. Filed Apr. 11, 1922. Serial No. 551,691. 9 Claims. (Cl. 221—125.)

1. In a device of the character described, a hopper having its bottom provided with a socket, a sleeve fitted in the socket and having a flanged head overhanging the

top of the socket, and a disk having a depending stud fitted in the sleeve and provided with an annular socket

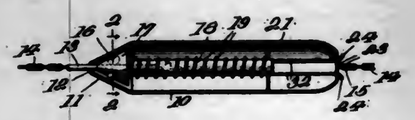
surrounding the stud and spaced from the same, said annular socket providing for the reception of the flanged head of the sleeve, and means for rotating said disk.

1,451,313. ART OF REDUCING INFLAMMABILITY OF MATERIALS. ARTHUR ARENT, Des Moines, Iowa, assignor to Arthur Arent Laboratories, Inc., Des Moines, Iowa, a Corporation of Iowa. Filed Jan. 15, 1921. Serial No. 437,618. 29 Claims. (Cl. 134—44.)



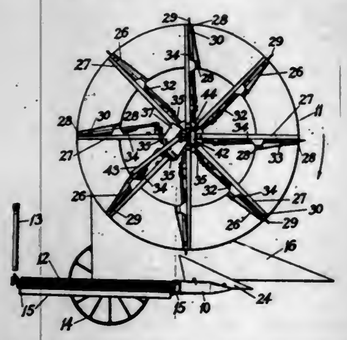
29. As a new article of manufacture, a motion picture film comprising a cellulose ester base with which is associated a sufficient proportion of an antimony salt to render the film non-inflammable, said antimony salt being present in a form in which it is substantially insoluble in and undecomposable by water.

1,451,314. FEEDER FOR FOUNTAIN PENS. HENRY F. AUSTIN, New Orleans, La. Filed July 14, 1921. Serial No. 484,761. 1 Claim. (Cl. 120—46.)



A fountain pen comprising a barrel, an ink containing sack positioned within the barrel, a relatively long bar disposed between the inner wall of the barrel and outer surface of the sack, a finger piece formed at one end of the bar, said finger piece adapted to extend through the barrel, whereby the sack may be compressed, and means adapted to contact with the bar at a point substantially intermediate the ends thereof for compressing the sack.

1,451,315. HOOK FASTENER. TAUE M. AVERY, Glens Falls, N. Y., assignor to Arrow-Grip Manufacturing Co., Inc., Glens Falls, N. Y., a Corporation of New York. Filed June 4, 1919. Serial No. 301,620. 1 Claim. (Cl. 152—14.)

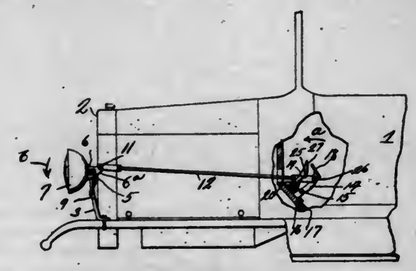


A hook fastener comprising a base for attachment to a relatively stationary object and provided with a laterally projecting hook adapted to be engaged by a link, a guard movable in the plane of the hook and pivoted to the base at its end remote from the hook in such relation that when positioned adjacent and substantially parallel to the base it extends substantially perpendicularly from its pivot toward the hook and with its lower end closes the link passage between the hook and the base, the guard and the base having companion elements which co-operate automatically when the guard is closed to secure the guard in closed position and the guard, by virtue of its perpendicular arrangement, maintaining its closed position despite any pressure thereon of the link engaged with the hook.

1,451,316. CLASP. LYMAN R. BARNETT, Missoula, Mont. Filed Apr. 20, 1922. Serial No. 555,766. 1 Claim. (Cl. 24—230.)

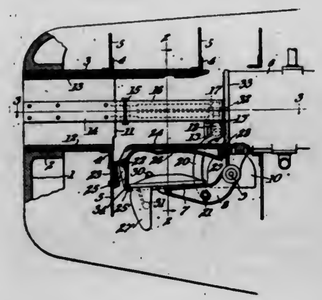
A clasp comprising a rod, a shell having closed ends, one of said ends being conical and having an opening at its apex to receive said rod, the remaining end having spaced openings, a tube in said shell, an enlarged conical end on said tube having ball receiving openings, balls in said last named openings adapted to be pressed into contact with said rod by the conical end of said shell, a plate in said shell having an opening receiving said tube, a spring abutting against said plate and enlarged end, portions of said tube cut away to leave separated strips adapted to pass through said spaced openings, means on the projecting ends of said strips to be grasped for actuation of said tube to release the balls from the rod.

1,451,317. FLAX-PULLER ATTACHMENT FOR BINDERS. JOSEPH A. BARTOSZ, Turner, Oreg. Filed Dec. 12, 1921. Serial No. 521,884. 7 Claims. (Cl. 55—66.)



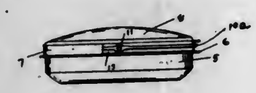
1. In an attachment for binders the combination of a guard, adapted to hold rubber rollers, a protecting plate secured to the under side of the guard, scrapers for the rubber rollers attached to said protecting plate, guiding plates on top of the guards to deliver the flax stalks in an orderly manner to the binder, a reel revolubly mounted above the guards, and raker teeth attached to the circumference of the reel.

4. In a device of the character described, the combination of a guard containing rubber rollers, a reel revolubly mounted above the guard, raker teeth projecting from the circumference of the reel, and means to impart a reciprocatory motion to the raker teeth.



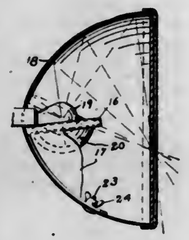
5. In a device of the character described, the combination of a guard containing rubber rollers, a reel revolubly mounted above the guard, said reel comprising arms mounted in pairs and extending radially from the axis, cross braces between each pair of arms, canvas wings stretched over the cross braces, raker teeth slidably mounted in the cross braces at the circumference of the reel, and means to withdraw said raker teeth momentarily after having passed the guards.

1,451,318. VEHICLE HEADLIGHT. OSCAR V. BERKLEY, Barbourville, Ky. Filed Nov. 1, 1921. Serial No. 512,058. 1 Claim. (Cl. 240—61.)



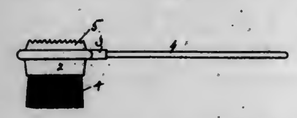
An automobile headlight mechanism comprising a transversely disposed rockable rod having headlights thereon, a rearwardly and upwardly extending arm carried by said rod, a foot lever pivotally mounted within the automobile, a connecting rod connecting said foot lever to the rear end of the rearwardly and upwardly extending arm, an outwardly extending lug carried by said foot lever, an upwardly extending pivoted arm adjacent one side of the foot lever, a shoulder carried by said pivoted arm and adapted to engage over the outwardly extending lug carried by the foot lever when said lever is forced forwardly, spring means for normally forcing the pivoted arm rearwardly, a stop lug disposed below the pivotal point of the pivoted arm, and a lug carried by the pivoted arm and adapted to engage the stop lug and limit the rearward movement of the pivoted arm.

1,451,319. TORPEDO GUIDE FOR TORPEDO TUBES. ERIC G. BJORKLUND, Bridgeport, Conn., assignor to The Lake Torpedo Boat Company, Bridgeport, Conn., a Corporation of Maine. Filed Aug. 18, 1922. Serial No. 582,749. 18 Claims. (Cl. 114—238.)



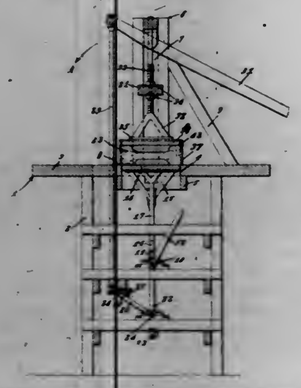
13. In a vessel, having a torpedo tube, the combination with said tube of a plurality of guides provided with movable extensions, the movable extension of one of said guides pivoted for swinging action upon a horizontal axis and the movable extensions of the others of said guides pivoted for swinging action upon vertical axes, a muzzle door for said torpedo tube, an operating lever for said door, means on said door for actuating the guide extension pivoted upon a horizontal axis to move the same into and out of operative alignment with respect to said tube, levers pivoted to a stationary portion of said boat and connected with the extensions of the guides movable upon vertical axes, and means carried by said door operating means and cooperating with said levers for moving said vertically pivoted portions into and out of operative alignment with respect to said tube.

1,451,320. CAN OPENER. JOHN BODNAR, Springfield, Mass. Filed May 21, 1920. Serial No. 383,238. 1 Claim. (Cl. 220—43.)



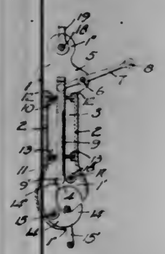
The combination with a can, including a bottom and a cover, and the bottom having an external circular flange located below its upper edge and said upper edge being insertable in the cover, said cover being provided with upwardly turned integral ears, located in opposite sides thereof, a U-shaped lever having terminal portions pivotally connected with said ears and projecting beyond said pivotal connections, the central portion of the lever having an outset finger hold, the lever normally resting in bodily contact with the flange, being normally protected against accidental displacement by said flange, the lever having a medial reinforcing flange coextensive with its length.

1,451,321. HEADLIGHT DIMMER. ULYSSES S. G. BAOBST, Fresno, Calif. Filed May 31, 1921. Serial No. 473,565. 1 Claim. (Cl. 240—48.2.)



In a headlight having a reflector and a bulb the combination of an approximately horizontal frame of a configuration in top plan to fit the interior of the reflector and having a downwardly projecting apron surrounding the curved portion thereof, said apron being of a configuration to fit the perimeter of the lower half of the reflector and terminating at its lower end in an ear provided with a horizontally disposed slot therethrough; a bolt projecting through said reflector and slot; a wing nut on the inner end of said bolt whereby said frame is locked against movement; and a deflector detachably mounted in said frame having a central pocket adapted to surround the lower portion of the bulb.

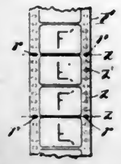
1,451,322. SHOE-POLISH-APPLYING BRUSH. ELLIS B. BURRELL, Baltimore, Md. Filed Aug. 18, 1920. Serial No. 404,328. 1 Claim. (Cl. 15—110.)



A shoe polish applying brush comprising a wire handle, a metal cylinder having a flanged upper edge and an extension on one side of said flange, the upper flange and extension being bent around the ends of said handle, bristles projecting below said cylinder, and a flexible disk secured in said cylinder and projecting above the said flange and having a serrated outer surface.

1,451,323. MOLDING MACHINE. JOHN D. DAUGHDRILL, Anniston, Ala. Filed Sept. 9, 1921. Serial No. 499,455. 4 Claims. (Cl. 22—27.)

1. In a device of the class described, a main frame; a flask carried thereby; a lower pattern cooperating with the flask; means carried by the main frame for raising and lowering the lower pattern; an upper pattern cooperating with the flask; an auxiliary frame hinged to the main frame for folding movement with respect to the main frame, means for mounting the upper pattern on the auxiliary frame for movement toward and away from the lower pattern and mechansim carried by the main and auxiliary frames for operating the upper pattern toward and away from the lower pattern.

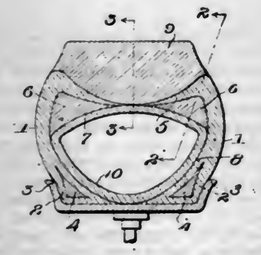


1,451,324. SLING RELEASER FOR TRANSPORTING APPARATUS. MARCOS CASAMAYOR, Manzanillo, Cuba. Filed Nov. 7, 1921. Serial No. 513,565. 2 Claims. (Cl. 294—83.)

1. A sling releaser for transporting apparatus, comprising a main body presenting a hollow space along which are guides between which slides a bolt, a hook pivoted at the lower part of such body at a point higher than its gravity center and which presents an angular cut at its upper end for adjusting with the lower end of the bolt; a lever pivoted on the upper part of said main body and articulated at one end to the upper end of the bolt and from the opposite end pending a cord for the releasing pull and an element maintaining frictionally the lower end of the bolt against the cut in the hook in the securing position of the releaser.

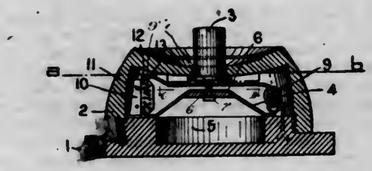
1,451,325. CINEMATOGRAPHIC FILM. DANIEL F. COMSTOCK, Cambridge, and JOSEPH A. BALL, Wollaston, Mass., assignors, by mesne assignments, to Technicolor Motion Picture Corporation, Boston, Mass., a Corporation of Maine. Filed Oct. 6, 1920. Serial No. 415,018. 24 Claims. (Cl. 88—19.5.)

1. A cinematographic film having a plurality of series of complemental images representing simultaneous aspects of an object field, the images of certain series being interposed between images of other series longitudinally of the film, the film having registering means arranged uniformly with respect to transverse lines equidistant from



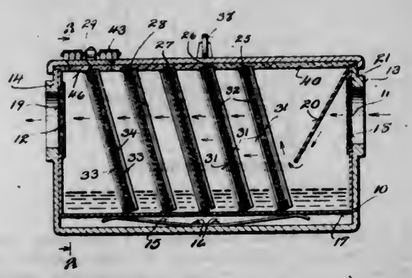
the several images of each complemental set so that the distance from each point of each image to the transverse line thereof is the same as the distance between the corresponding points of the complemental images to the lines thereof.

1,451,326. RING FOR CURTAINS AND THE LIKE. JACK ARTHUR CUNDY, London, England. Filed June 12, 1922. Serial No. 567,714. 1 Claim. (Cl. 156—21.)



A curtain ring and support, comprising a single length of material coiled intermediate its ends into ring form and projected above and below the ring to form arms with the lower arm of greater length, said arms being aligned diametrically of the ring, with the terminals of each arm formed with upwardly-opening hooks, whereby to facilitate the application of a curtain and utilize the greater length of the lower arm under the weight of the curtain to always maintain the arms aligned vertically in use.

1,451,327. VEHICLE TIRE. JOHN DARIUS CUNNINGHAM, Houston, Tex. Filed July 7, 1922. Serial No. 573,329. 4 Claims. (Cl. 152—10.)



4. A combined pneumatic and cushion tire including fabric side walls, a fabric outer wall integral with the side walls and concave from the side walls towards the center of the tire, a cushion tread secured on said concave outer wall, cushion sections arranged within the tire at the juncture of the fabric side walls and outer wall, said cushion sections defining the upper surface of the tube receiving space, and a tube fitted within the tube receiving space and bearing in part on the fabric side walls and in part on said cushion sections.

1,451,328. ELECTRIC SIGNAL TRANSMITTER. DOMINGO DESPLATS, Buenos Aires, Argentina. Filed Nov. 4, 1919. Serial No. 335,729. 4 Claims. (Cl. 177—380.)

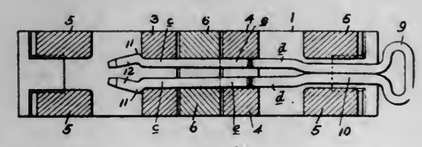
4. Electric signal transmitter comprising, a base, a cover therefor, an air chamber formed by a flexible membrane within the base and cover, a valve in the membrane, a spring forming one pole of the circuit connected to said valve, a push button movable in the cover and engaging the spring, a contact plate having a plurality of holes therein and mounted on the base obliquely to the free path of one end of the spring, and a wire forming the other pole of the circuit threaded through such holes as will produce signals in the desired combination on a single depression of the push button.

1,451,329. AIR FILTER FOR ENGINES. ALVIN R. DRESSLER, Sheboygan, Wis. Filed May 8, 1922. Serial No. 559,437. 3 Claims. (Cl. 183—30.)

1. In a filter for engines the combination of a casing, a quantity of oil in the bottom thereof, a plurality of filters having their lower ends extending into said oil, a lid for said casing, and a fabric lining for said lid cooperating with said filters to prevent the escape of air about said filters.

1,451,330. MANUFACTURE OF CELLULOSE DERIVATIVES. HENRY DREYFUS, London, England. Filed Aug. 5, 1920. Serial No. 401,383. 34 Claims. (Cl. 260—152.)

34. Process for the manufacture of aralkyl ethers of cellulose, compriaing impregnating with alkali a cellulosic body not soluble in alkali, and thereafter treating the cellulosic body with an aralkylating agent in presence of further alkali, said further alkali being added by stages in solid form, and the aralkylating agent being also added by stages, the water used in the reaction, disregarding that formed in the reaction, being restricted to an amount not greater than from about the natural humidity content of the cellulosic body up to about one and a half times the weight of the cellulosic body and the total alkali used in the process being at least equal in weight to said restricted water quantity, disregarding water formed in the reaction.



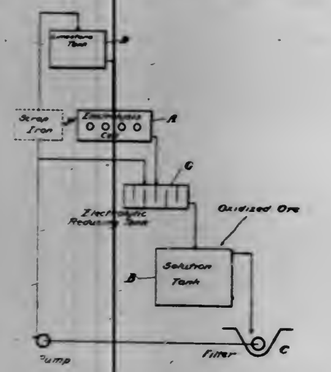
1,451,331. MANUFACTURE OF CELLULOSE DERIVATIVES. HENRY DREYFUS, London, England. Filed Aug. 5, 1920. Serial No. 401,385. 22 Claims. (Cl. 260—152.)

1. Process for the manufacture of cellulosic derivatives being "mixed" aralkylalkyl ethers of cellulose, comprising treatment of a cellulosic body in presence of a base with aralkylating agents and with alkylating agents whereby aralkyl and alkyl groups are introduced into hydroxyl groups of the cellulosic body.

7. Process for the manufacture of "mixed" ethers of cellulose, comprising treating a cellulosic body not soluble in alkali, in presence of alkali, with aralkyl halide and with dialkyl sulphate, while restricting the water present, disregarding that formed in the reaction itself, to an amount not greater than from about the natural humidity content of the cellulosic body up to one and a half times the weight of the cellulosic body, the total alkali used in the process exceeding, in a ratio of 3:1 and upwards, the weight of said restricted quantity of water, disregarding water formed in the reaction.

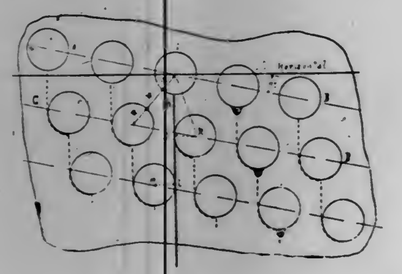
22. As new products, benzyl-ethyl "mixed" ethers of cellulose.

1,451,332. BRAKE-SHOE KEY. ERASTUS EMERY, Pittsburgh, Pa. Filed Apr. 28, 1922. Serial No. 557,118. 8 Claims. (Cl. 188—243.)



5. A key for connecting a brake shoe to a brake shoe head, said head and shoe having intercalating lugs intermediate their ends, said lugs having openings therethrough having in combination an upper body portion, resilient legs extending from the body portion and adapted when the key is in operative position to bear against the side walls of the openings through the lugs on the shoe-head, a head on the body portion and shoulders adjacent to the ends of the legs, said shoulders and head being adapted when the key is in operative position, to maintain the legs in contact with the side walls of the openings through the lugs on the head and shoe.

1,451,333. ART OF MAKING ELECTROLYTIC IRON. FREDERIC A. EUSTIS, Milton, CARLE R. HAYWARD, Quincy, and HENRY M. SCHLEICHER and DONALD BELCHER, Boston, Mass., assignors, by direct and mesne assignments, of one-half to said Eustis and one-half to Charles Page Perin, New York, N. Y. Original application filed Dec. 1, 1920, Serial No. 427,541. Divided and this application filed July 7, 1921. Serial No. 482,928. 5 Claims. (Cl. 204—15.)



1. The art of making electrolytic iron which comprises reducing a ferric solution by means of an electric

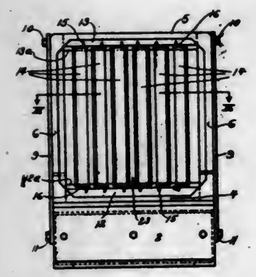
current to a ferrous state, and then transferring the ferrous solution to a separate electrilytic cell to which

the ferric solution has no access and depositing iron from the ferrous solution by electrolysis in said separate cell.

1,451,334. SURFACE CONDENSER. ANDRÉ GINABAT, Paris, France. Filed May 3, 1921. Serial No. 466,481. 9 Claims. (Cl. 257—43.)

1. In surface condensers of the tubular type, a disposition of the tubes by which a vertical line from any position on the axis of the upper tube of any pair is tangent at the end of a horizontal diameter of the lower tube of the pair.

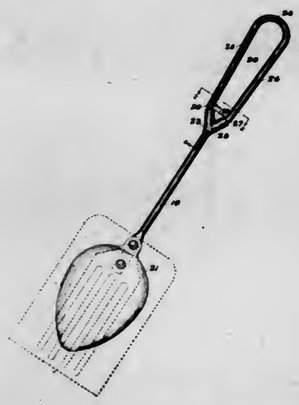
1,451,335. GRINDING BODY AND METHOD OF PRODUCING SAME. GEORGE R. HANKS, High Bridge, N. J., assignor to Taylor-Wharton Iron and Steel Company, High Bridge, N. J., a Corporation of New Jersey. Filed Dec. 30, 1921. Serial No. 525,950. 7 Claims. (Cl. 29—148.4.)



1. A continuous method of making grinding bodies at one heat, which consists in casting a slug having a substantial part thereof of the ultimate shape of the finished product, forging the slug, while hot from the heat of casting, to the ultimate form desired, and rapidly cooling the forged product.

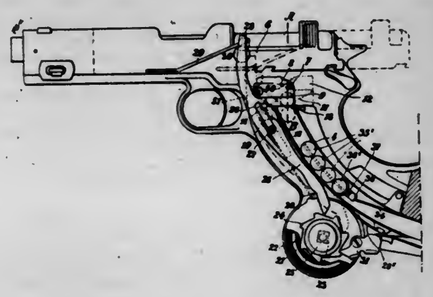
1,451,336. QUICK-STOP EMERGENCY BRAKE FOR VEHICLES. JACOB HOCHMAN, New York, N. Y. Filed Feb. 6, 1922. Serial No. 534,486. 3 Claims. (Cl. 180—83.)

1. In combination with a vehicle, brake members arranged in pairs and adapted to engage the ground in front of the wheels of the vehicle, bodily movable shafts from which said brake members are suspended, arms carrying said shafts, transverse shafts on which said arms are fixed, front and rear longitudinal shafts having bevel gear connections with the said transverse shafts, said front longitudinal shaft being formed in two sections, a clutch connecting said sections, means operatively connected to one section of said shaft for raising and holding in raised position said brake members, the other section of said shaft having the above mentioned gear connection with the transverse shaft, means operatively connecting the last mentioned section of the front longitudinal shaft with the rear longitudinal shaft whereby the latter is caused to operate and means for releasing said clutch to free the said transverse shafts.



1,451,337. RADIATOR GUARD. NORMAN C. HUCKESTEIN, Pittsburgh, Pa. Filed Sept. 23, 1920. Serial No. 412,171. 4 Claims. (Cl. 180—68.)

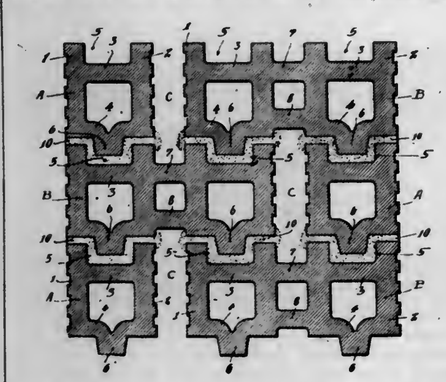
1. A radiator guard consisting of a supporting frame adapted to be spaced in front of a vehicle radiator and a series of vertically arranged independently movable spring controlled pivoted vanes therein having open and closed positions and being arranged to normally remain in open position.



1,451,338. HANDLE FOR KITCHEN UTENSILS. EDWARD H. JOHNSON, Binghamton, N. Y., assignor to The A. & J. Manufacturing Company, Binghamton, N. Y., a Corporation of New York. Filed July 23, 1920. Serial No. 398,377. 3 Claims. (Cl. 30—22.)

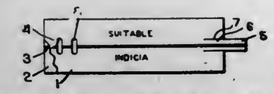
1. In a handle for a culinary utensil: a metal rod one end of which is suitably attached to such utensil, said rod being abruptly bent to one side at a suitable distance from said attached end thereof, the portion of said rod beyond such bend being fashioned to provide an open hand grip loop having a rounded end remote from said abrupt bend, the sides of such loop gradually converging toward said abrupt bend, and the remaining end of said rod being turned abruptly toward said abrupt bend and brought into abutting relation with the side

of said rod thereat; and a metal piece wrapped around said rod so as to provide a tightly fitting Y-shaped socket containing said abutting end and said abrupt bend, and separately enclosing portions of said rod at either side of said bend and adjacent to said end.



1,451,339. MAGAZINE FIREARM. ARTHUR KOTTAS, Vienna, Austria. Filed July 8, 1921. Serial No. 483,283. 6 Claims. (Cl. 42—17.)

1. A magazine firearm, a cartridge channel therein, in which the cartridges lie transversely of the stock, means for conveying the cartridges along said channel, and means for turning the cartridges through an angle of ninety degrees in passing from said channel, said means comprising two members having oblique edges crossing at right angles.

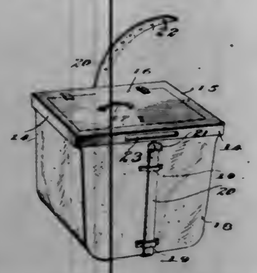


1,451,340. BUILDING CONSTRUCTION. LEO KROONEN, Corona, Calif., assignor to Charles Donlon, Oxnard, Calif. Filed July 1, 1920. Serial No. 393,384. 5 Claims. (Cl. 72—41.)

1. A wall structure combining a plurality of horizontally disposed interlocking hollow building blocks each having horizontal top and bottom walls and vertical connecting side walls extending above the top wall to form a mortar groove, the bottom wall of each block being formed with a longitudinal tongue vertically aligned with said groove and having converging side

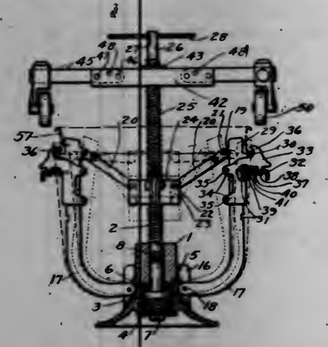
walls and positioned and embedded in mortar in the mortar groove of the adjacent block.

1,451,341. MARKING TICKET. ALONZO KIMBALL MARSH, New York, N. Y., assignor to A. Kimball Company, New York, N. Y., a Corporation of New York. Filed Aug. 3, 1922. Serial No. 579,439. 3 Claims. (Cl. 40—21.)



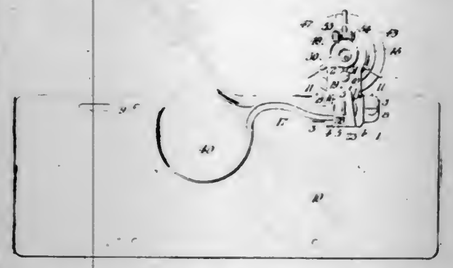
1. A marking ticket comprising two plies of flexible non-metallic material secured together face to face, a soft wire stiffener interposed between said plies and extending longitudinally thereof, the said ticket presenting an aperture adjacent one end and a tongue at the other end containing the end of the wire stiffener whereby, when the ticket is bent to surround the article or articles to be marked, it may be secured in position by passing the tongue through the aperture and bending the tongue back upon itself.

1,451,342. FOOD-PREPARING UTENSIL. PRESILIANO MENDEZ, Valmy, Nev. Filed Oct. 7, 1922. Serial No. 593,040. 6 Claims. (Cl. 146—14.)



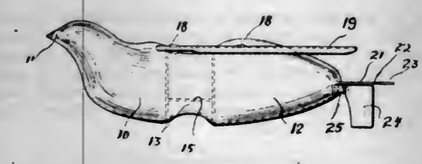
1. A device of the class described comprising a pair of handles pivoted together, means on one handle for rotatively supporting an article to be peeled, and a knife slidably mounted on the second handle.

1,451,343. MAIL RECEPTACLE. NICK PANAGOPOLOUS, Muskogee, Okla. Filed Jan. 21, 1922. Serial No. 530,852. 1 Claim. (Cl. 150—13.)



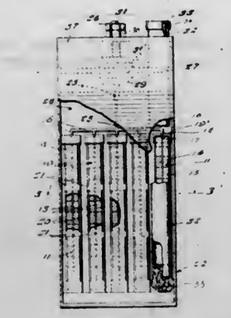
In a mail receptacle, a pouch having a flexible collapsible body and a rectangular rigid top section of a permanent nature to which the body is permanently attached and against which the body may be collapsed, provided with a mail introducing slot centrally of one side and having a hinged and normally locked closing lid in its top affording access to the body for the removal of mail therefrom, said body having strap guides, and a strap normally carried in said guides and extendible when connected around the rigid top to hold the body in collapsed position against the top and across said slot and said lid to prevent loss of mail from the former and avoid accidental opening of the latter.

1,451,344. TIRE CHANGER. WINFIELD S. ROBINETT, Seattle, Wash. Filed Feb. 23, 1922. Serial No. 538,539. 6 Claims. (Cl. 157—6.)



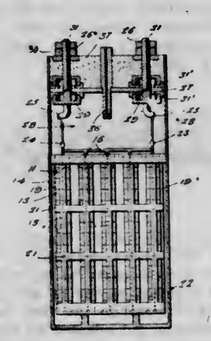
1. A tire changer of the class described embodying a vertical spindle supported in thrust bearings in a suitable base which will permit it to rotate; threads on the spindle; notches around the spindle; a pin slidably mounted in a hole in the base which engages the notches in the spindle; a lever pivotally supported on the side of the base to operate the pin; a spring in a recess in the base bearing against the lever to hold the pin in the notches; lugs on the sides of the base; arms pivotally mounted to the lugs which project outward and upward; lugs on the inner side of the upper end of the arms; links pivotally mounted on the lugs whose opposite ends are pivotally mounted in a collar which is screwed on the spindle; lugs on the outer edges of the arms; notches in the outer edges of the arms; jaws slidably mounted on the arms; spring latches in the jaws to engage the notches in the arms; hook shaped projections on the upper sides of the jaws; a horizontal member also screwed on the spindle; bars pivotally mounted in the horizontal member; pins for holding the bars in a horizontal position; other pins and holes for holding the bars in vertical positions; brackets with set screws slidably mounted on the bars; rollers pivotally mounted in the lower ends of the brackets; and a hole in the top of the spindle thru which a bar may be placed for rotating it.

1,451,345. SIGNALING DEVICE. EDWIN M. ROSENBLUTH, Wallingford, Pa. Filed July 28, 1921. Serial No. 488,071. 14 Claims. (Cl. 116—45.)



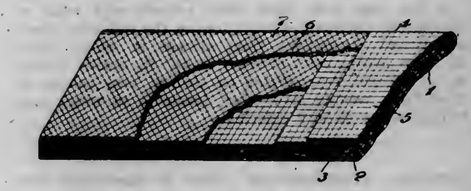
1. In a signaling device, the combination with a frame member adapted to detachably support a vehicle license number plate; of a lamp having means detachably connecting it with said frame member in position to illuminate the numbered face of said plate; a hollow nut sleeve journaled in said frame; a semaphore signal carried by said nut sleeve in such relation to said plate as to be normally concealed behind the latter; means adjustably connecting said nut sleeve and semaphore including a bifurcated clamp on the latter; means adapted to raise said semaphore above said plate and into position to be illuminated by said lamp; including a screw member axially movable in said nut sleeve as a nut, and having thread of such rapid pitch as to turn said semaphore when said screw is moved axially in said frame and nut sleeve without turning said screw; means limiting the turning movement of said semaphore, including a stop projection extending therefrom in an arcual slot in said frame member; an abutment on said screw; a spring encircling said screw within said nut sleeve, and bearing at one end upon said abutment; whereby said screw is normally shifted to one extreme of its axial movement; and a connecter extending from said screw to a member of a vehicle which it is necessary to move to stop the vehicle; whereby said semaphore signal is automatically displayed as a consequence of the movement of said vehicle member.

1,451,346. AERIAL VEHICLE. ADOLF SEYDEL, Brooklyn, N. Y. Filed Aug. 23, 1922. Serial No. 583,717. 1 Claim. (Cl. 244—9.)



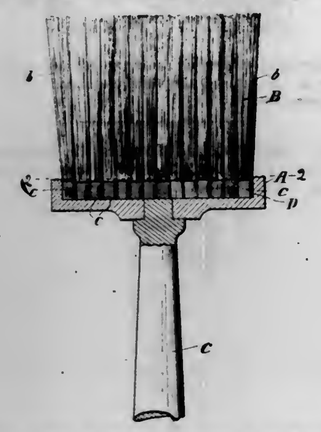
An aerial vehicle comprising a hollow body raised at the front and of substantially circular cross section thruout, said body tapering from the center fore and aft, a vertical cock-pit in the center of said body, said cock-pit having a flooring through which the legs of the rider extend, a pair of wings hinged to said body, hooks on the underside of said wings to engage the arms of the rider, a tail on said body, and rudders for changing the inclination and direction of the vehicle.

1,451,347. STORAGE BATTERY. WILLIAM H. THORPE, Mount Vernon, N. Y. Filed Feb. 1, 1922. Serial No. 533,443. 2 Claims. (Cl. 204—29.)



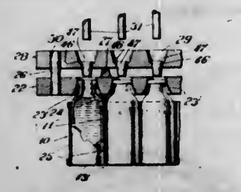
1. In a storage battery, plates comprising a plurality of units, each unit having spaced apart layers of active material, a metallic core for each unit, said layers encircling said core, and a moldable inactive porous material molded to lie between said active layers and around said core.

1,451,348. STORAGE BATTERY. WILLIAM H. THORPE, Mount Vernon, N. Y. Filed Feb. 1, 1922. Serial No. 533,444. 4 Claims. (Cl. 204—29.)



1. In a storage battery, automatic means within the battery for measuring the water added to the battery comprising a filling tube in the battery and liquid absorbing means in the tube.

1,451,349. POWER-TRANSMISSION BELT. GEORGE S. TOWNE, San Francisco, Calif. Filed Apr. 26, 1922. Serial No. 556,744. 2 Claims. (Cl. 74—63.)



1. A power transmission belt including a substantially inelastic woven body, the opposite ends thereof being formed with a woven elastic surface, and means for securing said belt ends together with said elastic surfaces in substantially parallel meeting relation at substantially right angles to the normal plane of the body of the belt.

1,451,350. METHOD OF CONSTRUCTING BRUSHES. WILLIAM UNGER, Wooster, Ohio. Filed Jan. 3, 1922. Serial No. 526,800. 2 Claims. (Cl. 300—21.)

2. The herein described method of constructing a brush, comprising the insertion and pressing into a channel of a brush head or block, of a flat line of brush material sewed together with a strong cord seam across the butt ends of the line, after filling the channel with a liquid cement, and then dry hardening, substantially as set forth.

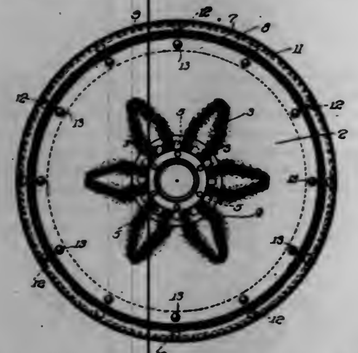
1,451,351. APPARATUS FOR BOTTLING LIQUIDS. CHESTER J. VAN DOREN, Oak Park, Ill., assignor of one-half to H. T. Dorrington, Chicago, Ill. Filed Sept. 18, 1920. Serial No. 411,172. 6 Claims. (Cl. 226—92.)

1. A cork rack charging device comprising, in combination, a cork rack having a plurality of holes adapted at their lower portions each to fit a tapered cork projecting below the board, each hole having an abrupt increase of diameter forming an offset adjacent the position occupied by the base of a cork seated in said hole, said increased diameter being greater than the greatest diameter of the tapered cork, said hole being of upwardly increasing diameter above said offset, and means to subject said rack to suddenly arrested upward movements.

1,451,352. AIRPLANE. FRANK B. VORACEK, Portland, Oreg. Filed Oct. 18, 1920. Serial No. 417,535. 10 Claims. (Cl. 244—14.)

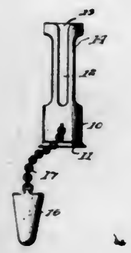
1. In an airplane, the combination of a fuselage tapering toward both ends and terminating in a blunt nose, triple deck wings extending horizontally from the fuselage, double deck tail planes extending horizontally from the

fuselage, vertical and horizontal rudders within the tail plane, quadruple motors within the triple deck wings, propellers in front of the triple deck wings, running



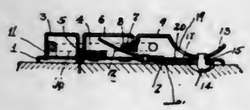
gears underneath the wings and the planes, and operating means in the nose of the fuselage ahead of the wings and the propellers.

1,451,353. FIRE DOOR. HERMAN C. WALDMAN, St. Louis, Mo. Filed Aug. 21, 1920. Serial No. 405,122. 5 Claims. (Cl. 189—46.)



1. A fire door having a rigid, rectangular frame composed of four commercially rolled, flanged members, and a panel in said frame composed of a plurality of sheets connected together within their marginal edges and having their top and bottom edge portions directly connected to said frame.

1,451,354. CORRUGATED-PLATE WHEEL. WILLIAM ERASTUS WILLIAMS, Chicago, Ill. Filed Dec. 5, 1919. Serial No. 342,577. 5 Claims. (Cl. 301—63.)

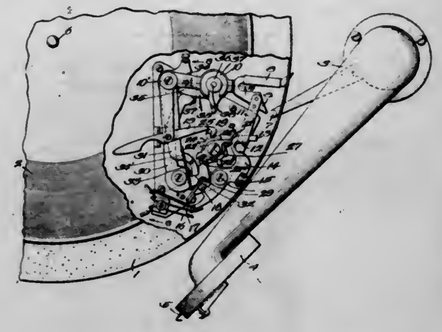


5. A wheel disk having a plane outer non-corrugated zone and a central zone with deep radial corrugations formed on one side of the plane of the outer zone, combined with a cast-on hub lying in the central opening of the disk and having two thin parallel circumferential flanges corrugated like the inner margin of the disk and rigidly holding the marginal portion between them.

1,451,355. TIE FORM. HUGH C. WREN, Louisville, Ky. Filed Feb. 13, 1922. Serial No. 536,107. 2 Claims. (Cl. 24—49.)

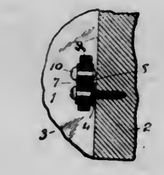
1. In a necktie clamp, a tubular member through which one end of a tie may be passed and having shoulders between which the other end of said tie may be wrapped, and a clamping member arranged to clamp the tie in said tubular member.

1,451,356. FASTENING DEVICE. RUDOLPH M. YEMNIKER, Cleveland, Ohio, assignor to The Langenau Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 28, 1920. Serial No. 384,806. 1 Claim. (Cl. 292—250.)



In a fastening device of the character described, the combination of two plates designed to be secured in abutting relation on the parts to be fastened together; a link pivotally attached to one of said plates; a lever member pivotally attached to the free end of said link and having a fulcrum end adapted to engage with said other plate; and a leaf spring acting on said fulcrum end serving to align said parts during the latching operation and to hold said parts in locking position.

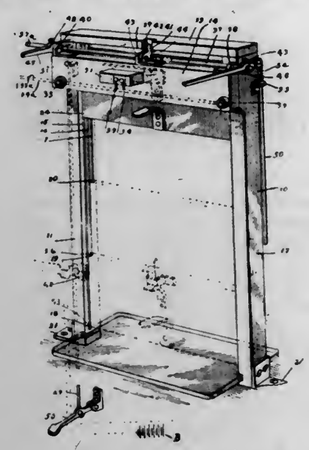
1,451,357. NITROBENZOIC ACID ESTERS OF TRIHALOGENTERTIARY BUTYL ALCOHOL. THOMAS B. ALDRICH, Detroit, Mich., assignor to Parke, Davis & Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 10, 1922. Serial No. 551,267. 5 Claims. (Cl. 260—103.)



5. The new body meta nitro benzoic acid ester of tri-chlorotertiary-butyl-alcohol having the following characteristics: crystallizes from alcohol in white plates having a melting point of about 86–88° C., readily soluble in hot alcohol, crystallizing on cooling, very soluble in chloroform, acetone and ether, insoluble in water containing about 32.06% chlorine.

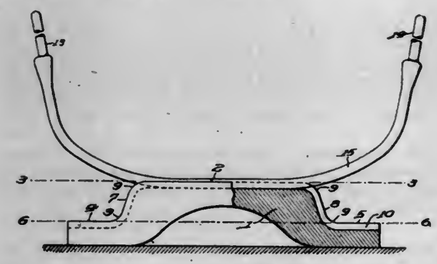
1,451,358. PHONOGRAPH. JOHN F. BERGANDER, Chicago, Ill. Filed Nov. 29, 1920. Serial No. 427,018. 8 Claims. (Cl. 192—122.)

1. A phonograph including a disc record supporting turn table; a tone arm structure mounted to swing over the turn table and carrying a sound box that is provided with a record groove engaging stylus; automatic means for stopping the turn table; and mechanism governed by the tone arm for rendering said means operative and inoperative and set by the tone arm upon inward manual movement of the tone arm to record concluding position, to make said means operative when the record being played subsequently returns the tone arm approximately to this position.



1,451,359. SASH ANTIRATTLER. JOSEPH E. CAMPBELL, Rosedale, Kans. Filed Feb. 10, 1921. Serial No. 443,874. 8 Claims. (Cl. 292—194.)

1. In a sash anti-rattler, a supporting member adapted to be mounted in a window frame, a washer mounted on said member and arranged to bear against said frame, two plates rotatably mounted on the supporting member, one having frictional engagement with the washer, and a resilient member eccentrically mounted on the supporting member and adapted to be clamped thereby between said plates, said resilient member being adapted to engage and to be compressed by a sash slidably mounted in said window frame, susbtantially as set forth.

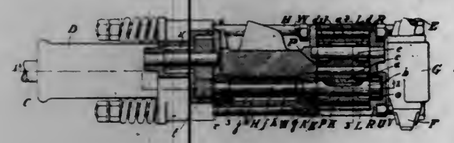


1,451,360. SHIELD FOR BANK WINDOWS. JOHN W. CLEARY, New York, N. Y. Filed Mar. 1, 1919. Serial No. 280,181. 2 Claims. (Cl. 268—2.)

1. In a shield for bank windows, in combination; a detachable frame adapted to be installed in any bank, comprising two vertical supports connected by horizontal members at their upper ends and having a series of vertical guides on their inner surfaces; a plurality of vertically slidable shield members disposed in a horizontal position with their opposite ends in said guides, a bracket provided upon one of the shield members for lifting and supporting the other shield members at the upper portion of the frame, and a spring catch on the same shield member adapted for securing it in its elevated position in the frame; means for releasing the spring catch by manually controlled mechanism by the hand or foot, or by electrically controlled means in the alternative and means for checking the several shield members in their downward movement when released,

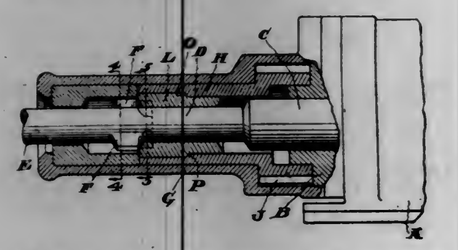
whereby they will be extensibly disposed so as to close the entire extent of the opening, and alarm means adapted to give a signal when the shield is closed.

1,451,361. METHOD OF MAKING SOLID GLASS RODS HAVING BENDS THEREIN. VICTOR DURAND, Jr., Vineland, N. J. Filed Nov. 14, 1921. Serial No. 514,858. 2 Claims. (Cl. 49—77.)



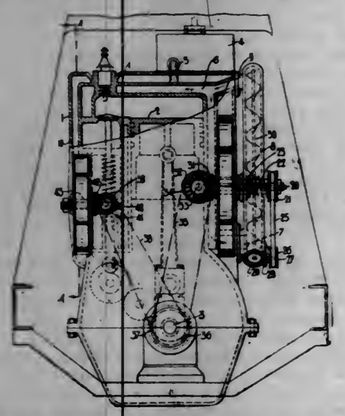
2. The process or method of making solid-glass rods with right angle bends therein which consists in manually drawing a mass of plastic glass down to a stretch of solid plastic glass, circular in cross-section and substantially uniform in diameter, laying said stretch while plastic into a groove in a hot former, said groove being substantially semi-circular in cross-section, the central or middle part of said groove lying in one plane, the two ends of said groove lying in a second plane parallel to said first-mentioned plane, and the entire groove also lying in a plane normal to said parallel planes, severing said stretch of solid plastic glass at the ends of said former, and allowing said former and the glass in the groove thereof to slowly cool.

1,451,362. INDEPENDENT ROTATION FOR PERCUSSIVE TOOLS. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Apr. 7, 1922. Serial No. 550,421. 4 Claims. (Cl. 121—7.)



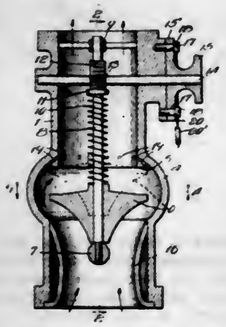
1. A fluid actuated percussive tool having a cylinder and a piston adapted to operate therein, and a motor operatively connected to rotate the drill steel, said cylinder having a projection at its rearward end formed with a plane face, said motor having a casing open at the front end and adapted to be removably secured against the face of

said projection which thereby forms one head of the motor casing, longitudinal bolts for securing the motor



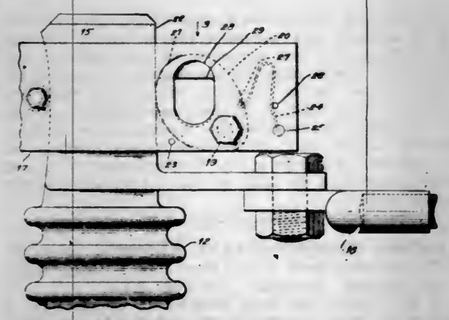
casing against the face of said projection, a back head for the cylinder extending outwardly over the motor casing, and means for clamping the back head to the cylinder.

1,451,363. LUG CHUCK FOR ROCK DRILLS. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed May 5, 1922. Serial No. 558,689. 3 Claims. (Cl. 121—32.)



1. A lug chuck for fluid actuated rock drills of the hammer type, comprising a chuck sleeve adapted to be rotated, a removable cylindrical chuck bushing within the forward end of said sleeve seated against an internal integral shoulder on said sleeve, through which the shank of the drill steel is adapted to extend in position to receive the impact blows of the hammer piston of the machine, clutch jaws formed in both the chuck sleeve and the chuck bushing, and a driver having clutch jaws cooperating with the clutch jaws in both the chuck sleeve and chuck bushing.

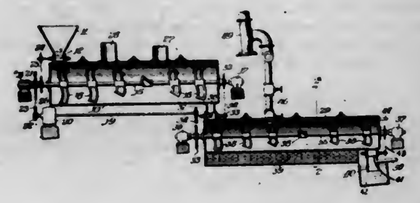
1,451,364. AUTOMOBILE RADIATOR SYSTEM. JOSEPH F. KUPEC, Lincoln, Nebr. Filed Apr. 22, 1922. Serial No. 555,955. 6 Claims. (Cl. 123—170.)



5. In combination with a combustion motor, its cylinders and crank shaft, of a water jacket surrounding said cylinders, an air jacket surrounding said water jacket, an obliquely arranged hydraulic conveyer propelling water from the lower end of said water jacket to the upper end thereof, a plurality of fans for causing air to flow through said air jacket, and means including a clutch control for transmitting drive from said crank shaft to said conveyer and to said fans.

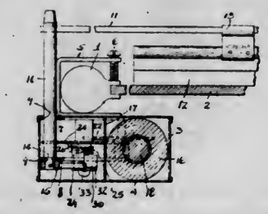
1,451,365. GOVERNOR. DAVID L. A. LARSONNEUR, Chicago, Ill. Filed Jan. 31, 1920. Serial No. 355,424. 2 Claims. (Cl. 137—152.)

1. A governor of the character described comprising a casing having an inlet and an outlet with a widened portion intermediate said inlet and said outlet, a valve supporting stem disposed within the casing, a valve slidably mounted on said stem, an extension projecting into the widened portion of the casing, said extension contacting with the valve when the same is in a closed position, a plurality of apertures passing through said extension to provide a passageway when the valve is closed, a spring for normally urging said valve in an open position, and means for varying the pressure necessary to close the valve.



1,451,366. SWITCH LOCK. FRANK T. LEILICH, Baltimore, Md. Filed May 11, 1920. Serial No. 380,456. 4 Claims. (Cl. 200—169.)

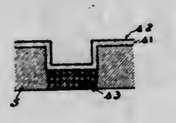
1. In a switch lock, the combination with a movable contact maker and a fixed contact, of a cam on said maker located to engage said fixed contact at any one of a plurality of positions of said maker and prevent movement of said maker with reference to said fixed contact.



1,451,367. PROCESS OF TREATING SHALE. STEPHAN MARKO, Chicago, Ill. Filed Oct. 10, 1921. Serial No. 506,757. 2 Claims. (Cl. 48—202.)

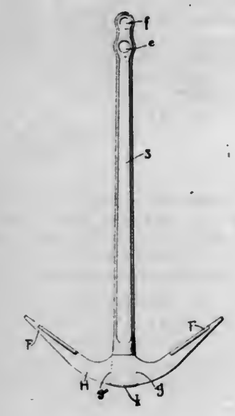
1. A process of producing combustible gas from oil-bearing shale, consisting in agitating ground shale in the presence of dry heated gaseous products of combustion at temperatures in excess of 600 degrees F., passing the heated shale and gases to a secondary zone of treatment and there continuously agitating the shale and subjecting it to increased temperatures and adding sufficient quanti-

ties of superheated steam to the secondary stage of treatment to increase to a predetermined amount the hydrogen content of the evolved gases, separately withdrawing the gas and shale residue from the secondary stage of treatment.



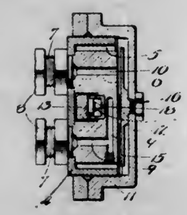
1,451,368. AUTOMATIC WINDSHIELD-CLEANING DEVICE. RICHARD E. MILLER, Bay Village, Ohio. Filed Oct. 16, 1920. Serial No. 417,857. 8 Claims. (Cl. 15—253.)

1. In a windshield cleaning device, the combination of a support adapted to be attached to a windshield, a wiper arm actuating shaft rotatably mounted upon said support, a wiper arm associated with one end of said shaft, a crank arm associated with the other end of said shaft, a spring motor connected with said crank arm, means for tensioning the spring of said motor, and automatic means for releasing said spring to permit said motor to operate.



8. A windshield cleaner comprising a wiper supported to have a range of motion over the windshield, a motor having a reciprocating part, and connections between said part and wiper to actuate said wiper, including means for distributing the separate impulses of the motor, for moving the wiper through its full range of motion at substantially uniform speed.

1,451,369. STRIP SHINGLE. RAY P. PERRY, Upper Montclair, N. J., assignor to The Barrett Company, a Corporation of New Jersey. Filed Mar. 10, 1917. Serial No. 154,014. 17 Claims. (Cl. 91—67.9.)

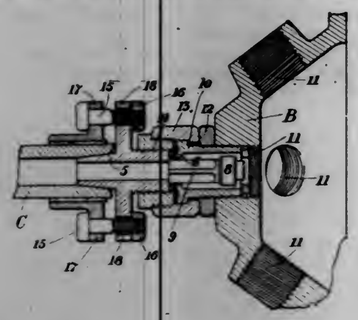


1. As an article of manufacture, a strip shingle consisting of a strip with a main body portion containing fibrous material, said strip having one or more transverse depressions extending into the main body portion of said strip.

1,451,370. ANCHOR. NORRIS D. POWELL, Chester, Pa., assignor, by mesne assignments, to Baldt Anchor & Chain Company, a Corporation of Pennsylvania. Filed Oct. 9, 1919, Serial No. 329,516. Renewed Dec. 1, 1922. 3 Claims. (Cl. 114—207.)

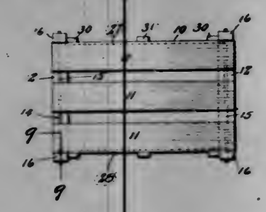
1. Anchor structure comprising a head having a tapered opening therein, a separate shank having at its lower end a tapered portion fitting in said tapered opening in the head, said shank at its tapered end having a depression into which said head is fitted to interlock the head and shank.

1,451,371. NEEDLE VALVE. THEODORE C. PROUTY, Elgin, Ill., assignor, by mesne assignments, to Patents Holding Corporation, Chicago, Ill., a Corporation of Delaware. Filed Apr. 2, 1919. Serial No. 286,986. 12 Claims. (Cl. 50—21.)



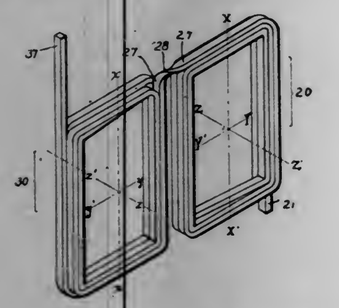
1. In an apparatus of the class described, a valve mechanism comprising a body portion provided with a valve port, a controlling sapphire needle valve for opening and closing the valve port, and means for operating said controlling needle valve.

1,451,372. AUTOMATIC VALVE FOR PNEUMATIC-HOSE FITTINGS. FRANCIS JOHN QUIN, and WILLIAM HENRY PARK, Belfast, Ireland. Filed Nov. 25, 1919. Serial No. 340,502. 4 Claims. (Cl. 284—18.)



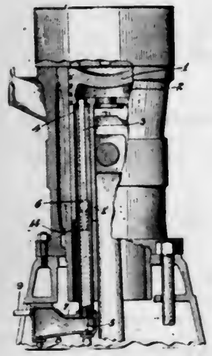
1. Means for coupling pneumatic hose to a pneumatic strainer, comprising, in combination, a tubular member

secured to the strainer and in communication with the compressed air supply, a valve seat within said member and a valve normally closed against said seat by the pressure of the compressed air, a coupling nut rotatable on



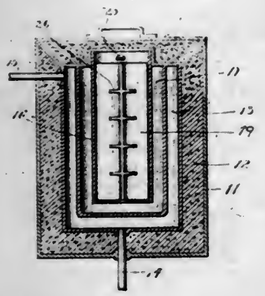
said member, a spigot on the hose adapted to be engaged by the coupling nut, and means coacting with said valve whereby it is moved from its seat when the spigot is engaged.

1,451,373. FOLDING CRATE. BYRD C. ROCKWELL, Camden, Ark. Filed June 1, 1922. Serial No. 565,146. 9 Claims. (Cl. 217—48.)



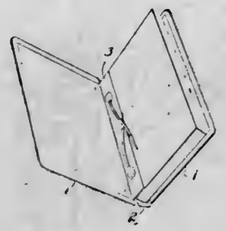
1. In a folding crate, side walls, transverse end bars pivotally connected thereto, and end walls supported by said transverse bars and pivotally movable into engagement with said side walls.

1,451,374. CONSTRUCTION OF ELECTRICAL WINDINGS. SAMUEL ROGERS, Anderson, Ind., assignor to The Remy Electric Company, a Corporation of Indiana. Filed Aug. 15, 1919. Serial No. 317,740. 11 Claims. (Cl. 140—92.2.)



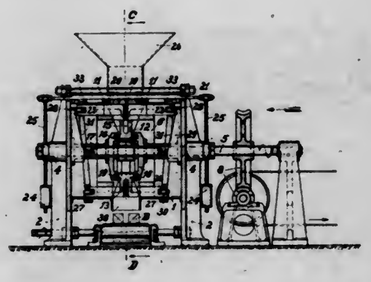
1. The method of forming coils in pairs from a continuous piece of wire which consists in forming the turns of the first coil spirally and approaching the axis of the spiral and then winding from the innermost turn of said spiral outwardly beginning with a turn adjacent to said innermost turn of the spiral so that the ends of said coil each will be continuous with and extend from outside turns of the coil; in forming the second coil in like manner, the first turn of the second coil being locatable in the same plane with the last outside turn of the first coil, and the axes of the coils being substantially parallel; and in bending and twisting the wire joining the two coils so that both coils lie with the first turn of the first coil in the same plane with the last turn of the second coil and with the last turn of the first coil in the same plane with the first turn of the second coil.

1,451,375. PISTON-COOLING DEVICE. RUDOLPH SCHLATTER, St. Louis, Mo., assignor to Busch-Sulzer Bros.-Diesel Engine Company, St. Louis, Mo., a Corporation of Missouri. Filed July 30, 1921. Serial No. 488,516. 10 Claims. (Cl. 123—176.)



1. In a piston cooling device the combination of a water supply apparatus, a piston having a cooling chamber, and a tube in communication with said cooling chamber and forming part of extensible connections between said chamber and said supply, said tube having a relatively constricted discharge orifice adapted to produce a smooth-flowing discharging stream of water.

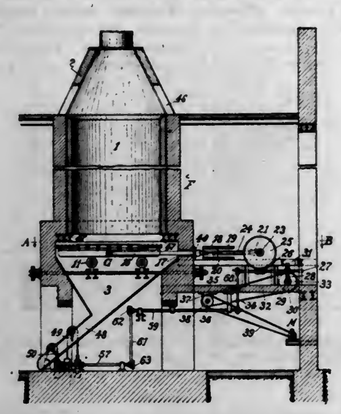
1,451,376. ICE-BLOCK FREEZER. HAZOR J. SMITH, Chicago, Ill., assignor, by direct and mesne assignments, of one-fourth to Willard Reid and one-half to Alfred Hastings Chapin, both of Springfield, Mass. Filed June 5, 1920. Serial No. 386,885. Renewed Oct. 10, 1922. Serial No. 593,653. 2 Claims. (Cl. 62—111.)



1. In combination, a can adapted to receive water to be frozen, a detachable ice block forming element within the can, comprising a stem, blades carried by the stem extending outwardly to a point in proximity to the sides of the can, alternate blades having webs at right angles thereto.

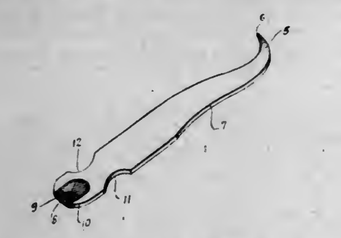
1,451,377. TEMPORARY BINDER. LOUIS STEIN, Chicago, Ill. Filed Sept. 12, 1921. Serial No. 500,043. 11 Claims. (Cl. 129—41.)

1. A temporary binder having, in combination, two covers, two binding strips suitably related to said covers, one of said strips having openings, a cord extending through said openings, the other strip having eyelets registering with said openings, caps movably attached by the eyelets to the last mentioned binding strip and swingable on a horizontal axis alongside the eyelets over the same, and a stud on each cap adapted to enter the eyelet and clamp the cord therein.



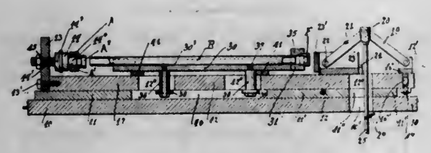
1,451,378. MOLDING PRESS. EITEL WILHELM THIELE, Hoxter-on-the-Weser, Germany. Filed Sept. 22, 1921. Serial No. 502,584. 6 Claims. (Cl. 25—78.)

1. A molding-press of the character described, comprising a molding-drum rotating in a vertical plane, moulds arranged in pairs in the circumference of said molding-drum, press-plungers horizontally disposed in pairs in said pairs of moulds, means for successively charging said pairs of moulds, means for closing each pair of moulds separately when charged, means for forcing the individual plungers of each pair of press-plungers from opposite sides into the pair of moulds charged last, means for ejecting the moulded objects from said pair of moulds, and means for retracting said pair of press-plungers, substantially as set forth.



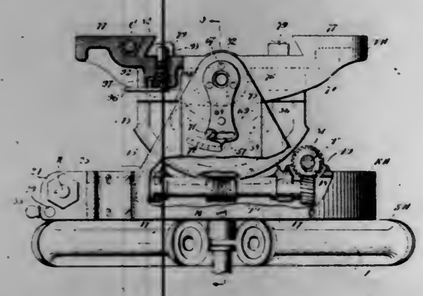
1,451,379. CONTINUOUS FURNACE FOR BURNING CEMENT AND THE LIKE. RUDOLF THIELE, Hoxter-on-the-Weser, Germany. Filed Aug. 12, 1916. Serial No. 114,514. 6 Claims. (Cl. 126—174.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A continuous furnace of the character described, having a shearing-grate consisting of grate-sections adapted to be reciprocated in their own plane in opposite direc-



tions to each other, clinker-crushing teeth on said sections and means for reciprocating said grate-sections.

1,451,380. TOOTHPICK. RUDOLF THUM, Baldwin, N. Y., assignor to The Weva Company Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 5, 1922. Serial No. 558,624. 2 Claims. (Cl. 132—93.)



1. A tooth pick comprising a flat body member, provided with a plurality of indents, a hook formed adjacent one indent and a rounded and depressed portion formed adjacent the other indents, said indents being arranged for the reception of the opposed lips and teeth.

1,451,381. ASSEMBLING MACHINE. HARRY E. TUNNELL, New York, N. Y. Filed Apr. 5, 1920. Serial No. 371,542. 15 Claims. (Cl. 29—88.2.)

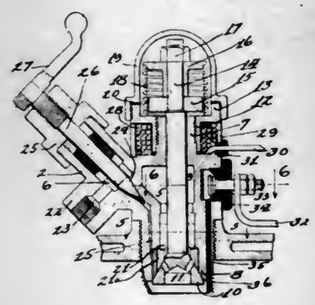
1. A machine of the character described, comprising an abutment located at one end of the machine, a sliding presser at the other end of the machine, and a cradle adapted to support some of the parts to be assembled, and located between said abutment and said presser, and freely slidable relatively to the presser and to the abutment in a direction parallel to the path of the presser, said cradle being perfectly loose so that, during the placing of such parts on said cradle, it will stay in any position to which it may be brought between the abutment and the presser.

1,451,382. APPARATUS FOR SUPPORTING CINEMATOGRAPHIC MACHINES OR THE LIKE. WILLIAM BURTON WESCOTT, Wellesley, Mass., assignor to Kalmus, Comstock & Wescott, Incorporated, Boston, Mass., a Corporation of Massachusetts. Filed June 28, 1917. Serial No. 177,518. 22 Claims. (Cl. 248—47.)

1. In apparatus of the character described, the combination of a supporting head having a horizontally disposed base, a tiltable head mounted on and above the supporting head to rotate about a horizontal axis, a gear-wheel segment extending downwardly from the tiltable head concentrically with the said axis, the gear-wheel segment having a radius such as to extend at least to the plane of the horizontally disposed base, and a gear mounted beneath said base in operative relationship to the gear-wheel segment.

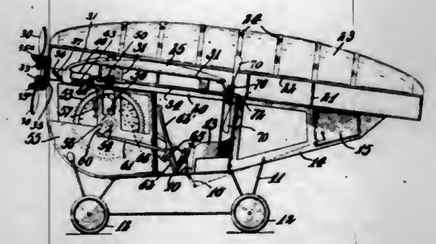
8. In apparatus of the character described, the combination of supporting means, a tiltable head mounted on the supporting means, cooperative means mounted on the supporting means and tiltable head respectively for tilting the head, and means for adjusting the tiltable head toward and from the supporting means.

18. In combination with a photographic device having two parallel lens system, a stationary head, and means on the stationary head cooperating with the photographic device for limiting lateral movement of the photographic device in two directions, so that when the photographic device is in one extreme position one lens system is in alinement with a certain optical path and when the photographic device is in the other extreme position the other lens system is in alinement with the same optical path.



20. Cinematographic apparatus comprising a stationary head, a rotatable head mounted on the stationary head to rotate about a vertical axis, means for mounting a power-driven device upon the rotary head, and a power shaft extending through said heads for transmitting power to said device, the power shaft extending along said axis so that the rotatable head may be rotated thereabout.

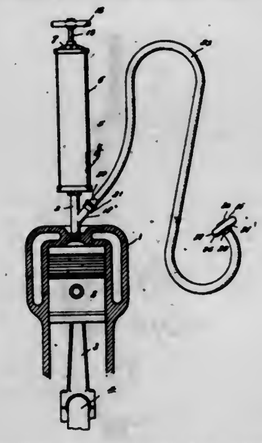
1,451,383. BOX FOR FLAT METAL TABLEWARE. CLARENCE C. WILSON, Bridgeport, Conn. Filed Mar. 2, 1922. Serial No. 540,495. 7 Claims. (Cl. 206—44.)



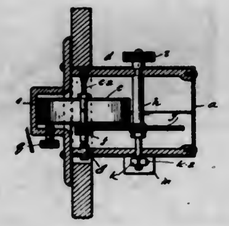
1. A display box including a platform provided with an opening therein, and a bridge mounted in said opening comprising a cardboard strip folded to form a ridge above the platform, said ridge being provided with an article receiving recess.

1,451,384. SOLENOID-CONTROLLED FUEL INJECTION AND IGNITION VALVE. JOHN WHYTE, Chicago, Ill. Filed Apr. 19, 1920. Serial No. 374,894. 8 Claims. (Cl. 123—33.)

1. In a valve for internal combustion engines, a valve seat, a fuel duct leading to said valve seat, a valve cooperating with said valve seat to stop the flow of fuel from said duct, a chamber on the same side of said valve as said duct, passages through said valve leading to said chamber, and a one-way valve controlling said passages.



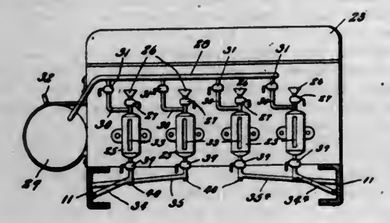
1,451,385. MANUALLY-PROPELLED FLYING MACHINE. JOSEPH ARDO, Newhall, W. Va., assignor of one-half to Kalman Horvath, Newhall, W. Va. Filed Dec. 30, 1921. Serial No. 525,993. 3 Claims. (Cl. 170—163.)



1. In a flying machine, a propeller comprising a pair of radial blades, a propeller shaft, a T-head fixed on said shaft and having said blades rotatably mounted thereon, a bevel gear loosely encircling said shaft, bevel pinions fixed to said blades and meshing with said bevel gear, a sleeve feathered on said shaft and having a pin and spiral groove engagement with said bevel gear, and means for adjusting said sleeve longitudinally of said shaft, said means comprising a second sleeve loose on said shaft and having a feather connection with a fixed part and bearing at one end said first sleeve, a spring bearing against the other end of said first sleeve.

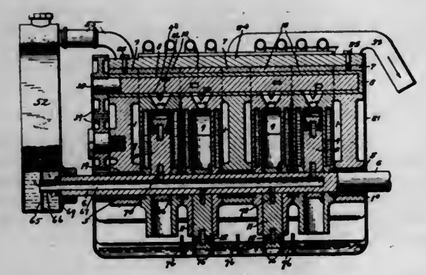
1,451,386. METHOD OF AND APPARATUS FOR DETECTING FAULTY ENGINE CONSTRUCTION. THOMAS J. BROOKS, Sheridan, Pa. Filed June 1, 1922. Serial No. 565,178. 2 Claims. (Cl. 116—114.)

2. A detector for engines comprising a pump, means for connecting said pump to the engine cylinder, said pump being operable to create a vacuum and pressure in said cylinder and so influence the piston therein to move in the event of the piston being loose, a sound transmitter connected to said means whereby any sounds given off by the piston may be interpreted, said sound transmitter comprising an amplifying and transmitting diaphragm, a flexible tube in communication with said diaphragm and an ear piece on said tube.



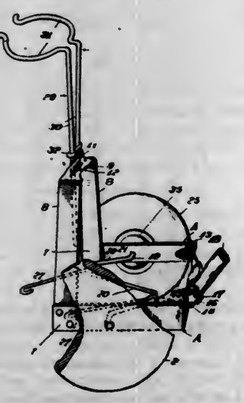
1,451,387. GRADOMETER. FRED T. BURNS, Detroit, Mich., assignor of one-third to Jay J. Burns, Race Track, Mont., and one-third to Frank L. Fisher, Butte, Mont. Filed Mar. 2, 1921. Serial No. 449,187. 2 Claims. (Cl. 33—218.)

2. The combination with a motor vehicle instrument board of a gradometer comprising, in combination, a casing rigidly secured to said board, a drum rotatably journalled in said casing and bearing on its periphery a reading scale, a spindle journalled in said casing and projecting at one end through the wall of the casing, a pendulum suspended from the projecting end of the spindle and adapted to rotate the spindle relative to the casing as the inclination of the casing is changed, said pendulum being rotatably adjustable on said spindle, and means operatively connecting the drum with the pendulum controlled spindle so as to be rotated thereby and in proportion to the rotation thereof.



1,451,388. CHASSIS LUBRICATING AND CLEANING SYSTEM. JOHN L. FAY, St. Louis, Mo. Filed Feb. 23, 1921. Serial No. 447,068. 4 Claims. (Cl. 184—7.)

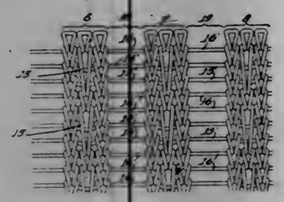
4. In an automobile chassis lubricating system, the combination with the chassis bearings, of a container adapted to receive a suitable liquid, means for controlling the communication between said container and the atmosphere, a main conduit leading from said container, branch conduits leading from said main conduit to said bearings, a valve in said main conduit, a compressed air tank, pipe connection between said air tank and the upper end of said container for admitting compressed air to the latter and thereby force the liquid therefrom into the



chassis bearings, and a manually operable valve for controlling the admission of compressed air from said air tank to said container.

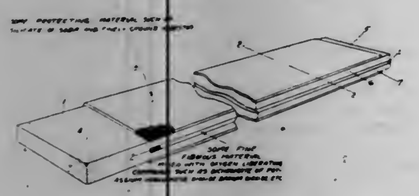
1,451,389. INTERNAL-COMBUSTION ENGINE. THOMAS W. GRANNAN and WILLIAM D. GRANNAN, Loogootee, Ind. Filed June 3, 1921. Serial No. 474,634. 20 Claims. (Cl. 123—42.)

1. In an internal combustion engine, the combination of a straight driving shaft; rectangular cylinders mounted to oscillate about an axis parallel to said shaft; a valve shaft rotatable about said axis to control the admission and exhaust of the motive fluid to and from said cylinders; disc pistons mounted eccentrically on the driving shaft, one within each cylinder, a yoke surrounding each piston and shoes carried by said yokes so as to slide on the walls of the cylinders.



1,451,390. DOLL WALKER. ROBERTA W. HENDRIX, Chicago, Ill. Filed Aug. 18, 1919. Serial No. 318,129. 3 Claims. (Cl. 46—40.)

3. In mechanism of the class described, the combination of a wheel supported frame having an upstanding in-

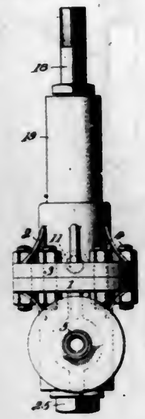


verted U shaped section formed of a metal strip and having the central portion of its arm connection turned to lie substantially in a plane extending longitudinally of the arms and provided with spaced parallel slits transverse the section, the portion of the arm connection between the slits being curved oppositely to the portion above and below the slits to provide a socket formation, a figure supporting device engaged in said socket formation, and a crank device for connecting the supporting wheels to parts of a supported figure.

1,451,391. OPENWORK KNITTED FABRIC AND METHOD OF PRODUCING SAME. RALPH HINCHLIFF, Rockford, Ill., assignor to Burson Knitting Company, Rockford, Ill., a Corporation of Illinois. Filed Sept. 1, 1922. Serial No. 585,725. 14 Claims. (Cl. 66—4.)

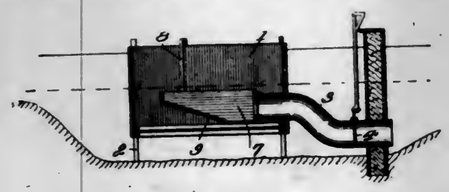
1. An open work knitted fabric, comprising alternately disposed webs and open work stripes, each web consisting of a plurality of knitted wales, and each stripe consisting of transversely extending yarns arranged in successive groups throughout the length of the stripe, each group comprising yarns of varying lengths.

1,451,392. ELECTRODE FOR ELECTRIC-ARC CUTTING OR REDUCING. CLAUDE J. HOLSLAG, South Orange, N. J., assignor to Electric Arc Cutting & Welding Company, Newark, N. J. Filed Nov. 15, 1921. Serial No. 515,299. 16 Claims. (Cl. 219—12.)



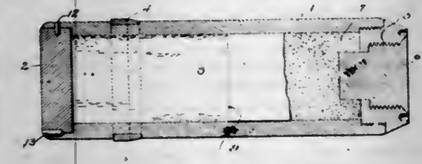
1. An electrode for use in electric arc cutting or reducing comprising a material arranged in substantially two sections and carrying a compound between said sections, said compound being adapted under the heat of the arc to give up oxygen freely for the purpose described.

1,451,393. HOMOGENIZING VALVE. DIEDRICH FREDERICH HORMANN, Oklahoma, Okla., assignor of one-half to Edward Freeman Comegys, Oklahoma, Okla. Filed June 6, 1922. Serial No. 566,430. 13 Claims. (Cl. 99—2.)



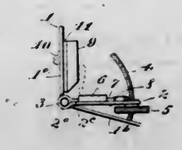
6. A homogenizing valve comprising a casing having a suitable fluid passage therethrough, a stack of homogenizing annuli arranged with their central apertures concentric with said passage, a perforated centering sleeve surrounding said annuli, and constructed and arranged to maintain said annuli in centered position.

13. A homogenizing valve comprising a body having a fluid passage therethrough, a disk seat adjustably threading into said body and provided with a bore registering with said passage, a stack of annuli seated on said disk seat, a stem threading into said body and pressing



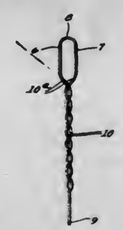
said annuli to said seat, a pin disposed in said fluid passage and provided with a tapering head and arranged concentrically within the bore of said annuli.

1,451,394. FISH SCREEN. FREDERICK G. HURST, Portland, Oreg. Filed Nov. 1, 1921. Serial No. 511,994. 8 Claims. (Cl. 210—172.)



1. A fish screen comprising, a stationary crib, means for securing said crib in such position that the water will flow upwardly through its lower side, a flow spreading device in said crib and communicating with an outlet, and an outlet leading from said crib.

1,451,395. SPOTTING PROJECTILE. OLAF M. HUSTVEDT and HARRY J. NICHOLS, Washington, D. C. Filed Aug. 30, 1920, Serial No. 408,407. Renewed Aug. 29, 1922. Serial No. 585,079. 10 Claims. (Cl. 102—26.)



6. The herein described method whereby determination of the errors of salvo gun fire is made possible which consists in loading each gun with a projectile having the known diffusible pigment adapted to color the splash or make a colored cloud on impact, firing said guns in salvo and identifying the fall of the projectile from each gun by the different colored splashes or clouds produced by the differently colored diffusible pigments.

1,451,396. SHEARS SHARPENER. WALTER JONES, Cleveland, Ohio. Filed Sept. 9, 1921. Serial No. 499,461. 2 Claims. (Cl. 76—82.)

1. In a shear sharpening device, the combination of a fixed angle bracket; an adjustable leaf hinged in the angle of said bracket; an abrasive element removably mounted on said leaf; means for arcuately adjusting the angular relation of said abrasive element to the bracket; and an adjustable guide attached to the bracket.

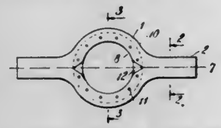
1,451,397. HAIRPIN. JOSEPH C. KUCEWICZ, Cleveland, Ohio. Filed July 31, 1922. Serial No. 578,682. 1 Claim. (Cl. 132—50.)

A hair pin having two branchs and a connecting bend, the branches extending from the bend with straight portions located in a single plane, both branches being coiled in the same direction to form helices on different axes, which axes diverge from the plane of the straight portions.

1,451,398. INSTRUMENT FOR REMOVING THE TESTICLES OF BIRDS. VICTOR D. LESPINASSE, Chicago, Ill. Filed June 26, 1922. Serial No. 571,080. 6 Claims. (Cl. 128—306.)

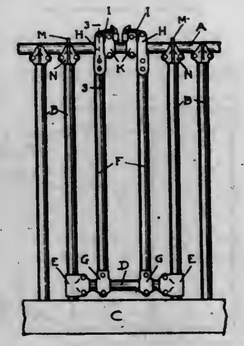
1. An instrument for seizing and raising the testicle of a bird, comprising a handle and a member having an eye and a slot communicating with the said eye, substantially as described.

1,451,399. PROCESS OF PRODUCING HALOGEN ACIDS. FRANK S. LOW, Niagara Falls, N. Y., assignor to Weaver Company, Madison, Wis., a Corporation of Wisconsin. Filed Feb. 8, 1918. Serial No. 216,062. 11 Claims. (Cl. 23—1.)



1. The process of producing a halogen acid by vaporizing a halide, which combines with H_2O and directly treating such vapor with water vapor.

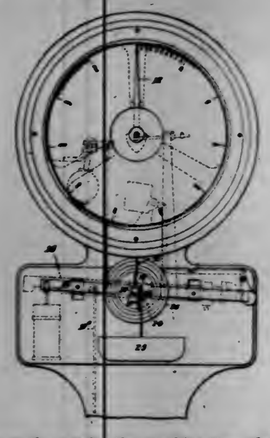
1,451,400. BRUSH CONSTRUCTION. GEORGE MOE, Saginaw, Mich. Filed Mar. 7, 1922. Serial No. 541,732. 3 Claims. (Cl. 15—164.)



3. The combination of a body having a pivot bearing, a handle having a twisted wire shank having the free extremities of the wire separated, one extremity being bent to form an eye, and the other bent transversely of the shank and extended through said bearing and said eye.

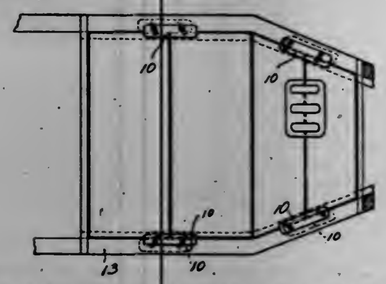
1,451,401. AXLE HOUSING AND METHOD OF MAKING SAME. THOMAS E. MURRAY and THOMAS E. MURRAY, Jr., Brooklyn, N. Y. Filed Nov. 30, 1921. Serial No. 518,743. 10 Claims. (Cl. 29—153.)

1. An axle housing or the like comprising an enlargement with inward flanges and with a tubular extension from the side, said housing being formed of longitudinal segments the edges of which are united along the tubular extension but diverge where the latter merges into said flanges.



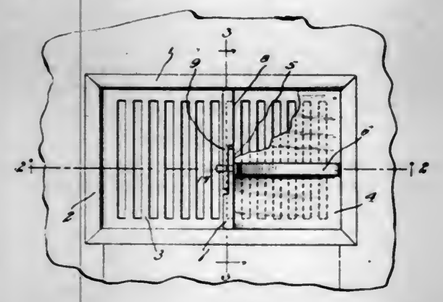
1,451,402. ANIMAL STANCHION. ALBERT H. NELLER, Fairfield, Iowa, assignor to The Louden Machinery Company, Fairfield, Iowa, a Corporation of Iowa. Filed Jan. 19, 1922. Serial No. 530,362. 4 Claims. (Cl. 119—147.)

1. In animal stanchions, a stanchion bar pivotally supported at its lower end, a horizontally disposed rail upon which the upper end of the stanchion bar is adapted to



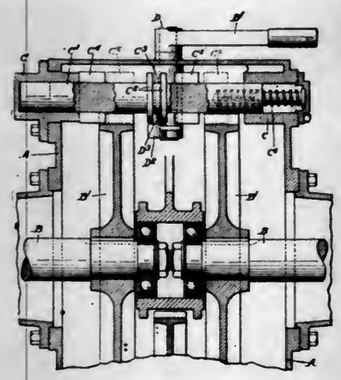
slide from one position to another, a catch applied to the horizontally disposed rail on each side of the upper end of the stanchion bar, a latch pivoted at one end to the upper end of the stanchion bar and adapted to be turned over from one side to the other, and oppositely disposed hooks on the free end of said latch having sloping outside edges adapted, as the latch is turned over, to automatically slide over and co-act with the opposite catches on the horizontally disposed rail, and without additional mechanism, to alternately lock the stanchion bar in open as well as in closed position.

1,451,403. COUNTING DEVICE FOR SCALES. LOUIS A. OSGOOD, Dayton, Ohio, assignor to International Scale Company, Dayton, Ohio, a Corporation of Illinois. Filed Jan. 16, 1920. Serial No. 351,975. 14 Claims. (Cl. 265—30.



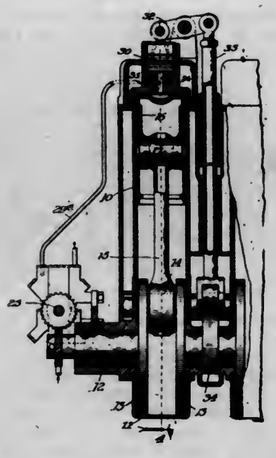
1. In a counting scale, the combination of a main scale beam, an automatic counterbalance therefor, an indicator displaceable from zero in accordance with the displacement of the beam, a pair of counting beams movable in unison with the main beam, a receiver carried by one of said beams and shiftable relatively to the fulcrum of the main beam, a counterbalancing poise carried by the other beam and also shiftable relatively to the fulcrum of the main beam, and means for moving the counterbalancing poise and receiver in unison and thereby causing the weight of the articles in the receiver to react upon the main scale beam and its automatic counterbalance, and thereby displace the indicator to zero and show that the applied load is balanced by the articles in the receiver.

1,451,404. AUTOMOBILE FLOOR-BOARD CLAMP. JOSEPH W. PARKS, Altoona, Pa. Filed Dec. 7, 1920. Serial No. 429,022. 1 Claim. (Cl. 296—1.)



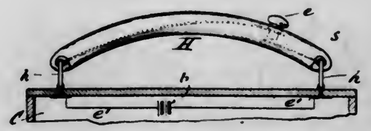
A lock for vehicle floor boards including in combination with the side rails of the chassis having rabbeted floor board receiving seats, abutment elements carried by the upper face of the said side rails and spaced from the upper edge of the rabbet, and a clamping plate having tapering slots fitting over the said abutments, and the said slots being arranged so that their narrow ends wedge onto the abutments when the plate is shifted into position to overlie the edge of said floor boards.

1,451,405. MEANS FOR REDUCING THE CAPACITY OF FIRE BOXES. LEONARD C. PETERS, Providence, R. I. Filed Dec. 22, 1921. Serial No. 524,066. 1 Claim. (Cl. 126—147.)



Means to reduce the capacity of fire box, comprising an imperforate fireproof mat, a brace adapted to be superimposed on said mat, a partition including sections with lapped portions, and horizontal oblong openings therein, and a stem projecting from the end of the brace and terminating in an upright T-head, said stem adapted to extend through said openings in the partition sections, and said T-head adapted to rest at the opposite side of the partition with reference to the major portion of the brace.

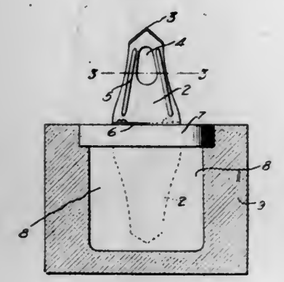
1,451,406. DRIVE-WHEEL-LOCKING DEVICE. JAMES ROSS, Laporte, Ind., assignor to Advance Rumely Company, Laporte, Ind., a Corporation of Indiana. Filed Mar. 14, 1921. Serial No. 452,067. 11 Claims. (Cl. 74—100.)



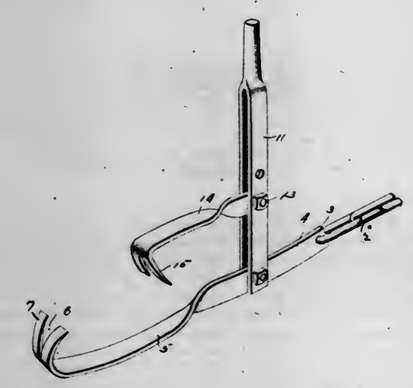
2. In a transmission a plurality of separately mounted driven gears, and means for causing them to rotate in unison at the same speed, said means comprising a driven shaft rotating about its own longitudinal axis and having a plurality of pinions fixed upon it, and means for causing each of said pinions to mesh with one of said gears, said means comprising said rotary shaft upon which said pinions are fixed and means for movng it axially to cause said pinions to mesh with said gears.

1,451,407. INTERNAL-COMBUSTION ENGINE. CHARLES E. SARGENT, Indianapolis, Ind. Filed June 27, 1919. Serial No. 307,160. 4 Claims. (Cl. 123—33.)

1. In a Diesel-type engine, a cylinder, a piston therein, a chamber adjacent the cylinder and communicating therewith, means for supplying a measured charge of fuel to said chamber, an auxiliary cylinder, a pressure piston therein, a passage connecting said cylinders, a hollow tube slidable in said passageway, means for moving said tube to close communication between said cylinders near the end of the compression stroke of the main piston, means for forcing down the pressure piston for compressing the charge of gas in the pressure cylinder, said tube upon a further movement opening communication between the pressure cylinder and main cylinder through said chamber.



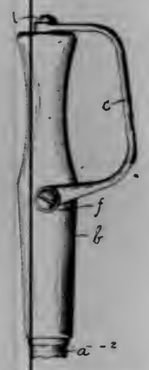
1,451,408. PORTABLE-CONTAINER HANDLE. ISIDOR SCHNEIDER, New York, N. Y. Filed Jan. 18, 1922. Serial No. 530,075. 2 Claims. (Cl. 240—8.4.)



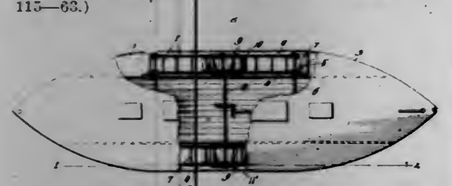
1. In combination with a portable container of the character designated, a flexible handle connected therewith by metallic loops, an electric flash lamp and circuit switch incorporated with said flexible handle, a battery in the container, and said metallic handle loops electrically connected with said battery and with said handle flash light and switch, substantially in the manner set forth.

1,451,409. CARPET-RAG LOOPER. MARY A. SEARS, Los Angeles, Calif. Filed Aug. 24, 1922. Serial No. 584,026. 2 Claims. (Cl. 28—16.)

1. As an article of manufacture, a rag slitting blade of thin sheet metal, the width of which is tapered smaller from the lower part to an acute angle at the top, the sides of which acute angle are sharpened to cutting edges, said blade medially apertured and having ridges stamped or embossed in it along each side of the aperture from adjacent the base, and means for securing said blade to a base.

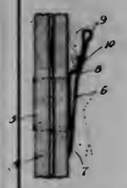


1,451,410. WIRE STRETCHER. ANDREW E. TRINKEL, Jeffersonville, Ind. Filed June 12, 1919. Serial No. 303,578. 1 Claim. (Cl. 254—74.)



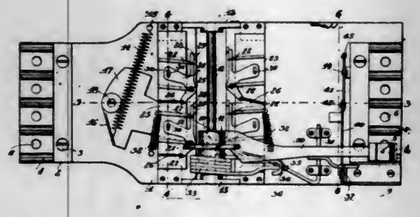
A wire stretcher comprising a relatively long bar, a relatively short bar, each of said bars being formed from a flat strip of metal twisted intermediate their ends to provide a body and a right angularly disposed shank, inwardly bent chain engaging claws formed on the forward terminals of the bodies of the bars, the shank of the relatively long bar extending rearwardly of the shank of the relatively short bar, an anchoring member secured to the rear end of the extended shank of the relatively long bar, and an operating lever including a handle and a bifurcated portion defining a pair of spaced arms, the lower terminals of the arms straddling the shank of the relatively long member at a point intermediate its ends, means pivotally securing the arms to the last mentioned shank, the rear terminal of the shank of the relatively short bar being disposed between the arms above the shank of the relatively long bar, and means pivotally securing the shank of the relatively short bar to said arms.

1,451,411. CYCLE HANDLE. ALEXANDER WENDLING, Detroit, Mich. Filed July 14, 1921. Serial No. 484,683. 1 Claim. (Cl. 208—126.)



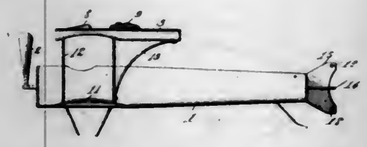
In a device of the class described, a hand grip, a hand guard secured at one end to the rear end of said hand grip, the opposite end of said hand guard forked so as to straddle said hand grip, means securing said forked end to said hand grip.

1,451,412. BOAT PROPULSION MEANS. JAMES YOUNGSON, Winston-Salem, N. C., assignor of one-half to Michael D. Gantt, Winston-Salem, N. C. Filed Aug. 27, 1921. Serial No. 495,857. 2 Claims. (Cl. 115—63.)



2. Boat propulsion means including chains equipped with paddles, paddle wheels cooperable with the chains, said chains and paddle wheels being arranged adjacent the sides of the boat, and perforate walls arranged beneath said paddle wheels and paddle chains and extending upwardly at the sides thereof, in parallelism with the sides of the boat to encase said wheels and chains.

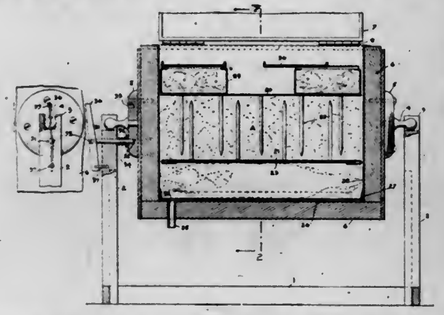
1,451,413. PENCIL PIN AND CLIP. PETER ANDERSON, Owatonna, Minn. Filed Oct. 4, 1920. Serial No. 414,545. 1 Claim. (Cl. 24—12.)



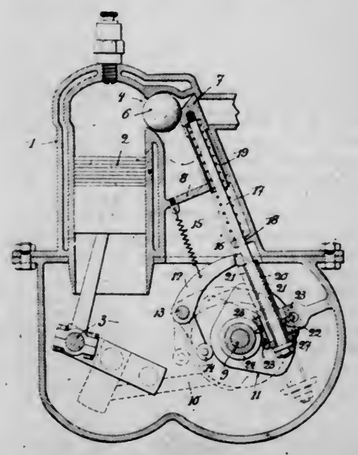
A pencil pin and clip bent from a single piece of metal, comprising a gripping band encircling a pencil, an elongated sticking member bent from and spring fulcrumed on the said gripping band, operative when pried out to pin the pencil to a piece of clothing and when released to clip the pencil to the pinned clothing, a lever head formed by the bend on the upper end of the said sticking member above the fulcrum, operative to spring the sticking member out when force is applied against the said lever head, and means of fastening the folded parts of the said lever head together near the fulcrum point.

1,451,414. BURGLAR ALARM. ROY BARRETT, Palmyra, N. Y. Filed Mar. 30, 1922. Serial No. 548,204. 20 Claims. (Cl. 116—23.)

20. A burglar alarm comprising a recoil actuated oscillatory hammer movable in the direction of its axis of oscillation, means for supporting said hammer for oscillatory movement and also movement in the direction of its axis of oscillation, two members arranged on opposite sides of the axis of oscillation and each carrying a series of abutments, the abutments on the two members being arranged in staggered relation so as to be alternately engaged by the hammer, swinging members on which said abutment carrying members are mounted, pin and slot connection between each abutment carrying member and its swinging members, stops limiting the movement of the swinging members, means acting on the swinging members to hold them in cooperation with the stops while permitting the abutment carrying members to move away from the axis of oscillation of the hammer when the hammer is moved to its initial position, and springs acting on the abutment carrying members for holding the latter in position on the swinging members which will permit the abutments to yield in the direction of its axis of oscillation of the hammer after the hammer engages such abutments in moving away from its initial position.



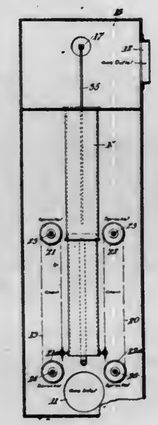
1,451,415. AEROPLANE. GUSTAVUS BESS, Scappoose, Oreg. Original application filed July 8, 1921, Serial No. 483,226. Divided and this application filed Aug. 30, 1922. Serial No. 585,176. 2 Claims. (Cl. 244—12.)



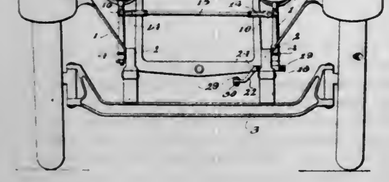
1. An aeroplane including a central wing arched longitudinally, a cambered wing projecting laterally from each side of the central wing, a straight wing projecting laterally of the central wing and behind each cambered wing, each straight wing being relatively disposed on the same straight lines with the arch of the cambered wings extending above the plane of the straight wings, and a cambered wing below each first mentioned cambered wing and in spaced relation thereto.

1,451,416. ICE BOX FOR FISH AND OTHER SEA FOODS. LAUREN M. BOWLUS, San Luis Obispo, Calif. Filed Aug. 14, 1922. Serial No. 581,694. 7 Claims. (Cl. 62—31.)

1. An ice box comprising a receptacle open on opposite sides, closures for said open sides, means on which the receptacle is reversibly mounted, partitions extending across the receptacle for containing therebetween a quantity of ice, said partitions providing fish storage spaces between them and the closures.



1,451,417. INTERNAL-COMBUSTION ENGINE. HENRI COLNOT, Paris, France. Filed Apr. 26, 1922. Serial No. 556,698. 6 Claims. (Cl. 123—75.)



5. In an internal combustion engine, a power cylinder, a piston, engine valves constituted by balls, seats formed in the walls of the cylinder and cooperating with the said balls, a push-piece for each ball having a reciprotating motion and adapted to impel the ball upon its seat and to hold it in position, a sleeve disposed upon the end of the said push-piece farthest from the said ball, the said push-piece being provided with longitudinal ribs and having an intermittent rotation, a lever oscillating at regular intervals, a fixed axle having the said lever mounted thereon, the latter being adapted to bear at times upon the grooves of the said sleeve for opening the valve, and at other times to engage in the spaces between the said ribs while the said valve is closed.

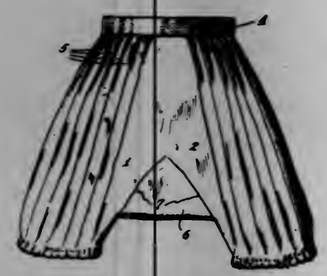
1,451,418. ELECTRIC PRECIPITATOR. EDWARD P. DILLON and ALBERT A. HEIMROD, New York, N. Y., assignors to Research Corporation, New York, N. Y., a Corporation of New York. Filed June 15, 1922. Serial No. 568,571. 12 Claims. (Cl. 183—7.)

1. The combination with a stationary tubular body constituting a collecting electrode and a discharge electrode therein, of a tubular member having a sliding fit in the tubular body and provided at one end with means defining a scraper edge and means engaging the other end of the tubular member for reciprocating the same.

1,451,419. DIRIGIBLE HEADLIGHT. THOMAS O. DILLS, Batesville, Miss. Filed Oct. 17, 1921. Serial No. 508,196. 1 Claim. (Cl. 240—62.)

In a device of the character described, the combination of a pair of lamp spindle casings secured to the frame of an automobile, having a rotatably connected lamp spindles mounted therein, of a laterally and inwardly extending member with respect to the frame of the automobile, secured to the lower end of one of said spindles, the outer end of said member being bifurcated and notched on its under face at the inner edge of said bifurcation, an inclined connecting plate in the same vertical plane with said member having its upper and lower ends extending parallel and outwardly in different horizontal planes, the upper end of said plate being mounted on a horizontal pivot between the bifurcations of said member, a forwardly extending lip on said end adapted to be positioned in the recess in said member, a bent spring disposed within said recess and engaged by said lip, and the lower end of said plate having a right angular pivotal connection with the steering mechanism of the automobile.

1,451,420. MILK RECEPTACLE. NORMAN E. GEE, Altoona, Pa., assignor of one-half to Joseph W. Parks, Altoona, Pa. Filed Aug. 11, 1922. Serial No. 581,182. 4 Claims. (Cl. 215—51.)

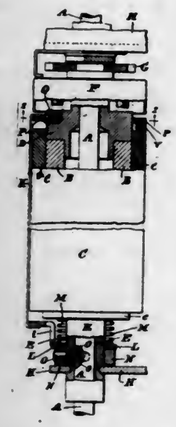


1. In combination, a milk bottle, a receptacle cover or cap adapted to be fitted to the top of the receptacle and

a ledge upon which the receptacle cap is adapted to rest, said ledge being crescent shaped on one side, and an oblong projection at the other side whereby the edge of

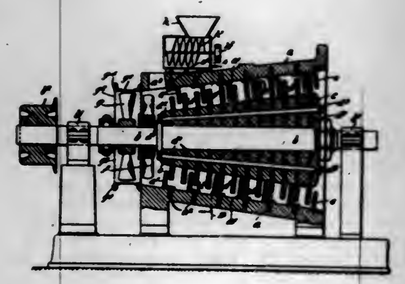
the cap adjacent the oblong ledge is turned upward by pressure placed on cap between the said ledge and the centre of the receptacle.

1,451,421. BLOOMERS. IRVING GOODMAN, New York, N. Y. Filed June 18, 1921. Serial No. 478,480. 1 Claim. (Cl. 2—122.)



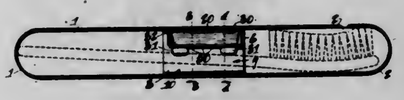
A pair of bloomers consisting of front and rear body covering portions, each provided with an inverted V shape crotch portion, and a substantially large diamond shape gusset folded upon itself to form triangular front and rear portions, the edges of said front and rear triangular portions being connected to the edges of said front and rear crotch portions with the folded portion of said gusset extending between the leg portions of said bloomers and at approximately the knee portions thereof.

1,451,422. SOUND SIGNALING DEVICE FOR DENSE SOUND-PROPAGATING MEDIUMS. WALTER HAHNEMANN, Kitzeberg, near Kiel, Germany, assignor to the Firm Signal Gesellschaft m. b. H., Kiel, Germany. Filed Feb. 4, 1921. Serial No. 442,586. 7 Claims. (Cl. 181—32.)



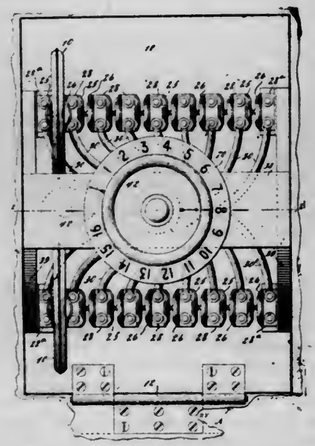
1. A composite sound radiating structure for submarine acoustic apparatus, comprising two diaphragms and a layer of liquid therebetween, the composite structure being tuned as a whole to a definite frequency.

1,451,423. TYPEWRITING MACHINE. GEORGE F. HANDLEY, Glendale, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed May 27, 1922. Serial No. 564,099. 11 Claims. (Cl. 197—144.)



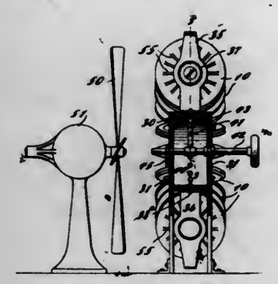
1. In a typewriting machine, the combination of a main platen and an auxiliary platen associated therewith and movable from an inactive position removed from the line of print to an active position in the line of print, and spring controlled means for maintaining yielding frictional connection between the two platens.

1,451,424. MEANS FOR GRINDING OR PULVERIZING FOOD OR OTHER SUBSTANCES OF A SIMILAR NATURE. RONALD HEAD, Luton, England, assignor to Joseph Baker Sons and Perkins Company, Incorporated, White Plains, N. Y., a Corporation of New York. Filed Sept. 3, 1921. Serial No. 498,409. 4 Claims. (Cl. 83—11.)



1. An apparatus for grinding or pulverizing food and similar products comprising in combination a stationary conical casing open at both ends, beaters or reducers, carried by the inner wall of said casing, a conical member within said casing leaving an annular channel between itself and the casing wall, outer beaters or reducers carried by said conical member and co-operating with those in the casing, a screw or propeller at the inlet end of the casing adapted to force the material towards and into engagement with the cooperating beaters or reducers of the casing and conical member, a forcing fan mounted outside the casing adjacent the inlet end thereof on the same shaft as the conical member, for impelling air through the annular channel and onto the material treated by the beaters or reducers therein, and a segmental covering ring at the discharge end of the casing, said ring cooperating with the beaters or reducers on the conical member and assisting the eduction or ejection of the treated material.

1,451,425. STERILIZING HOLDER FOR TOOTH-BRUSHES. ROY F. HURLEY, Galesville, Wis., assignor to Albert T. Twesme, Galesville, Wis. Filed Jan. 31, 1922. Serial No. 533,022. 7 Claims. (Cl. 206—15.1.)



1. In a tooth brush holder, a receptacle for a tooth brush composed of two like sections arranged for end to end connection, a coupling member for frictionally engaging the abutting ends of the two sections, one of the said sections being adapted for engaging the coupling member under less frictional contact than the contacting engagement of the other holder section with the coupling member, whereby to readily pull from off the coupling member, when it is desired to open the holder to remove the brush.

1,451,426. SPARK-GAP APPARATUS. LAWRENCE J. LESH, New York, N. Y., assignor to Emil J. Simon, New York, N. Y. Filed Apr. 9, 1918. Serial No. 227,440. 23 Claims. (Cl. 250—38.)

3. Spark gap apparatus, comprising a plurality of gap unit holders each having spring contact pieces to bear against opposite sides of a gap unit, said contact pieces of each holder being under tension to bear against each other to close the circuit at the holder when there is no gap unit in place therein, and electrical connections between the holders.

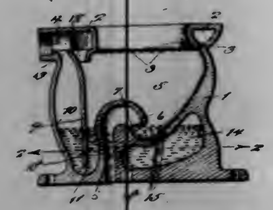
1,451,427. SPARK-GAP APPARATUS. LAWRENCE J. LESH, New York, N. Y., assignor to Emil J. Simon, New York, N. Y. Filed June 5, 1918. Serial No. 238,310. 14 Claims. (Cl. 250—38.)

6. Spark gap apparatus, comprising a plurality of independently removable spark gap units supported radially about and at approximately equal distances from a common axis with adjacent units flatwise to each other.

1,451,428. RESILIENT BEARING SLEEVE. HARRY R. LONTZ, Richmond, Ind. Filed Aug. 22, 1919. Serial No. 319,223. 4 Claims. (Cl. 64—10.)

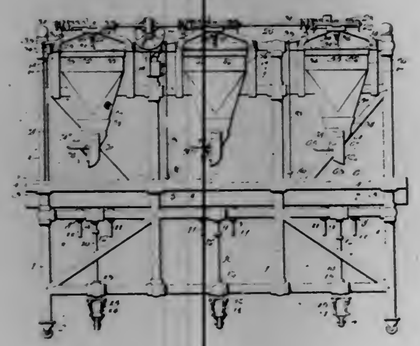
1. A device of the character described composed of an integral piece of resilient sheet-metal and having a shaft-receiving hub portion and a plurality of shaft gripping fingers which engage the shaft only at their outer ends.

1,451,429. METHOD OF MAKING RESILIENT BEARING SLEEVES. HARRY R. LONTZ, Richmond, Ind. Original application filed Aug. 22, 1919, Serial No. 319,223. Divided and this application filed Jan. 12, 1921. Serial No. 436,759. 9 Claims. (Cl. 113—116.)



1. The method of making a resilient bearing sleeve which comprises cutting a blank with radial arms, forming a hub-like part at the center of said blank, bending back portions of said arms at their junction with the hub-like part and bending the remaining arm portions at an angle to the bent back arm portions, and re-bending the bent back arm portions to bring the arms into the form of a sleeve.

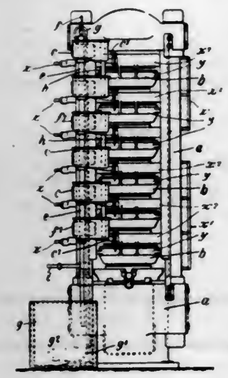
1,451,430. TOILET HOPPER. WALTER G. MUNKEL, Anamosa, Iowa. Filed Oct. 11, 1919. Serial No. 329,981. 3 Claims. (Cl. 4—22.)



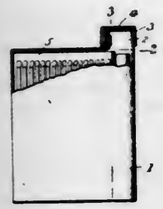
2. As an article of manufacture, a hopper comprising a body having a bowl terminating in an outlet trap, a

water storage space at the back of the trap and being communicatively connected with the interior of the bowl, said space extending under the bowl, the portion of said

space under the bowl having apertures of communication with the bottom of the bowl, whereby the bottom of the bowl may be cleansed, and jets of water directed toward and through the trap.



1,451,431. APPARATUS FOR POSITIONING MATERIALS. WILSON R. MYERS, Portland, Oreg., assignor of one-third to George W. Burt and one-third to George W. Weatherby, both of Portland, Oreg. Filed Mar. 28, 1921, Serial No. 456,111. Renewed Apr. 10, 1922. Serial No. 551,210. 41 Claims. (Cl. 226—101.)

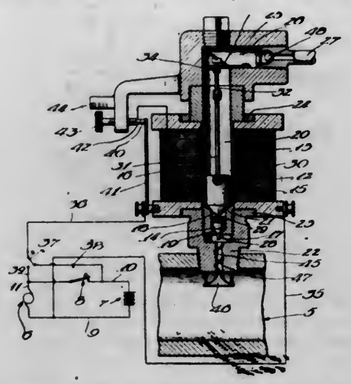


1. In apparatus of the class described, a support, a table including a raisable element, a reservoir for the mix mounted on the support above the table and including a valved throat designed to fit within the mold into which the mix is to be deposited and shaped with its outlet opening in a direction to lay a ribbon horizontal of mix in the mold on movement of the mold horizontally, when said mold is held in place by said raisable element.

1,451,432. CHARGING OF COCOA-BUTTER PRESSES AND THE LIKE. WILLIAM EDWARD PRESCOTT, London, England, assignor to Joseph Baker & Sons, Limited, London, England. Filed Sept. 27, 1919. Serial No. 326,930. 4 Claims. (Cl. 100—50.)

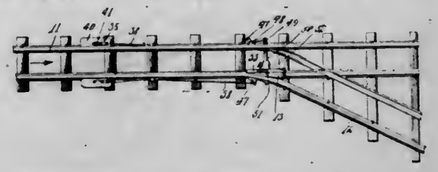
1. In charging apparatus for cocoa butter presses and the like the combination with a series of withdrawable pans of a series of charging vessels for said pans disposed in proximity to the press, means for charging said vessels each with a measured quantity of liquid, means for moving said vessels towards the withdrawn pans, and means for discharging the contents of said vessels into the pans.

1,451,433. COMBINED MATCH AND CIGARETTE CASE. FREDERICK K. RICKSECKER, Washington, D. C. Filed Sept. 22, 1921. Serial No. 502,458. 2 Claims. (Cl. 206—48.)



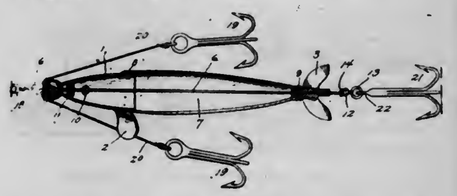
1. A device of the class described, comprising a water proof case having a tubular neck formed at one end thereof, said case being divided into compartments to respectively receive cigarettes and matches, said compartments being so disposed with respect to said neck as to permit one match and a cigarette to be simultaneously dispensed therefrom when the case is shaken and a water proof cap for said neck portion.

1,451,434. PRIMING DEVICE FOR INTERNAL-COMBUSTION ENGINES. DANIEL ROESCH, Chicago, Ill. Filed Oct. 30, 1920. Serial No. 420,651. 9 Claims. (Cl. 123—187.5.)



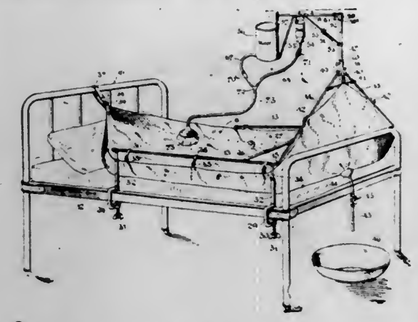
1. An automatic cut-out device for the purpose specified, comprising in combination a solenoid having a central longitudinally extending passage with a valve seat at its lower end, a fuel delivery connection at the upper end of said passage, a fuel discharge connection at the lower end of said passage and below said valve seat, a vertically movable valve working against said valve seat, an armature working in said passage and connected to said valve, and adapted to be raised to raise the valve when the solenoid is energized, a check valve between the aforesaid passage and the fuel delivery connection to prevent backward movement of fuel from the passage into the fuel delivery connection, means for limiting the opening movement of the valve under the influence of the solenoid,

and temperature actuated means for adjusting said limiting means according to the temperature of the device, whereby when the device is cold the valve may open fully,



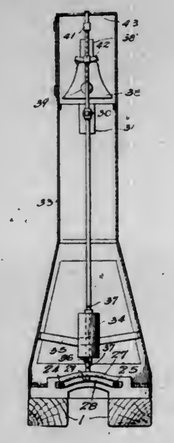
and whereby as the device becomes warmer the opening of the valve is limited more and more to thereby reduce the priming effect as the device becomes warmer, substantially as described.

1,451,435. RAILWAY SWITCH. CLIFFORD WILLS, Salt Lick, Ky. Filed Sept. 25, 1922. Serial No. 590,463. 5 Claims. (Cl. 246—323.)



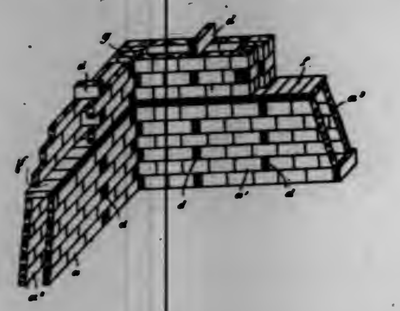
1. In combination with a railway switch including a crank, a link connected to said crank, a bell crank pivoted to said switch, one arm of which is connected to said link, a second link running substantially parallel to said track and connected at one end to the other arm of said bell crank, a cam bell crank pivoted to said track, one arm being connected to the other end of the second named link, and means adapted to strike said cam bell crank to operate the point.

1,451,436. ARTIFICIAL MINNOW. FRANK I. BARNIA, Merrill, Wis., assignor of one-half to Mathilde Barnia, Merrill, Wis. Filed Mar. 6, 1922. Serial No. 541,577. 2 Claims. (Cl. 43—47.)



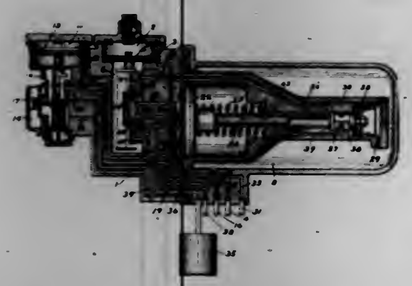
1. An artificial minnow, having a head piece and a tail piece of unyielding material, the head piece being hollow and provided with a perforation and with gill fins oppositely curved in propeller fashion and the tail piece having a perforation, a center wire engaging the perforations of the head and tail pieces, and a body of yieldable material connecting the head piece and the tail piece and surrounding said wire.

1,451,437. BED BATHING APPARATUS. LEAH E. BERNIER, Kelso, Wash. Filed Jan. 6, 1922. Serial No. 527,391. 12 Claims. (Cl. 4—27.)



1. A bathing apparatus of the character described, comprising a sheet of water proof material and adapted to cover a bed, a pair of side frame members adapted to be detachably connected to the side frame members of the bed, means whereby the associated edges of the sheet may be connected with said side frame members, a pair of frame members extending between the rear ends of said side frame members and the last named frame members extending upwardly, means whereby the rear end of the sheet may be connected with the said upwardly extending members to hold the rear end portion of the sheet in an elevated position, and means whereby the forward end of the sheet may be connected with the head of the bed whereby the forward portion of the sheet may be held in an elevated position and thereby forming a container or receptacle in which a person may be bathed.

1,451,438. RAILROAD SIGNAL. STEPHEN M. DONALDSON, Meggett, S. C. Filed Jan. 29, 1923. Serial No. 615,703. 7 Claims. (Cl. 246—294.)

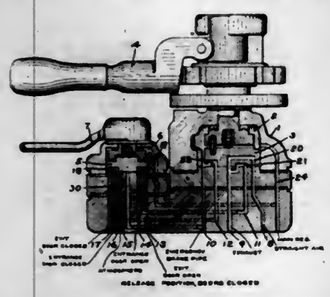


2. The combination with an oscillatable signal arm, of, a pivoted lever normally out of operative position with relation to the free end of said arm, a draw rod connected to said lever and means for retaining said rod in normal position, a vehicle actuated tripping dog operatively connected to the draw rod, and means for guiding said lever into position for contact with the free end of said signal arm upon a working stroke of said tripping dog.

1,451,439. HOLLOW WALL. FRITZ ECKERT, Wetzlar, Germany. Filed Sept. 8, 1921. Serial No. 498,533. 1 Claim. (Cl. 72—102.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

A hollow wall of standard bricks wherein there are interposed in the courses formed of stretchers separate bonding bricks in such a manner that the vertical course is interrupted repeatedly and the vertical shaft is shut off at these parts and several complete courses of headers laid flat dividing the whole of the hollow space into horizontal passages.

1,451,440. FLUID-PRESSURE BRAKE. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Mar. 24, 1922. Serial No. 546,523. 8 Claims. (Cl. 303—40.)

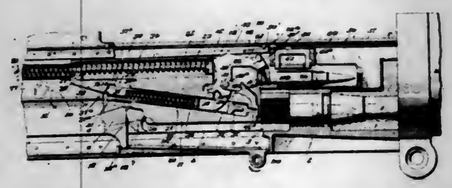


1. In a fluid pressure brake, the combination with a brake pipe, an application cylinder, a pressure chamber, a piston chamber, and an equalizing valve device operated upon a reduction in brake pipe pressure for supplying fluid under pressure from the pressure chamber to the application cylinder and to said piston chamber, of a piston in said piston chamber movable by fluid pressure supplied to said piston chamber.

1,451,441. CAR-DOOR-CONTROL DEVICE. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Mar. 24, 1922. Serial No. 546,524. 7 Claims. (Cl. 313—6.)

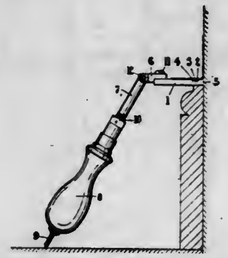
1. In combination, a manually operated device for controlling a plurality of car doors and a door selector device for determining which car door shall be operated by the movement of the manually operated device.

7. The combination with a brake valve device having ports for supplying fluid under pressure for opening and closing two car doors, of a selector valve device having a position in which communication is opened for controlling both doors by manipulation of the brake valve device, and other positions in which the selector valve device supplies fluid under pressure for holding one car door closed while establishing communication through which the other door is controlled by said brake valve device.

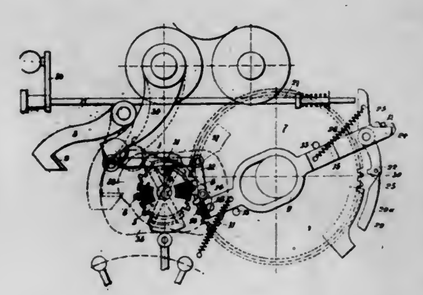


1,451,442. BAND CUTTER AND FEEDER. JOSEPH B. FIRESTONE, Roanoke, La. Filed Apr. 18, 1922. Serial No. 555,162. 2 Claims. (Cl. 130—1.)

1. In a band cutter and feeder for threshing machines, the combination of a supporting frame provided with arcuate slots in its sides, a conveyor mounted above said frame, a cutter mounted in the frame concentric with said slots, a retarder shaft playing in said slots, supporting arms mounted upon the axis of the cutter for swinging movement and having the retarder shaft mounted in their free ends, a retarder fitted upon said retarder shaft, arcuate rods rising from the retarder shaft and playing through abutments on the frame, and springs coiled around said rods between the retarder shaft and said abutments.



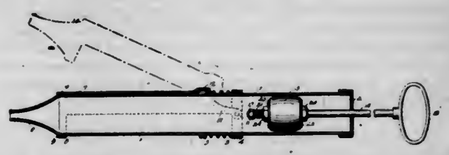
1,451,443. MACHINE GUN. ELBERT FOWLER, Baltimore, Md. Filed Dec. 4, 1918, Serial No. 265,239. Renewed Dec. 21, 1922. 21 Claims. (Cl. 89—3.)



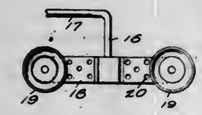
1. In a machine gun or the like, a combined firing-pin cocking-member, cartridge-extractor and shell ejector.

1,451,444. PAPER-HANGER'S TOOL. WILLIAM BOOTH LUPTON, Windermere, England. Filed May 20, 1922. Serial No. 562,466. 8 Claims. (Cl. 164—78.)

1. A trimmer for paperhangers' use comprising a flat plate of relatively narrow width in proportion to its length, a plurality of longitudinally arranged grooves in parallel relation to one of the edges of the plate and to each other, said grooves being each located at a predetermined distance from one of the edges of the plate, and a handle mounted on said plate and adjustable in relation thereto.

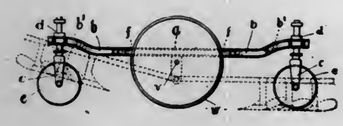


1,451,445. CUTTING DEVICE FOR COPYING MACHINES. FREDERIC MAY, Vienna, Austria. Filed Dec. 29, 1922. Serial No. 609,775. 8 Claims. (Cl. 164—68.)



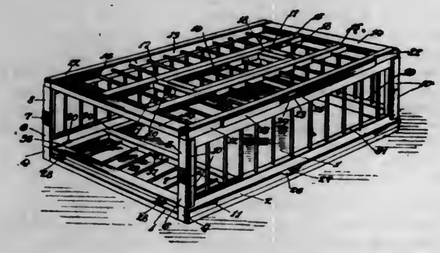
1. In a machine of the class described, a rotary knife, a second knife cooperating therewith, an interrupted gear carried by the rotary knife, a constantly rotary gear positioned for engagement with the interrupted gear, means operable by the continuously rotating gear for starting and stopping the interrupted gear at predetermined intervals, and other means for regulating the length of said intervals.

1,451,446. GREASE GUN. JAMES MARSHALL MILLS, Helena, Mont. Filed June 8, 1920. Serial No. 387,356. 6 Claims. (Cl. 221—78.)



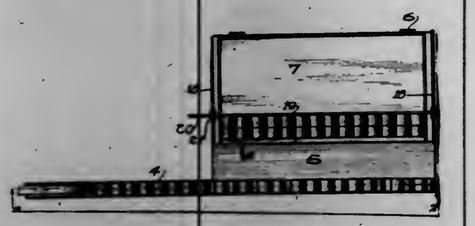
1. A grease gun including a barrel, a removable nozzle receiving one end of the barrel, movable and fixed parts carried by the barrel, the movable part being hingedly connected to the nozzle, and a spring around the barrel between said movable and fixed parts.

1,451,447. WASHING MACHINE. OTTO NELSON, Crystal Falls, Mich. Filed Nov. 5, 1919. Serial No. 335,875. 3 Claims. (Cl. 259—101.)



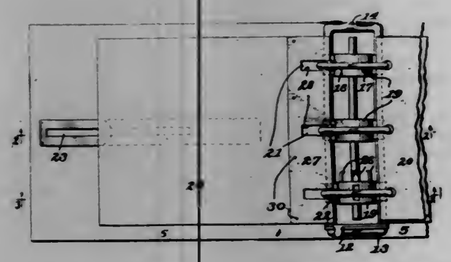
1. In a washing machine, a tub, a vertical shaft in the tub, means for imparting an oscillatory movement to the shaft, a perforated paddle at the inner end of the shaft, and opposed cups at each end of the paddle.

1,451,448. MOTOR TRACTOR. ERNEST RICHARD PELLING, Croydon, and VICTOR ALEXANDER MATTICK, Beckenham, England. Filed Sept. 2, 1921. Serial No. 498,023. 1 Claim. (Cl. 180—21.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



In a motor tractor, a main frame supported by two driving wheels and adapted to carry the power unit and the transmission gear between said power unit and said driving wheels; and two secondary self-contained rigid frames adapted to be detachably mounted on the ends of the main frame on the same side thereof and each carrying a steering wheel, each of said secondary frames comprising a beam and a stay and the width of one of said secondary frames being such that it can be attached to the main frame to locate the steering wheel carried by it either at one side of the main frame or centrally in relation to said frame.

1,451,449. COLLAPSIBLE CRATE. CHARLES L. PETERMAN, York, Pa. Filed Sept. 10, 1921. Serial No. 499,600. 3 Claims. (Cl. 217—47.)

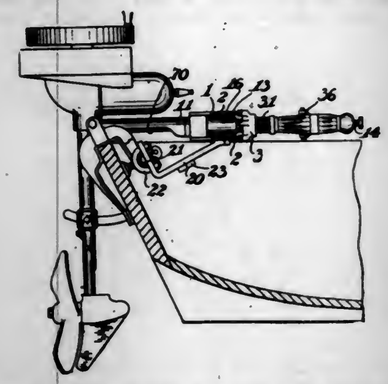


1. A crate comprising a bottom, end frames and side frames hinged to the bottom to swing over onto the same, a top, and toggle connections between the top and the bottom, said toggle connections constituting stops to limit the opening movement of the side and end frames.

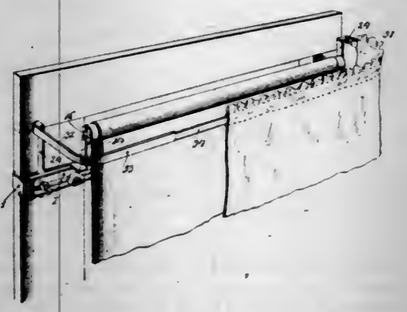
1,451,450. CAN-FEEDING DEVICE. OTTO SMITH, Honolulu, Hawaii, assignor to California Packing Corporation, San Francisco, Calif., a Corporation of New York. Filed June 6, 1922. Serial No. 566,386. 7 Claims. (Cl. 198—45.)

1. A device of the character described comprising an elevated support adapted to receive trays loaded with cans, an inclined plate leading from the support, and a trough running parallel with said inclined plate and downwardly inclined to permit cans to roll and discharge by gravity through the same, and said trough having a width equal to the height of the can.

1,451,451. LOOSE-LEAF BOOK. RALPH G. WHITLOCK, Los Angeles, Calif., assignor to E. D. Whitlock and M. H. Whitlock, both of Los Angeles, Calif. Filed June 21, 1920. Serial No. 390,672. 3 Claims. (Cl. 129—24.)



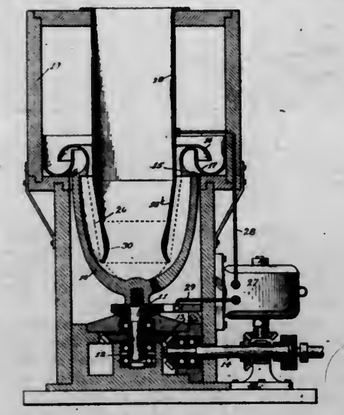
2. In a loose leaf book, means to guide the inner edges of the leaves comprising a plate adapted to be threaded upon the leaf rings, and means to tension said plate, whereby when the book is opened or closed the leaves are prevented from sticking on the rings.



3. In a loose leaf book having a ring frame, said frame having ring frame plates, an arch band having prongs struck therefrom and turned inwardly, said arch band being secured to a ring frame plate, thereby forming means to retain a pencil.

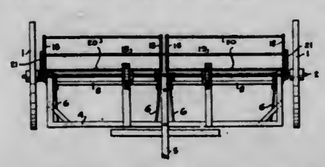
1,451,452. TILLER LOCK. HANNAH TOTTEN WILLIAMS, Seattle, Wash. Filed Nov. 22, 1920, Serial No. 425,728. Renewed Feb. 16, 1923. 8 Claims. (Cl. 115—18.)

8. The combination with the tiller arm of an outboard motor of a rod reciprocable lengthwise thereof to reverse said motor, a handle including an outer sleeve rotatable upon said tiller arm, and having angular slots therein, a pin secured in said rod and receivable in said angular slots, an inner sleeve forming a part of the tiller arm within said outer sleeve and having longitudinal slots therein positioned to receive said pin, means permitting relative rotative movement and preventing relative longitudinal movement between said inner and outer sleeves, and means for locking said tiller in any steering position operable in either rotated position of its handle.



1,451,453. ADJUSTABLE WINDOW SHADE AND CURTAIN SUPPORT. WILLIAM X. YORK, Clinton, Ind. Filed Aug. 24, 1921. Serial No. 494,880. 5 Claims. (Cl. 156—24.)

5. In a device of the class described adapted to be secured to a window frame, members assembled for relative sliding adjustment and provided with arms adapted to engage opposed faces on the window frame, a space being formed between the frame and the members, springs in said space connecting said arms, the said members being provided with registering longitudinal slots, brackets each having an attaching portion disposed against one of the said members and provided with upper and lower end portions engaging the upper and lower sides of the said member, a clamping bolt assembled with the bracket and extending through the slots, and a nut threaded upon the bolt and adapted to be tightened to secure the members in positions of relative adjustment and to secure the bracket at adjustment relative to the said members, said brackets having upward extensions adapted to support shade roller and curtain pole.

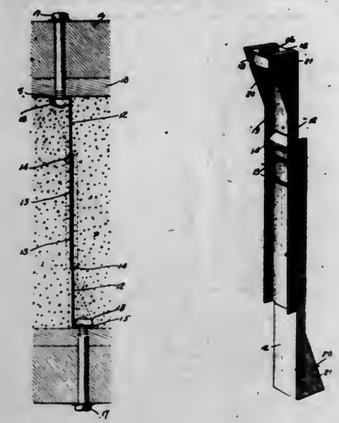


1,451,454. PROCESS AND APPARATUS FOR RECOVERY OF PRECIOUS METALS. FREDERICK A. BEAUCHAMP, Berkeley, Calif. Filed Aug. 4, 1920. Serial No. 401,166. 2 Claims. (Cl. 83—67.)

1. A machine for the recovery of precious metals by amalgamation with mercury, comprising a centrifugal bowl so shaped as to confine a layer of fluid mercury around its walls at an angle to the horizontal, a feed spout for the pulp extending downwardly into the bowl

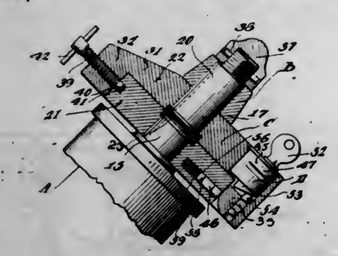
and sealed at its lower end by the mercury, the lower portion of said feed spout being formed of insulating material.

1,451,455. WEED PULLER. ALBERT JOHN BEINGESSNER, Calgary, Alberta, Canada, assignor of one-third to Albert Beingessner and one-third to Alfred E. Allen, both of Calgary, Alberta, Canada. Filed Mar. 22, 1922. Serial No. 545,797. 2 Claims. (Cl. 55—60.)



1. In a weed puller, in combination with a carriage and a frame mounted thereon, a puller bar mounted in the lower end of hangers pivoted in brackets upon the said frame, depth control rods pivoted to the said hangers and adapted to raise or lower the position of the pulling bar, a setting lever and quadrant controlling the movement of the said depth control rods, and a rotary pressure member adapted to engage the tops of the weeds and press them upon the surface of the ground, all substantially as described.

1,451,456. NONSLIP QUARTZ TILE. MACDONALD C. BOOZE, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 11, 1920. Serial No. 423,456. 5 Claims. (Cl. 106—25.)

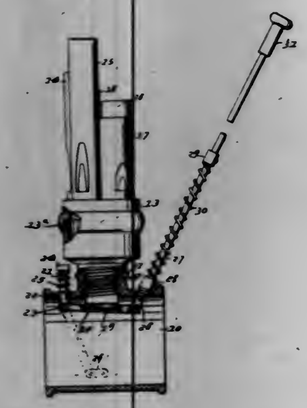


1. A non-slip tile comprising abrasive quarts granules and a ceramic bond uniting said grains into an integral, wear-resisting mass in which the grains form the major portion of the tread surface, said bond being more wearable than the quarts and capable of permitting renewal of the tread anti-slipping characteristics under a normal usage.

1,451,457. ADJUSTABLE FORM TIE AND SPACER. JOHN C. BUCHENAU, De Witt, N. Y. Filed Sept. 23, 1921. Serial No. 502,746. 6 Claims. (Cl. 25—131.)

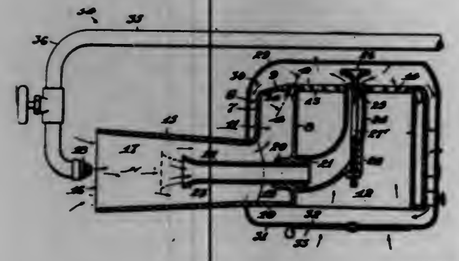
6. In a tie and spacer for wall molds, a member presenting laterally extending flanges, said flanges being wider at one end and turned laterally inward to form a reinforced socket adapted to receive a nut, and at the other end terminating short of the end of the member whereby a bendable tongue is presented; together with bolts for securing said member to a mold board.

1,451,458. TILTING AND LOCKING DEVICE FOR STEERING WHEELS. ROBERT S. BUSBY, Jacksonville, Fla., assignor of one-half to A. D. Richardson and R. O. Birchy, both of Jacksonville, Fla. Filed Jan. 13, 1921. Serial No. 436,991. 6 Claims. (Cl. 74—83.)



1. In a steering device, the combination with a steering post and a steering wheel, a shell for rotatably receiving said post, spark and throttle levers rotatably carried by the shell, and quadrants for said levers, of an attachment interposed between the steering wheel and post, including a pair of plates adapted for connection respectively with the steering post and the steering wheel, means hingedly connecting the plates together adjacent to one end and above said quadrants, whereby the plates can be swung in relation to each other and the wheel in relation to the post and in engagement with the quadrant, the wheel when swung in engagement with the quadrant, lying in the path of the levers whereby actuation thereof is prevented, and locking means carried by the plates for holding said plates against movement when the plates are swung in relation to each other.

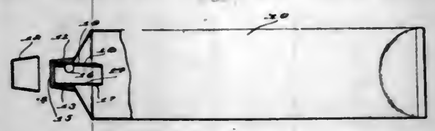
1,451,459. WHISTLE. JACOB JACKSON CORNELL, Paducah, Ky. Filed May 23, 1922. Serial No. 563,041. 5 Claims. (Cl. 116—138.)



4. In an exhaust whistle, a coupling, a horn body having a nipple extending through the coupling, a valve coacting with the end of the nipple to open and close

the same, a yieldable post on which the valve is oscillatably mounted, means for oscillating the valve, a link pivotally connected to the valve, a rod to which the

link is pivoted, a guide carried by the coupling in which the rod is slidable, and means for forcing the rod outwardly.

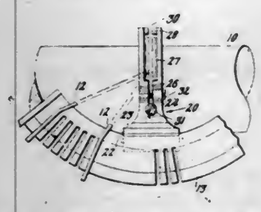


1,451,460. OIL BURNER. WALTER B. KERRICK, Los Angeles, Calif., assignor to Kerrick Steam Motors Company, Los Angeles, Calif., a Corporation of California. Filed Mar. 26, 1921. Serial No. 455,930. 10 Claims. (Cl. 158—65.)

5. In a burner, a burner body having a plurality of burner orifices and formed with an opening disposed in the center of said body, a tube communicating with said orifices adapted to conduct a mixture of vaporized fuel and air to said orifices and formed with a mouth communicating with the atmosphere, another tube disposed within said first named tube formed with a mouth communicating with the interior of the first named tube and terminating at its other end in an orifice disposed centrally in said opening, and a nozzle adapted to eject fuel into the mouth of said first named tube.

1,451,461. COLLAPSIBLE TUBE. CLIFFORD G. KING, Providence, R. I. Filed Mar. 14, 1921. Serial No. 452,858. 11 Claims. (Cl. 221—60.)

1. A collapsible tube, comprising a nozzle, and a longitudinally-slidable cap located in said nozzle, said cap having a side delivery-opening and a flanged head, said head being closely adjacent to, or abutting, the outer end of said nozzle when said cap is in closed position, said cap

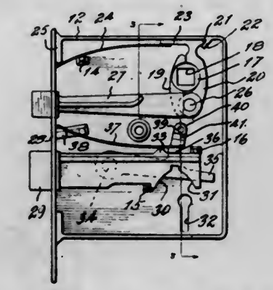


being provided with means for maintaining itself in closed position and with means for limiting its outward movement.

1,451,462. NONSLIP TILE. ABRAHAM ALBERT KLEIN and MILTON F. BEECHER, Worcester, Mass., assignors to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 11, 1920. Serial No. 423,423. 8 Claims. (Cl. 106—7.5.)

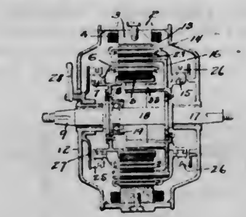
1. A non-slip tile comprising wear-resisting abrasive granular material of a hardness between quartz and crystalline alumina and a ceramic bonding material integrally united by heat into an abrasive, wear-resisting and substantially integral mass in which the granular material constitutes a substantial proportion of the surface of the tile and the bond is capable of permitting renewal of the safety characteristics of the tread surface.

1,451,463. TYPEWRITING MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 21, 1921. Serial No. 463,266. 2 Claims. (Cl. 197—43.)



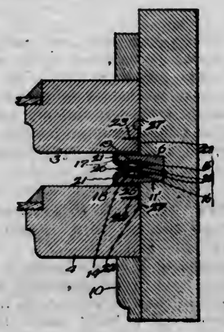
1. In a front-strike typewriting machine, a platen, a segment, type-bars pivoted on the segment to swing upward and rearward to the platen, type-blocks fixed to the type-bars near the ends of the latter, guiding extensions on the ends of the type-bars, a pair of uprights between which the type-blocks are adapted to pass on movement to the platen, guide-pieces offset toward each other, one on each upright beyond the type-blocks, for co-operation with said extensions on the type-bars, and means, engaging the uprights below the path of the type-blocks, for adjusting the uprights toward and from each other to regulate the space between the guide-pieces thereon; said uprights being spaced apart a sufficiently greater distance than the width of the type-blocks to permit of such adjustment while nevertheless providing at all times free passageway therebetween for the type-blocks.

1,451,464. LOCK. STANLY LECZYCKI, Detroit, Mich. Filed May 12, 1921. Serial No. 468,811. 1 Claim. (Cl. 70—75.)



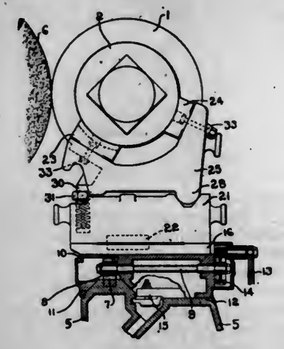
A lock comprising a casing, a bolt slidable in said casing, said bolt being adapted to be projected and retracted by a key, a stop lug on the upper edge of the bolt, a lever pivoted within the casing, a tongue projecting laterally from the upper edge of the lever in position to engage the lug, when the bolt is in projected or retracted position, a flat leaf spring normally urging the tongue against the upper edge of the bolt, said tongue being

elevated out of contact with the bolt by the bit of the bolt actuating key, and a key actuated member mounted above the tongue, and adapted to be turned into engage-



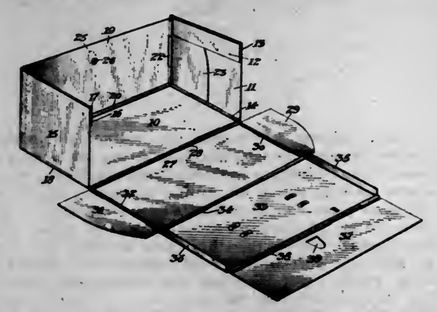
ment with the spring directly over the tongue to prevent said tongue from being moved out of the path of the stop lug.

1,451,465. POWER-TRANSMISSION APPARATUS. ALFONS H. NEULAND, San Francisco, Calif., assignor to Neuland Electrical Company, Inc., San Francisco, Calif., a Corporation of New York. Filed May 13, 1916. Serial No. 97,258. 18 Claims. (Cl. 172—239.)



1. In an electric power transmission apparatus, a driving armature, a driven armature surrounding said driving armature, a stationary field element surrounding said driven armature arranged to produce a flux traversing both of said armatures and means for varying the flux traversing said driving armature with respect to the flux traversing said driven armature.

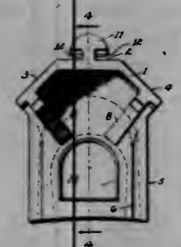
1,451,466. WEATHER STRIP. GUNNAR F. NORDBLAD, Chicago, Ill., assignor to Robert M. Burns, Chicago, Ill. Filed Aug. 28, 1916. Serial No. 117,141. 5 Claims. (Cl. 20—69.)



5. In combination with upper and lower window sashes, a joint closure comprising a parting strip having a longitudinal groove therein, and a weather strip transversely bent to provide a pair of channels with a dividing wall therebetween, the channel-forming portions of said strip being disposed in said groove, and U-shaped strips having respectively laterally extending flanges attached to the side edges of said sashes, with one leg of each U-shaped strip engaging the face of its respective sash, and the second leg slidably engaging in its respective channel.

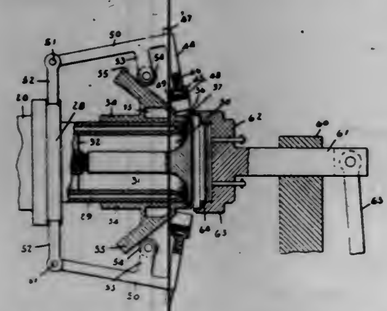
1,451,467. WORK SUPPORT FOR ROLL-GRINDING MACHINES. CHARLES H. NORTON and ALBERT TURNER, Worcester, Mass., assignors to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Feb. 11, 1921. Serial No. 444,205. 10 Claims. (Cl. 51—236.)

1. A journal rest for a roll grinding machine comprising a base, a work shoe holder mounted thereon, work supporting shoes on said holder, and means for moving the holder and shoes vertically to bring the roll axis into proper relation with a grinding wheel.



1,451,468. LUNCH BOX. HARRY OLSHAN, Newark, N. J., assignor to Goldee Mfg. Co., Inc., Brooklyn, N. Y. Filed Feb. 24, 1921. Serial No. 447,402. 6 Claims. (Cl. 220—6.)

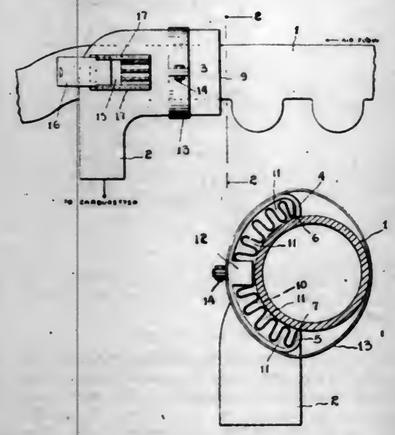
6. A container comprising a base, end walls hinged to the opposite ends of the base, a front wall hinged to one side of the said base, flaps hinged to the ends of the front wall and adapted to be engaged in pockets provided therefor in the said end walls, a rear wall hinged to the opposite side of the said base, flaps hinged to the ends of the said rear wall and also adapted to be engaged in pockets provided therefor in the said end walls, a top member hinged to the said rear wall and adapted to close the said container so that the wall may be thus turned on the hinges to a set up position and may also be turned to a collapsed position, a flap hinged to the



said top wall, and a latch associated with the front wall and adapted to engage the last aforesaid flap when the walls are in a set up position and also when the walls are in a collapsed position so as to secure the walls in place when in either positions.

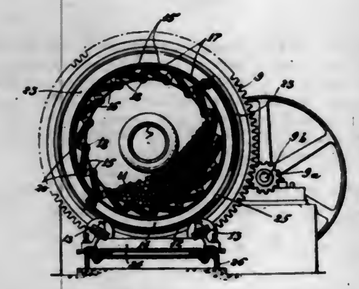
1,451,469. HEEL-BLANK SEPARATOR AND FORMER. DENNIS PARKS, St. Louis, Mo. Filed Mar. 26, 1921. Serial No. 455,807. 6 Claims. (Cl. 12—50.)

1. A separating device for use with decked heel-blanks, comprising a separator plate having heel-forming members projecting at one end from one side thereof, and a guide member on the top of said device.



1,451,470. MEANS FOR FORMING AND SECURING GASKETS TO JAR COVERS. WILLIS J. PEELLE, Chicago, Ill. Filed Oct. 18, 1920. Serial No. 417,825. 14 Claims. (Cl. 113—80.)

1. In a machine for forming and applying sealing gaskets and the like, the combination of means for forming a gasket ring including a cylindrical longitudinally reciprocable shearing means for cutting the gasket ring from a mass of gasket material, and means for holding a jar cover and the like in position for the severed gasket ring to be forcibly applied thereto by said shearing means in the shearing movement thereof, whereby the shearing means shears the gasket ring and immediately applies it to the jar cover and the like.

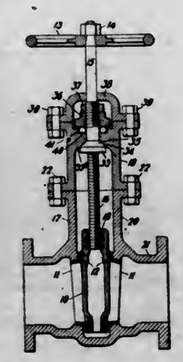


1,451,471. AIR HEATER. FRANK POKORNY, Jr., New York, N. Y., assignor of one-half to Francis W. Keegan, New York, N. Y. Filed Aug. 14, 1920. Serial No. 403,629. 1 Claim. (Cl. 257—241.)

Preheating means for the air supply to carburetors of internal combustion engines comprising, in combination, an elbow device having a transversely curved portion with oppositely inturned edges and an intermediate, inturned spacing lug adapted to set against the exhaust manifold of an engine to provide an air passage between said portion and manifold, an angularly disposed tubular portion to connect with the carburetor, the forward end of the curved portion being open to admit air for passage through the tubular portion, a corrugated sheet of heat conductive material fitting between the

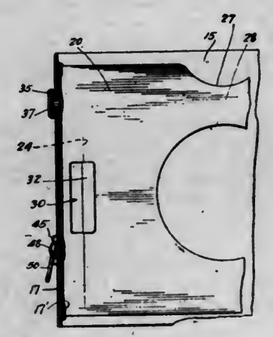
curved portion and the manifold to provide a series of parallel channels for the sub-division of the flowing air into separate streams, and a controllable opening in the curved portion to vary the temperature therein.

1,451,472. PULVERIZING MILL. RALPH E. H. POMEROY, Canton, Ohio. Filed June 1, 1921. Serial No. 474,079. 12 Claims. (Cl. 83—9.)



1. In a pulverizing apparatus, the combination of a rotatable shell having perforations in its periphery and having therein loose tumbling devices for assisting in grinding the material, means for supplying a current of air inward through said perforations, and adjustable means for shifting said air supply relative to the shell so as to be admitted to different portions of the shell.

1,451,473. VALVE. WILLIAM E. PULVERMAN, Wilkes-Barre, Pa. Filed Dec. 20, 1919. Serial No. 346,360. 6 Claims. (Cl. 251—62.)

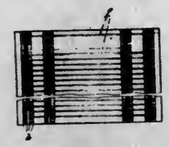


1. The combination of a casing having a seat, a gate valve fitted thereto, said casing comprising a bonnet into which said gate valve rises, a rotary stem in said bonnet having at its lower end a screw connection with said valve, said bonnet provided with an integral interior flange and said stem having below said flange an integral shoulder to fit said flange, a binding nut screw-threaded upon said stem and a bearing upon said bonnet on

which the nut unyieldingly rests for forcing the shoulder up against the flange to form a leak-proof joint and pre-

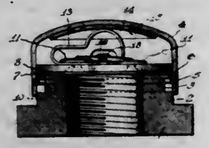
vent any endwise movement of the stem, said bonnet formed in upper and lower sections, and means for detachably joining said sections.

1,451,474. ALBUM. JOHN RODGERS, Jamaica, N. Y. Filed Apr. 8, 1921. Serial No. 459,537. 8 Claims. (Cl. 129—20.)



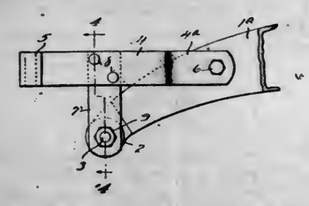
3. In an album, a plurality of pairs of envelope leaves each pair formed from a single blank, said envelope leaves having recesses on their upper edges and openings through the sides thereof, tabs extending from opposed sides adapted to be secured on opposite edges after folding the blank, other tabs adapted to pass through openings in the opposite sides and be secured thereto, and means for clamping said leaves within a cover.

4. An album comprising covers, a backing and envelope leaves disposed between said covers, a stiffener extending coincident with said backing, means formed with said stiffener for securing said leaves, means for removably engaging said stiffener to said backing, and means combined with said engaging means for distinguishing the album.



1,451,475. DEVICE FOR PRINTING INTERSECTING LINES. JAMES ROSENBERG, Cleveland, Ohio. Filed Aug. 23, 1920. Serial No. 405,406. 10 Claims. (Cl. 101—400.)

1. In mechanism for printing intersecting lines, the combination of a gauge element provided with a plurality of recesses extending transversely along one side, and a longitudinally extending recess along its upper face and said gauge being adapted to receive a line printing



type element on its upper surface, and a line-printing type bar adapted to engage in one of such recesses in said gauge element.

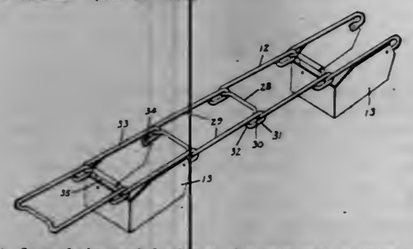
1,451,476. PUSH-BUTTON CONSTRUCTION. ROBERT E. SCHIEBER, Detroit, Mich. Filed Jan. 16, 1922. Serial No. 529,430. 3 Claims. (Cl. 200—159.)

1. In a push button construction wherein a nut is provided with a cap or finger piece adapted to be depressed to effect an electrical connection between a stationary contact member, and a movable contact member, which movable member holds said cap normally distended relative to said nut, and a leading in conductor;—means articulating said nut and cap to prevent displacement of the latter and permit said cap to rotate relative to said nut, said means including a split ring, said cap having a groove in its inner wall to receive said ring and said nut having a groove to receive said ring, the nut groove being of sufficient width to permit said ring to shift therein during depression of said cap, and said cap having a side opening to rivet said leading in conductor so that said conductor by virtue of said rotatable cap may be conveniently placed.

1,451,477. AUTOMOBILE BUMPER. BLADEN M. SHORT, Detroit, Mich., assignor to Christian Girl, Kalamazoo, Mich. Filed Jan. 7, 1922. Serial No. 527,562. 13 Claims. (Cl. 293—55.)

4. A bumper supporting member comprising an arm having its inner end offset laterally for attachment to a vehicle side member and having its front end formed for connection with a bumper, and a brace extending from the said arm and adapted for attachment to the spring bolt of such side member.

1,451,478. SAFETY PIN. AARON JACOB SMITH and FOSTER T. FREDERICK, Chicago, Ill.; said Smith assignor to said Frederick. Filed Aug. 30, 1922. Serial No. 585,138. 6 Claims. (Cl. 24—158.)

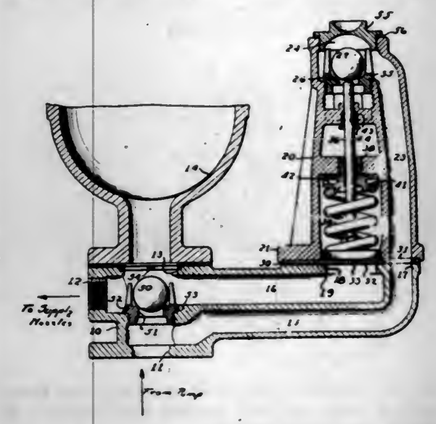


1. A safety pin comprising in combination a body member having parallel extending side portions with looped portions at each of its ends, one of said side portions terminating adjacent one of said looped portions and forming a point for said pin, a head secured to one of said looped portions and adapted to hold the free end of said body

portions in normal closed engagement, the said head having a limited sliding movement upon said body portion

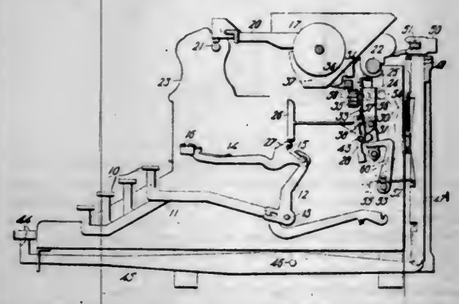
and a spring locking member adapted to engage against the inner curved body portion whereby the head is held in locked position.

1,451,479. CHAIN SAND DREDGE. ROSELL SMITH, Lebanon, Ind. Filed Dec. 12, 1921. Serial No. 521,834. 4 Claims. (Cl. 37—85.)



1. In a chain sand dredge, a chain formed of links comprising two parallel side portions connected by an end cross portion, hooks provided on the free ends of said side portions for engaging the next adjacent link, and projections on the ends of said hooks for maintaining said hooks in position to permit the sliding movement therein of said adjacent link and acting as stops for limiting the sliding movement thereof.

1,451,480. CALLING DEVICE. SAMUEL SUEKOFF, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 3, 1918. Serial No. 256,656. 2 Claims. (Cl. 188—104.)

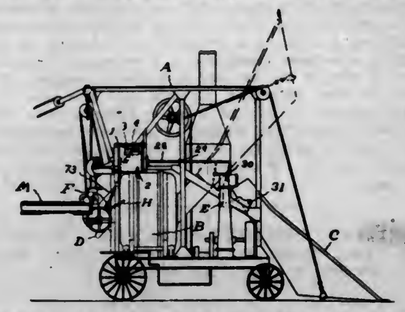


1. A device of the character described including spring-restored mechanism, a worm-gear mechanism, a rotatable shaft connected to said mechanism by said worm-gear mechanism, a rotatable cylindrical member comprising a core provided with securing means to secure the same to said rotatable shaft and a cylindrical ring of a size to fit over said core, a permanent magnet having soft iron pole-pieces secured to its ends by means of screws resting in countersunk openings in said pole-pieces and enlarged in relation with the thickness of said permanent magnet, said thickness of said pole-pieces at right angles to the axis of said cylindrical member being substantially the same as the diameter of said cylindrical member, concave faces for said pole-pieces forming an opening of a size to receive said cylindrical member, whereby the said member as a whole may be rotated in said opening by means of said spring-restored mechanism to cut the magnetic flux of said magnet to regulate the speed of operation of said spring-restored mechanism through the medium of said worm-gear mechanism.

1,451,481. PRESSURE REGULATOR. ELBERT S. VINCENT, Salem, Ohio, assignor to The Deming Company, Salem, Ohio, a Corporation of Ohio. Filed Nov. 29, 1920. Serial No. 426,992. 2 Claims. (Cl. 103—42.)

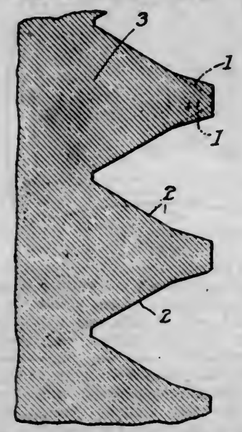
1. In a device of the character described, the combination with a lower casing having a laterally extending partition therein, passageways on opposite sides of the partition, a valve disposed in the partition between said passageways, one of said passageways being arranged to communicate with a supply conduit and the other with a pump conduit, each of said passageways terminating adjacent one end of the casing, a pressure relief valve carried by the casing adjacent the termini of said passageways, and an air chamber carried by the casing and communicating with the passageway leading to the supply conduit.

1,451,482. TYPEWRITING MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed June 26, 1920. Serial No. 391,879. 10 Claims. (Cl. 197—176.)



1. In a typewriting machine, the combination of a carriage, tabulating mechanism for said carriage, type-keys, escapement mechanism actuable by said type-keys, and means operable by said tabulating mechanism to actuate said escapement mechanism.

1,451,483. BATCH MIXER AND METER. HENRY O. WINKLER, Los Angeles, Calif., assignor to Koehring Company, Milwaukee, Wis., a Corporation. Filed Oct. 18, 1921. Serial No. 508,425. 33 Claims. (Cl. 83—73.)

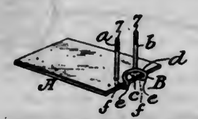


1. The combination with a mixing machine including a mixer and charging and discharging means associated

therewith, of timing means including an escapement mechanism, said timing means being controlled by the charging

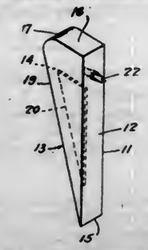
ing means, and governing the discharging means, whereby materials charged into the mixer may be mixed a predetermined time before being discharged.

1,451,484. SCREW THREAD. IRVING C. WOODWARD, Syracuse, N. Y. Filed Mar. 25, 1922. Serial No. 546,653. 3 Claims. (Cl. 152—22.)



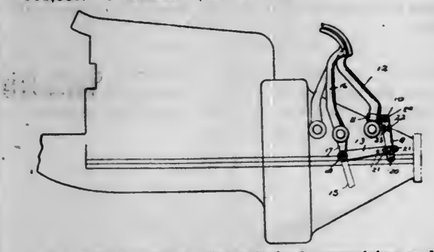
3. A member provided with a thread, the included angle of which is less near the apex of the thread than throughout the main body portion thereof.

1,451,485. COMPOSITION FOR FIREPROOFING AND OTHER PURPOSES AND PROCESS OF PREPARING SAME. WILLIAM LEVIS WOOTTON, Brooklyn, N. Y. Filed July 5, 1919. Serial No. 308,739. 11 Claims. Cl. 23—5.)



1. A composition consisting of a mixture containing calcium chloride and but two other salts, namely sodium chloride and calcium sulphate, substantially as described.

1,451,486. PIN TICKET. MARCUS O. ANTHONY, New York, N. Y. Filed July 7, 1921. Serial No. 482,895. 5 Claims. (Cl. 40—25.)

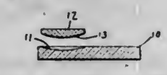


1. A pin ticket characterized by a pin provided on its opposite faces with bevels converging toward the extremity of said pin so as to impart a longitudinal taper to the end portion, said exeremity being provided with a rounded edge.

1,451,487. WINDOW OR DOOR STOP. FREDERICK ARMBROSTER, Averne, N. Y. Filed Apr. 13, 1921. Serial No. 460,939. 5 Claims. (Cl. 292—342.)

1. A window or door stop comprising in combination a wedge-shaped body, a wedge-shaped bearing member tightly fitted within said body, said bearing member being provided with a knife-edge pin made integral therewith and protruding outwardly from the bottom of said body, substantially as described.

1,451,488. FORD BRAKE-CLUTCH CONNECTOR. JAMES C. BOYLE, Flint, Mich. Filed Oct. 5, 1921. Serial No. 505,661. 4 Claims. (Cl. 74—81.)



1. An attachment as characterized comprising a link pendant from the brake lever; means operatively connecting said link with the clutch lever of an automobile for moving the same to release the clutch during the movement of said brake lever and prior to the setting of the brakes thereby; and means mounted on said link for adjusting the working position thereof, said means embodying a set screw mounted on said link to bear against the pivot hub of said brake lever for varying the operating position of said link.

1,451,489. PROCESS FOR THE MANUFACTURE OF AZOXY, AZO, HYDRAZO, AND AMINO COMPOUNDS. OLIVER W. BROWN and CLYDE O. HENKE, Bloomington, Ind. Filed Sept. 21, 1921. Serial No. 502,245. 16 Claims. (Cl. 260—69.)

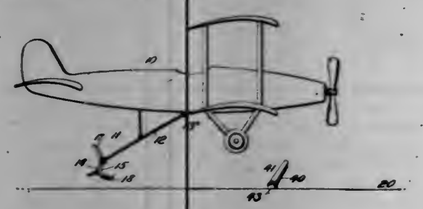
1. The process of producing azoxy, azo, hydrazo, and amio compounds, which consists in subjecting a nitro compound in the gaseous state and mixed with gas containing hydrogen to the action of a heated catalyst containing a finely divided metal having an atomic weight between that of thallium and that of bismuth inclusive, to form one or more of the desired azoxy, azo, hydrazo, and amino compounds.

1,451,490. PROCESS OF MAKING BIFOCAL LENSES. LUCIAN W. BUGBEE, Indianapolis, Ind., assignor to Franklin Optical Company, Indianapolis, Ind., a Corporation of Indiana. Filed Apr. 8, 1922. Serial No. 550,843. 9 Claims. (Cl. 49—82.1.)

7. The process of producing a fine optical surface consisting of grinding and polishing said surface, heating the

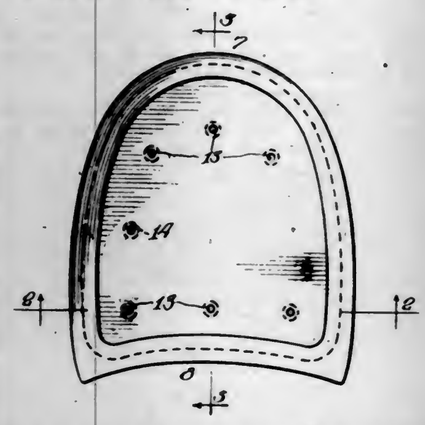
same to a temperature sufficient to release or substantially release such surface strain as may exist therein, annealing said surface by the cooling thereof and thereafter repolishing the same.

1,451,491. PATTERN AND GUIDE STRIP. SEWARD H. CALKINS, Long Island City, N. Y., assignor to The Traitel Marble Company, Long Island City, N. Y., a Corporation of New York. Filed Aug. 31, 1920. Serial No. 407,094. 9 Claims. (Cl. 94—18.)



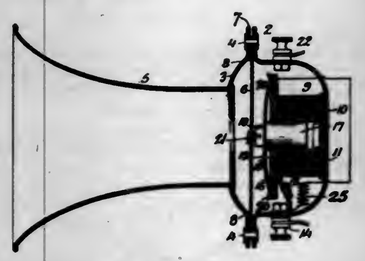
1. A pattern and guide strip of the character described comprising a flat strip of metal having upper and lower uninterrupted straight edges and a plurality of ears pressed out of said strip and positioned to extend on opposite sides thereof, substantially from the center of the strip.

1,451,492. VEHICLE SPRING. GEORGE C. CASPER, Chicago, Ill., assignor of one-half to Arthur N. Evans, Chicago, Ill. Filed Jan. 14, 1922. Serial No. 529,399. 3 Claims. (Cl. 267—50.)



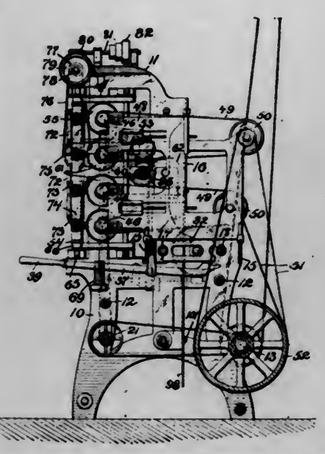
1. In a vehicle spring a plurality of superposed leaves of different lengths, the adjacent faces of the leaves being provided with mating grooves and connecting openings, consisting of longitudinal grooves extending outwardly and inwardly from the openings at the upper and lower faces of the leaves respectively and provided at intervals with transverse branches, the longitudinal grooves and branches in the upper faces of leaves mating with the grooves and branches in the lower faces of the contiguous leaves to form connecting channels when the leaves are in normal position and adapted to effect a wiping action of the lubricant when the leaves are deflected.

1,451,493. STOPPING AND LANDING MECHANISM FOR AEROPLANES, DIRIGIBLES, BALLOONS, AND THE LIKE. JAMES H. CRUICKSHANK, Big Indian, N. Y. Filed Nov. 26, 1921. Serial No. 517,929. 4 Claims. (Cl. 244—2.)



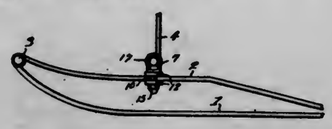
1. Mechanism of the character described, comprising a landing surface for an aeroplane or like machine, a turn-table mounted therein and means associated therewith to be engaged by a part connected with the aeroplane or the like while in motion for retarding and arresting the machine, said turn-table being rotatable to align the retarding means with the direction of motion of the machine, and said retarding and arresting means comprising a loop to be caught by said part on the machine, a member consisting of a cross-head having a series of pins or the like and a member consisting of a series of wires extending between said pins and held kinked thereby, one of said members being movable with said loop to effect the kinking of successive sections of said wires by said pins during the movement of said movable member for strongly retarding the motion of the same.

1,451,494. RESILIENT SHOE HEEL. EUGENE L. DE VERE, Chicago, Ill. Filed Mar. 6, 1920. Serial No. 363,884. 1 Claim. (Cl. 36—35.)



A heel comprising a block of resilient material having its upper face cored out to leave the sides and bottom relatively thin; a core of relatively rigid, light material having its rear and side edges rounded, tapering and sharply bent upwardly near its immediate edges and leaving its front edge in a horizontal plane and of uniform thickness, said core adapted to fit neatly within the cavity of the block, and a covering of impervious material on top of the core, and sealed to the edges of the block.

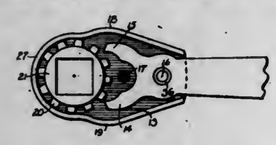
1,451,495. AUDIBLE-SIGNAL DEVICE. JOHN L. DINSMOOR, Philadelphia, Pa. Filed Aug. 7, 1917. Serial No. 184,832. 5 Claims. (Cl. 177—7.)



1. A signal device having a resilient current carrying sounding diaphragm, a solenoid having at one side an annular contact member in circuit therewith, a current carrying plunger revolubly mounted in the solenoid, adapted to be vibrated upon energization thereof and adapted for electrical connection with the diaphragm to control the solenoid circuit, and a spring connected with the plunger having shiftable connection with the annular contact member for normally holding the plunger pressed upon the diaphragm and operable to place said diaphragm under an initial flexure adapted to prolong electrical connection with the plunger when the solenoid is energized.

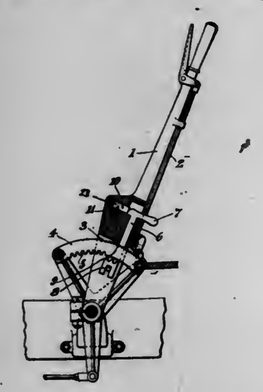
1,451,496. MACHINE FOR TURNING IRREGULAR FORMS. GEORGE W. DUCHEMIN, Newark, N. J. Filed June 4, 1921. Serial No. 474,967. 5 Claims. (Cl. 142—15.)

1. A machine for cutting forms comprising a carriage with means for supporting a series of cutters and for holding a tracing wheel, a frame having means for holding a series of blocks and a pattern, a set of opposed brackets at the front and a set of opposed brackets at the rear of the frame, said brackets being arranged to swing and adapted to form the only support for the frame so that in the movement of the frame the blocks are held always in the same plane relative to the cutters, and means for yieldingly pressing the frame toward the cutters.



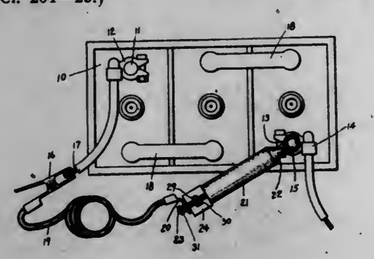
1,451,497. PIVOTAL CLAMPING DEVICE FOR BUMPERS AND THE LIKE. WAYNE E. DUNSTON, Kalamazoo, Mich., assignor to Christian Girl, Kalamazoo, Mich. Filed Dec. 16, 1922. Serial No. 607,276. 5 Claims. (Cl. 293—55.)

2. The combination, with a supporting member having an eye, of means for clamping and pivotally supporting a bar or plate from said eye, said means comprising a pair of eye bolts, a bolt extending through the eyes of said bolts and through the eye on said supporting member and pivotally connecting the eye bolts thereto, each eye bolt having a stem and a stop, clamping members mounted on the stems of said bolts on opposite sides of said bar or plate, and nuts on the threaded ends of said eye bolts.



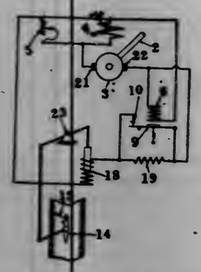
1,451,498. RATCHET WRENCH. GUSTAV A. FAITZ, Chicago, Ill. Filed Aug. 10, 1921. Serial No. 491,182. 2 Claims. (Cl. 81—62.)

1. In a ratchet wrench, in combination, a head comprising a pair of parallel plates having inwardly projecting spacing flanges at their peripheries, a sleeve journaled between the plates, ratchet teeth formed on the sleeve, a handle pivoted between the plates, a pair of oppositely facing pawls fixed to the handle and projecting



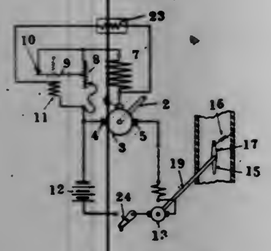
beyond the pivot of the handle to cooperate with the ratchet teeth, and springs mounted within the head reacting upon the handle for normally holding the handle in central position.

1,451,499. LOCKING DEVICE FOR AUTOMOBILES. JAMES H. FORD, Mount Vernon, N. Y. Filed May 6, 1921. Serial No. 467,458. 6 Claims. (Cl. 70—132.)



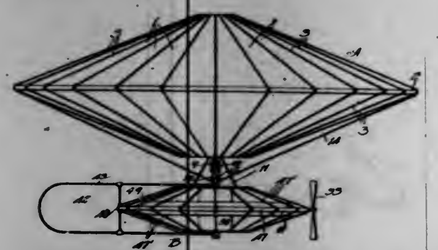
4. The combination with an operating lever of a motor car of a separate locking device mounted on the lever having locking means at its lower end adapted to engage with non-serrated means on the lower portion of the segment when the locking device is operated, and a spring actuated bolt adapted automatically to lock the locking device in locking position and adapted to be released by a key.

1,451,500. PROCESS AND MEANS FOR REMOVING CORRODED TERMINALS FROM STORAGE BATTERIES. GERHARD E. FROHBIETER, Princeton, Ind. Filed Sept. 11, 1922. Serial No. 587,377. 4 Claims. (Cl. 204—29.)



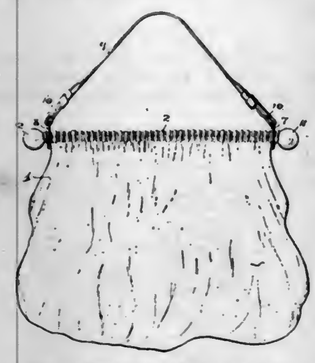
4. The combination of a corroded terminal, a source of electrical energy, an electrically energized arc forming device, and means connecting said device, said battery and said terminal in an electric circuit for the purpose described.

1,451,501. SPEED-REGULATING APPARATUS. VALÈRE A. FYNN, St. Louis, Mo., assignor, by mesne assignments, to Wagner Electric Corporation, St. Louis, Mo., a Corporation of Delaware. Filed July 5, 1919. Serial No. 308,867. 3 Claims. (Cl. 290—40.)



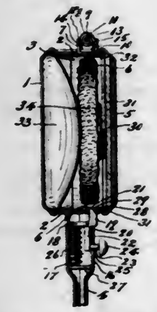
1. The combination of a prime mover, speed controlling means therefor, electromagnetic means for actuating the controller, a generator driven by the prime mover, a vibratory relay for automatically varying the current supplied to said electromagnetic means, said vibratory relay being responsive to the current output of the generator and operable when said current output passes a predetermined value.

1,451,502. SPEED-REGULATING APPARATUS. VALÈRE A. FYNN, St. Louis, Mo., assignor, by mesne assignments, to Wagner Electric Corporation, St. Louis, Mo., a Corporation of Delaware. Filed July 5, 1919. Serial No. 308,868. 6 Claims. (Cl. 290—40.)



1. The combination of a dynamo electric machine, means for driving said machine, a storage battery connected to the dynamo electric machine to be charged thereby, and means for controlling the excitation of the dynamo to prevent permanent reversal of its polarity.

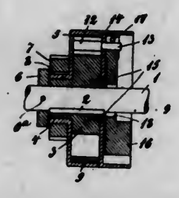
1,451,503. DIRIGIBLE AIRSHIP. HENRY A. GOETZ, Chicago, Ill. Filed May 14, 1917. Serial No. 168,399. 20 Claims. (Cl. 244—7.)



1. An airship comprising a plurality of balloon units held together by means of and within a rigid wedge shaped wire cage of double saucer form, said cage comprising uprights under compression and wires under tension.

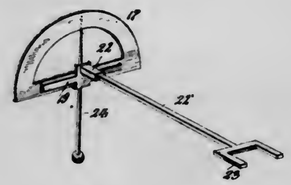
1,451,504. COMBINED STIFFENING AND CLOSING DEVICE FOR BAGS. FREDERICK GOERTZ, Newark, N. J., assignor to August Goertz & Co., a Corporation of New Jersey. Filed Mar. 14, 1918. Serial No. 222,283. 3 Claims. (Cl. 150—5.)

1. A combined stiffening and closing device for bags, comprising a pair of closing members for attachment thereto of the mouth-portions of the bag, loop-shaped devices rigidly connected in fixed relation with one of said closing members and extending at right angles therefrom, a carrier-strap or handle secured at its ends to said loop-shaped devices, and retaining knobs connected with the other closing member adapted to enter said loop-shaped devices for separable retaining engagement therewith.



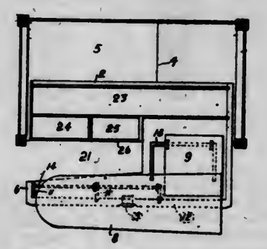
1,451,505. CONTAINER. FREDERICK GOERTZ, Newark, N. J., assignor to August Goertz & Co., a Corporation of New Jersey. Filed Dec. 2, 1920. Serial No. 427,758. 2 Claims. (Cl. 206—37.)

1. A container for the purposes described, comprising a main body open at one end, a cover for closing said main body, a spring hinge connected between said main body and cover adapted to actuate the opening movement of the latter, a mirror secured within said cover adapted to be disclosed when said cover is in open position, a handle member of substantial length projecting outwardly from the side of said main body and adapted to be grasped to support the container before the user, and a releasable catch means associated with said handle-member for holding said cover closed.



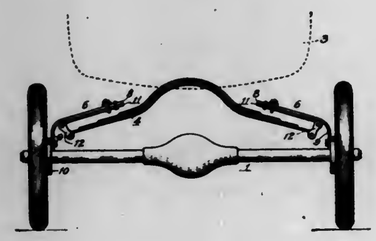
1,451,506. SELF-ACTING FRICTION CLUTCH. FREDRIK GRAF, Krokslatt, and JOHN WALDEMAR SVENSSON, Molndal, Sweden. Filed Nov. 10, 1920. Serial No. 423,133. 1 Claim. (Cl. 192—105.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

The combination with a driving shaft, of a clutch member comprising a split annulus having a radially disposed portion secured to said shaft, the walls of the split portion being provided with parallel channels having a common axis, a pin provided with a double cam operating between the opposite walls of the opening formed by the channels, a driven member surrounding said clutch member, and a pin operating element comprising a flat portion secured at one end to the pin and



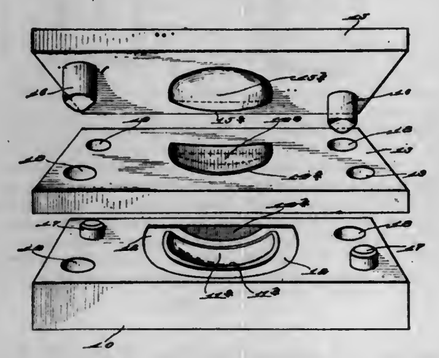
projecting to a point beyond the said shaft and receiving the latter through an arcuate opening therein, the free end of said element being provided with a weighted section adapted to cause the said element to lag behind the clutch member when the latter rotates at and beyond a predetermined speed to turn said pin and expand said annulus into engagement with the driven member.

1,451,507. GRAVITY ANGLE METER FOR DENTAL RADIOGRAPHY. LOY E. HARRIS and TROY A. LEACH, Emporia, Kans. Filed Mar. 3, 1922. Serial No. 540,799. 4 Claims. (Cl. 33—207.)



1. A device of the character described including a film carrier engageable between the teeth, and means carried by said carrier to automatically indicate the exact angle of disposition of the film.

1,451,508. COMBINED TABLE AND IRONING BOARD. CHARLES J. HENDERSON, Chicago, Ill. Filed Oct. 12, 1921. Serial No. 507,180. 6 Claims. (Cl. 68—10.)

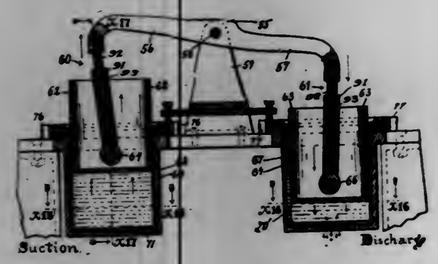


6. In combination, a drawer, means for slidably supporting the drawer, the drawer having a section at one side and a section of the bottom removed therefrom a short distance in rear of the front end so as to form at the front end of the drawer a comparatively narrow arm supported at its inner end and free at its outer end, and an ironing board associated with said drawer, and movable from a stored position within the drawer to a position overlying said arm.

1,451,509. SHOCK ABSORBER FOR AUTOMOBILES. HARRY DE F. HILLIARD, Chicago, Ill., assignor, by mesne assignments, to H-R Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed June 17, 1920. Serial No. 389,577. 6 Claims. (Cl. 267—45.)

1. In an automobile having a running gear and body supporting springs, a resilient element connecting the said running gear and an end of one of the springs, said resilient element comprising a pair of resilient members secured together at one end, the free end of one of said members being secured to the spring and the free end of the other being bent and rigidly secured to the said running gear, the last mentioned member acting as a shock absorber to check the recoil of the other member and the springs connected thereto.

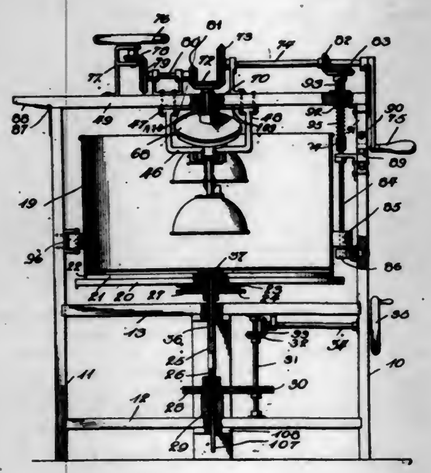
1,451,510. MOLD FOR RUBBER HEELS. LEVI HOLMES, Raynham, Mass. Filed Aug. 23, 1921. Serial No. 494,594. 3 Claims. (Cl. 18—42.)



1. A three-part mold constructed and arranged for molding scoop-shaped rubber heels presenting abutting shoulders between each of the mold members at the front or breast portion of the heel cavity.

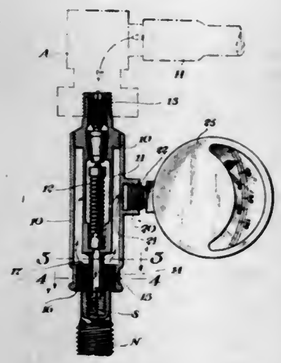
1,451,511. AEROPLANE RACE GAME. ALFRED E. JONES, Indian Orchard, Mass. Filed Aug. 26, 1920. Serial No. 406,246. 2 Claims. (Cl. 46—63.)

1. A game apparatus consisting of a game board arranged to represent geographical divisions and centers providing stopping points, certain of the centers being organized into flight courses, the distance between the centers of the each flight course being indicated in mileage figures, miniature aeroplanes for indicating the position of each player on the board, and means for producing plays of different values, whereby totals may be built up corresponding to the total mileage of any one flight course.



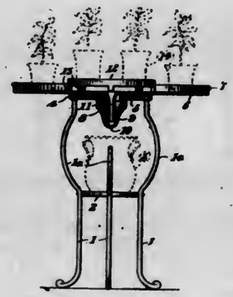
1,451,512. MEASURING APPARATUS. SYLVANUS H. KELLOGG, Los Angeles, Calif. Filed June 27, 1918. Serial No. 242,290. 32 Claims. (Cl. 226—95.)

1. The combination with two measuring devices, of a single conveyor adapted to intermittently move receptacles two by two simultaneously, beneath said devices alternately operable means to charge the receptacles while stationary between steps; and means connected with the charge-operating means to move the conveyor step by step during periods when the charges are not being received or delivered.



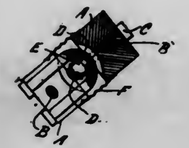
1,451,513. WASHING MACHINE. DANIEL F. LANE, Painted Post, N. Y. Filed Apr. 10, 1922. Serial No. 551,296. 7 Claims. (Cl. 68—19.)

2. A washing machine comprising, in combination, a frame, a vat revolubly mounted upon said frame, a cross bar hingedly secured to said frame, a suction cup mounted upon said cross bar, means mounted upon the bar to operate the said cup, means secured to the frame to



revolve said vat, means mounted upon the bar to operate said last named means, and readily removable connection for said last named means for causing revolution.

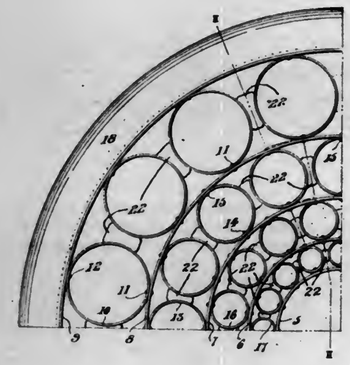
1,451,514. AIR-PRESSURE INDICATOR AND GAUGE. EDWARD C. MILLER, Williamsport, Pa. Filed Apr. 18, 1922. Serial No. 554,479. 2 Claims. (Cl. 152—11.5.)



1. In a tire gauge, a casing having an inlet at one end and an outlet at the other, a tubular conduit extending through said casing from end to end thereof, a check valve in said conduit and opening toward the outlet end of the casing, a gasket loosely surrounding the conduit at the outlet end of the casing, and a pressure indicator having communication with the interior of said casing.

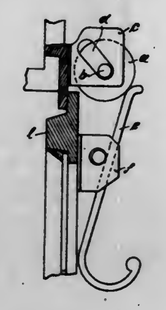
1,451,515. FLOWER STAND. ALOYSIUS NIEMCZEWSKI, Elmira, N. Y. Filed June 22, 1922. Serial No. 570,136. 6 Claims. (Cl. 47—22.)

1. In a flower stand of the type described, supporting legs, a table top rotatably carried thereby and having a centrally positioned depending drain pipe, and a platform carried by the stand for supporting a waste receptacle beneath the drain pipe.



1,451,516. FLEXIBLE TRACK AND THE LIKE. OSCAR STYLES PENN, Old Charlton, London, England, assignor to Roadless Traction, Limited, London, England. Filed Aug. 22, 1922. Serial No. 583,576. 6 Claims. (Cl. 305—10.)

1. In a chain or like coupling, a plurality of members, interlocking devices at the adjacent ends of two members each having an internal spherical surface, a ball interposed between adjacent spherical surfaces, and a flexible covering enclosing the joint thus formed to exclude dust.

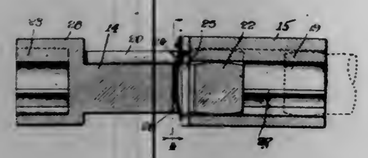


1,451,517. SPRING WHEEL. WILLIAM H. SMITH, Bridgeport, Conn. Filed Feb. 27, 1922. Serial No. 539,674. 2 Claims. (Cl. 152—29.)

1. A spring wheel comprising a hub member including an inner band forming a portion of the hub, a plurality of resilient circular concentric bands of sheet metal disposed about said hub band and a plurality of spring elements disposed between adjacent ones of said bands, each of said elements comprising a ring of resilient sheet metal, the spring elements of each series being in side by side spaced relation and said elements being unconnected with each other and attached only at their inner and outermost points to the bands, the series of spring elements between adjacent bands being in staggered relation to those of the series at either side thereof, said bands being spaced gradually lesser distances apart inwardly, and said spring elements of the series of spring elements gradually decreasing in size inwardly, and cushion blocks

having concave side faces conforming to the spring elements and interposed between said elements for resisting flexing of the latter.

1,451,518. SHUTTING OR FASTENING CONTRIVANCE. ROBERT WEBER, Dresden, Germany. Filed May 25, 1920. Serial No. 384,243. 3 Claims. (Cl. 292—261.)

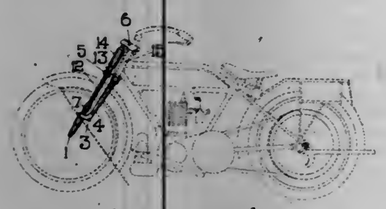


1. In a closure-fastener, simultaneously acting as buffer for use at windows, doors, ventilating flaps and the like, a casement, having two brackets projecting therefrom, said brackets being provided with elongated slots, said slots being inclined against the opening movement, a roller, said roller being provided with trunnions, said trunnions being movable in said slots, said roller being normally held on the axis of rotation of the window-sash, means for guiding said roller by its trunnions in upward direction as soon as the window-sash provided with said arrangement shall be moved in order to be opened and closed whereby said roller returns automatically in its original position after each movement of the same.

1,451,519. ROLLING-MILL COUPLING AND SPINDLE. HENRY W. WILSON, Duluth, Minn. Filed Nov. 24, 1920. Serial No. 426,172. 4 Claims. (Cl. 64—91.)

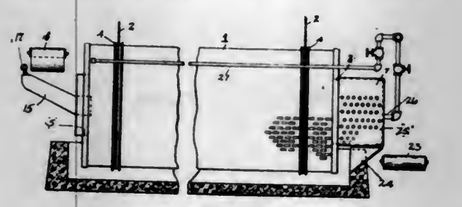
1. In a rolling mill construction, means adapted to transmit power from a driving wobbler to a driven wobbler, comprising a coupling and a spindle associated together, the coupling consisting of a single casting hav-

ing a multiplicity of straight interior projections extending longitudinally from end to end, one end being adapt-



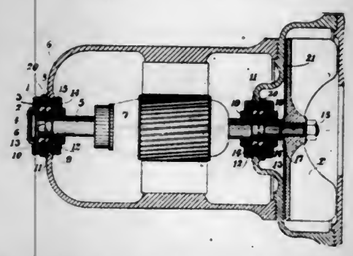
ed to engage one wobbler, the other end being adapted to engage one end of the spindle, the other end to the spindle being adapted to engage the other wobbler.

1,451,520. ADVERTISING SIGNBOARD WITH MOVABLE REFLECTING AND TRANSLUCENT INSCRIPTIONS. VINCENT WISNIEWSKI, Berlin, Germany. Filed Sept. 16, 1922. Serial No. 588,562. 5 Claims. (Cl. 40—133.)



1. An advertising sign board for day or night advertising, comprising a casing, a front closure for said casing provided with diaphanous characters, a source of illumination in said casing behind said closure and translucent mirror interposed in said casing between said closure and source of illumination whereby said mirror will reflect light from a source exterior to said casing through said transparent characters and will permit the light from said source of illumination to pass through said characters.

1,451,521. WHEEL FORK. HERBERT OLIVER WOOD, Saltaire, England. Filed Apr. 7, 1920. Serial No. 371,869. 6 Claims. (Cl. 208—96.)

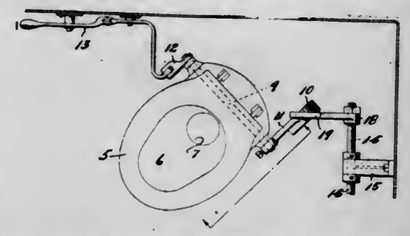


1. A fork support for vehicle wheels comprising a pair of spindles, a wheel axle supported on said spindles, a fork supporting said spindles, a rigid steering fork, means to allow of relative axial movement between said spindles and said steering fork, and means to prevent binding of said spindles within said supporting fork on the distortion of said spindles.

1,451,522. MECHANISM FOR THE RECOVERY OF PAPER STOCK. BURKE M. BAXTER, Cleveland, Ohio, assignor to American Reduction Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 20, 1920. Serial No. 375,214. 5 Claims. (Cl. 92—35.)

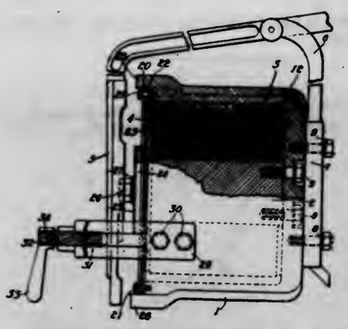
1. In mechanism of the character described, the combination with a suitable tank for containing liquid, of a drum rotatably supported with its lower portion submerged in such liquid, said drum having its cylindrical wall formed with perforations and having intake and discharge openings in its respective ends; means for feeding the material to be treated into such first-named opening; and other means adapted to automatically remove residual material through such discharge opening as said drum rotates, said last-named means including a triangular, perforated plate mounted in the interior angle formed between the cylindrical wall of said drum and the adjacent end-wall thereof, and an angle-bar reinforcing the free edge of said plate and having an end projecting into such discharge opening.

1,451,523. BEARING MOUNTING. CARL N. BENSON, New York, N. Y., assignor to The Skayef Ball Bearing Company, a Corporation of Connecticut. Filed Apr. 20, 1922. Serial No. 555,688. 5 Claims. (Cl. 64—36.)



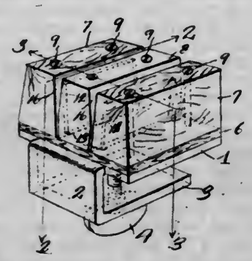
5. The combination with a shaft, of a housing therefor provided with hubs at its respective ends, of a pair of housing sleeves of substantially equal length mounted in the said hubs respectively, an anti-friction bearing comprising an inner and an outer ring and a series of rolling elements mounted within each sleeve, the shaft being mounted upon the inner rings of the anti friction bearings, distance pieces of unequal length respectively located within the housing sleeves, interchangeable caps having screw threaded connection with the ends of the housing sleeves and adapted to limit the outward movement of the distance pieces.

1,451,524. CONTROLLING MECHANISM FOR TOILET STOOLS. BENJAMIN L. BIRKHOLZ, Colonia, N. J. Filed Nov. 8, 1920. Serial No. 422,529. 7 Claims. (Cl. 4—17.)



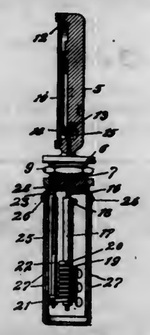
1. The combination with a toilet closet and the ordinary discharging mechanism of the toilet stool therein, of a combined locking and actuating means cooperating with said discharging mechanism, a shaft upon which said combined locking and actuating means is mounted, one end

of said shaft projecting exteriorly from said toilet closet, a hand-lever on the exterior end of said shaft, and a fixed quadrant plate having a quadrant flange provided



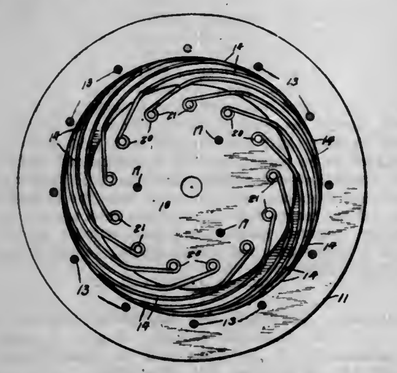
with a neutral notch and a lock notch selectively engageable by said hand-lever to release or lock said ordinary discharging mechanism as desired.

1,451,525. ELECTROMAGNET. EDGAR M. BOUTON, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 16, 1920. Serial No. 351,847. 9 Claims. (Cl. 175—336.)



9. In an electromagnetic braking device, the combination with a magnetizable core member, an energizing coil, a magnetizable casing for enclosing and for positioning the said member and the said coil, and a magnetizable brake base on which is mounted the said casing, of an armature member pivotally mounted on the said base and constituting a portion of two parallel magnetic circuits, one of which extends through the said core member and the said casing, and the other of which extends through the said core member and the said brake base.

1,451,526. KNIFE SHARPENER. BYRON E. BOWLES, Council Bluffs, Iowa. Filed June 29, 1921. Serial No. 481,230. 1 Claim. (Cl. 76—86.)



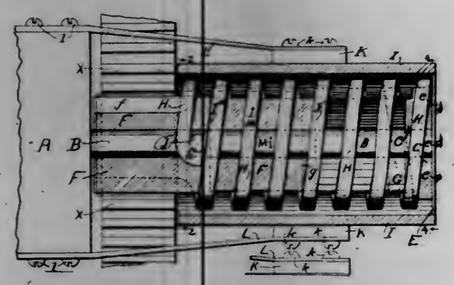
A knife sharpener comprising a base plate, a clamping member carried by said base plate whereby said base plate may be detachably secured to a support, a wooden member disposed on said base plate and of substantially the same size as the base plate, three spaced vertically disposed blocks extending upwardly from said wooden member and attached thereto by means of bolts extending therethrough and into the base plate, the adjacent walls of the blocks being oppositely inclined thereby forming wedge shaped spaces, flat sharpening elements disposed in recesses in the inclined faces of the outer blocks, the inclined faces of the centrally disposed block merging into downwardly and inwardly extending faces in engagement with the inner faces of the flat sharpening elements, and forming means for holding said sharpening elements in place, said centrally disposed block being formed from metal.

1,451,527. TEMPERATURE-INDICATING INSTRUMENT FOR MOTOR-VEHICLE RADIATORS. HARRISON H. BOYCE, Forest Hills, N. Y. Original application filed June 20, 1914, Serial No. 846,247. Divided and this application filed Feb. 20, 1919. Serial No. 278,224. 9 Claims. (Cl. 73—52.)

1. In means for indicating the thermal condition of an internal combustion engine having a water circulation cooling system including a radiator, the combination with the radiator of an instrument adapted to be mounted thereon and having temperature indicating means outside of the radiator and a temperature responsive element within the radiator operatively connected to said indicating means and adjustable means for supporting said temperature responsive element.

1,451,528. VEHICLE WHEEL. THOMAS A. BOYER, Gainesville, Tex. Filed Mar. 21, 1922. Serial No. 545,441. 3 Claims. (Cl. 152—37.)

2. A vehicle wheel having radially spaced hub and rim members, the hub member having kerfs, springs seated



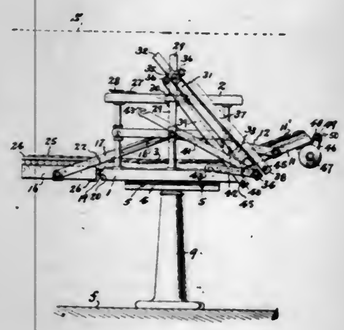
snugly and for a substantial part of their length in said kerfs, said springs at their inner ends having rolls, the kerfs being enlarged to accommodate said rolls, said springs projecting beyond the periphery of the hub member and arranged on curves substantially tangential to the periphery of the hub member and engaging the rim member at their free ends, side plates overlapping said hub member and springs and rim, and bolts passing through said side plates and rim.

1,451,529. RESISTOR ELEMENT. QUINCY A. BRACKETT, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 5, 1919. Serial No. 315,394. 7 Claims. (Cl. 219—74.)

1. In combination with an insulating base, fixed spaced metallic projections embedded in said base, and means for attaching a resistor to said projections.

1,451,530. ELECTRIC STARTER FOR INTERNAL-COMBUSTION ENGINES. ODILON BRISBOIS, Chicago, Ill. Filed Feb. 7, 1921. Serial No. 443,172. 5 Claims. (Cl. 74—7.)

1. A rotatably mounted shaft, means to drive said shaft, a cylinder concentric to said shaft, and a yielding shaft in said cylinder, in combination with means to attach one end of said yielding shaft to said first shaft, a member provided with external gear teeth loosely mounted on said first shaft, and a projecting member on said loosely mounted member arranged to engage with said yielding shaft and engaged with said cylinder, and adapted to be moved laterally a determined distance by the rotation of said yielding shaft, and said yielding shaft arranged to engage said abutment upon the completion of the lateral travel thereof and turn said projection, said loosely mounted member and said cylinder around the axis of said shaft, and means tending to retard rotation of said cylinder.

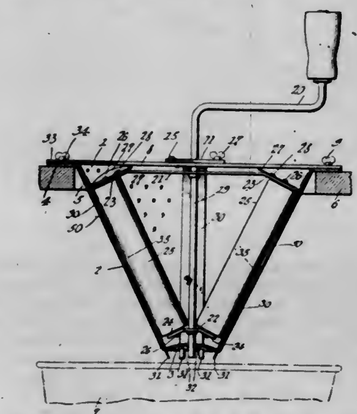


1,451,531. METHOD OF MANUFACTURING ANTI-FRICTION BEARING RINGS. HAROLD E. BRUNNER, Larchmont, N. Y. Filed Jan. 6, 1922. Serial No. 527,445. 6 Claims. (Cl. 29—149.5.)

1. The method of producing grooves in bodies, which consists in providing a pair of members adapted to meet at a plane bisecting the contemplated groove, then spacing the said members apart, and then forming an annular

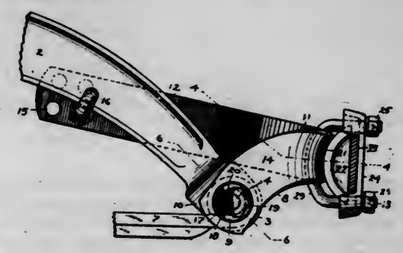
groove therein having in cross section the form of a continuous arc.

1,451,532. CONVERTIBLE BABY CRIB AND SEAT FOR AUTOMOBILES. LOUIS B. BUCHNER, Caldwell, N. J. Filed Dec. 6, 1921. Serial No. 520,259. 3 Claims. (Cl. 155—44.)



2. In a device of the kind described, a horizontal bottom body having fixed upright sides, means for supporting said bottom body, an adjustable back member connected with the rear end of said bottom body movable to either upright or substantially horizontal position, a convertible member providing either a foot-rest or tray, stays pivotally connected with the sides of said convertible member, the inner ends of said stays having longitudinal slots therein, pivot studs projecting outwardly from said upright sides of said bottom body intermediate their upper and lower ends with which said slotted ends of said stays are engaged, cooperative means on the rear edge of said convertible member and the forward edge of said bottom body for coupling the former in foot-rest relation to the latter, and additional cooperative means on the rearward portion of the sides of said convertible member and the forward portion of the upright sides of said body member for coupling said convertible member in tray relation to the latter.

1,451,533. DENTURE. HOUSTON MUNROE CARROLL, Sr., San Antonio, Tex. Filed Nov. 13, 1922. Serial No. 600,590. 2 Claims. (Cl. 32—4.)

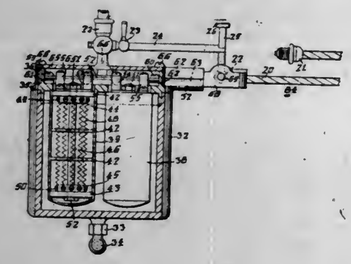


2. In a device of the class described, a lower set of artificial teeth comprising a plate; a combined retainer and tooth coacting with the rear portion of the plate and having a grinding surface, the retainer and tooth including a laterally projecting part; and means for securing the retainer and tooth to the plate, said means being extended beneath said part.

1,451,534. TOMATO STRAINER. JOHN CHOPPA, New Haven, Conn. Filed July 23, 1921. Serial No. 487,066. 6 Claims. (Cl. 100—47.)

1. In a device of the class described, a receptacle; a pressure member cooperating with the receptacle; means for mounting the pressure member for orbital movement; and a resilient retarder extended longitudinally of the receptacle and located in the path of the pressure member.

1,451,535. APPLIANCE FOR ATTACHING BUMPERS ADJUSTABLY TO AUTOMOBILES. WILLIAM G. COX, Cleveland, Ohio, assignor to Cox Brass Manufacturing Company, Albany, N. Y., a Corporation of New York. Filed Nov. 13, 1922. Serial No. 600,527. 3 Claims. (Cl. 293—55.)

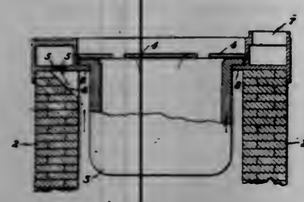


1. A loop-shaped bracket having rearwardly extending attachment arms and a concavo-convex front portion, a rounded clamping segment seated within the concaved side of said front portion, and a yoke-shaped clamping device and associated clamping means adapted to secure a bumper and said segment jointly together in rotatable adjustable position upon said bracket.

1,451,536. TIRE TUBE. SOLOMON L. DAVIS and EARL H. RINEHART, El Paso, Tex. Filed Nov. 5, 1921. Serial No. 513,078. 1 Claim. (Cl. 152—13.)

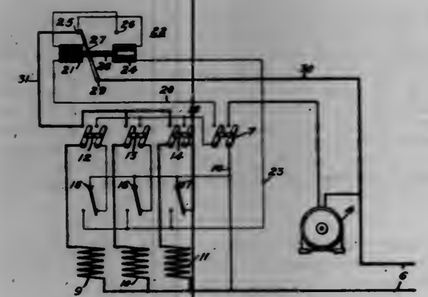
A pneumatic tube of the character described comprising an outer wall, an inner wall and an intermediate wall dividing the space between the outer and inner walls into circumferentially extending chambers, resilient material filling the outer chamber, resilient material of greater consistency than the first mentioned material filling the inner chamber, said walls and material being slightly tapered toward one end, and at the opposite end the outer and inner walls extending substantially beyond the intermediate wall and said resilient materials as and for the purpose specified.

1,451,537. ELECTRIC HEATER. MANUEL D. DOMINGUEZ, New Orleans, La. Filed May 1, 1922. Serial No. 557,691. 6 Claims. (Cl. 219—39.)



1. An electric heater comprising, in combination, a casing, a removable cover for said casing, cylinders carried by and projecting from said cover, heating elements contained in said cylinders, buss bars attached to said cover, and electrical connections from said bus bars to said heating elements.

1,451,538. VENTILATOR. FRANK ENGEL, Niagara Falls, N. Y., assignor to U. S. Light & Heat Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed Sept. 25, 1919. Serial No. 326,114. 3 Claims. (Cl. 98—55.)



2. In combination, a fire box wall, a pot and a ventilator supported by said wall, said ventilator comprising a frame work forming a passageway surrounding the upper edge of said pot, said framework having apertures communicating with said passageway from between

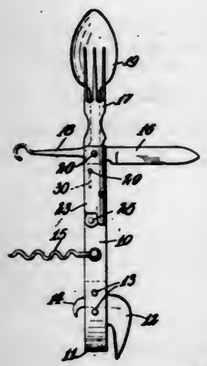
said wall and said pot and from points adjacent to the top of said pot and also having an exhaust aperture

through which fumes may be drawn off from said ventilator.

1,451,539. ELECTRIC HEATING SYSTEM FOR IRONING MACHINES. FRANK F. FORSHEE, Flint, Mich., assignor to Westinghouse Electric Products Company, a Corporation of Michigan. Filed Feb. 14, 1921. Serial No. 444,728. 9 Claims. (Cl. 219—20.)

1. In an electrically heated apparatus, the combination with a motor for driving said apparatus, a switch for controlling said motor circuit, and electric heating means for said apparatus, of circuit-controlling means for said heating means operated in accordance with said motor switch.

1,451,540. MANUFACTURE OF SELF-HARDENING REFRACTORY ARTICLES. WILLIAM A. FRANCE, Philadelphia, Pa. Filed Dec. 22, 1920. Serial No. 432,533. 13 Claims. (Cl. 106—9.)

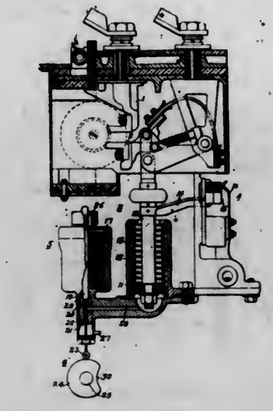


1. The method of manufacturing refractory articles, such as furnace-lining bricks, which consists in mixing magnesite with other elements including magnesium chlorid in a molten condition, forming the same, and finishing the resultant by subjecting it to the drying action of air and without burning.

1,451,541. METHOD OF AND APPARATUS FOR MAKING PROPELLERS. LOUIS T. FREDERICK, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 15, 1919. Serial No. 297,352. 5 Claims. (Cl. 18—56.)

1. The method of curing a propeller formed of fibrous sheet material and a binder which comprises subjecting the propeller to heat and pressure in a mold to partially cure and harden the binder, clamping the propeller with the thrust faces of its blades at the desired angles and baking the propellers to complete the curing and hardening of the binder.

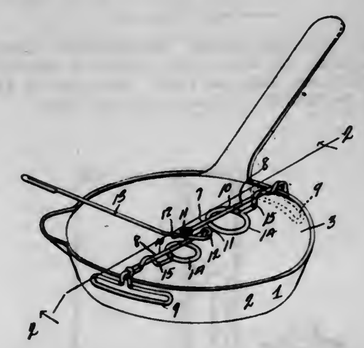
1,451,542. COMBINATION UTENSIL. ANDREW FTYKLO, Braznell, Pa. Filed Nov. 1, 1921. Serial No. 511,987. 1 Claim. (Cl. 7—16.)



In a composite implement, a body comprising a handle formed of a plurality of flat metal strips, a plurality of tools secured at each end of said body, one tool at one end of said body being partially comprised of curved portions of a pair of said metal strips, said curved portions projecting laterally to either side of said body, the plurality of tools at the opposite end of said body being pivoted to said body and adapted to be positioned between said metal strips when they are in inoperative position, a spring finger located between a pair of said metal strips for each of said pivoted tools, said spring fingers acting to hold said tools either in operative or in inoperative position, a shaft projecting transversely of the body and extending through said strips, a plurality of cams fixed to said shaft for acting on the spring fingers to render the release thereof more facile, a member fixed to one end of said shaft adapted to be manually operated to cause the cams to act on said spring fingers, and squared portions of said pivoted tools for coperation with said spring fingers.

1,451,543. ELECTROPLATING WITH ZINC. JOSEPH HAAS, Jr., Muncie, Ind., assignor to The Roessler & Hasslacher Chemical Company, New York, N. Y., a Corporation of New York. Filed Sept. 16, 1922. Serial No. 588,567. 14 Claims. (Cl. 204—18.)

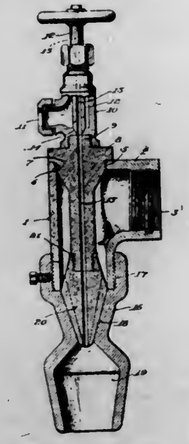
1. In zinc electroplating from a cyanid bath, the step which consists in depositing zinc in the presence of mercury to produce a coating of zinc alloyed with a small percentage of mercury.



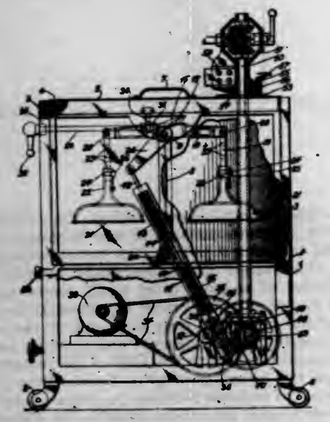
1,451,544. CONTROL APPARATUS. RUDOLF E. HELLMUND, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 9, 1919. Serial No. 288,797. 8 Claims. (Cl. 200—5.)

1. The combination with a plurality of movable control members, of means for mechanically actuating the first of said members to a certain position, and means normally responsive to the position of a second member for itself

electrically preventing the return movement of the first member.



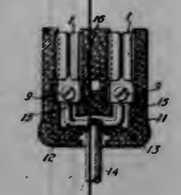
1,451,545. FRYING-PAN-COVER HOLDER. FRED INGERSOLL, Omaha, Nebr. Filed July 20, 1922. Serial No. 576,192. 3 Claims. (Cl. 53—7.)



1. The combination with a frying pan having a cover thereon, said cover frictionally engaging the inner periphery of the frying pan, of a cover holder, said holder comprising angularly shaped members, jaws carried by said angularly shaped members and engaging opposite sides of the frying pan, said members also having inwardly extending arms, a handle member, the inner ends of the inwardly extending arms being pivotally connected to the handle member at points so spaced that when the handle member is forced downwardly it will be held in engagement with the cover and the jaws in close and binding engagement with the sides of the pan, and members extending downwardly from the arms and engaging the upper side of the cover.

1,451,546. BURNER. THOMAS F. KENT, New York, N. Y. Filed Oct. 4, 1921. Serial No. 505,308. 2 Claims. (Cl. 158—76.)

1. In a burner of the character described, in combination, a needle valve whose stem is hollow throughout, said needle valve being provided with a fuel chamber, and means of attachment to a fuel supply, a member secured to the valve and having a fuel-duct therethrough, said member carrying at one end a conical head having circumferential grooves thereon, a member surrounding the first mentioned member and forming a chamber for the reception of a medium to be mixed with the fuel, a nozzle secured to the hollow member and provided with a seat for the conical head, and means for adjusting said nozzle to and from said head for the purpose set forth.

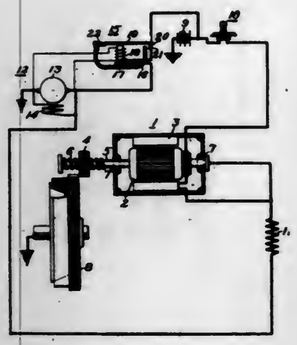


1,451,547. WASHING MACHINE. JULIUS H. KINTZELE, St. Louis, Mo., assignor to Ste. Genevieve Wash Machine Corporation, Ste. Genevieve, Mo., a Corporation of Missouri. Filed Dec. 27, 1921. Serial No. 524,873. 6 Claims. (Cl. 68—19.)

4. A washing machine, comprising a tub, a shaft journaled for rocking movements below and near the top of the tub, a rocker arm within and below the top of the tub, a latch device releasably holding said arm in connection with said shaft for rocking movements therewith, an arm

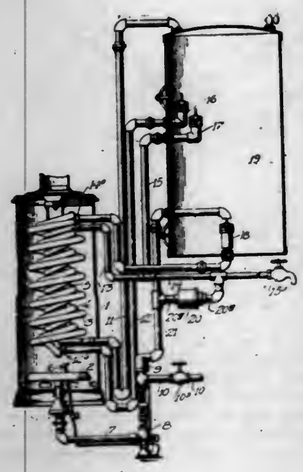
suspended from the end of said rocker arm, an inverted bowl-shaped plunger supported by said swinging arm, and connections for rocking said rock shaft from said gearing.

1,451,548. CONTACT TERMINAL. HENRY KREISHELD, Mansfield, Ohio, asignor to Westinghouse Electric Products Company, a Corporation of Michigan. Filed Nov. 20, 1919. Serial No. 339,264. 2 Claims. (Cl. 173—332.)



1. A unitary terminal device for electrical conductors comprising a body portion having three extensions, one of said extensions being return-bent against said body portion and two of said extensions being bent at right angles to said body portion on the same side thereof and parallel to each other, and a plurality of longitudinally slotted end portions, transversely bent to arcuate shape to form a tubular socket of circular cross section.

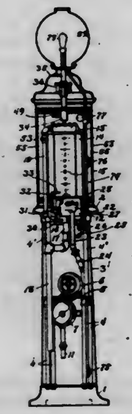
1,451,549. LIFTING DEVICE. NICHOLAS W. KYLE, Colfax, Ill. Filed Oct. 3, 1921. Serial No. 504,945. 3 Claims. (Cl. 298—19.)



1. In a device of the class described, the combination of a support, a tiltable member, a rotor mounted on said support and including a pair of pins spaced equidistantly from the axis thereof and diametrically opposite each other, a series of at least three toggle levers coupling said rotor to said tiltable member, the terminal levers being respectively pivoted at their outer ends to one of said rotor pins and the tiltable members and pivotally connected at their inner ends with the ends of the intermediate toggle lever, the latter-named pivotal connections having slots therein, the distance between the pivotal connections of said levers to each other being equal to the distance between the pins on said rotor, and the said slots in said pivotal connection adapted to receive and engage pins on said rotor, the construction being such that the levers are adapted to swing outwardly in extended relation in alinement with each other and to collapse in nested arrangement with each other and the rotor, and means for transmitting motion to the rotor.

1,451,550. STARTING SYSTEM FOR AUTOMOBILES. WARREN P. LOUDON, Edgewood Park, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 14, 1920. Serial No. 373,742. 5 Claims. (Cl. 290—36.)

1. In a starting system, the combination with a starting motor, an engine gear wheel, a motor pinion movable axially into mesh with the engine gear wheel, and a resistor connected in series with said motor, of means for electrically connecting said motor to said gear wheel upon engagement therewith by the pinion to short-circuit said resistor.

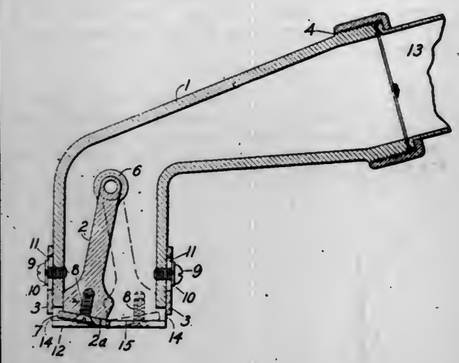


1,451,551. WATER-HEATER MECHANISM. THOMAS MUEHLEISEN, San Diego, Calif., asignor of one-third to Conrad Musch, Fullerton, Calif. Filed Jan. 20, 1920. Serial No. 352,762. 5 Claims. (Cl. 126—362.)

1. An automatic storage water heater mechanism, including a triple coil heater, a storage tank, a cold water conductor communicating with the lower portion of said storage tank, water conducting means connecting the lower ends of two of the coils of said triple coil heater with the interior of said tank intermediate its ends and the lower end of the other coil of said triple coil heater

communicating with the upper end of said tank, the upper end of one of the two first mentioned coils communicating with a service faucet and with the interior of said tank intermediate its ends and the upper ends of the other two coils communicating with the interior of said tank at its lower end in close proximity to the exit end of the cold water conductor.

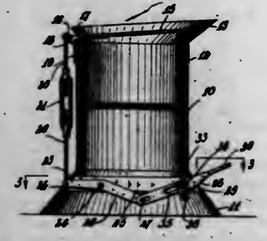
1,451,552. DISPENSING APPARATUS. MATTHEW B. MUXEN, Fort Wayne, Ind., assignor to Tokheim Oil Tank and Pump Company, a Corporation of Indiana. Filed Apr. 10, 1919. Serial No. 288,967. 19 Claims. (Cl. 221—100.)



1. In liquid dispensing apparatus, a measure having means in connection therewith for filling and emptying the same, and having also a valve-controlled drain independently operable respecting the emptying means; a float in the measure having a rack-bar in connection therewith; a counter having normal driven relation with the rack-bar; and a mechanism associated with the valve-controlled drain for the disengagement of the counter with the rack-bar when the drain-valve is in open position.

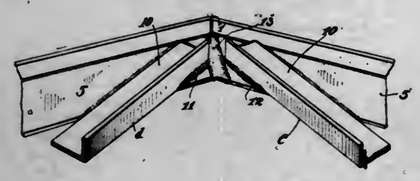
5. In dispensing apparatus having a measure for holding and displaying a quantity of liquid, a filling means for the measure; an emptying means for the measure; a valve controlled drain for the measure independently operable respecting the emptying means; a float mechanism in the measure; a counter having normal driven relation with the float mechanism; and means for the disengagement of the counter with the float mechanism when the drain valve is opened.

18. In a dispensing device, the combination with a bowl including means for filling it with liquid, of a discharge means in communication with the bowl, a valve controlled drain for the bowl independently operable respecting the discharge means, and a lock controlled movable member adapted to prevent operation of the discharge means and to automatically open the valve of said drain.



1,451,553. PNEUMATIC CLEANING NOZZLE. JESSE O. REED, Washington, D. C., assignor to Assistant Secretary of Agriculture of the United States of America. Filed Jan. 4, 1923. Serial No. 610,710. 1 Claim. (Cl. 15—155.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

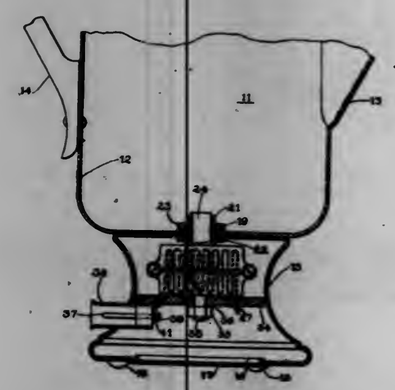
An improved pneumatic cleaning nozzle, comprising a casing adapted to receive air, a valve affixed to the interior of said casing, said valve extending to the mouth of said casing and adapted to be swung in a lateral direction to either side of the casing, and adjustable



plates affixed to the sides of the casing at the mouth thereof, adapted to regulate the flow of air into said casing.

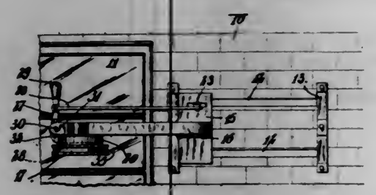
1,451,554. SANITARY CUSPIDOR. ANTONINA RYBICKY, New London, Conn. Filed Nov. 16, 1922. Serial No. 601,246. 2 Claims. (Cl. 4—39.)

1. In a cuspidor, a hinged cover, an extensible rod connected at one end thereto, a lever fulcrumed between its ends and having said extensible rod connected to one end thereof, a second lever having one end connected to the other end of said first lever, and having its opposite end in the form of a foot-pedal, and means for varying the fulcrum point of the said lever with relation to its ends.



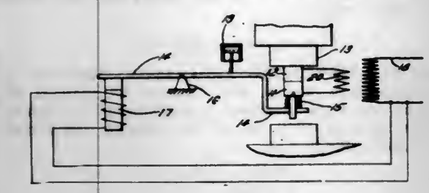
1,451,555. ARC-WELDED TRUSS. WILLIAM SCHENSTROM, Brooklyn, N. Y. Filed Oct. 11, 1920, Serial No. 416,011. Renewed Nov. 4, 1922. Serial No. 599,160. 8 Claims. (Cl. 219—4.)

1. In building construction, a plurality of beams, each throughout its entire extent of uniform cross section,



substantially the same chemical composition and in substantially the same state, of unannealed steel having a hardness in the nature of temper; portions of two or more of said beams having mutual surface-contacting portions; and an electric arc weld joining said two or more beams along the edge of said surface-contacting portions.

1,451,556. ELECTRIC PERCOLATOR. FRANK THORNTON, Jr., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 29, 1922. Serial No. 571,759. 5 Claims. (Cl. 219—43.)

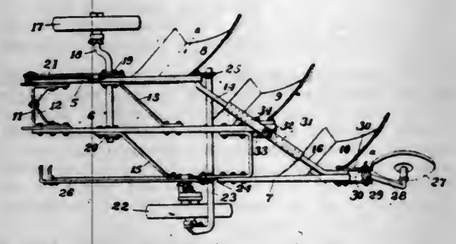


1. In a percolator, in combination, a fluid container, a tubular member constituting a vaporizing chamber secured to the bottom of said container and depending therefrom and having a plurality of integral laterally extending flanges having sides substantially parallel to the longitudinal axis of the tubular member, heating elements engaging the outer sides of said flanges and means for clamping said heating elements against said flanges.

1,451,557. CLOTHESLINE. FRANK TOTH and KÁROLY GOMBOS, Phoenixville, Pa. Filed Jan. 7, 1922. Serial No. 527,692. 4 Claims. (Cl. 68—3.)

1. In a device of the class described, a pulley adapted to have a clothesline looped therearound, a support on which said pulley is movably mounted to permit of positioning the pulley in front of or to one side of a window opening, means for locking said pulley to said support, means for locking said pulley against rotation, connecting means between said locking means, and a handle adapted to operate said connecting means.

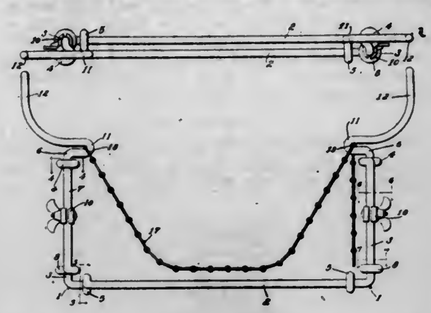
1,451,558. ELECTROPERCUSSIVE WELDING SYSTEM. CHARLES F. WAGNER, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 14, 1921. Serial No. 469,499. 8 Claims. (Cl. 219—10.)



1. In an electro-percussive welding system, means for separating electrodes to be welded comprising a solenoid-actuating contact member.

1,451,559. SECTION INSULATOR. NILS A. WAHLBERG, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 3, 1921. Serial No. 474,717. 12 Claims. (Cl. 191—39.)

12. A trolley-conductor device comprising an arc chute having an insulated magnetizable side member adjacent an arc gap.

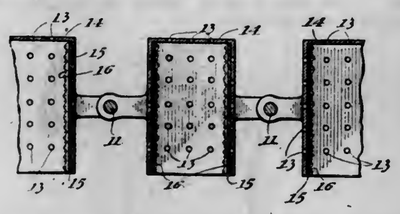


1,451,560. PLOWBRACE. HENRY C. WELKER, Minneapolis, Minn., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Mar. 23, 1920, Serial No. 368,059. Renewed Sept. 11, 1922. Serial No. 587,565. 7 Claims. (Cl. 97—93.)

1. In a plow frame, the combination of a plurality of spaced beams connected together at the front, means connecting the rear portions of the beams, and a transversely positioned member connected with the rearward portion of an intermediate beam and having its ends supported by the means connecting the rear portions of the beams.

1,451,561. ARM SUPPORT. CHARLES W. ALLEBRAND and CHRISTOPHER G. GUYATT, Duquesne, Pa. Filed Aug. 5, 1921. Serial No. 490,050. 2 Claims. (Cl. 45—50.)

1. In a device of the class described, base members comprising upstanding parts having eyes, supports vertically adjustable in the eyes and having eyes slidable upon said parts, each base member having an eye receiving the other base member slidably, to permit an adjustment in the distance between the supports, a flexible sling connecting

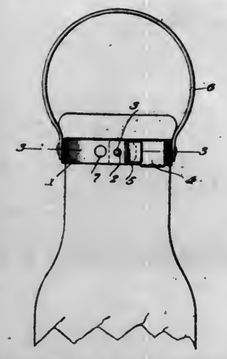


the supports and clamping means cooperating with the supports and with said parts to hold the supports at adjusted heights.

1,451,562. COMB. HENRY W. BABCOCK, Bloomington, Ill. Filed Apr. 10, 1922. Serial No. 551,401. 5 Claims. (Cl. 132—45.)

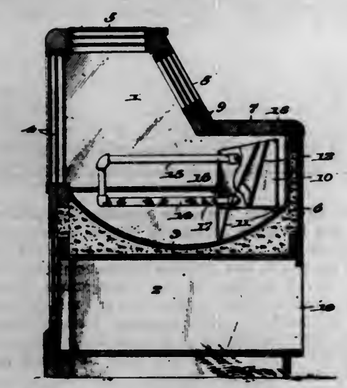
5. A comb for facilitating the cutting of hair comprising a body shaped to conform to the contour of the head, and forwardly projecting tongues formed on the body having their forward active faces disposed at an angle to the body.

1,451,563. BOAT-PROPELLING MEANS. CARL J. BAER, Riverside, Ill. Filed Nov. 17, 1919. Serial No. 338,591. 5 Claims. (Cl. 170—137.)



4. Propelling means for boats comprising chambered elements provided with perforated walls permitting free passage of air, and instrumentalities adapted to successively present said elements to the water at an angle, whereby the chambers thereof may be automatically filled with water, and to withdraw said elements from the water at an angle, whereby to automatically discharge the water from said chambers, substantially as described.

1,451,564. BOTTLE ATTACHMENT. WILLIAM W. EDMISTER, Kokomo, Ind. Filed Feb. 20, 1922. Serial No. 538,136. 1 Claim. (Cl. 215—100.)

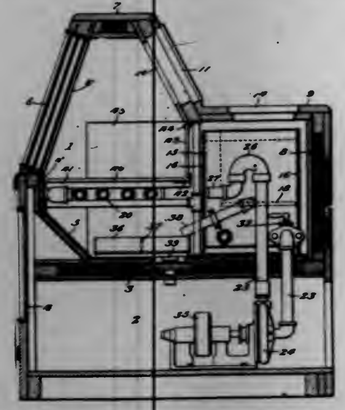


A bottle carrier of the character described comprising a band being provided with a hole adjacent one end, a stud projecting from the outer surface of the opposite end and being designed to engage the hole to connect the two ends together and forming a ring shaped member thereby, a clip slidably secured around the band and being adapted

to pass over the stud and hole when said stud is operatively associated therewith to hold the stud locked therein, a finger piece secured to the clip and lying in the same

horizontal plane therewith to facilitate its operation, a bail pivoted to the ring and a handle rigidly secured to the ring for the purpose specified.

1,451,565. DISPLAY REFRIGERATOR. ALBERT H. EHRLICH, St. Joseph, Mo. Filed Aug. 26, 1921. Serial No. 495,649. 2 Claims. (Cl. 62—37.)

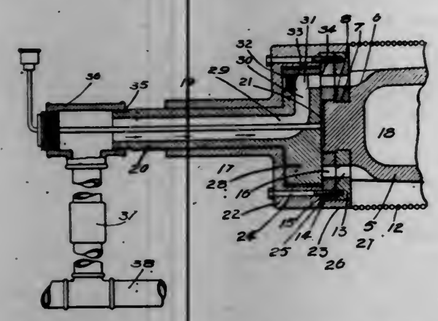


1. A refrigerator comprising a display chamber provided with a curved bottom, and transparent front walls and top, a rear horizontal counterportion provided with lids and an inclined transparent door arranged between the counterportion and the rear of the top, a perforated shelf spaced from the bottom of the display chamber, a cooling tank provided with a plurality of inclined tubes, a cooling coil extending laterally from the tank toward the front of the chamber and beneath the display shelf being connected to the lower part of the tank and having an outlet leading to the upper part of the tank.

1,451,566. REFRIGERATOR DISPLAY COUNTER. ALBERT H. EHRLICH, St. Joseph, Mo. Filed Feb. 25, 1922. Serial No. 539,248. 4 Claims. (Cl. 62—37.)

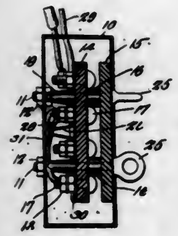
1. In a refrigerating display counter, a cooling display chamber, the inner front surface of said cooling display chamber having a substantially vertical portion, an upwardly and rearwardly extending window portion connected at the top of said vertical portion, and a rearwardly and downwardly sloping floor connected to the lower portion of said vertical portion, a shelf adjacent the vertical portion for dividing the chamber into an upper display compartment and a lower cooling compart-

ment, and a circulating system in the upper part of said cooling chamber extending between the sloping floor and



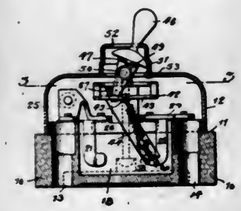
said shelf, whereby an adequate and efficient circulation of air is permitted in both the cooling and display compartments.

1,451,567. GOLD-PANNING MACHINE. CHARLES E. ERICKSON, Delta, Utah, and MATTHEW JAMES MAST, Grand Junction, Colo. Filed Nov. 26, 1921. Serial No. 517,868. 1 Claim. (Cl. 83—88.)



A separator of the character specified comprising a frame, a pan having a corrugated copper bottom coated upon its upper side with amalgam, deflectors in the upper portion of the pan in line with the depressions between the upwardly curved portions of the corrugations, hangers forming suspending means between the pan and frame and normally inclined to the vertical, means for imparting an intimate forward movement to the pan and a bumper for sustaining the impact of the pan upon its return movement and imparting a jar thereto.

1,451,568. VACUUM ROLL. BION B. FARNHAM, Buffalo, N. Y. Filed Aug. 11, 1919. Serial No. 316,664. 3 Claims. (Cl. 92—53.)

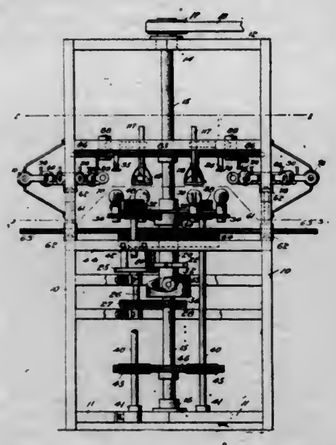


3. In a drying roll, a hub, said roll having compartments formed on the surface thereof, a head mounted at one end of the roll, a valve member mounted between the hub and head, said valve member having a central opening communicating with a lateral opening, said head having an opening communicating with the lateral opening, a piston moving in the last mentioned opening and contacting with the head, and said piston adapted to be forced into engagement with the head to move the cylinder, when steam passes through the openings.

1,451,569. PERMUTATION SWITCH. ROLAND FREDERICK, Fairmount, Ind. Filed Dec. 6, 1920. Serial No. 428,708. 2 Claims. (Cl. 200—43.)

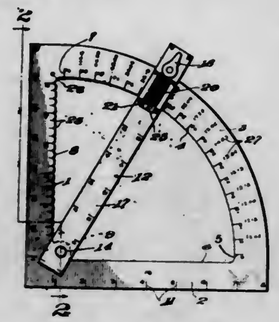
1. A device of the class described comprising a casing, an insulated member located in said casing having a plurality of openings therein, a second insulated member located in the casing and provided with a plurality of openings to correspond with the openings in the first member, a plurality of binding posts extending through the second member between said openings, a plurality of L-shaped contacts surrounding the posts adjacent the edges of the second member, a plurality of U-shaped contacts surrounding the other posts extending through said member and a plurality of pointed keys adapted to extend through the openings in said members and engaging said contacts.

1,451,570. ELECTRIC SWITCH. FREDERIC P. GATES, West Hartford, Conn., assignor to The Arrow Electric Company, Hartford, Conn., a Corporation of Connecticut. Filed Dec. 9, 1919. Serial No. 343,503. 15 Claims. (Cl. 200—67.)



1. In an electric switch, an oscillating rocker, a floating switch bar member pivotally connected therewith, a switch spring, one end of which is operatively connected to said switch bar member, in combination with a skeleton switch frame having an integral bridge piece extending at right angles to the axis of the rocker and affording a fixed support for the other end of the switch spring, a pivot joint between the rocker and switch bar member moving from one side to the other of said point of fixed support of the spring on the actuation of the rocker.

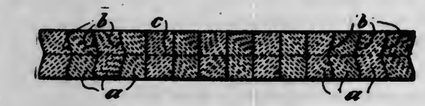
1,451,571. APPLE-PREPARING MACHINE. EDWARD E. GAY, Springdale, Ark. Filed Feb. 13, 1922. Serial No. 536,267. 10 Claims. (Cl. 146—8.)



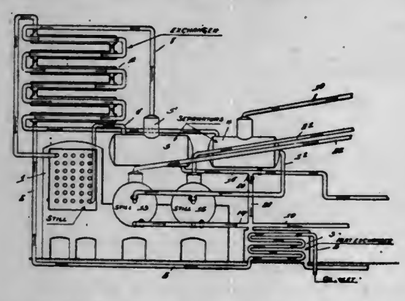
1. In a machine of the character described, an intermittently rotatable carrier, an independently rotatable

member carried thereby, an apple holder movable with said member, a paring knife, and means for reciprocating

said carrier while said holder is revolving to bring the apple into contact with said paring knife.



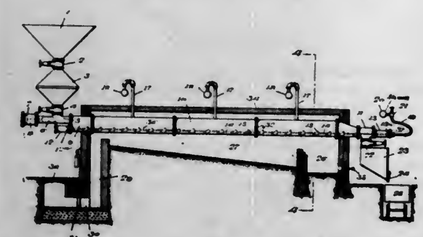
1,451,572. MEASURING INSTRUMENT. WILLIAM R. GREEN, Downers Grove, Ill. Filed Mar. 18, 1921. Serial No. 453,199. 4 Claims. (Cl. 33—93.)



1. An instrument of the class described comprising angularly disposed arms, a segment of more than 90 degrees connecting the spaced ends of said arms, a pivoting boss offset inwardly from the junction of said arms and provided with an opening, concentric with said segment and the center of which forms the apices of the angles denoted on said segment, an arm pivoted to said boss for co-action with said segment, said arm being formed of sheet metal bent to provide a hollow arm structure and provided with cutout portions in its sides forming inturned right angularly disposed clamping ears, and means for clamping said ears in gripping engagement against said segment to lock the arm in adjusted positions.

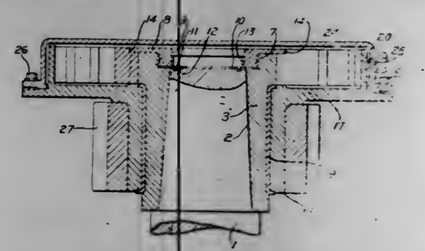
1,451,573. BELT FOR MACHINERY DRIVING. ALEXANDER HENDRY and MALCOLM ALLAN HENDRY, Glasgow, Scotland. Filed Sept. 23, 1919. Serial No. 325,614. 8 Claims. (Cl. 74—63.)

1. A belt for machinery driving comprising a plurality of strips of material arranged side by side and secured together, an unexposed surface of an inner strip in proximity to the outer strip having therein a groove extending longitudinally of the belt, substantially as and for the purpose set forth.



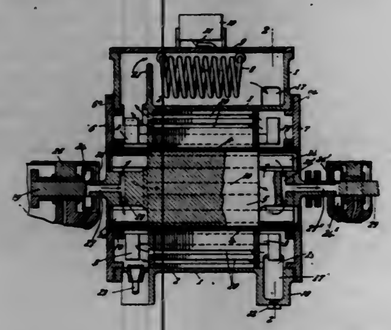
1,451,574. OIL-REFINING DEVICE. CHARLES FRED HILLMAN, Wichita Falls, Tex. Filed Mar. 13, 1920. Serial No. 365,554. 1 Claim. (Cl. 126—3.)

An apparatus of the class described comprising a pipe still, a pair of separators, a pipe line connecting the pipe still with one of said separators, a vapor pipe line connecting said separator with the other separator, a pump line for delivering the crude oil to the pipe still, portions of said line enclosing portions of the vapor line, a condenser connected with the second separator, a pair of stills, a pipe connecting the second separator with said stills so that the oil will flow to said stills by gravity, a pair of condensers connected with said pair of stills, a second pair of stills, a pipe line connecting the same with the first separator so that the oil will flow into said stills by gravity, a pumping out line connected with the bottoms of said pairs of stills, valves in said discharging lines; a by-pass pipe connecting the line leading from the first separator with the pumping out line to cut out the second pair of stills, a valve in said by-pass and means for exchanging the heat of the oil in said pumping out line with the crude oil on its way to the pipe still.



1,451,575. OIL-SHALE RETORT. GEORGE EDWARD HOLMES, Salt Lake City, Utah. Filed Dec. 27, 1919. Serial No. 347,665. 6 Claims. (Cl. 196—19.)

1. Apparatus for distilling oil shale, comprising a heating furnace, a closed horizontal retort, extending through such furnace and subjected to graduated external heat; means for admitting shale into the cooler end of said re-



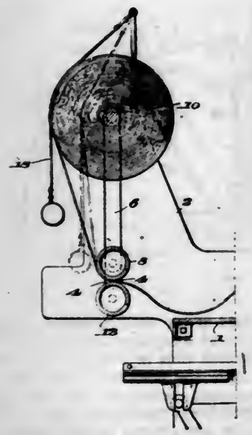
tort; reciprocating means for stirring the shale when said means moves in one direction and to move the shale along the bottom of the retort in the other direction; means for drawing off distilled products progressively along said retort; means to inject low pressure steam through the agitating means along the bottom of the retort while the shale is in process of distillation; and means for discharging the spent shale at the hottest end of the retort, substantially as described.

1,451,576. FLEXIBLE PINION. HAROLD A. HOUSTON, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 11, 1922. Serial No. 574,311. 9 Claims. (Cl. 74—29.)

1. A gear mounting comprising a shaft, a flanged hub secured thereto, a casing for housing said hub and rotatably mounted thereon, a plurality of flexible members disposed between said hub and said casing and a gear secured to an extended portion of said casing.

1,451,577. DYNAMO-ELECTRIC MACHINE. PAUL HERMANN HUDDEN JANTZEN, London, England. Filed Apr. 10, 1920. Serial No. 372,758. 4 Claims. (Cl. 171—252.)

1. A stator structure of a dynamo electric machine comprising a core having passages therethrough, windings carried by said core, a frame supporting said core, end members and an internal cylindrical member forming with said frame and enclosure for the core, the windings, the regions adjacent the ends of the core and the end parts of the windings, the said internal cylindrical member being of non-magnetic and high-resistance material, means for producing circulation of oil through the enclosed space, and means for cooling the oil in circulation.

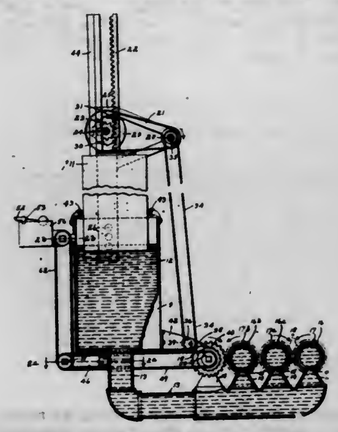


3. A stator structure of a dynamo electric machine comprising a core having passages therethrough and windings carried thereby, a frame supporting said core, end members, an internal cylindrical member of non-magnetic and high-resistance material, said frame, end members and internal member enclosing the core, the windings, the regions adjacent the ends of the core, and the end parts of the windings, and a chamber above the core, cooling means in said chamber, the said chamber being in communication with said end regions to permit circulation of oil between the chamber and the end regions and through the passages in the core.

1,451,578. SOLDERING IRON. FRANK L. KYGER, Streator, Ill. Filed Feb. 26, 1921. Serial No. 448,091. 1 Claim. (Cl. 158—26.)

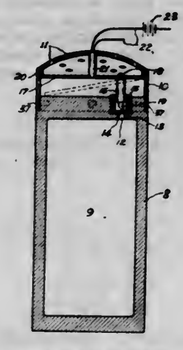
In a self-heating soldering iron, a head having a soldering point on one end thereof and provided with an inwardly extending axial bore terminating adjacent to the soldering point, the wall of the bore at the outer end thereof being internally threaded for the reception of a gas pipe connection, the head having a pair of spaced parallel slots therein disposed on opposite sides of the bore and terminating short of the opposite ends thereof and arranged in relative close proximity to certain side walls of the head and opening out through certain other side walls of the head, and means for establishing communication between the axial bore and the said parallel disposed slots.

1,451,579. WEB-FEEDING DEVICE. IGNACIO LAZAGA, Salem, Va. Original application filed Dec. 19, 1918, Serial No. 267,511. Divided and this application filed June 15, 1921. Serial No. 477,725. 7 Claims. (Cl. 242—55.)



1. In a wrapping machine, the combination of a reel, a pair of feed rollers under said reel, the strip from the reel passing downwardly therefrom and between said feed rollers, and said reel having its weight carried by the upper of said feed rollers.

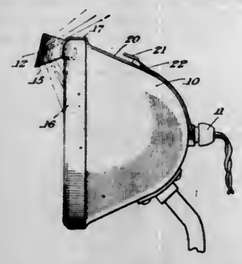
1,451,580. LIQUID MOTOR. MORITZ THEODORE LINDENBERG, Boston, Mass. Filed Jan. 30, 1922. Serial No. 532,922. 11 Claims. (Cl. 253—18.)



1. A motor comprising a series of tanks, liquid circulating means for supplying liquid thereto including conduits interconnecting said tanks as described, and rotary

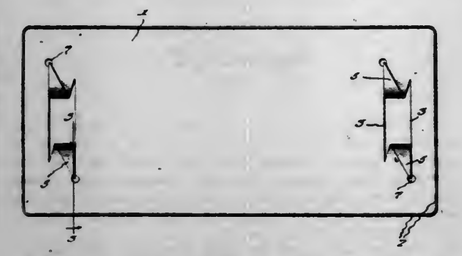
valve elements controlling the said conduits, buoyant weight non-synchronously movable in said tanks by liquid supplied to and successively exhausted from the tanks, and means for utilizing the movements of said weights to rotate said valve elements step-by-step, and to transmit unidirectional continuous rotary motion from the motor,

the liquid and the weights being arranged at different elevations, and the arrangement being such that some of the weights are left unsupported by liquid, and free to act by gravity when the accompanying tanks are being exhausted, and the other weights are caused to act by displacement when the accompanying tanks are being refilled.



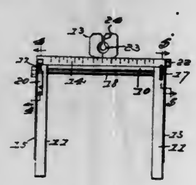
1,451,581. PROTECTIVE APPARATUS FOR SAFES AND SAFETY VAULTS. EMANUEL V. LORIG and ULYSSES G. GRAHAM, Omaha, Nebr. Filed Oct. 27, 1921. Serial No. 510,829. 10 Claims. (Cl. 109—6.)

1. Apparatus of the specified class, comprising a casing for gases under compression; a valve for opening and closing the outlet of the casing; means for opening the valve; an explosive member adapted to operate the opening means; an electric generator for firing the explosive member; a pneumatic circuit-closer connected with the explosive member and with the generator; and a safety device for rendering the circuit-closer inactive.



1,451,582. ATTACHMENT FOR HEADLIGHTS. EUGENE P. LOW, Oneida Castle, N. Y. Filed Sept. 27, 1921. Serial No. 503,571. 1 Claim. (Cl. 240—46.)

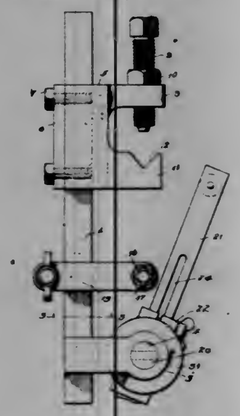
The combination with an electric head lamp for vehicles including an axially disposed lamp socket, of a reflector arranged upon the front face of the lamp to intercept rays of light from said lamp and reflect them rearwardly, means carried by the reflector for engagement with the lens retaining ring, an arm extending rear-



wardly from the reflector upon the outside of the lamp casing, an elastic band having one end looped over the lamp socket and means carried by the rearwardly extending arm for engagement by the band.

1,451,583. FLY-PAPER HOLDER. SAMUEL MCCARDIA, Strathcona, Canada. Filed Oct. 18, 1921. Serial No. 508,589. 6 Claims. (Cl. 43—115.)

5. In a fly paper holder, a plate having upwardly extending flanges on the outer surfaces thereof, upwardly projected rounded fingers arranged in spaced pairs adjacent to the ends of the plate, said fingers having pointed ends which are disposed in comparatively close relation with respect to the body plate, said body plate having openings below and in a line with the fingers, and depending flanges surrounding said openings.

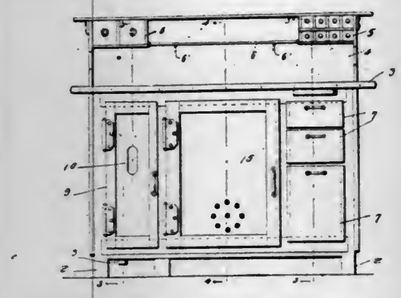


1,451,584. GUN SIGHT. JAMES R. MAPES, Canaseraga, N. Y. Filed Nov. 9, 1920. Serial No. 422,833. 1 Claim. (Cl. 33—56.)

A rear sight for guns consisting of a yoke having a cross bar and slotted side bars of which the latter are adapted for terminal securement by screws to the sides of a gun stock, a sight block movable longitudinally of the cross bar and provided with an adjusting screw for hand manipulation, a transverse spindle paralleling the cross bar and spanning the side bars in which it is journaled, pinions mounted on said spindle, arms depending

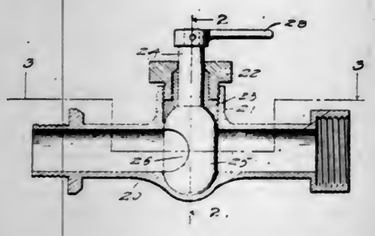
from the cross bar and of transversely dovetailed shape and slidable in the slots of the side bars, said arms being formed with rack teeth engaging said pinions, and a spring carried by one of said side bars and formed with a teat for engagement with the teeth of one of the pinions to maintain the same in a desired position of adjustment, the said spindle being provided with a hand hold for rotating it.

1,451,585. BORING MACHINE. ALISTER W. MARQUIS, Hollister, Calif. Filed Feb. 17, 1920. Serial No. 359,385. 4 Claims. (Cl. 77—62.)



1. A boring appliance comprising a T-shaped frame consisting of a longitudinal bar united to a cross bar at one end, bearing hangers offset from said cross bar and provided with aligned bearing openings, two clamps sleeved over said longitudinal bar and means for securing said clamps at different points along said bar, one of said clamps being constructed so as to receive the wrist-pin of a connecting rod and hold it parallel with the axis of said bearing openings, and the other being adapted to clamp the sides of the connecting rod between its ends, and V-shaped seats of the wrist-pin clamp opening away from the axis of the bearing openings.

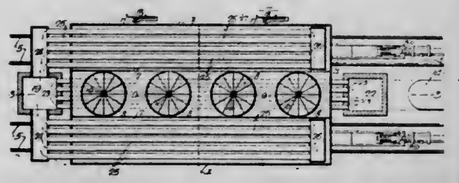
1,451,586. SINGLE-VALVE WALL REGISTER. RICHARD A. OLSON, Ironwood, Mich. Filed Dec. 11, 1920. Serial No. 429,920. 2 Claims. (Cl. 98—54.)



2. A wall register having a valve plate, means to pivotally mount said plate, said plate having an elongated slot, a resilient tongue, means passing through said slot to adjustably mount said tongue, said tongue having a shoulder to abut said register to limit inward swinging movement of said plate, and means on the tongue to resiliently engage the first mentioned means and maintain the plate in an open position.

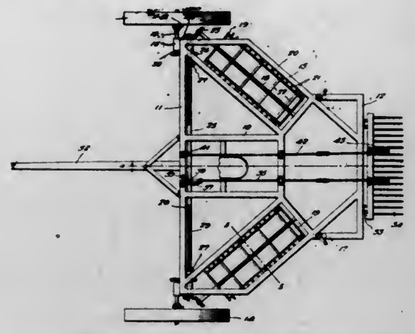
1,451,587. KITCHEN CABINET. ANTON PEDERSEN, Dagmar, Mont., assignor of one-half to Franz W. Berg, Grenora, N. Dak. Filed May 19, 1920. Serial No. 382,479. 1 Claim. (Cl. 257—9.)

A cabinet of the class described having an article compartment, a chamber at one side of said compartment and spaced therefrom to provide a moisture trap bewteen the article compartment and chamber, a second compartment in said cabinet and spaced from the article compartment and at the opposite side thereof from that at which is located, said second compartment being spaced and insulated from the article compartment, means to space said article compartment and chamber from the walls of the cabinet, said chamber having an opening through its bottom wall in alignment with an opening in the bottom wall of the cabinet, a tubular connection between said openings, said chamber having an opening in its upper end, said cabinet having an opening in one end wall, the means for spacing the chamber and article compartment from the walls of the cabinet being so arranged as to direct a temperature changing medium in through one pair of openings in the cabinet and chamber and out through the second pair of said openings, said spacing means also serving to direct said temperature changing medium about said article compartment.



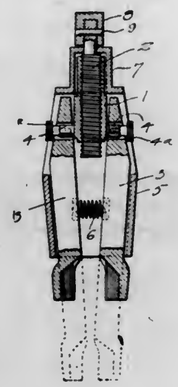
1,451,588. HOSE VALVE. ULRICH REIDT, Los Angeles, Calif. Filed Apr. 24, 1920. Serial No. 376,347. 1 Claim. (Cl. 251—91.)

A valve comprising an elongated body having its side and bottom walls offset at a point intermediate its ends, said offset in the side walls of the body being arcuate in section, said offsets in the bottom walls being semi-spherical to provide a seat, an internally screw threaded boss formed on the body in vertical alignment with said seat, a valve stem journaled in the boss, a stuffing gland in the boss, a packing in said boss and engaged by said gland and adapted to be moved inwardly thereby, a valve



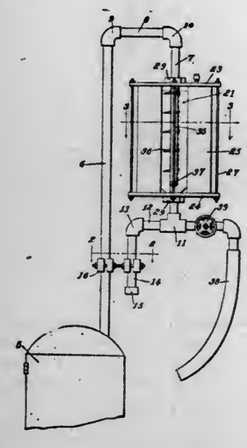
head formed on the stem, said valve head being cylindrical and provided with semi-spherical ends, the side of said valve head contacting with the arcuate portions of the offset side walls of the body, one semi-spherical end of said guide head engaging the seat and the other end engaging the packing of the stuffing gland, said valve head having a recess in one side to permit the passage of fluid through the body when said head is in one position, and said valve adapted to be held tightly on its seat by adjusting said gland inwardly and thereby compressing the packing.

1,451,589. DRIER. WALTER M. SCHWARTZ and ELWOOD B. AYRES, Philadelphia, Pa., assignors to Proctor & Schwartz, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 28, 1922. Serial No. 532,388. 8 Claims. (Cl. 34—46.)



1. The combination in a drier, of a drying chamber; means for circulating air in said chamber; a flue communicating directly with the lower portion of the chamber; a series of flues extending through the upper portion, but not communicating therewith; and means, in the chamber, for supporting the articles to be dried, said first mentioned flue admitting heated air to the drier and the other flues radiating heat derived from the products of combustion passing through the flues.

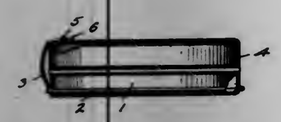
1,451,590. RAKE. OSCAR F. SCHWEDER, Billings, Mont. Filed Mar. 15, 1921. Serial No. 452,490. 1 Claim. (Cl. 56—376.)



A rake comprising a frame including front and rear transversely arranged parallel bars, traction wheels located adjacent the front transverse bar, rakes carried by the frame at each side thereof, a centrally located rake hingedly secured to the rear transverse bar at the rear of the side rakes, a shaft extending transversely of the frame, a substantially L-shaped arm pivotally mounted upon the shaft, means connecting the arm and hinged rake, a toothed wheel secured upon the shaft, a spring actuated dog pivotally secured to the L-shaped arm and normally disengaged from the toothed wheel and manually operated means connected to the dog, whereby the latter may be engaged with the toothed wheel to pivotally move the L-shaped arm and raise the hinged rake to dumping position.

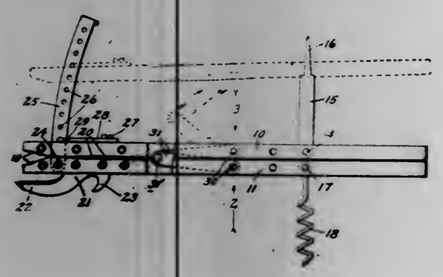
1,451,591. ADJUSTABLE SOCKET WRENCH. JOHN C. SIBISKI, Baltimore, Md. Filed Nov. 2, 1921. Serial No. 512,326. 2 Claims. (Cl. 81—113.)

1. A device of the class described including a hollow socket having side walls, the sides of the socket being open between said walls and the top wall of the socket, a screw journaled in said top wall, a head on said screw exteriorly of the socket and resting on the top wall, a nut within the socket, jaws within the socket in engagement with and for which said sides of the socket constitute guides, the jaws having openings therethrough, and means to extend through said openings to establish connections with the nut, and said means including detachable fastenings for application through the spaces of the socket above said sides.



1,451,592. GASOLINE DISPENSER. CHARLES EUGENE SIDES, Lexington, N. C. Filed July 20, 1921. Serial No. 486,155. 1 Claim. (Cl. 221—99.)

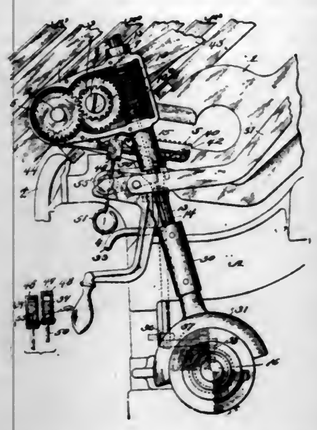
In combination with a dispensing tank and the discharge pipe thereof, a receiving tank formed of transparent material associated with the dispensing tank and adapted to receive fluid therefrom, a circular metallic casing housing the receiving tank, said casing having an opening, a transparent member disposed in the opening, a wall at each end of the circular housing, a rod con-



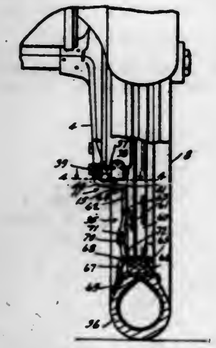
necting the walls, an adjustable bar supported by the rod, said bar carrying lateral extensions, a discharge pipe in communication with the receiving tank, and a valve for controlling the passage of fluid from the receiving tank to the discharge pipe.

1,451,593. BOX OPENER. OLE SKAAR, Akron, Ohio. Filed Sept. 3, 1921. Serial No. 498,283. 1 Claim. (Cl. 220—43.)

In combination with a box including a body having a rib formed thereon and a cover for the body, a device for facilitating the removal of the cover from the body including an arcuate spring body adapted to extend the entire height of the box, and an inwardly extending straight attaching ear arranged to overlie the top of the cover and to lie flat thereon and terminate outwardly of the center of the cover, the free lower end of the arcuate spring body engaging the rib when the cover is on the body, and means disposed adjacent to the edge of the top wall of the cover and extending through the top wall and the attaching ear for normally holding the device in position on the cover, the meeting portion of the arcuate resilient body and the attaching ear engaging the cover at all times, whereby swinging movement of the resilient body is prevented in relation to the cover and rib.



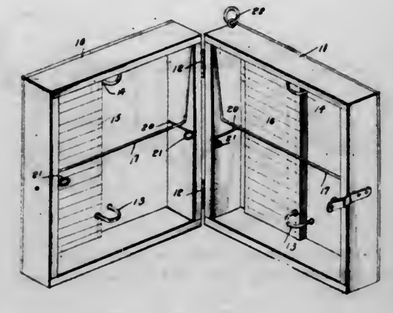
1,451,594. KITCHEN TOOL. HARRY SMOOKLER, Los Angeles, Calif. Filed June 27, 1921. Serial No. 480,573. 7 Claims. (Cl. 7—4.)



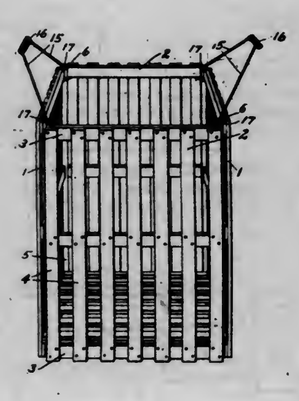
7. A tool comprising jaws, a connection between the jaws whereby the spaced position of the jaws from end to end can be varied, and means for pivotally sustaining the jaws irrespective of their relative positions.

1,451,595. TYPOGRAPHICAL MACHINE. SAMUEL E. SPERRY, Woodhaven, N. Y., assignor to Intertype Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 7, 1921. Serial No. 499,007. 16 Claims. (Cl. 199—45.)

1. In a typographical machine embodying means for shiftably supporting a set of at least three matrix magazines whereby one or another thereof may be brought into operative position, power-operated means for shifting the magazines in opposite directions, manually-controlled means for setting said power-operated means into operation to shift the magazines in one or the other direction, and manually-set means for predetermining the extent of the shift.



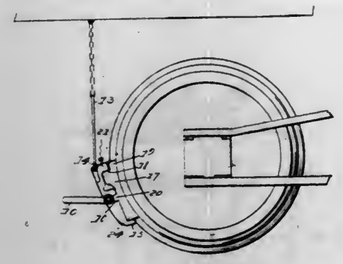
1,451,596. CIRCUIT CLOSER FOR SOFT-TIRE ALARMS. GEORGE L. STEVENS, Long Beach, Calif. Filed Jan. 31, 1919. Serial No. 274,249. 2 Claims. (Cl. 200—58.)



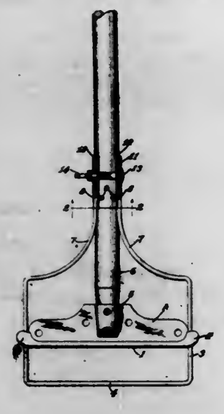
1. A switch supporting bracket adapted to be secured to the frame of a vehicle and extend downwardly on the inner side and adjacent to a wheel, a switch blade pivotally mounted upon the bracket and grounded to the frame, a pair of contacts insulated from the frame and connected together and in position to be engaged by the switch blade, a bearing bracket adapted to be secured to a spoke of a wheel, a lever connected to the bearing bracket by a pivot, a finger extending inwardly from the upper end of the lever in a plane to pass the switch blade and adapted to swing into engagement with the switch blade, a second bearing bracket adapted to be attached to the felly of the wheel, and a second lever pivoted at its center to the second bracket and having a lower end adapted to bear upon the inner side wall of a pneumatic tire, and having its upper end connected to the lower end of the first lever; so that when the tire goes flat the upper end of the first lever will swing into the plane of the switch blade and move the switch blade against one of the contacts.

1,451,597. SAFETY-FIRST REMINDER. CHARLES M. STEWART, Denver, Colo. Filed Mar. 2, 1921. Serial No. 449,210. 1 Claim. (Cl. 129—4.)

A device for the purpose described having a casing consisting of relatively movable sections provided interiorly respectively adjacent their longitudinal centers with temporary binding clips, leaves reversibly disposed on said clips, and lifting means in connection with each section and consisting of arms pivotally connected with the bottom of the section and extending to the side walls thereof beneath the schedules, said arms being provided with terminal upstanding extensions having finger holds.



1,451,598. COLLAPSIBLE CRATE. ENOS E. SUTHERLAND, Los Angeles, Calif. Filed Apr. 18, 1922. Serial No. 555,396. 4 Claims. (Cl. 217—48.)

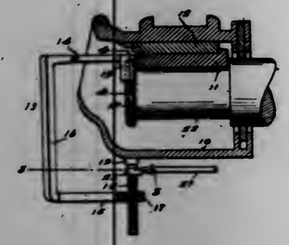


1. The combination with a collapsible receptacle having hinge forming members at the corners of the side walls, of bail like means pivoted upon said members and adapted to be moved into interengaging position.

1,451,599. BRAKE SHOE. EDWARD C. TEAGUE, Kansas City, Mo. Filed Apr. 18, 1922. Serial No. 554,355. 2 Claims. (Cl. 188—242.)

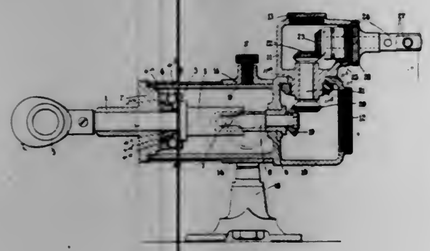
1. A brake mechanism having a head and a brake shoe removably seated upon and having an interlocking engagement therewith, and a spring actuated locking pin for securing the shoe in its interlocked relation with the head, the head having upper and lower forwardly projected lips of which the latter is provided with an upwardly extending stud for engagement with a socket in the lower end of the shoe, and the former carries the locking pin for engagement with a socket in an underlapping shoulder of the shoe.

1,451,600. MOP HOLDER. HENRY M. VAN DEUSEN, Westfield, Mass. Filed May 31, 1922. Serial No 564,771. 1 Claim. (Cl. 15—151.)



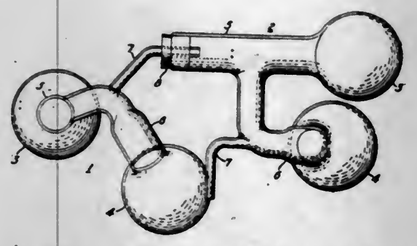
In a mop holder having a handle and a transverse head member with lateral guides, a mop engaging device comprising a light rod bent into substantially rectangular form having its sides slidably engaged with the lateral guides of the head member and its ends bent into locking engagement with the flanges of a runner clamp, said clamp consisting of sheet metal bent to embrace the handle and having spaced parallel flanges, said flanges being connected by a wing nut bolt to tighten the clamp on the handle.

1,451,601. JOURNAL-BOX JACK. SAMUEL C. VAUGHN, Charlotte, N. C. Filed Apr. 18, 1921. Serial No. 462,387. 1 Claim. (Cl. 258—34.)



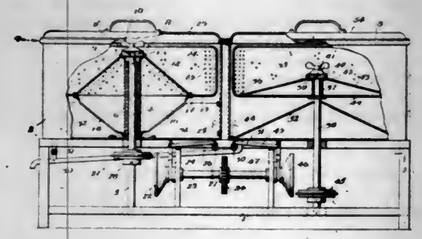
A journal box jack comprising a substantially U-shaped member presenting horizontal upper and lower parallel bars connected by a vertical bar offset laterally with respect to the parallel bars, an integrally formed

head depending from adjacent the free end of the upper bar and presenting a groove for the reception of the outer end of a car journal or axle, a bearing arm integral with the lower horizontal bar and extending inwardly from adjacent the outer free end thereof in spaced parallel relation to the upper face of the bar, a screw extending vertically through aligned openings in said



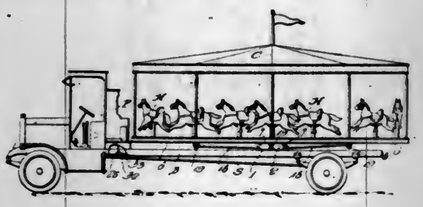
arm and lower horizontal bar, a gear positioned for rotation between the said arm and lower horizontal bar and having a central bore threadedly engaging the said screw, a shaft journaled longitudinally of the said lower bar in bearings extended laterally from the lower bar, a worm on one end of the shaft engaged with the said gear, and an operating lever at the opposite end of the shaft.

1,451,602. SHIP'S LOG. THOMAS SYDNEY WALKER and PHILIP JEFFERY WALKER, Birmingham, England. Filed Oct. 24, 1921. Serial No. 510,165. 3 Claims. (Cl. 73—122.)



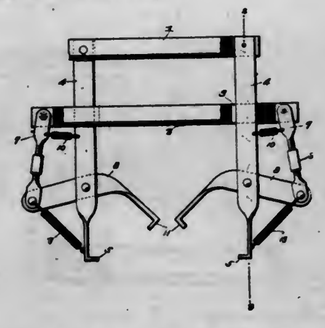
1. An apparatus for transmitting the movement of a rotor to the indicating mechanism of a ship's log comprising a supporting structure mounted for universal movement, said supporting structure having an intermediate apertured web, a bearing in said aperture, an arbor rotatably mounted in said bearing, a bearing plate removably secured at one end of said supporting structure, said bearing plate being apertured coaxially with said web, a primary spindle carried by said bearing plate, said spindle being forked to slidably embrace said arbor, a pin extending at right angles from said arbor and adapted to ride between said forks, a secondary supporting structure removably secured to said first-named supporting structure, and spindles mounted in said secondary structure in driving connection with said arbor.

1,451,603. STILL. HENRY C. P. WEBER, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 5, 1919. Serial No. 315,503. 10 Claims. (Cl. 23—3.)



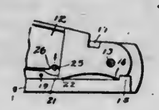
1. A still comprising a pair of flasks having the neck of one communicating with that of the other and integral therewith.

1,451,604. WASHING MACHINE. HARVEY L. WHEELER, Fremont, Ohio. Filed Mar. 28, 1921. Serial No. 456,058. 4 Claims. (Cl. 68—18.)



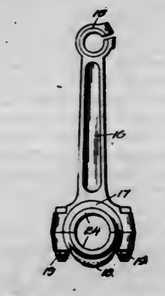
1. In a washing machine, a perforated clothes container rotatable in a horizontal plane and provided with a relatively large opening in its bottom, an inverted cone attached to said container about the rim of said opening, said inverted cone provided with a plurality of slits extending longitudinally of its side, the edges of said cone adjacent said slits being bent in opposite directions to pick up and force water into said container.

1,451,605. CARROUSEL. PHILIP ADELSON and EDWARD ADELSON, Cambridge, Mass. Filed Mar. 27, 1922. Serial No. 547,080. 3 Claims. (Cl. 46—27.)



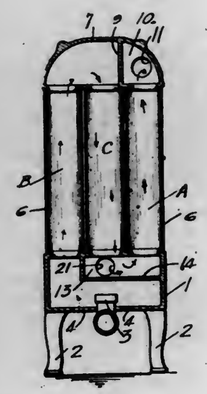
1. In a carrousel, a support, a plate mounted thereon, a runway secured to the upper side of the plate, a platform arranged above said runway, roller bearings carried by the platform and cooperable with the runway, a shaft connected at its upper end to said platform, a sprocket secured to said shaft, a drive chain cooperable with the sprocket, and a plurality of radially disposed bracing arms secured at their inner ends to said runway and provided at their outer ends with anti-friction rollers engaging the underside of said platform to facilitate the rotation thereof.

1,451,606. LIFTING TONGS. OSCAR ARNESON, Garretson, S. Dak. Filed June 20, 1921. Serial No. 479,066. 4 Claims. (Cl. 29—84.)



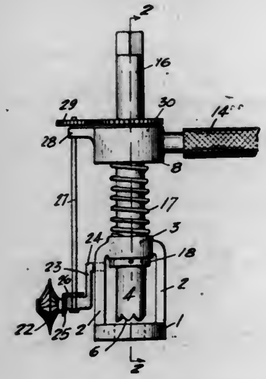
1. A lifting device of the class described comprising fixed and movable jaws, means movable toward each other for closing said jaws, a spring for opening said jaws, and means for steadying the movable jaw during their gripping operation.

1,451,607. KNIFE. LANGDON B. BATES, Thomaston, Me. Filed Apr. 13, 1922. Serial No. 552,178. 3 Claims. (Cl. 30—10.)



1. The combination with a folding knife including a handle and a blade pivoted thereto having notched portions therein, of resilient means having a locking extremity adapted to respectively engage with the locking notches for positively retaining and locking said blade in opened or closed positions, and means carried by said handle and engageable with the locking means for effecting the release thereof, said releasing means having an element thereof normally disposed in the path of movement of a portion of the blade when in closed position to constitute an auxiliary means for locking the same in closed position.

1,451,608. CRANK-SHAFT AND CONNECTING-ROD BEARING. WILLIAM CRAWFORD BELL, Baltimore, Md. Filed May 17, 1922. Serial No. 561,757. 3 Claims. (Cl. 74—38.)

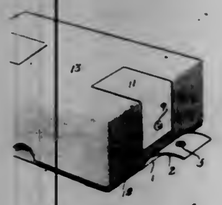


3. In combination an engine shaft provided with a pair of cranks each formed with a conical bearing, a journal portion spherical throughout and integral with said conical bearings, and a connecting rod provided at one end with means to provide a sectional bearing socket spherical throughout and mounted on said spherical journal, said means provided with conical bearings opposing the conical bearings on the cranks.

1,451,609. GAS RADIATOR. WILLIAM H. CAIN, Los Angeles, Calif. Filed June 20, 1921. Serial No. 479,150. 9 Claims. (Cl. 126—91.)

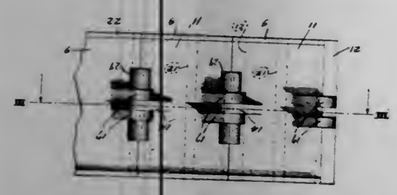
3. A radiator comprising a set of flues, a second set of flues communicating with the first set, a third set of flues communicating with the second set of flues, and a discharge flue common to all of the flues of the third set.

1,451,610. BORING MACHINE FOR PAPER. ISIDORE GESTAS, Los Angeles, Calif. Filed Sept. 15, 1921. Serial No. 500,878. 3 Claims. (Cl. 164—60.)



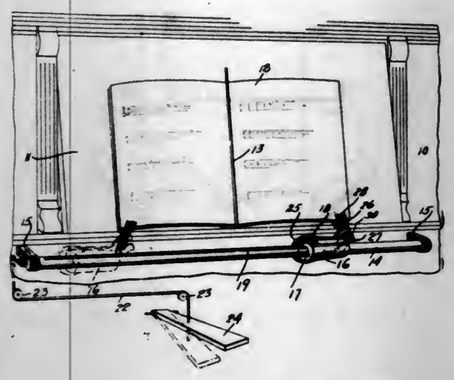
1. A paper boring machine, comprising a support, a cutter having a stem mounted in said support, a passageway through said stem, a chamber surrounding said stem, ports in said stem communicating with said chamber, and means for causing the wasted portion of the paper to pass into said chamber through said passage and ports.

1,451,611. PRINTING VULCANIZER. CHARLES B. HAUGHEY, Council Bluffs, Iowa, assignor of one-half to Orin R. Edwards, Davenport, Iowa. Filed Dec. 30, 1921. Serial No. 525,974. 3 Claims. (Cl. 18—18.)



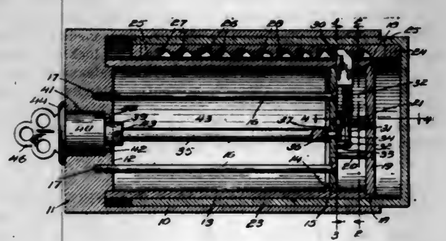
1. A printing vulcanizer including a vulcanizing block having interior heating means and provided at the inner side with exterior printing means adapted to print on the exterior of a finished tire, and a clamp extending beneath and supporting the vulcanizing block in position to be applied to a tire and receiving the vulcanizing block and provided at the outer side of the block with adjusting means and having an engaging portion projecting beyond the inner side of the block and cooperating with the adjusting means for holding an article in contact with the printing means.

1,451,612. ATTACHING MEANS FOR SEPARABLE FASTENER ELEMENTS. BEN Z. HAUSNER, New York, N. Y. Filed Oct. 19, 1921. Serial No. 508,726. 5 Claims. (Cl. 229—7.)



2. The combination with a pair of flexible members, including opposed gummed surfaces having registering openings therein, of a snap fastener element, and means permanently associated therewith sealed between the gummed surfaces, said fastener element extending through one of the openings.

1,451,613. TRACTOR. FRANK HODGKISS, Oakland, Calif. Original application filed May 10, 1921, Serial No. 468,338. Divided and this application filed Dec. 21, 1921. Serial No. 525,972. 3 Claims. (Cl. 74—44.)

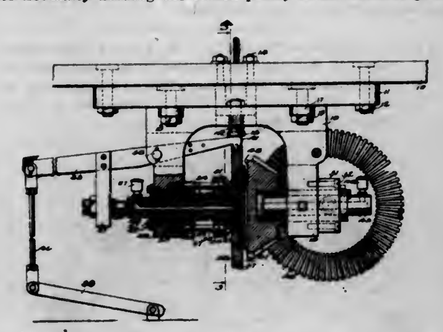


1. A hinge engagement between two links of the character described, comprising a central lug rising from one of the links and a pair of spaced lugs rising from the other adapted to receive the single lug between the same, a pin having a central sleeve thereon engaging the three lugs and extending beyond the same at either end, with collars at either end of larger diameter than the sleeve for holding the lugs in engagement with the sleeve.

1,451,614. LEAF TURNER. DAVID HOECKE, Greenwich, Conn. Filed Nov. 2, 1921. Serial No. 512,240. 3 Claims. (Cl. 84—521.)

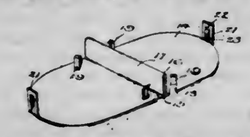
1. In a leaf turning device, the combination with a leaf supporting means, of a member mounted for transverse sliding movement with respect to the leaves, manual means for effecting the sliding movement of the member in one direction, means for returning said member in the opposite direction to normal position, and interengageable magnetic means provided respectively on the transverse sliding member and the leaves for coupling the leaves for movement with the sliding member when manually actuated.

1,451,615. TIRE-CARRIER LOCK. WILLIAM J. HUNT, St. Joseph, Mo. Filed May 27, 1921. Serial No. 472,998. 4 Claims. (Cl. 70—14.)



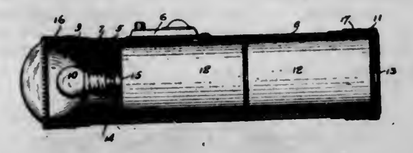
1. In a locking device as characterized, a pair of cylindrical casings adapted for telescopic engagement with each other, a keeper device within the inner of said casings and coextensive therewith and having a plurality of keeper sockets spaced along the same, a latch bolt carried by the outer of said casings and adapted for selective engagement with the said keeper sockets, an actuating mechanism carried by the outer of said casings for said latch bolts, and means, carried by the outer of said casings for locking said actuating mechanism and said latch bolt in its inoperative position.

1,451,616. POWER-TRANSMISSION MECHANISM. JOSEPH IMPELLIZIERI, Brooklyn, N. Y. Filed Aug. 1, 1922. Serial No. 578,929. 8 Claims. (Cl. 192—17.)



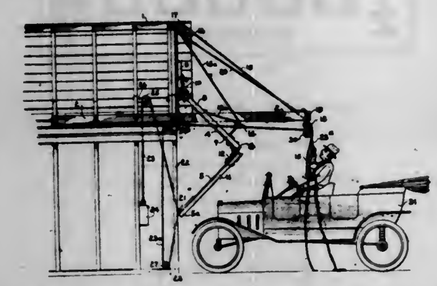
1. A power transmission mechanism of the class described, comprising a frame, an axle slidably mounted in the frame, means for holding the axle against rotation, a clutch pulley rotatably mounted on the end of the axle,

means provided in conjunction with the axle and frame for normally holding the clutch pulley in an inactive posi-



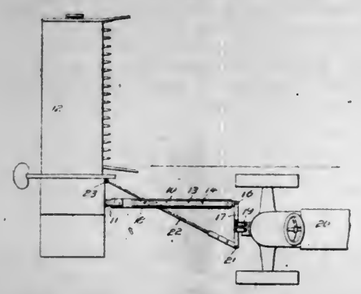
tion, and means mounted on the frame for moving the axle endwise to force the clutch pulley into an active position.

1,451,617. VANITY CASE. WILLIAM G. KENDALL, Newark, N. J., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Original application filed Feb. 20, 1922, Serial No. 537,995. Divided and this application filed Nov. 7, 1922. Serial No. 599,608. 2 Claims. (Cl. 132—83.)



2. A vanity case having a constricted open side, said constricted open side forming an inwardly disposed shoulder, a removable bottom plate, straight resilient tongues projecting forwardly from said bottom plate, said tongues being of a length to terminate at and in engagement with the inwardly disposed shoulder, and resilient tongues struck from said straight tongues and positioned within the confines thereof.

1,451,618. FLASH LIGHT. HARRY M. KORETZKY, New York, N. Y. Filed June 27, 1921. Serial No. 480,597. 1 Claim. (Cl. 240—8.5.)

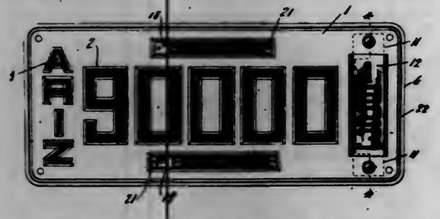


In a flashlight of the type including a combined battery case, light holder and handle, and of the type including a bulb in said holder and constituting said light at one end of the handle and a removable cap at the other end of the handle, and further of the type including a battery slidable in the handle between bulb and cap and an expansile coil spring in said handle immediately adjoining the battery, the combination of shock absorbing means between battery and bulb, said means comprising the interposition of such spring between bulb and battery, and means for precluding accidental lighting of the bulb by the battery, the means last mentioned including said spring and a circuit having therein bulb and battery and also having therein a plurality of make and break points one of which points is normally held open at an electrode of the battery by said spring, and a manually actuable switching device at the exterior of the handle and normally holding open the other of said points, there being provided coacting threads on said handle and cap for manual relative adjustment of handle and cap, all whereby said cap must be screwed up on the handle and also such switching device must be manually actuated in order to put the bulb in circuit with the battery.

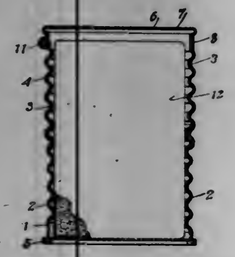
1,451,619. FOLDING DOOR FOR GARAGES. SEPTIMUS LATRACE, Saskatoon, Canada. Filed Sept. 7, 1921. Serial No. 499,013. 4 Claims. (Cl. 20—20.)

3. A folding door for a garage, comprising a pair of door sections hingedly mounted upon each other, one of said sections being hingedly mounted on the front of the garage above the door opening, a counter-balance connected to the other door section, and means for raising and folding the door sections one above the other and above the door opening, the said door when in raised position having its sections so positioned that one of said sections is located directly beneath the other section with the upper section inclined downwardly away from the front of the garage to provide a sheltering means for the space in front of the door.

1,451,620. DRAFT ATTACHMENT. BERNT LIMOSETH, Westby, Wis. Filed Sept. 22, 1921. Serial No. 502,462. 1 Claim. (Cl. 280—33.5.)



A draft equalizer comprising a main draft beam having a transverse intermediate slot and adapted to be attached at one end to the machine to be moved, a draw bar coupled at one end to the forward end of the beam and adapted to be connected intermediate the ends to the draft power, and a continuous pull member coupled at one end to the free end of the draw bar and passing through the intermediate slot of the beam and adapted to be attached at the other end to the machine to be moved and in spaced relation to the draft beam.

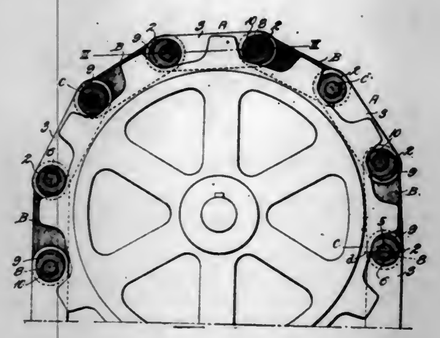


1,451,621. LICENSE PLATE. DONALD MCRUER and JAMES E. SELLERS, Phoenix, Ariz. Filed Apr. 3, 1922. Serial No. 549,275. 1 Claim. (Cl. 40—63.)

In combination, a license plate for motor vehicles having a rectangular depression therein disconnected from the plate at opposing ends so as to leave slots between the depression and the plate, and a second plate having a

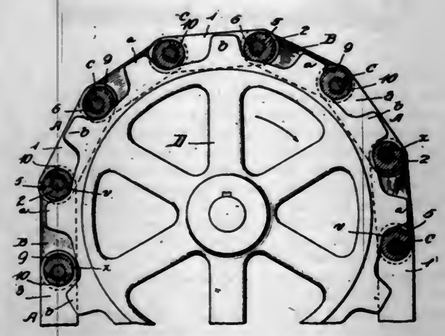
raised central portion fitting in said depression and end portions adapted to be slipped through said slots underneath the license plate and to be detachably secured thereto so as to present an upper surface flush with the surface of the license plate.

1,451,622. SIZE-REDUCIBLE BOX. HOWARD F. MAPSTON, Dayton, Ohio. Filed Nov. 18, 1921. Serial No. 516,189. 2 Claims. (Cl. 220—8.)



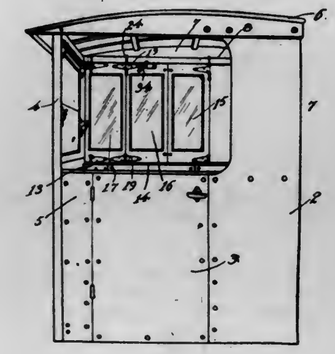
1. A size-reducible tobacco box of such dimensions as to adapt it to be carried in the pocket comprising two sections, one section closed at one end and the other section having a removable top, one section of the box being rotatable on the other and screw-thread like devices connecting the two sections whereby as the material in the carton is used the size of the box may be reduced by rotating one section of the box on the other.

1,451,623. SOLDERING IRON. EDGAR MILLNER, St. Louis, Mo. Filed May 3, 1920. Serial No. 378,511. 24 Claims. (Cl. 219—26.)



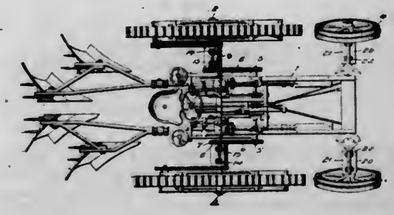
1. A heating tool including, in combination, an inner metallic body-section provided with insulated terminals, a heating element fitting upon said section and adapted for electrical connection with the terminals, and an outer metallic body-section enclosing both the inner-section, the heating-element, and the terminals.

1,451,624. SPROCKET CHAIN. WILLIAM L. MONTAGUE and BRINTON WELSER, Milwaukee, Wis., assignors to Chain Belt Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 24, 1921. Serial No. 502,871. 3 Claims. (Cl. 74—32.)



1. A sprocket chain comprising links having tubular cross bars and connecting cylindrical pintles which pass through the cross bars, the openings through the cross bars having working surfaces shaped to fit the pintles, on the sides toward the ends of the link, and there being on the opposite sides of the pintles cavities adapted to receive grease, the grease cavity in an end bar being bounded on one side by a segment of the surface of the pintle and on the opposite side by an inner wall of the end bar of the link concentric with and offset from the surface of the pintle, and at its ends by inner walls of the end bar, which walls converge at such angles that if projected they would meet, on a line crossing the pintle diametrically, on that side of the link on which is the bearing surface for the pintle, whereby the grease cavity is extended beyond a diametrical line crossing the pintle at right angles to the diametrical line first mentioned, substantially as and for the purposes set forth.

1,451,625. SPROCKET CHAIN. WILLIAM L. MONTAGUE and GEORGE BRINTON WELSER, Jr., Milwaukee, Wis., assignors to Chain Belt Company, Milwaukee, Wis., a Corporation of Wisconsin. Original application filed Sept. 24, 1921, Serial No. 502,871. Divided and this application filed Jan. 29, 1923. Serial No. 615,722. 4 Claims. (Cl. 74—32.)

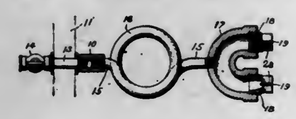


1. A sprocket chain comprising links having tubular cross bars and pintles uniting the links and passing through the cross bars, the walls of the tubular cross bars being thickened toward the ends of the links so as to be engaged by the driving sprockets with which the chain engages, thereby advancing the links and tending to prevent destructive wear between the sprocket teeth and chain as the latter seats itself upon and leaves the wheel.

1,451,626. VEHICLE BODY AND THE LIKE. JAMES MORRISON, Cincinnati, Ohio, assignor to The Highland Body Manufacturing Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Nov. 25, 1921. Serial No. 517,487. 18 Claims. (Cl. 296—45.)

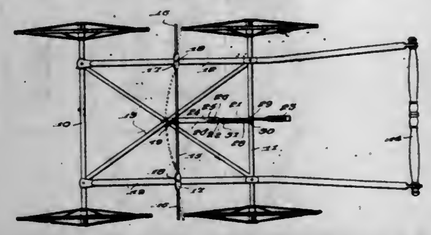
1. In a vehicle window device, the combination with a rectilinear support, of a window in a plurality of articulated sections, a part at least of said sections adapted to fold together into side by side relation, all of the sections being mounted on the support so as to slide thereon, and to permit the said folding, said support being longer than the total length of the sections, whereby the entire window when in fully aligned relation may be slid as a unit on the support.

1,451,627. TRACTOR SPREADER. SWENEY MUNSON, Fowler, Colo. Original application filed May 13, 1920, Serial No. 381,065. Divided and this application filed Jan. 11, 1921. Serial No. 436,548. 3 Claims. (Cl. 180—70.)



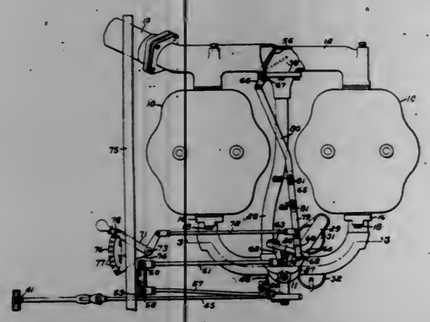
1. In a tractor, an axle, a crawler supporting the axle and adjustable inwardly and outwardly thereon, a driving member rotatable on the axle, a driven member rotatable on the axle, said two members having means for being interlocked to each other, means for driving the driving member, means for driving the crawler from the driven member, and spacing means arranged for detachment and provided with means for establishing driving connections between the said members when the latter are spaced apart, substantially as set forth.

1,451,628. FIGURE TOY. REUBEN NAKIAN, West Hoboken, N. J. Filed Oct. 11, 1921. Serial No. 507,049. 4 Claims. (Cl. 46—40.)



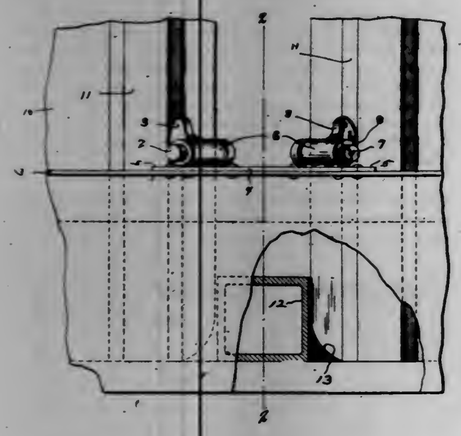
2. As a new article of manufacture, a toy broom or brush comprising bristles simulating in the aggregate a skirt, a support for said bristles simulating the body of a figure provided with arms, a handle extending upwardly from the bristle support, and a head for said body rotatably mounted upon the handle and resting upon the upper end of the body.

1,451,629. COMBUSTION-CHAMBER CARBURETOR. ABRAHAM P. PELSER, Greenfield, Mass. Filed Mar. 24, 1922. Serial No. 546,233. 2 Claims. (Cl. 110—175.)



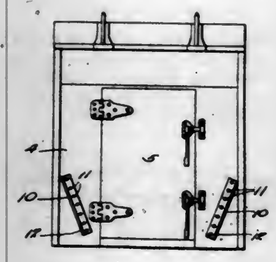
1. A device of the class described comprising a section of piping adapted to operate through the fuel door of a combustion chamber, a laterally branching tubular member connected to the inner end of the piping, a nozzle device terminating each branch and each comprising a tubular plug closed at the outer end except for a plurality of transversely directed intersecting clefts, and a baffle member at the intersection of the clefts, whereby the air passing through the plug will be directed laterally through the clefts.

1,451,630. VEHICLE BRAKE. HENRY ALPHONSO PERKINS, East Templeton, Mass. Filed Nov. 18, 1920. Serial No. 424,891. 13 Claims. (Cl. 188—20.)



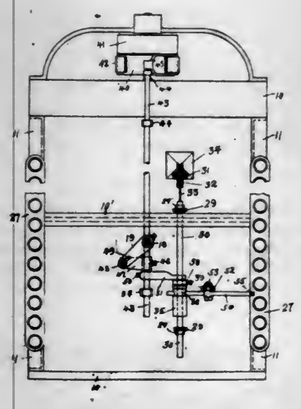
1. In a vehicle of the class described, a brake, means for pressing the same against the wheel, and a single depressible treadle for actuating and releasing said means by successive movements in the same direction.

1,451,631. FUEL SYSTEM FOR INTERNAL-COMBUSTION ENGINES. ADOLPH ROSNER, Bridgeport, Conn., assignor, by mesne assignments, to The Locomobile Company, Bridgeport, Conn., a Corporation of Delaware. Filed June 24, 1918. Serial No. 241,721. 9 Claims. (Cl. 123—122.)



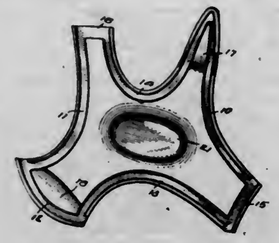
1. In a fuel system for internal combustion engines, the combination of engine heated fuel-supply means, heat-controlling means, fuel-supply controlling means, means interconnecting both controlling means to coordinate their operation, said interconnecting means including a lever and a member actuated thereby, and means available during the operation of the engine to move said member toward and from the fulcrum of said lever to vary the effect of said heat controlling means.

1,451,632. COMPARTMENT FREIGHT CAR. ALFRED H. SMITH, Chappaqua, N. Y. Filed Dec. 21, 1921. Serial No. 524,032. 6 Claims. (Cl. 105—366.)



1. The combination with a carrier having vertically disposed bulkheads adapted to receive containers between them, of gravity cam abutments adapted to engage the containers to space them and hold them from shifting or rocking on the carrier.

1,451,633. FREIGHT CAR. ALFRED H. SMITH, Chappaqua, N. Y. Filed Mar. 11, 1922. Serial No. 542,994. 7 Claims. (Cl. 105—366.)

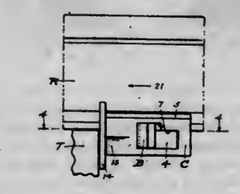


4. A carrier having walls and abutments bodily secured to said walls at an angle to the vertical.

1,451,634. STOP MOTION FOR SPINNING FRAMES. TILDEN BURT STEVENSON, Caroleen, N. C. Filed Oct. 28, 1921. Serial No. 511,111. 2 Claims. (Cl. 192—143.)

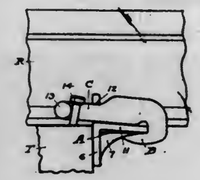
1. A belt shifting device comprising a shipper rod adapted to co-act with a drive belt to shift it to and from a driven element, a shiftable element, a slidably supported guide rod provided with a stop collar, an arm carried by the shipper rod and extending into the path of the stop collar, a trip block slidably mounted on said guide rod, counter-balanced means for yieldably holding the trip block in contact with said stop collar, and a lever pivotally supported intermediate its ends and having one end extending into the path of said shiftable element and its other end extending into the path of said trip block and adapted when actuated by said shiftable element to release said counter-balanced means causing thereby the shifting of said guide rod whereby said collar will shift said arm to move the shipper rod to shift the belt from the driven element.

1,451,635. LAST FOR SHOES AND SANDALS. JOSEPH THOMAS, Aberdeen, Wash. Filed Aug. 22, 1922. Serial No. 583,537. 10 Claims. (Cl. 12—123.)



1. A last adapted to be positioned against the exterior of a shoe or sandal and having means to receive an edge portion of the sole to enable the sole to be fastened with nails while disposed against the last.

1,451,636. ELECTRIC HEATER. RICHARD ULLRICH, Wels, Austria. Filed Sept. 12, 1922. Serial No. 587,827. 6 Claims. (Cl. 219—41.)

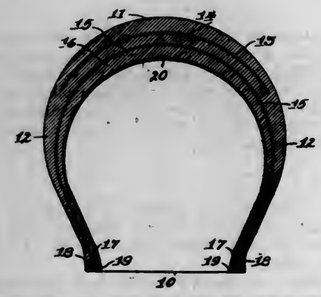


1. An electric immersion fluid heating device comprising a resistance element, a casing therefor, a buoyancy operated circuit breaker, a casing for the circuit breaker, the last said casing being buoyancy operated, and operated solely by its own weight, when in upright position, to break the circuit.

1,451,637. ANTICREEPER FOR RAILWAY RAILS. WILLIAM S. WESTON, Dallas, Tex. Filed July 3, 1922. Serial No. 572,477. 10 Claims. (Cl. 238—329.)

10. A two-piece rail anchor comprising a transverse bar arranged to extend beneath the rail and engage one of the rail base flanges and a tie abutting member arranged to engage the other rail base flange and adapted to be sprung into interlocking engagement with said bar.

1,451,638. ANTICREEPER FOR RAILWAY RAILS. WILLIAM S. WESTON, Dallas, Tex. Filed July 3, 1922. Serial No. 572,478. 5 Claims. (Cl. 238—329.)



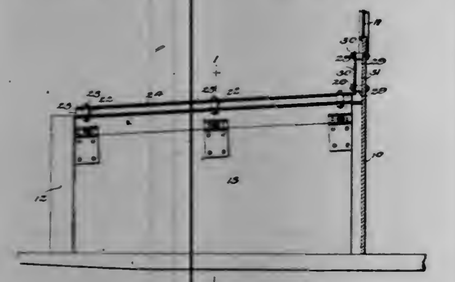
1. An anti-creeper for railway rails comprising two parts, a tie abutting jaw part mounted on one rail base flange, and a V-form spring clamp part mounted with one arm of the V located transversely beneath the rail with shoulders bearing against opposite rail base edges and having its free end hooked over the opposite rail base flange and with the other arm of the V located longitudinally of the rail and interlocked with the said jaw part against relative movement in all directions.

1,451,639. CLAMP FOR ROOFS. CHARLES COURTNEY WHITE, Ocean Springs, Miss., assignor of one-third to Louis Braun, Biloxi, Miss. Filed Dec. 31, 1921. Serial No. 526,093. 6 Claims. (Cl. 108—33.)

1. A roof clamp of U-shape presenting upper and lower members and adapted to receive between the two an edge portion of the roof element, the upper member extending beyond the lower member for more effectively clamping the upper surface of said roof element.

1,451,640. PNEUMATIC TIRE. ELMER H. WICKERT, St. Paul, Minn. Filed July 13, 1921. Serial No. 484,418. 3 Claims. (Cl. 152—18.)

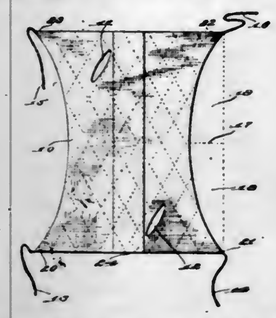
2. In a pneumatic tire casing having a tread on its outer periphery and being open at its inner periphery, annular beads at the lateral edges of the inner periphery, annular cords within said beads, a lining on the inner surface of the tire, a plurality of flexible and spaced



wires between said tread and lining, each of said wires extending in an arc from one of said cords to the other, and relatively short links joining adjacent wires, said links being spaced apart to form with said wires a foraminous reinforcement.

1,451,641. HAND LOOM WITH DEVICE FOR READING WEAVING DRAWINGS. GERTRUD WITTE, Berne, Switzerland. Filed Aug. 29, 1921. Serial No. 496,465. 1 Claim. (Cl. 139—18.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

A hand loom for weaving patterns according to a weaving drawing comprising a plate for holding a drawing, a device for stretching the warp-thread across the plate close to the drawing, the plate being provided with two rows of needle holes, two rows of needles passing through two rows of needle holes in the said plate, eyes in the said needles for the warp-threads, and a holding member for holding the said needles in an upright position, the plate being adapted to be suspended by the threads passing through said needles and to be tilted to and fro on the two rows of needles, whereby first one row of needles and then the other is caused to protrude more than usual through the said plate.



1,451,642. AUTOMOBILE HOOD. JOHN MATTHEW WOLL, Kittanning, Pa. Filed July 20, 1922. Serial No. 576,316. 2 Claims. (Cl. 180—69.)

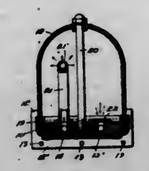
1. In combination with an automobile hood construction embodying a double upper wall structure defining an air circulation space and a plate secured to and spaced from the front wall of the automobile body defining an air circulation space which communicates with the air circulation space defined by the double upper wall structure of the hood.

1,451,643. DIAPER, CATAMENIAL BANDAGE, AND THE LIKE. REGINA J. WOODY, Chestnut Hill, Mass. Filed Oct. 22, 1921. Serial No. 509,638. 3 Claims. (Cl. 128—284.)

1. An article of the class described comprising a quadrangular sheet of absorbent material having an envelope of gauze, said sheet and envelope each having its ends substantially parallel and its transverse dimension a minimum substantially at its central transverse axis, and each having two slots located respectively near the diagonally opposite corners thereof, each slot being arranged to receive the nearer corner of the sheet

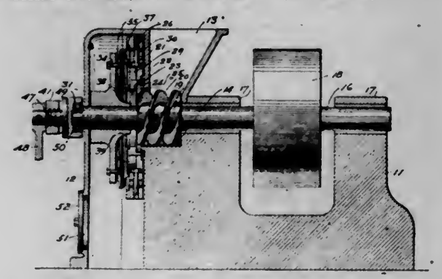
on the opposite side of the transverse axis thereof, and fastening devices secured to the corners of said sheet.

1,451,644. AIR-BRAKE TEST VALVE. CHARLES E. ZACHARY, Atlanta, Ga. Filed Sept. 30, 1919. Serial No. 327,360. 4 Claims. (Cl. 137—77.)



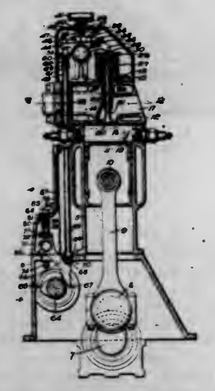
1. The method herein described of detecting leakage in an air pipe line, consisting in automatically closing and opening, in rapid succession, the section of the pipe in which there is a reduction of pressure due to leakage.

1,451,645. CORD TIRE. CHARLES L. ARCHER, Des Moines, Iowa. Filed Feb. 4, 1922, Serial No. 534,091. Renewed Mar. 10, 1923. 1 Claim. (Cl. 152—13.)



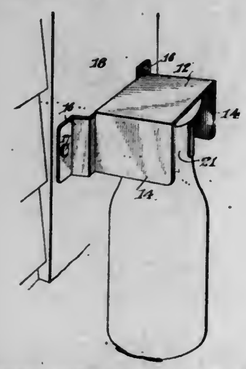
In a tire of the character describe, the combination of a first ply of cords having converging end portions terminating in outwardly extending portions, a second ply of cords positioned on said first ply of cords, said second ply of cords having parallel straight end portions engaging the tips of said outwardly extending portions of said first ply, thus forming inclosed looped portions, a third ply of cords positioned upon said second ply and having parallel straight end portions bearing upon the parallel straight end portions of the second ply, the end portions of the third ply terminating in outwardly extending portions, a fourth ply of cords positioned upon said third ply, said fourth ply of cords having parallel straight end portions engaging the tip ends of the outwardly extending portions of said third ply, thereby forming inclosed looped portions adjacent the first mentioned looped portions, a fifth ply of cords fitting upon the fourth ply and having parallel straight end portions fitting upon the parallel straight end portions of the fourth ply and terminating in outwardly extending portions, a sixth ply of cords positioned upon the fifth ply and having parallel straight end portions engaging the tip ends of the outwardly extending portions of the fifth ply, thus forming inclosed looped portions adjacent the second mentioned looped portions, said last-mentioned parallel straight end portions of the sixth ply terminating in elongated inwardly extending projections fitting upon the outwardly extending portions of the first, third, and fifth plies, and filling means carried within said looped portions, thus forming reinforced beads upon said tire, as and for the purposes set forth.

1,451,646. AUTOMOBILE DASH ATTACHMENT. EDWARD R. BITTLER, Schuylkill Haven, Pa. Filed June 13, 1922. Serial No. 568,091. 1 Claim. (Cl. 116—117.)



A device for the purpose set forth comprising a base having a forwardly projecting integral supporting extension provided with inlet and discharge bores opening at the upper face of the base at each side of the center thereof, a hollow transparent body mounted on the base and forming in connection with the latter a fuel receiving chamber, means extended through the chamber and engaging with said body and base for connecting them together, a fuel discharging element within said chamber and having one end opening thereinto and its other end registering with the inlet bore, and a filtering element associated with said outlet bore.

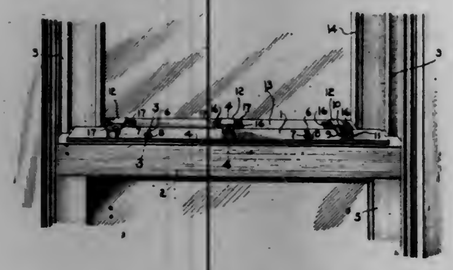
1,451,647. GRINDING MACHINE. HARRY BUCKLEY and RAY BUCKLEY, Louisville, Ky. Filed Apr. 8, 1921. Serial No. 459,506. 2 Claims. (Cl. 83—8.)



1. In a grinding machine, a housing, a conveyor chute having a delivery opening at one end, a grinder plate adjacent said delivery opening and having an opening centrally disposed and registering with the delivery opening, a screw arranged to rotate in said chute and having its threaded ends at the delivery opening evenly spaced whereby to deliver material to the plate, means supporting the plate and having an inner flange opening forming a conveyor tube from the end of said screw to the opening in the plate, said supporting means comprising an outer ring pivoted at diametrically opposite points to the housing, an inner gimbal ring pivoted at diametrically opposite points at right angles to the first mentioned pivoted points of the outer ring, said inner ring comprising an outer peripheral part whereto the pivots are connected, and an inner peripheral part of substantially the same diameter as the opening in the grinder plate whereby said inner part forms a continuation of said opening, a second grinder plate cooperating with the first grinder plate, and means to rotate the screw and second grinder plate.

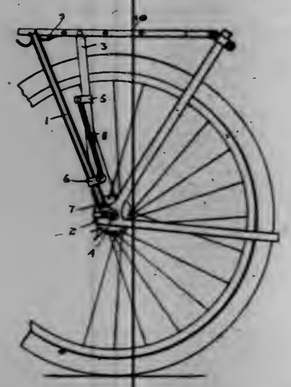
1,451,648. INTERNAL-COMBUSTION ENGINE. HAROLD D. CHURCH, Fairfield, Conn., assignor to The Locomobile Company, Bridgeport, Conn., a Corporation of Delaware. Filed June 5, 1920. Serial No. 386,676. 7 Claims. (Cl. 123—90.)

1. In an internal combustion engine, the combination of a cylinder having inlet and exhaust ports in its head, puppet valves controlling said ports, respectively, and having stems extending in the same general direction as the axis of said cylinder, and valve-actuating mechanism including rocking levers, one for each valve, and means for utilizing the engine's exhaust automatically to cause the maintenance of a substantially constant predetermined relation between said levers and their respective stems despite longitudinal expansion and contraction of said cylinder.



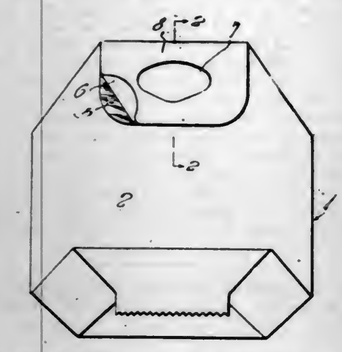
1,451,649. BOTTLE HOLDER. CHARLES COHEN, Bridgeport, Conn. Filed Dec. 21, 1921. Serial No. 524,048. 1 Claim. (Cl. 232—41.)

A bottle holder formed from a section of sheet material with spaced clefts leading from one edge, the material between the clefts being bent at rightangles to the body of the section and the material externally of the lines of the clefts bent at rightangles to the body of the section,



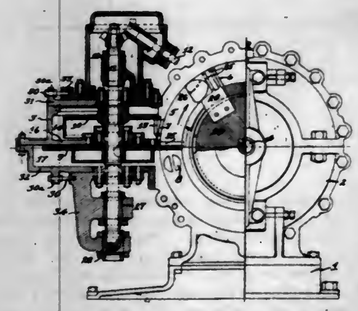
the material externally of the clefts being further bent outwardly to form attaching ears, and a bottle clasp device connected to the section and adapted to engage the neck of a bottle and hold the same with its mouth portion beneath the body of the section and protected thereby.

1,451,650. COMBINED WEATHER STRIP AND SASH FASTENER. COLONEL COONEY, Ada, Ohio. Filed Apr. 6, 1922. Serial No. 550,035. 2 Claims. (Cl. 20—68.)



1. A combined sash fastener and weather strip comprising a plate adapted to be mounted on the upper face of the meeting rail of a lower sash so as to slide transversely and rest upon the upper face of the meeting rail of the upper sash, means for preventing the upward movement of the plate, and for slidably retaining the same on the first-mentioned meeting rail, tapered tongues projecting outwardly from the outer edge of the plate, and loop-shaped keepers attachable to the upper face of the outer meeting rail of the upper sash and in alinement with said tongues and adapted to receive the same, when the plate is moved outwardly and across the gap between said meeting rails, to hold the sashes from movement.

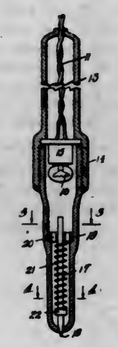
1,451,651. BICYCLE STAND AND CARRIER. GEORGE FRANCIS CRYSDALE, Toronto, Ontario, Canada. Filed Aug. 1, 1921. Serial No. 488,827. 1 Claim. (Cl. 208—75.)



In a bicycle stand and carrier, the combination with the bicycle frame, of a carrier rigidly connected to the frame, a pair of uprights rigidly secured to the carrier and connected to the axle of the bicycle, a U-shaped stand pivoted to said uprights above and to the rear of the axle, and a coil spring having one end connected to said uprights and its other end connected to the stand.

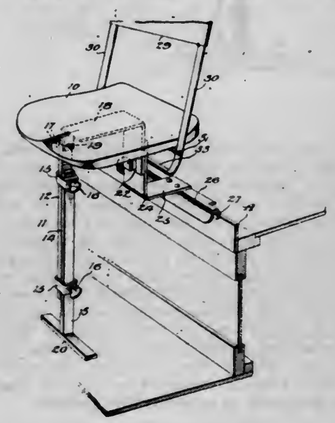
1,451,652. HANDLE CONSTRUCTION FOR PAPER BAGS. GEORGE W. EISENHART, Binghamton, N. Y., assignor to Mid-East Specialty Company, Inc., Binghamton, N. Y., a Corporation of New York. Filed Aug. 18, 1921. Serial No. 493,328. 1 Claim. (Cl. 229—54.)

In a handle construction, the combination of a paper bag having its material at its upper end folded inwardly and downwardly upon itself forming a narrow strip of double thickness of material extending entirely around its mouth, substantially rectangular sheets of heavy cardboard folded upon themselves midway of their ends into inverted U-shape and arranged in straddling relation around the upper edges of the opposite side walls of the bag, the inner and outer portions of said folded sheets being disposed respectively alongside of the inner and outer surfaces of the opposite side walls of the outer surfaces of the opposite side walls of the bag and being glued thereto, the opposite side walls of the bag and the inner and outer portions of said folded sheets being provided below the adjacent portions of the aforesaid strip with alined openings forming hand holes and handle bars above said hand holes at the upper ends of said side walls, the grain of the cardboard of said sheets extending transversely of the bag and parallel to the upper edges of its opposite side walls and therefore longitudinally of said handle bars so as to tend to prevent the latter from tearing transversely, the upper edges of said openings being curved and joining their end edges on curved lines so as to increase the width of said handle bars from their middle portions to their ends and so as to avoid sharp corners at the ends of said handle bars, whereby to tend to prevent the latter from tearing transversely.



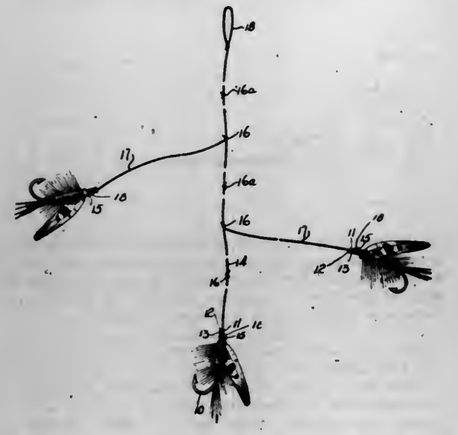
1,451,653. ROTARY STEAM ENGINE. ELOV ERICSSON, St. Paul, Minn. Filed Dec. 16, 1920. Serial No. 431,234. 7 Claims. (Cl. 121—71.)

1. In an engine, a rotor, a piston fixed in the periphery of said rotor, an annular cylinder in which said piston is adapted to travel, said cylinder being provided with steam and exhaust ports, a steam chest mounted adjacent to



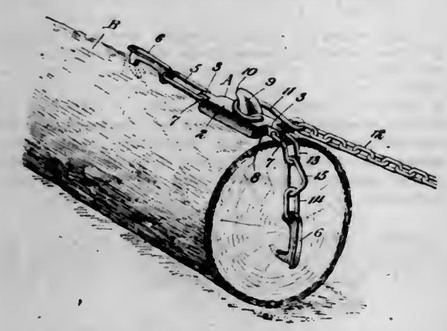
said steam port, a valve shaft extending through said chest, a valve and an abutment disc mounted on said shaft, said disc being separated from said valve by a steam tight partition and means for driving the valve shaft from the rotor.

1,451,654. MARKING DEVICE. MARIE LOUIS GARCIN, New York, N. Y. Filed Aug. 13, 1920. Serial No. 403,274. 7 Claims. (Cl. 95—1.1.)



1. A photographic appliance including a casing formed with an opening in its end portion, a source of illumination within said casing, means for normally closing said opening and extending beyond the same, said means being adapted to uncover said opening when that portion of the same extending beyond the casing is directed against a surface.

1,451,655. AUXILIARY SEAT FOR AUTOMOBILES. SULLIVAN E. GILLEY, New York, N. Y. Filed June 13, 1922. Serial No. 567,890. 2 Claims. (Cl. 155—11.)

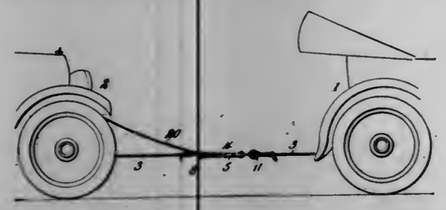


1. An auxiliary seat for automobiles comprising a seat bottom having an extensible supporting leg pivoted to and depending from its under forward end for engagement with the floor of the vehicle, a vertically adjustable supporting bracket depending from the under side of the seat bottom and including a rearwardly projecting portion, a laterally disposed bearing element carried by the rear end of the rearwardly projecting portion of the bracket, and means on said bearing element adapted to engage over an upstanding flange at the front of a permanent seat structure to afford means for supporting the rear end of the auxiliary seat from the permanent seat and above the plane of the latter.

1,451,656. FLY HOOK AND LEADER. PETER F. HALFERTY, Grayland, Wash. Filed Jan. 20, 1922. Serial No. 530,623. 3 Claims. (Cl. 43—28.)

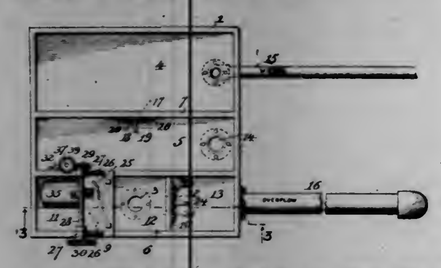
1. A leader having a knot at its lower end, and a separate length of material incorporated in said knot, said separate length of material and the said leader each having a plain knot and return bent at said plain knots, the leader and its returned portion both passing through the plain knot of the separate length and the returned portions of the separate length being passed through the plain knot of the leader, said plain knots being brought together into close relation.

1,451,657. JAY BAR. JESSE A. L. HEFNER, Danese, W. Va. Filed Jan. 31, 1921. Serial No. 441,306. 3 Claims. (Cl. 294—78.)



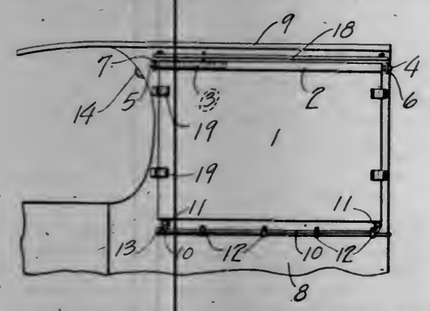
1. A jay bar for use in logging, comprising an elongated plate-like structure with a laterally rounded top surface and a transversely curved cylindrical under surface adapted to fit the side of a log, and a horn rising from an intermediate point of the upper surface for receiving a chain hook, the jay bar being provided with ears at each end in the line of draft with each ear having a downwardly-inclined tapered extremity terminating in a sharp point adapted to bite into the log.

1,451,658. RELEASE DEVICE FOR TOWING. KASPAR FRANK HENNEKIN, Seaside, Calif. Filed Mar. 31, 1921. Serial No. 457,285. 2 Claims. (Cl. 280—33.15.)



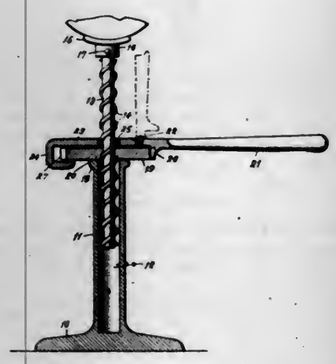
1. A towing device for automobiles, comprising a frame composed of spaced side members laterally inclined towards each other to form a substantially flat frame having a narrow and a wide end disposed oppo-

site each other, transverse bars joining the side members at spaced points, said frame terminating at its narrow end in a rope-receiving eye, arcuate-shaped jaws pivoted intermediate their ends at the corners of the wide end



of the frame, a spring controlled wedge block engaging between the inner ends of the pivoted jaws and slidably mounted in said bars and adapted to lock the outer free ends of the jaws in abutting relation for retaining the loops of a rope attached to a towing machine.

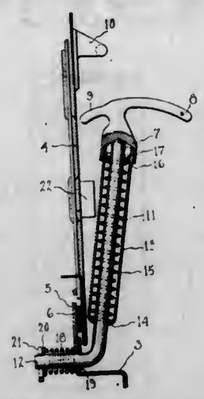
1,451,659. AUTOMATIC STOCK REGULATOR FOR PAPER-MAKING MACHINES. RUSSEL HOCKMAN, Lock Haven, Pa., assignor of one-third to Harry H. Wilson and one-third to Ellis B. Shaffer, both of Lock Haven, Pa. Filed Sept. 3, 1920. Serial No. 407,856. 7 Claims. (Cl. 92—46.)



1. An automatic stock regulator for paper making machines, comprising a receptacle for receiving the stock and delivering it to the paper making machine, said receptacle having compartments, one into which the stock is delivered, another into which water is delivered, and another intermediate of the first two compartments and constituting a mixing and delivering chamber, and means for controlling the access of water and of stock to the mixing compartment from the other two compartments.

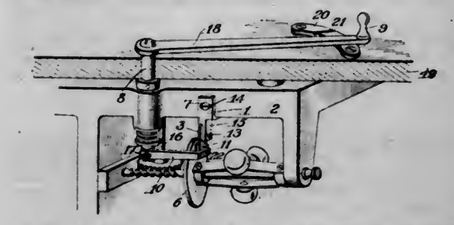
1,451,660. CURTAIN MOUNTING FOR TRUCKS. EDWARD J. HYLAND, Mount Morris, Ill. Filed Nov. 19, 1921. Serial No. 516,454. 1 Claim. (Cl. 296—143.)

Curtain mountings for cage trucks, comprising spring-controlled roller shades at the outer sides and back of the truck and adapted to draw down outside; guide fingers outwardly on the frame of the truck and extended loosely over the vertical edges of the shades; screw-eyes mounted outwardly of the truck along the lower horizontal edges thereof; a tube across the floor inside the front of the truck; a hook at one side inside the top of the truck at the hand of the driver; an opening through each side of the truck at the front end thereof; and cables attached to the lower edges of the shades, and extended through the said screw-eyes, forwardly around the outer sides of the truck and through the said openings at the front, the cable ends at the side under the said hook being extended straight up thereto and the cable ends from the opposite side being extended through the said tube and thence up to the said hook; and a ring secured to all of the said cable ends for releasably attaching to the said hook.



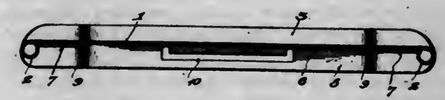
1,451,661. ELEVATING JACK. JESSE G. CROCKETT, Winnebago, Nebr., assignor to Sloan-Crockett Co., Sioux City, Iowa. Filed Nov. 25, 1921. Serial No. 517,589. 2 Claims. (Cl. 254—98.)

1. A jack comprising a hollow vertical standard provided with a bearing surface at its upper open end, a horizontally disposed gear overhanging said open end of said standard and having a bearing on the said bearing surface thereof, said gear having a central threaded opening, a screw adjustable through the opening of said gear and having a load-rest at its upper end beyond the gear, a bracket disposed crosswise of said gear and having a central opening for the passage of the said screw therethrough, said bracket having one end hooking over the gear to prevent vertical displacement of the bracket and an operating handle having a dog engageable with the gear for turning same to adjust the screw, said handle being hingedly connected to the said bracket for swinging movement to an inoperative position.



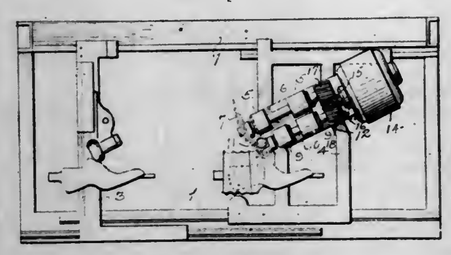
1,451,662. FASTENING DEVICE FOR MOTOR-VEHICLE HOODS. KINGSTON FORBES, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed June 13, 1919. Serial No. 303,941. 7 Claims. (Cl. 292—114.)

6. In a hood door fastening device of the class described, a spring operated latch member having a hook adapted to engage an element carried by the door to thereby hold the same in a closed condition; a suitable support located adjacent the free edge of said door; an oscillating member supported by said support and whereby said latch member is carried, and which oscillating member is movable transverse to said support; a spring acting upon said oscillating member to move the same as aforesaid, to thereby force the free edge of the



door against a fixed stop; and an abutment through which the force exerted by said spring is transmitted to said door.

1,451,663. SPEED REGULATOR FOR PHONOGRAPHS. EARNEST W. LADD, New York, N. Y., assignor of one-half to Charles F. Herrmann, New York, N. Y. Filed Nov. 30, 1921. Serial No. 518,767. 4 Claims. (Cl. 188—187.)

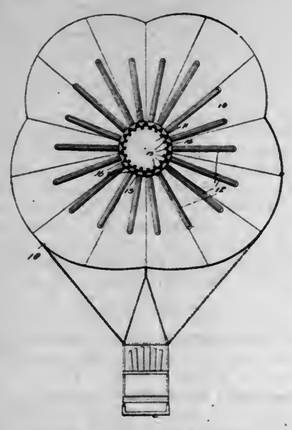


2. In a speed regulator for phonographs, in combination with a phonograph motor embodying a friction disc, a friction device adapted to act on said disc, said friction device comprising a bracket member, bifurcated arms extending therefrom, one of said arms being rigid and the other of said arms being resilient, adjusting means carried by said rigid member to control the adjustment of the resilient member, and adjusting means carried by said resilient member adapted to control the adjustment thereof.

1,451,664. WATERBOARD FOR WRINGING MACHINES. RUDOLF A. KOWALSKY, Woonsocket, R. I., assignor to American Wringer Company, Woonsocket, R. I. Filed June 11, 1921. Serial No. 476,881. 3 Claims. (Cl. 68—32.)

1. In a drain board, a sheet metal plate having its ends shaped to form tubes and having its side marginal portions extended upwardly and then downwardly and again extended upwardly to form parts of double thickness both above and below the body of the plate, the edges of the side marginal portions having integral ears secured to and beneath the body of the plate and the ends of the tubes abutting portions of the side marginal portions.

1,451,665. CUTTER-HEAD DRIVE FOR LAST LATHES. CLAUD L. LONG, Dayton, Ohio, assignor to The Crawford, McGregor and Canby Company, Dayton, Ohio, a Corporation of Ohio. Filed Nov. 27, 1920. Serial No. 426,755. 5 Claims. (Cl. 142—15.)

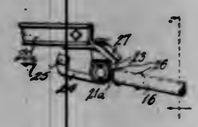


1. The combination with a pattern lathe including a reciprocatory carriage and a pair of rotary cutter heads mounted thereon, and operable simultaneously on a single piece of work, of a motor carried by the carriage and direct positive driving connections between the cutter heads and motor for driving said cutter heads simultaneously at predetermined relative rates of speed.

1,451,666. PRODUCTION OF ALPHA-NAPHTHYLAMINE. STUART P. MILLER, Philadelphia, Pa., assignor to The Barrett Company, a Corporation of New Jersey. Filed Oct. 2, 1919. Serial No. 328,054. 2 Claims. (Cl. 230—130.5.)

1. The method of producing alpha-naphthylamine which comprises nitrating naphthalene, reducing the nitro compound with iron in the presence of an acid, adding solvent naphtha, filtering and distilling.

1,451,667. DIRIGIBLE AND THE LIKE. RALPH H. UPSON, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed July 20, 1918. Serial No. 245,940. 14 Claims. (Cl. 244—3.)

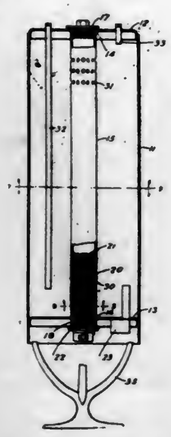


1. The combination with the envelope of an air craft having a nose portion, of a relatively rigid nose cup mounted in front of the nose portion of the envelope, and devices cooperating with the edge of the cup adapted to secure the cup upon the envelope in spaced relation with respect thereto.

1,451,668. SUSPENSION MEANS FOR VERTICALLY-SLIDING SASHES. HARRY E. CAMPBELL, New York, N. Y., assignor to Campbell Metal Window Corporation, Baltimore, Md., a Corporation of Maryland. Filed May 12, 1922. Serial No. 560,289. 5 Claims. (Cl. 189—72.)

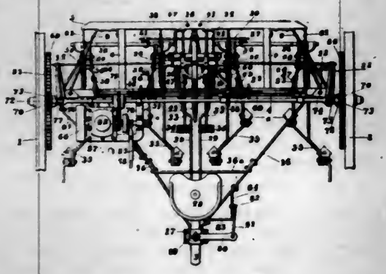
1. Suspension means for vertically sliding sashes, comprising suspended counterweights for said sashes, hollow jambs receiving said counterweights, and, within said jambs and interposed between said counterweights, partitions, each hinged at one vertical edge.

1,451,669. MARKER DEVICE FOR PLANTERS. CHARLES H. WHITE, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Nov. 27, 1920. Serial No. 426,768. 5 Claims. (Cl. 97—230.)



5. In a planting apparatus of the class described, the combination with the frame and the arm held to swing only in horizontal planes or vertical planes, of the coupling device having an element with a vertical pintle and a horizontal pintle, the vertical pintle pivotally connected to the frame, the arm being pivoted on the horizontal pintle, and a stationary cam element positioned at a point remote from the vertical pintle adapted to engage with the arm when the coupling device and the arm are swung about the vertical pintle.

1,451,670. ANTISEPTIC AND INSECTICIDAL SOAP OR COMPOSITION. ROBERT MACPHERSON, Worthing, and WILLIAM E. HEYS, Bushey, England. Filed Jan. 16, 1923. Serial No. 613,060. 3 Claims. (Cl. 87—5.)



1. A saponaceous antiseptic and insecticidal composition comprising soap, a fixed alkali benzoate, and tar in the proportions of eighty parts of soap, ten parts of fixed alkali benzoate, and ten parts of tar.

1,451,671. ELECTRIC WATER HEATER. WILLIAM G. CARTTER, Monrovia, and FULLER W. THOMPSON, Arcadia, Calif. Filed Feb. 28, 1922. Serial No. 539,851. 4 Claims. (Cl. 219—39.)

1. In an electric water heater, the combination of a cylindrical outer shell; a top secured in said shell; a bottom secured in said shell; a tube situated in said shell, the upper end of said tube being secured to said top and the lower end of said tube being secured to said bottom; and an electric heating element inserted in said tube, said tube being perforated to provide an open communication between the interior of said tube and the water space around said tube and inside said shell.

1,451,672. MOTOR CULTIVATOR. THEOPHILUS BROWN, Moline, Ill., assignor to Deere and Company, Moline, Ill., a Corporation of Illinois. Filed Mar. 23, 1917, Serial No. 156,997. Renewed Sept. 2, 1922. Serial No. 586,024. 8 Claims. (Cl. 97—47.)

1. A power driven tillage implement comprising a frame, a pair of dirigible wheels supporting the front portion of the frame and adapted to be swung to guide the implement when in operation, a motor mounted on the frame, power transmitting connections between the motor and said wheels, tillage devices adapted to be moved laterally through the surface parts of the soil while they are advancing in operation and mounted at the front of the frame, and a steering wheel mounted at the rear of the frame, and operable independently of the said dirigible wheels.

Patents Nos. 1,451,673 to 1,452,485.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 309—No. 3. TUESDAY, APRIL 17, 1923. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

ADVERSE DECISIONS IN INTERFERENCE.

Pat. 1,385,235, A. Westman, Poultry hover, has been involved in an interference and a decision rendered March 9, 1923, that said patentee was not the first inventor of the subject matter covered by claim 1 of said patent, and no appeal having been taken such decision has become final.

Pat. 1,353,506, S. B. Atwood, Bumper, has been involved in an interference and a decision rendered March 8, 1923, that said patentee was not the first inventor of the subject matter covered by claims 1, 2, and 3 of said patent, and no appeal having been taken such decision has become final.

Pat. 1,327,833, Lamkin and Berghaus, jr., Collapsible form, have been involved in an interference and a decision rendered March 10, 1923, that said patentees were not the first inventors of the subject matter covered by claims 1, 2, 3, 4, 19, 20, 21, 22, 23, 42, 50, and 56 of said patent, and no appeal having been taken such decision has become final.

Pat. 1,274,600, H. F. Richter, Label-affixing machine, has been involved in an interference and a decision rendered March 6, 1923, that said patentee was not the first inventor of the subject matter covered by claims 44, 45, 64, 65, and 69 of said patent, and no appeal having been taken such decision has become final.

ADJUDICATED PATENTS.

(U. S. C. C. A. Mo.) Luten patents, No. 802,004 and 1,106,880, for false work for construction of bridge arches, not invalid on their face. *Luten* v. *Kansas City Bridge Co.*, 285 Fed. Rep., 840.

Interference Notice.

U. S. PATENT OFFICE, *Washington, Apr. 3, 1923.*

Rex Fluid Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of The Rex Laboratories, of 2453 North Halsted Street, Chicago, Ill., for registration of a trade-mark and trade-mark registered December 4, 1906, No. 59,083, to the Rex Fluid Company, Des Moines, Iowa, and a notice of such declaration sent by registered mail to said Rex Fluid Company at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Rex Fluid Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
Acting Commissioner.

Rule 194.

All payments of money required for Office fees must be made in specie, Treasury notes, national-bank notes, post-office money orders, or certified checks. Money orders and checks should be made payable to the "Commissioner of Patents." Money sent by mail to the Patent Office will be at the risk of the sender. Letters containing money should be registered. In no case should money be sent with models.

Suggestion for Use of Coupons.

The execution of orders for printed copies of U. S. patents, etc., will be considerably expedited if coupons are used. Such coupons may be purchased at the Patent Office in lots of 20 at $2.00 and 100 at $10.00.

Coupon orders do not have to be accompanied by letters of transmittal. They require nothing but the filling in of the patent number, the name of the inventor, the date of issue, and the name and address of the party desiring the service.

Condition of Applications Under Examination at Close of Business April 6, 1923.

(Total number of applications awaiting action, excluding Trade-Mark Division, 73,968; Trade-Mark Division, 4,064. Oldest new case, Apr. 6, 1922; oldest amended, Apr. 6, 1922. The dates given are 1922 except where * indicates 1923.)

Room No.	Divisions, Examiners, and subjects of inventions.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.
314	1. LOEFFLER, F. A., Closure Operators; Fences; Gates; Harrows and Diggers; Plows; Planting; Scattering Unloaders; Trees, Plants, and Flowers.	July 21	June 30	1,124

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decisions.

TILDEN *v.* SNODGRASS.

Decided December 13, 1922.

1. INTERFERENCE—MOTIONS TO DISSOLVE BY EACH PARTY—DISSOLUTION WITHOUT HEARING—REJECTION OF CLAIMS.

Where each party files a motion to dissolve on the ground that the count is unpatentable in view of the prior art cited, the motions will not be set for argument, but will be treated as admissions of nonpatentability and abandonment of the invention of the count, the interference will be dissolved, and the Primary Examiner will reject the claims to each applicant on the estoppel contained in the motion papers.

MOTION to dissolve.

ELECTRIC WELDING MACHINE.

Messrs. Rector, Hibben, Davis & Macauley for Tilden.

Messrs. Gifford & Bull for Snodgrass.

FENNING, *Assistant Commissioner:*

Each party has filed a motion for dissolution of this interference on the ground that the count is unpatentable in view of prior art cited.

The motions will not be set down for argument, but will be treated as admissions of nonpatentability and abandonment of the invention of the count.

The interference is dissolved and the Primary Examiner instructed to reject the claim to both applicants on the estoppel contained in the motion papers.

U. S. Circuit Court of Appeals—First Circuit.

I. T. S. RUBBER COMPANY *v.* ESSEX RUBBER CO.

Decided June 7, 1922.

[281 Fed. Rep., 5.]

1. PATENTS—REISSUE 14,049, CLAIMS 5–9, FOR RUBBER HEEL LIFT, CONSTRUED SO AS TO REQUIRE HEARING TO DETERMINE INFRINGEMENT.

The Tufford reissue patent, No. 14,049, claims 5–9, for a rubber heel lift, *Held* not limited to a lift which when inverted would rest only on the rear edge and the two forward corners, but to include a lift in which the top outer edge was all in one plane, and, so construed, to require a hearing of evidence to determine whether it is infringed by defendant's heels, so that a dismissal of the bill on motion must be reversed.

2. EQUITY—AVERMENT OF INFORMATION AND BELIEF AS TO FACT IS NOT AVERMENT OF FACT.

An averment in a bill of complaint that plaintiff is informed and believes that defendant undertook the defense of a prior suit, so as to be bound by the decree therein, is not an allegation of the fact based on information and belief, but merely an allegation of such information and belief, which is insufficient to tender an issue.

APPEAL from the District Court of the United States for the District of Massachusetts; George W. Anderson, judge.

Suit in equity for infringement of patent by the I. T. S. Rubber Company against the Essex Rubber Company. Bill dismissed on motion (270 Fed. 593), and plaintiff appeals. Reversed and remanded for further proceedings.

See, also, 276 Fed., 478.

Mr. Charles A. Brown and *Mr. F. O. Richey* (*Mr. F. A. Tannant* on the brief) for the appellant.

Mr. Lucius E. Varney (*Messrs. Emery, Booth, Janney & Varney* on the brief) for the appellee.

Before BINGHAM and JOHNSON, Circuit Judges, and MORRIS, District Judge.

BINGHAM, *Cir. J.:*

This is an appeal from a decree of the district court for Massachusetts in an equity suit charging infringement of reissued Letters Patent No. 14,049, applied for June 22, 1915, and issued January 11, 1916, to the I. T. S. Rubber Company, assignee, through mesne assignments from John G. Tufford.

The invention is for an improvement in resilient heels, and particularly in cushion heels of the type comprising an elastic lift, adapted to be applied to the ordinary shoe heel.

After motion by the defendant for particulars, a stipulation was filed in which it was agreed that certain attached heels (plaintiff's Exhibits 1 and 2, defendant's heels, series A and B) were sold by the defendant in the district of Massachusetts between January 11, 1916, the date of the Letters Patent in suit, and the date when the complaint in the cause was filed, and that the acts of infringement relied on by the plaintiff were based on sales made by the defendant of heel lifts the same as the heel lifts which formed plaintiff's Exhibits Nos. 1 and 2, defendant's heels, series A and B, or other heels exactly like them, except as to size and color, and that the advertisements appearing upon pages 29 and 30 of the record were issued and published under the authority of the defendant, on or about the dates of their publication, April 1, 1918, and July, 1920. The defendant thereupon moved to dismiss the complaint, on the ground that it appeared from the record thus made that there was no infringement.

The case was treated in the court below as though the plaintiff had set up in its bill that the defendant had been guilty of infringement by selling the attached heels, and the defendant had demurred to the bill on the ground that it appeared therefrom that the alleged infringing structures were not infringements, and a decree dismissing the bill for this reason was entered, from which this appeal is taken.

The questions presented by the assignments of error, and here argued, are that the court erred (1) in holding that the claims in issue were not infringed; and (2) in holding that the defendant was not estopped from denying infringement, due to certain allegations in the bill of complaint, in which the plaintiff claimed that the defendant had partici-

pated in certain suits in the sixth circuit, brought by the plaintiff against dealers to whom the defendant had sold heels exactly like plaintiff's Exhibit No. 1, defendant's heels, in which decrees pro confesso had been entered.

The theory upon which the court below proceeded in dealing with the case was that it was its duty to grant the motion to dismiss, unless it appeared that the heels in question were or could be found to be an infringement of the plaintiff's patent, but that, if expert testimony or other extraneous evidence was needed—

to assist in the construction of the patent, or to determine whether the defendant's products infringe, the case must stand for hearing.

For the purpose of determining the questions raised by the motion, the defendant concedes that the patent is valid, and that there is nothing in the prior art, except as stated in the patent itself, and nothing in the file wrapper, which should limit the plain terms of the patent.

The claims in issue read as follows:

5. A heel lift of substantially nonmetallic resilient material, having its body portion of concavo-convex form on every line of cross section, the concave upper face lying entirely below a plane passing through the rear upper edge and the breast corners of the lift.

6. A heel lift of substantially resilient material having its body portion of concavo-convex form on every line of cross section, the concave upper face lying entirely below a plane passing through the rear upper edge and the breast corners of the lift, said lift being provided with nail-receiving openings located near the center thereof.

7. A heel lift of substantially resilient material, comprising a body portion, the attaching face of which is concave and the tread face of which is convex on every line of cross section, and normally held in such form by its own inherent resiliency, the concave attaching face lying entirely below a plane passing through the rear upper edge and the breast corners of the lift, whereby to cause the entire margin of said lift to exert a uniform pressure on the heel of a shoe, when said lift is positioned on the heel and the convex tread face thereof depressed to flatten said lift.

8. A heel lift of resilient material, comprising a body portion of uniform thickness throughout its entire area and of concavo-convex form on every line of cross section, the concave upper face of the lift lying entirely below a plane passing through the upper edge and the breast corners of said lift.

9. A heel lift of resilient material, comprising a body portion, the attaching face of which is concave and the tread face of which is convex, the concave face of the lift being unbroken and lying entirely below a plane passing through the rear upper edge and the breast corners of the lift, whereby, when the convex tread face is depressed to flatten said lift, a suction will be created between the lift and the heel to hold the attaching face of the lift throughout its entire extent in contact with the exposed face of the heel.

[1] All of these claims were regarded by the court below as referring to the concave face of the lift as—

lying entirely below a plane passing through the rear upper edge and the breast corners of the lift,

and, construing the claims with reference to the specification and drawings, it reached the conclusion that—

this shape-defining language concerning the concave upper face "lying entirely below a plane passing through the rear upper edge and breast corners" [was] of the very essence of the invention,

and that—

so far as these claims in suit [were] concerned, no heel having along the sides and rear a straight edge—all in one plane—can be held an infringement of the plaintiff's patent;

that inasmuch as the defendant's heel was a straight edge heel, except between the two breast corners, it did not infringe the claims in issue, as they called for a heel of concavo-convex shape,

which when laid down upon a plane surface touches only at the rear and the two breast corners;

and that expert testimony or other extraneous evidence was not needed "in order to understand the language of the patent."

An examination of the above claims discloses that the court below was mistaken when it said that—

in every one of these five claims the upper face is referred to as "lying entirely below a plane passing through the rear upper edge and the breast corners of the lift."

The statement is true as to the fifth, sixth, seventh, and ninth claims, but in the eighth claim the language is:

The concave upper face of the lift lying entirely below a plane passing through the *upper edge* and the breast corners of said lift—

plainly showing that the patentee contemplated a heel the upper edge and the breast corners of which lay in the same plane. In this claim he does not use the phrase "the rear upper edge" that appears in the other four claims, and the omission of the word "rear" manifests a purpose not to limit claim 8 to a heel having the concave upper face lying below a plane passing through only the *rear* upper edge and breast corners of the lift.

Then again the court below, in construing the claims in issue, laid special stress upon the word "entirely," as used in the phrase—

the concave upper face lying entirely below a plane passing through the rear upper edge and breast corners of the lift.

His reasoning was that, as an edge is a line where two surfaces meet, the upper edges of the lift must be a part of the concave upper face, and that, as the concave upper face is described as lying entirely below a plane passing through the three points, the line or edge of the concave face must fall below the plane. But it seems to us that such is not the meaning of the language, for otherwise the rear upper edge and breast corners, through which (according to claims 5, 6, 7, and 9) the plane passes, would be below the plane, a clear contradiction of the language of these claims; and in claim 8, where the term "upper edge" and not "rear upper edge" is used, and in which the concave upper face is described as—

lying entirely below a plane passing through the upper edge and breast corners of the lift,

it seems apparent that the patentee did not mean to convey the idea that the upper edge was a part of the "concave upper face" which is described as—

lying entirely below a plane passing through the upper edge and breast corners.

The question of infringement with reference to claim 8 cannot be determined on the basis of comparison indulged in by the court below, for this claim cannot reasonably be construed as limited by its language to a concavo-convex heel, which, when laid upon a plane surface, touches only at the rear edge of the two breast corners.

It is conceded that claim 8 is valid, and that the defendant's alleged infringing heel is of a concavo-convex form on every line of cross section, whose

concave upper face lies entirely below a plane passing through the upper edge and breast corners of the lift. This being so, the only thing left open on the question of the infringement of claim 8 is whether the body portion of defendant's heel is of a "uniform thickness throughout its entire area." An inspection of the defendant's heel shows that its body portion is not of a uniform thickness throughout its entire area, but it appears to be substantially so, and, if it performs the functions of a heel constructed in compliance with claim 8, we fail to see wherein it should not be held to infringe.

Was the court below right in construing the fifth, sixth, seventh, and ninth claims as limited to a concavo-convex heel, which, when placed upon a plane surface, touches only at the rear edge and the breast corners, or, in other words, one in which—

the rear upper edge and breast corners of said concave attaching face are disposed in a plane above the upper side edges and the breast edges of the lift?

The fundamental conception of plaintiff's patent as to form is one—

molded or cut so as to be of a concavo-convex form on any line of cross section,

and its principal object or function when so formed is (according to the language of the specification)—

that when the lift is subjected to pressure any tendency for the edge portions of the lift to crowd beyond the sides of the shoe heel will be counteracted, and there will be equally as great a tendency for the material of the lift to crowd or compress toward the center thereof.

This means that the retroactive force inherent in the rubber will counteract any tendency of the edge portions of the lift to crowd beyond the sides of the shoe heel when the lift of the patent is subjected to pressure, and thus keep the side and breast edges of the lift in alignment with the side and breast edges of the shoe heel and in close contact therewith. This description gives the general form of the lift, without defining the upper edges of its concave attaching face, either between the breast corners or around the outer edge of the lift, or requiring it to be spherical.

The specification also discloses a preferred form of heel, concavo-convex on every line of cross section and possessing a like function or retroactive force. The specification says:

It is preferable that the lift be of the same thickness throughout and that its marginal surface be at all points radial to the center of curvature of its concave side 3 so that, when the lift is applied to the shoe heel and subjected to pressure, its said marginal surface will be coincident with the side of the shoe heel.

It is conceded by the plaintiff that the preferred form of lift called for by the language—

that its marginal surface be at all points radial to the center of curvature of its concave side 3—

is spherical. The drawings of the specifications show a concavo-convex lift of spherical form, having a body of uniform thickness and its side and breast edges below a plane passing through its rear upper edge and breast corners. This is plainly shown in Figures 2 and 4 of the drawings. The specification further says:

By references to Figs. 2 and 4 of the drawings, it will be seen that the concave upper face of the lift lies entirely below a plane passing through the rear upper edge and breast corners of the lift, whereby to cause the entire margin of said lift to exert a uniform pressure on the heel of a shoe, when the lift is positioned on the heel and the convex face thereof depressed to flatten said lift. In other words, owing to the curvature of the concave attaching face of the lift, the rear upper edge and breast corners of said concave attaching face are disposed in a plane above the upper side edges and the breast edges of the lift.

It seems to us that the language of claims 5, 6, 7, and 9 describes the preferred form disclosed in the specification and drawings, namely, the three-point contact form, having its side and breast edges, as well as its concave attaching face, located below a plane passing through the rear upper edge and breast corners of the concave face. But, as the patent is for an appliance, and not for a mere form, and when in operation or use functions in a given way, due to the elements embodied in its shape, we do not think the question of infringement is limited to a mere comparison of shapes or forms, independent of function. If it could be said that no other conclusion could be drawn from the allegations of the bill and the patented and alleged infringing heels than that a concavo-convex heel like the defendant's having side edges, as well as a rear edge and breast corners, in the same plane, functions in a different way from the concavo-convex heel of these claims, having only its rear edge and breast corners in the same plane, the decision of the court below that the defendant's heel did not infringe would have been right. But, as we think this cannot be said to be the undoubted fact, we are of the opinion that the question of infringement cannot properly be determined without evidence. If it should appear that the raised side edges in the defendant's heel do not cause it to function in a different way from the plaintiff's, but simply cause its rear edge and breast corners to function less perfectly (a matter of degree), we think it should be held to infringe.

As the defendant's heel may or may not infringe the claims in issue, depending upon whether or not it functions in the way or manner heels constructed in accordance with the requirements of the claims in issue function, and as this question cannot reasonably be determined on a mere inspection of the heels thus constructed, we think the case should be remanded for trial, unless the defendant is estopped to deny the question of infringement, due to the pro confesso decrees obtained against the dealers in the sixth circuit.

[2] As to the question of estoppel: In its bill of complaint the plaintiff does not specifically, or on information and belief, allege facts showing that the defendant assumed the control and undertook the defense of the suits brought in the sixth circuit against the dealers to whom it sold heels. It simply says that it is informed and believes that the defendant did so without averring the fact. Such an allegation tenders no issue material to the cause. The material question was and is whether the defendant assumed the control and undertook the defense of those suits, not what the plaintiff understood and believed the defendant did.

There is a distinction in equity pleading between an averment of information and belief as to matter of fact and an averment of matter of fact on information and belief. The former averment is improper, an issue can-

not legitimately be taken on the existence of such information and belief. The latter is proper, as it tenders issuable matter of fact. (*Murray Co.* v. *Continental Gin Co.* (C. C.) 126 Fed., 533, 534; *Helmet Co.* v. *Wm. Wrigley, Jr., Co.*, 245 Fed., 824, 826; 158 C. C. A., 164, and authorities there cited; 1 Whitehouse, Eq. Pr. sec. 105.)

However this may be, we do not think the allegations of the bill as to this branch of the case are of such a definite character that, in the absence of proof of what actually occurred, we should hold that the defendant was concluded by the decrees in the sixth circuit and estopped to contest the question of infringement.

The decree of the district court is reversed, and the case is remanded to that court for further proceedings not inconsistent with this opinion, with costs to the appellant.

21,081. OARS, HANDSPIKES, AND CAPSTAN BARS. Registered May 10, 1892. DE GRAUW, AYMAR & CO. Renewed May 10, 1922, to De Grauw, Aymar & Company, New York, N. Y., a Corporation of New York, assignee.

22,148. ELECTRIC INSULATORS. Registered December 6, 1892. A. & J. M. ANDERSON. Renewed December 6, 1922, to Albert & J. M. Anderson Manufacturing Company, Boston, Mass., assignee.

22,394. VARNISHES, STAINS, DRIERS, JAPANS, AND KINDRED GOODS. Registered January 31, 1893. CHICAGO VARNISH COMPANY, Chicago, Ill. Renewed January 31, 1923, to Flint Varnish & Color Works, Flint, Mich., assignee.

22,395. PAINTS, VARNISHES, STAINS, DRIERS, JAPANS, AND KINDRED GOODS. Registered January 31, 1893. CHICAGO VARNISH COMPANY, Chicago, Ill. Renewed January 31, 1923, to Flint Varnish & Color Works, Flint, Mich., assignee.

22,459. ROLLED WHEAT. Registered February 14, 1893. PETTIJOHN CALIFORNIA BREAKFAST FOOD COMPANY, Minneapolis, Minn. Renewed February 14, 1923, to The Quaker Oats Company, Chicago, Ill., assignee.

22,481. LAGER BEER. Registered February 14, 1893. JAMES EVERARD. Renewed February 14, 1923, to James Everard's Breweries, New York, N. Y., a Corporation of New York, assignee.

22,589. PEPSIN, PANCREATIN, AND RENNET AND THEIR COMPOUNDS. Registered February 28, 1893, to Swift & Company, Chicago, Ill. Renewed February 28, 1923.

22,580. PLAYING CARDS. Registered March 7, 1893. THE UNITED STATES PRINTING CO. Renewed March 7, 1923, to The United States Playing Card Company, Cincinnati, Ohio, a Corporation of Ohio, assignee.

22,582. PLAYING CARDS. Registered March 7, 1893. THE UNITED STATES PRINTING CO. Renewed March 7, 1923, to The United States Playing Card Company, Cincinnati, Ohio, a Corporation of Ohio, assignee.

22,591. CHOCOLATES AND OTHER BONBONS. Registered March 7, 1893. THE WALTER M. LOWNEY CO. Renewed March 7, 1923, to Walter M. Lowney Company, Boston, Mass., a Corporation of Massachusetts, assignee.

22,622. STOVE POLISH OR BLACKING. Registered March 7, 1893. MORSE BROS., Canton, Mass. Renewed March 7, 1923, to J. L. Prescott Company, New York, N. Y., assignee.

22,752. STEEL, STEEL WIRE, TOOLS, FILES, AND SAWS. Registered April 4, 1893. PETER STUBS, LIMITED, Warrington and Rotherham, England. Renewed April 4, 1923.

22,753. STEEL, STEEL WIRE, TOOLS, FILES, AND SAWS. Registered April 4, 1893. PETER STUBS, LIMITED, Warrington and Rotherham, England. Renewed April 4, 1923.

22,771. WHISKY. Registered April 11, 1893. THE DISTILLERS COMPANY, LIMITED, Edinburgh, Scotland. Renewed April 11, 1923.

22,904. AN ANTIDOTE FOR POISON, AND REMEDIES FOR BLOOD AND LIVER DISEASES. Registered May 9, 1893. ANTI-POISON MEDICINE CO., Springfield, Mo., a Corporation of Missouri. Renewed May 9, 1923.

23,025. PERFUMERY AND PERFUMED SOAP. Registered May 16, 1893. JOHN LIPSCOMB GROSSMITH. Renewed May 16, 1923, to J. Grossmith & Son, Limited, London, England, assignee.

23,104. METALLIC NAIL STRIPS. Registered May 23, 1893. MCKAY METALLIC FASTENING ASSOCIATION. Renewed May 23, 1923, to United Shoe Machinery Corporation, Boston, Mass., assignee.

23,192. PERFECTING PRINTING PRESSES. Registered June 6, 1893. DUPLEX PRINTING PRESS COMPANY, Battle Creek, Mich. Renewed June 6, 1923.

23,250. SHELLED POP CORN. Registered June 27, 1893. THE ALBERT DICKINSON COMPANY, Chicago, Ill. Renewed June 27, 1923.

23,262. WHEAT FLOUR. Registered June 27, 1893. STAR AND CRESCENT MILLING COMPANY, Chicago, Ill. Renewed June 27, 1923.

23,291. A SUBSTITUTE FOR LARD AND BUTTER. Registered July 4, 1893. ARMOUR & CO. Renewed July 4, 1923, to Armour and Company, Chicago, Ill., a Corporation of Illinois, assignee.

23,347. FARM OR AGRICULTURAL SEEDS. Registered July 11, 1893. THE ALBERT DICKINSON COMPANY, Chicago, Ill. Renewed July 11, 1923.

23,409. DIAMOND-POINTED SPADES. Registered July 25, 1893. TERRE HAUTE SHOVEL & TOOL CO., Terre Haute, Ind. Renewed July 25, 1923, to Ames Shovel & Tool Company, Boston, Mass., assignee.

23,420. PACKING FOR MACHINERY. Registered July 25, 1893. GARLOCK PACKING CO. Renewed July 25, 1923, to The Garlock Packing Company, Palmyra, N. Y., a Corporation of New York, assignee.

23,427. SHOULDER BRACES AND SUSPENDERS. Registered August 1, 1893. KNICKERBOCKER BRACE COMPANY, Easton, Pa. Renewed August 1, 1923.

23,441. CERTAIN NAMED MEDICAL AND DISINFECTING COMPOUNDS AND APPARATUS. Registered August 1, 1893. THE VAPO-CRESOLENE COMPANY, Stanley, N. J., and New York, N. Y. Renewed August 1, 1923.

23,445. TOILET POWDERS AND DENTIFRICE. Registered August 1, 1893. GEORGE B. EVANS, Philadelphia, Pa. Renewed August 1, 1923.

23,448. OILSTONES AND WHETSTONES. Registered August 1, 1893. THE PIKE MANUFACTURING COMPANY, Pike Station, Haverhill, N. H. Renewed August 1, 1923.

23,498. INSECT AND VERMIN DESTROYING PREPARATIONS. Registered August 15, 1893. ADOLPH ISAACSEN & SON. Renewed August 15, 1923, to Adolph Isaacsen & Son, Inc., New York, N. Y., assignee.

23,562. A LINIMENT. Registered August 29, 1893. ROBERT H. WAGNER. Renewed August 29, 1923, to Augusta A. Wagner, Rye, N. Y., successor.

LABELS

REGISTERED APRIL 17, 1923.

25,827.—*Title:* MATO WONDER WASHING POWDER. For Washing Powder. A. B. C. SALES CORPORATION, New York, N. Y. Published December 22, 1922.

25,828.—*Title:* SUNSET LABEL. For Calf Leather, BARNET LEATHER CO. INC., New York, N. Y. Published November 21, 1922.

25,829.—*Title:* BONNIE B TALCUM. For Talcum Powders. BONNIE-B CO., New York, N. Y. Published January 1, 1923.

25,830.—*Title:* MOONSHINE CLEANER. For Cartons Containing Cleaner for Automobiles and Furnitures. BOWEN CHEMICAL CO., San Francisco, Calif. Published March 2, 1923.

25,831.—*Title:* ELMDALE. For Butter. H. C. CHRISTIANS CO., Johnson Creek, Wis., and Chicago, Ill. Published December 27, 1922.

25,832.—*Title:* DOUBLE V FOLD. For Bias-Seam Tape and Bias-Seam Binding. ECONOMY BIAS BINDING CO., New York, N. Y. Published July 29, 1922.

25,833.—*Title:* GOLD SEAL MALT EXTRACT. For Cans Containing Malt Extract. JOHN J. HAUPT, Pittsburgh, Pa. Published August 1, 1920.

25,834.—*Title:* CHAMPION METAL POLISH. For a Polish for Silverware, Brassware, and Similar Metal Surfaces. WM. L. HOUGHTON AND SONS, Philadelphia, Pa. Published April 22, 1922.

25,835.—*Title:* HUMPHREY'S BIG CHIEF BAR. For Candy Bar. W. E. HUMPHREY CO., INC., Tacoma, Wash. Published March 1, 1923.

25,836.—*Title:* HUMPHREY'S BRIGHT EYES BAR. For Candy Bar. W. E. HUMPHREY CO., INC., Tacoma, Wash. Published March 1, 1923.

25,837.—*Title:* VIM. For Cereal Food. KELLOGG COMPANY, Battle Creek, Mich. Published February 23, 1923.

25,838.—*Title:* ALYEROND. For Overcoats. LITTLE & GOLZE., Philadelphia, Pa. Published January 5, 1923.

25,839.—*Title:* EVEREADY RADIO 'B' BATTERY. For Electric Batteries. NATIONAL CARBON COMPANY, INC., New York, N. Y. Published March 15, 1923.

25,840.—*Title:* BUTAROL BUTTER PAPER. For Butter. NEWARK PARAFFINE & PARCHMENT PAPER CO., Newark, N. J.; Columbus, Ohio, and New York, N. Y. Published August 15, 1922.

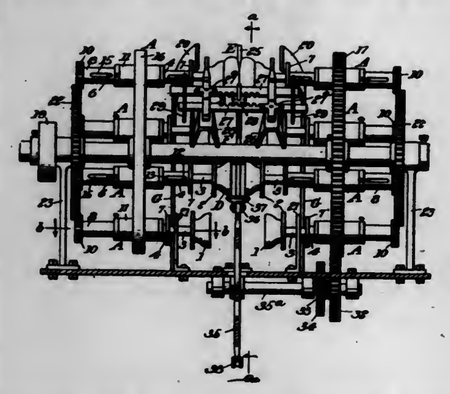
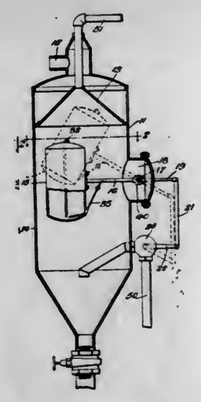
REISSUES.

APRIL 17, 1923.



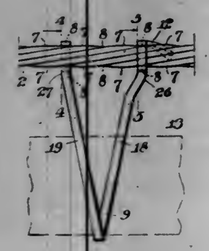
15,578. COMBINED ENGINE SHAFT, CLUTCH, AND TRANSMISSION. WILLIAM S. HARLEY, Milwaukee, Wis., assignor to Harley-Davidson Motor Co., Milwaukee, Wis. Filed Nov. 23, 1922. Serial No. 602,958. Original No. 1,360,110, dated Nov. 23, 1920, Serial No. 192,117, filed Sept. 19, 1917. 10 Claims. (Cl. 74—57.)



1. In a machine of the class described comprising in combination, a vertically elongated crank case having a pair of alined cylinder openings in its opposite walls at its lower end, a horizontally positioned cylinder carried in each of said openings, a horizontal engine shaft disposed in the lower end of the crank case transversely thereof and having its opposite ends journaled in the opposite side walls, a drive gear on one end of the engine shaft externally of the crank case and adjacent one side thereof, a peripheral flange extending from each of the last mentioned sides of the crank case and disposed laterally of the face thereof, a drive shaft disposed in the upper end of the crank case transversely thereof and having its opposite ends journaled in the opposite side walls, said ends being extended externally of the crank case, a counter shaft in the upper portion of the crank case between the engine shaft and the drive shaft and parallel thereto, the ends of said counter shaft being journaled in the opposite side walls of the case, a clutch on the drive shaft externally of the crank case and on the side thereof adjacent said drive gear, a gear train connecting the drive gear and clutch, a cover disposed over the last mentioned elements and having an oil tight engagement with the outer edge of said peripheral flange to form a gear case, selective speed means on said drive and counter shafts, and a driven member on the end of the drive shaft opposite the clutch and externally of the crank case.

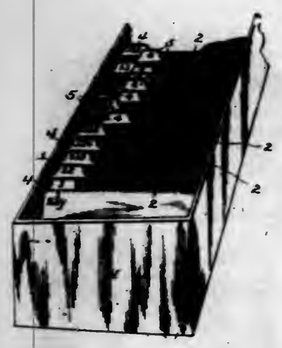
15,579. FRUIT-PITTING MACHINE. GEORGE R. PARANTEAU, Oxnard, Calif. Filed Dec. 15, 1922. Serial No. 607,248. Original No. 1,392,518, dated Oct. 4, 1921, Serial No. 411,841, filed Sept. 21, 1920. 12 Claims. (Cl. 144—6.)

11. In a fruit pitting machine, yieldable coacting fruit grasping members, means for moving the said members into operative relation with a knife, and means for simultaneously shifting the fruit grasping members in corresponding directions.



15,580. GAS-TRAP FLOAT. MILON J. TRUMBLE, Alhambra, Calif., assignor to Trumble Gas Trap Co., a Copartnership consisting of Milon J. Trumble, Francis M. Townsend, and Alfred J. Gutzler, Los Angeles, Calif. Filed Jan. 29, 1923. Serial No. 615,750. Original No. 1,432,221, dated Oct. 17, 1922, Serial No. 504,080, filed Sept. 29, 1921. 3 Claims. (Cl. 183—42.)

1. In gas trap float mechanism, the combination of: walls providing a receiving chamber; a float arm within said chamber having communication with the exterior of said receiving chamber; a float mounted upon said arm; means associated with said float furnishing guarded communication between the interior of said float and the interior of said receiving chamber whereby the pressure



existing in said receiving chamber is transmitted to the interior of said float; and valved means extending from said float to a point without said receiving chamber through which the interior of said float may be cleared of collected liquids.

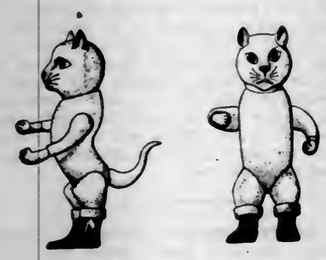
15,581. CABLE SUPPORT. ORSON W. BRENIZER, Philadelphia, Pa., assignor of one-fifth to Andrew V. Groupe, Philadelphia, Pa. Filed Jan. 13, 1923. Serial No. 612,555. Original No. 1,373,166, dated Mar. 29, 1921, Serial No. 433,758, filed Dec. 29, 1920. 4 Claims. (Cl. 248—33.)

4. A cable support formed of a single piece of flat spring wire and adapted to be applied to a supporting wire and comprising a cable receiving loop formed by a flatwise bend in the wire and having upwardly diverging arms extending from the respective sides of the loop, oppositely opening hooks formed by flatwise bends in the wire and extending upwardly from the upper ends of said arms and connected thereto by flatwise and edgewise bends in the wire and adapted to be hooked around a supporting wire from opposite sides thereof, each hook having a top part and a bottom part arranged one above the other to extend over and under a supporting wire, respectively, in a plane normal to the axis of the supporting wire when the cable support is applied thereto, and an arm connected by an edgewise bend in the wire to the free upper end portion of one of said hooks and extending laterally and downwardly therefrom in a direction away from the other of said hooks.

15,582. INDEX. ROBERT C. RUSSELL, Pittsburgh, Pa. Filed Nov. 21, 1921. Serial No. 516,860. Original No. 1,261,167, dated Apr. 2, 1918, Serial No. 198,458, filed Oct. 25, 1917. 7 Claims. (Cl. 129—16.5.)

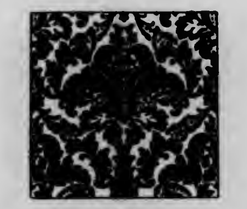
2. An index comprising a key element and a plurality of index elements, said key element comprising designations representing phonetic subdivisions, and said index elements having thereon phonetic key designations in accordance with the names entered on said index elements and in accordance with the phonetic key designations of said key element.

DESIGNS.



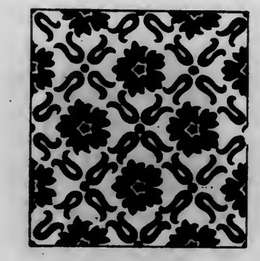
APRIL 17, 1923.

62,213. CANDY MINT. HENRY WARREN ALEXANDER, Jr., Philadelphia, Pa. Filed May 13, 1922. Serial No. 2,217. Term of patent 3½ years.



The ornamental design for a candy mint, as shown.

62,214. TOY CAT. ANDREW BONGIRNO, Brooklyn, N. Y. Filed Oct. 28, 1922. Serial No. 4,145. Term of patent 3½ years.



The ornamental design for a toy cat as shown.

62,215. WOVEN FABRIC. GUSTAVE M. FAUSER, New York, N. Y., assignor to Tingue Manufacturing Company, New York, N. Y., a Corporation of Connecticut. Filed Oct. 21, 1922. Serial No. 4,045. Term of patent 7 years.

The ornamental design for a woven fabric, as shown.

62,216. WOVEN FABRIC. GUSTAVE M. FAUSER, New York, N. Y., assignor to Tingue Manufacturing Company, New York, N. Y., a Corporation of Connecticut. Filed Sept. 29, 1922. Serial No. 3,846. Term of patent 7 years.

The ornamental design for a woven fabric, as shown.

62,217. WOVEN FABRIC. GUSTAVE M. FAUSER, New York, N. Y., assignor to Tingue Manufacturing Company, New York, N. Y., a Corporation of Connecticut. Filed Sept. 29, 1922. Serial No. 3,847. Term of patent 7 years.

The ornamental design for a woven fabric, as shown.

62,218. WOVEN FABRIC. GUSTAVE M. FAUSER, New York, N. Y., assignor to Tingue Manufacturing Company, New York, N. Y., a Corporation of Connecticut. Filed Sept. 29, 1922. Serial No. 3,848. Term of patent 7 years.

The ornamental design for a woven fabric, as shown.

62,219. WOVEN FABRIC. GUSTAVE M. FAUSER, New York, N. Y., assignor to Tingue Manufacturing Company, New York, N. Y., a Corporation of Connecticut. Filed Oct. 21, 1922. Serial No. 4,046. Term of patent 7 years.

The ornamental design for a woven fabric, as shown.

62,220. ICE-CREAM CONE. OSCAR S. KATZICK, Bridgeport, Conn. Filed Nov. 22, 1922. Serial No. 4,363. Term of patent 7 years.

The ornamental design for an ice cream cone substantially as shown.

62,221. PEN OR PENCIL CASE. FRANK J. KRISTOFEK, St. Paul, Minn., assignor to Brown & Bigelow, St. Paul, Minn., a Corporation of Minnesota. Filed Sept. 19, 1921. Serial No. 501,821. Term of patent 3½ years.

The ornamental design for a pen or pencil case as shown.

62,222. EARRING. BEATRICE C. LUTKINS, Montclair, N. J. Filed Jan. 2, 1923. Serial No. 4,800. Term of patent 3½ years.

The ornamental design for an earring, substantially as shown.

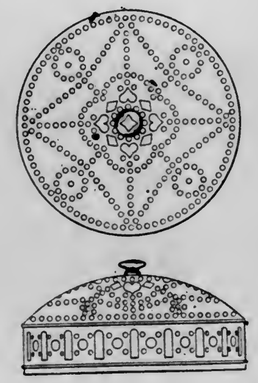
62,223. DOLL. GEORGE FREDERICK MCCANN, Jersey City, N. J. Filed May 27, 1922. Serial No. 2,443. Term of patent 3½ years.

The ornamental design for a doll, as shown.

62,224. PENCIL. WILLIAM C. STEFFAN, FRANK B. ACKERMANN, and WALTER J. GREINER, Chicago, Ill. Filed Aug. 13, 1921. Serial No. 492,167. Term of patent 14 years.

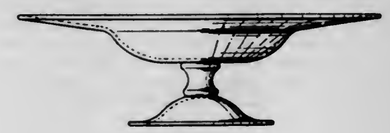
The ornamental design for a pencil as shown.

62,225. SWEATER. LOUIS STRAUSS, Brooklyn, N. Y. Filed Jan. 21, 1922. Serial No. 305. Term of patent 3½ years.



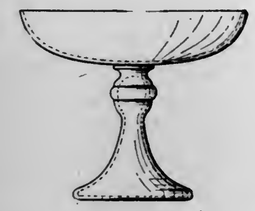
The ornamental design for a sweater as shown.

62,226. FINGER RING, PIN, BROOCH, OR SIMILAR ARTICLE. JULIUS WODISKA, New York, N. Y. Filed Jan. 22, 1921. Serial No. 439,305. Term of patent 3½ years.



The ornamental design for a finger ring, pin, brooch or similar article substantially as herein shown.

62,227. DISH OR VESSEL COVER. MICHAEL KANIUK, Boyertown, Pa. Filed May 15, 1922. Serial No. 2,264. Term of patent 7 years.



The ornamental design for a dish or vessel cover, as shown.

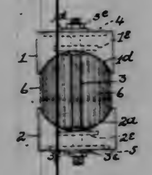
62,228. GLASS DISH. WILLIAM H. MAGEE, Wheeling, W. Va. Filed Jan. 30, 1922. Serial No. 436. Term of patent 3½ years.

The ornamental design for a glass dish, as shown.

62,229. FRUIT DISH. WILLIAM H. MAGEE, Wheeling, W. Va. Filed Jan. 30, 1922. Serial No. 434. Term of patent 3½ years.

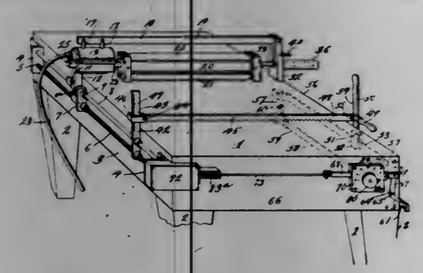
The ornamental design for a fruit dish, as shown.

62,230. STATUETTE. DUDLEY J. MORTON, Milford, Conn. Filed Oct. 1, 1921. Serial No. 504,787. Term of patent 7 years.



The ornamental design for a statuette as herein shown.

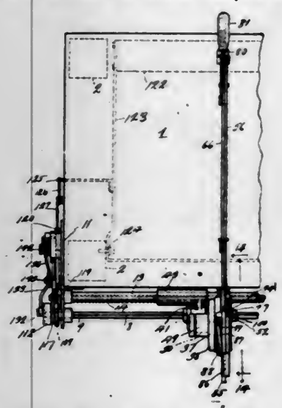
PATENTS



GRANTED APRIL 17, 1923.

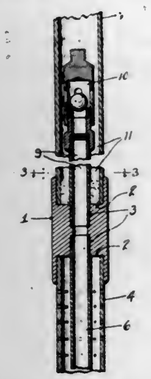
1,451,673. ELECTRIC VAPORIZER. LEONARD E. ASKE, Duluth, Minn. Filed Feb. 21, 1922. Serial No. 538,318. 6 Claims. (Cl. 219—38.)

1. In an electric vaporizer, the combination with a chamber provided with a cover, of a post extending through said cover and insulated therefrom, two blocks of insulating material mounted on said post and spaced from each other, said blocks having a plurality of wire passages formed in their peripheries, said passages in one block being in approximate registration with said passages in the other of said blocks, a high resistance wire wound back and forth from one to the other of said blocks through the peripheral passages therein and across the divisions between said passages, the opposite ends of said wire being adapted to communicate with one pole of a source of electricity, and an intermediate loop of said wire being adapted to communicate with the opposite pole of said source.



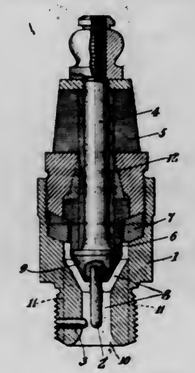
1,451,674. MEAT-CUTTING MACHINE. JOHN A. BAUMGARTNER, South Bend, Ind. Filed Dec. 16, 1921. Serial No. 522,896. 11 Claims. (Cl. 17—24.)

1. A meat cutting machine comprising a base, a transversely movable carriage disposed above said base, the rear end of said carriage being pivotally mounted, a meat severing element carried by said carriage, a feed screw cooperating with said carriage for intermittently moving the same, and means whereby said feed screw may be rotated a predetermined number of rotations.



1,451,675. MEAT-CUTTING MACHINE. JOHN A. BAUMGARTNER, South Bend, Ind. Filed Apr. 10, 1922. Serial No. 551,250. 23 Claims. (Cl. 17—24.)

1. The combination with a meat severing machine comprising a traversing carriage, a meat severing element carried by said carriage, a feed screw for intermittently moving said carriage, of means for rotating said screw,

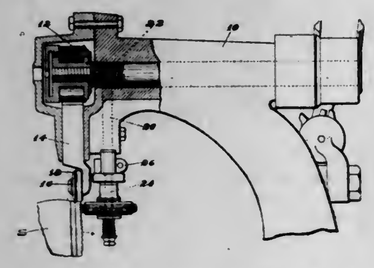


and adjustable cam means whereby said screw will be allowed to rotate a predetermined amount.

1,451,676. STANDING VALVE. CORWIN M. BERLIEN, Burkburnett, Tex., assignor of one-half to The Texhoma Oil & Refining Company, Wichita Falls, Tex. Filed Dec. 31, 1921. Serial No. 526,304. 1 Claim. (Cl. 103—220.)

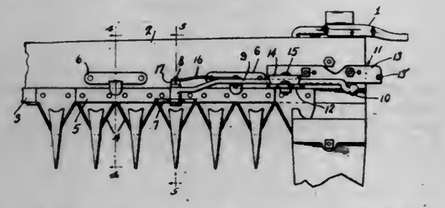
In combination, a well casing joint for standing valves consisting of a casting having a central bore threaded at each end and provided between the threaded portions with an internal flange, said flange being of such thickness as to leave an opening of the same diameter as the internal diameter of suction and valve pipes fitting the threaded portions of the bore, said casting further having an internally threaded flange at each end adapted for connecting a well casing pipe, an imperforate well casing pipe screwed into the upper flange of the casting, a perforate well casing pipe screwed into the lower end of the casting, a standing valve pipe screwed into the upper end of the casting bore and butted against said flange, and a suction pipe screwed into the lower end of the casting bore and likewise butting against said flange whereby a smooth and unobstructed passage of uniform diameter throughout extends through the suction pipe, the casting and standing valve pipe, said casting being of uniform dimensions at each end.

1,451,677. PROCESS OF MAKING SPARK PLUGS. GEORGE R. BLODGETT and MOSES E. CHENEY, Brooklyn, and ROY T. HURLEY, New York, N. Y. Filed Oct. 22, 1921. Serial No. 509,481. 1 Claim. (Cl. 123—169.)



The steps in the process of making spark plugs of any specific core and shell construction suitable to be used with any compression ratio of cylinder of internal combustion engines, which consist in varying the cross-sectional area of the orifice to the spark plug in accordance with the formula $O=Kr^n$, where K and n are constants depending upon the particular core and shell construction and are determinable from two spark plugs of the said core and shell construction but differing from each other in cross-sectional area of orifice, when each is used with the compression ratio adapted to give the best results for said spark plug.

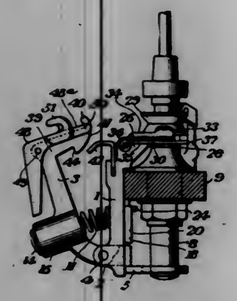
1,451,678. VARIABLE-RESISTANCE UNIT. WILL J. CAMERON, Chicago, Ill. Filed May 9, 1921. Serial No. 467,973. 5 Claims. (Cl. 219—48.)



1. A variable resistance unit comprising a hollow insulating core, a helix of resistance metal wound thereabout, a series of spaced contact elements secured respectively to different convolutions of said helix, a layer of insulating material covering said helix and all but the outer faces of said contact elements, a conductor disposed longitudinally of and spaced from said core and helix, a longitudinally slotted casing surrounding said core and conductor, an insulating slide mounted in the slot of said casing, and a conductor bridge carried by said slide and extending from said conductor to alinement with said series of contact elements.

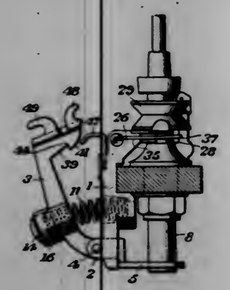
1,451,679. MACHINE FOR OPERATING UPON THE SOLES OF SHOES. LOUIS A. CASGRAIN, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 15, 1917. Serial No. 207,294. 12 Claims. (Cl. 12—32.)

1. In a machine for attaching the edge of the foxing of a rubber soled shoe to the upper preliminary to vulcanization, the combination with a pattern tool adapted to have rolling engagement with the foxing, and means for imparting percussional impulses to the tool in the direction to effect adhesion of an unvulcanized rubber foxing to the shoe upper, of a feed wheel arranged relatively to the tool to engage the sole of a shoe held in the hands of the operator and gage the distance from the shoe bottom edge at which the tool shall act, power means to drive the feed wheel, and a connection between the wheel and the power means constructed and arranged to prevent the wheel from rubbing the surface of the unvulcanized sole if the operator holds the shoe back to enable the tool to treat one part of the foxing longer than another part.



1,451,680. ATTACHMENT FOR MOWING-MACHINE SICKLE BARS. GEORGE W. CLINKINBEARD, St. Joseph, Mo. Filed Sept. 30, 1921. Serial No. 504,287. 2 Claims. (Cl. 56—303.)

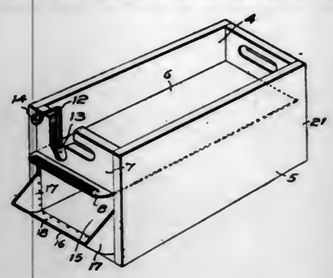
2. In a mowing machine, a finger bar, a cutter bar mounted for reciprocation longitudinally of the finger bar, a reinforcing plate fixed to the cutter bar and having a flange extending upward from one of its edges, a pivot pin passing through said flange, a guide plate fixed on the finger bar and provided with a bracket formed with angularly disposed legs, one of which is adapted to rest against the last-mentioned flange and the other against the guide plate, a flat reciprocating link mounted for longitudinal



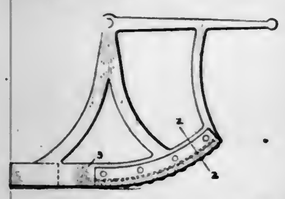
sliding movement between the angle plate and the last mentioned flange, said link having one end received on the pivot pin, means to hold the link on said pivot pin, and means at the other end of the link for connection to a pitman.

1,451,681. BAND-TYING GAUGE. ALBERT COOK, Holyoke, Mass. Filed Dec. 10, 1921. Serial No. 521,434. 15 Claims. (Cl. 265—1.)

1. A device of the class set forth comprising an attachment member, means carried thereby to engage a spindle bearing support, a movable band-engaging and tensioning member yieldingly held to the attachment member, guards carried by the attachment member and adapted to engage the spindle whorl, and means for locking the tension member when the desired tension has been placed on the band during the tying operation.



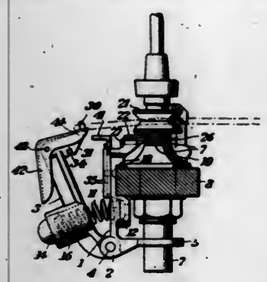
1,451,682. BAND-TYING GAUGE. ALBERT COOK, Holyoke, Mass. Filed Dec. 10, 1921. Serial No. 521,435. 13 Claims. (Cl. 265—1.)



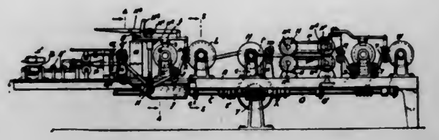
1. A band tying gauge comprising an attachment member, means to detachably connect said member to a spindle support, and a movable band tensioning member yieldingly held to the attachment member and having a pair of hooks formed on the tension member and between which the knot in the band may be formed and against which the free ends of the partially tied strands may be pulled in opposite directions to place the desired tension on the band to contract it and move the tension member toward the spindle.

1,451,683. BOBBIN SUPPLY BOX. ISAAC COUSER, Manchester, N. H., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Mar. 10, 1922. Serial No. 542,715. 7 Claims. (Cl. 211—7.)

1. A bobbin supply box for filling replenishing looms having an upper receiving compartment in which the filled bobbins are placed and a lower delivery compartment from which the filled bobbins are removed and placed in the magazine, a division plate normally separating the two compartments, a lock for locking the division plate in its normal position separating the compartments and movable from its locking position to permit the division plate to be moved at will for dumping filled bobbins from the receiving to the delivery compartment.

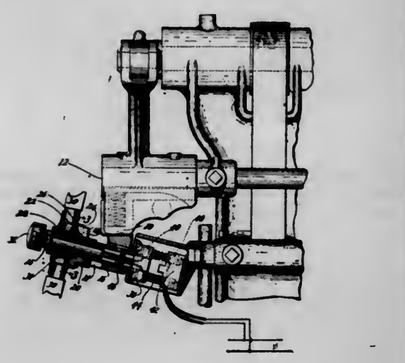


1,451,684. WEIGHING SCALE. HARRY CUMMER, Buffalo, N. Y. Filed Feb. 11, 1921. Serial No. 444,269. 4 Claims. (Cl. 265—70.)



1. In a weighing scale of the type which includes a rocker beam, a series of structurally independent bodies carried by said beam and arranged along the tread thereof, said bodies providing ball points on which the beam may tip.

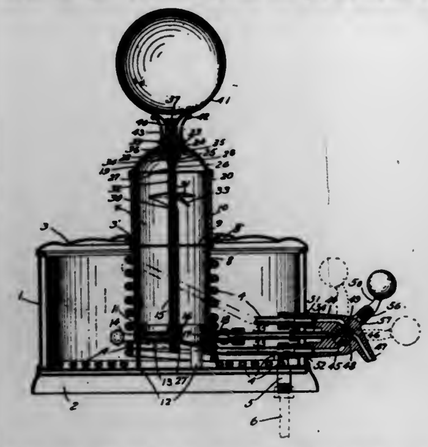
1,451,685. BAND-TYING GAUGE. MALCOLM CURRY, Scarsdale, N. Y., and ALBERT COOK, Holyoke, Mass.; said Curry assignor to said Cook. Filed Apr. 5, 1921. Serial No. 458,862. 19 Claims. (Cl. 265—1.)



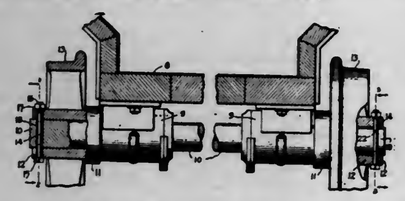
1. A device of the class set forth comprising an attachment member, a band engaging member pivotally held to the attachment member and arranged to swing toward said member, and a band-tension controlling spring for normally swinging the band engaging member away from the attachment member, whereby the tension placed on the band will swing the band engaging member and compress the tension controlling spring.

1,451,686. APPARATUS FOR MAKING BELTING. OTTO CZARAN, Long Island City, N. Y. Filed Jan. 28, 1919. Serial No. 273,648. 11 Claims. (Cl. 69—1.)

2. A belt making machine comprising a table, means for holding a sheet of belting material thereon, a knife adapted to cut a strip from said sheet, a trimmer adapted to form said strip into one of desired cross-section, means for guiding said strip to said trimmer, a bath, means for drawing the strip through said bath under a predetermined tension, friction wheels for smoothing and hardening the belt, polishing wheels, and means for drawing said strip between said wheels to finish the same.



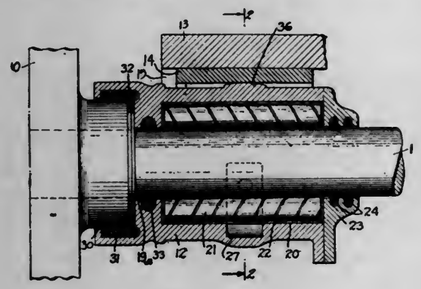
1,451,687. ELECTRICALLY-HEATED BURNISHING MACHINE. HARRY E. DOW, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 6, 1921. Serial No. 467,459. 4 Claims. (Cl. 219—19.)



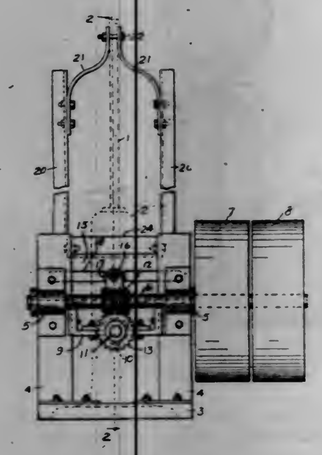
1. In a machine of the class described, a moving tool holder, a reversible tool carrier on said holder, a latch for holding said carrier in operative position, a spring extending between said latch and the fixed frame of the machine, an electric heating unit mounted in said oscillating holder, and a lead for conducting energy to said unit from a suitable source of power, said spring forming a part of said lead.

1,451,688. BEVERAGE-DISPENSING DEVICE. CHARLES M. EARL and BENJAMIN F. WHEELER, Detroit, Mich. Filed May 8, 1922. Serial No. 559,203. 16 Claims. (Cl. 225—30.)

1. In a beverage dispensing device, a chamber having an inlet for beverage under gas pressure and having an outlet for gas, and a receptacle for gas enclosing said outlet and adapted under predetermined pressure of gas to open said outlet and vent said chamber.

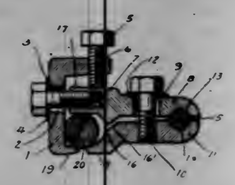


1,451,689. TIGHT AND LOOSE WHEEL. JAMES R. FLEMING, Scranton, Pa. Filed Mar. 4, 1922. Serial No. 540,997. 5 Claims. (Cl. 295—43.)



1. In combination, a rotative element, rotative members mounted on said rotative element, and means for securing said rotative members on said rotative element and against accidental removal therefrom, said means being adapted to cause unitary rotation of said element and members in one of its positions of operation, and to allow for relative rotation between said element and said devices in its other position of operation.

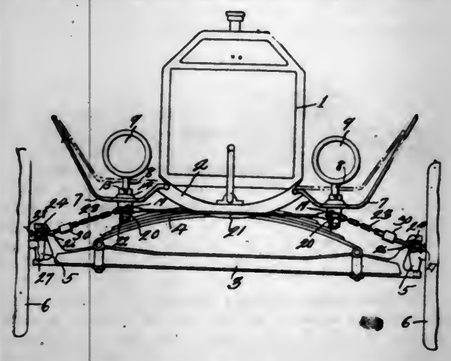
1,451,690. MINING-CAR TRUCK. JAMES R. FLEMING, Scranton, Pa. Filed Mar. 30, 1922. Serial No. 548,014. 7 Claims. (Cl. 295—42.)



2. A car mounting of the character described, comprising a bearing plate, a journal box below said bearing plate, and means on said bearing plate for supporting said journal box centrally therefrom.

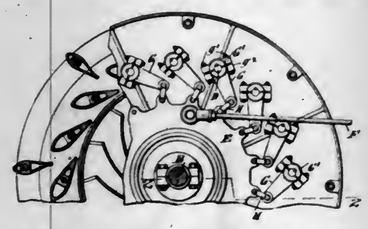
1,451,691. PUMP-ACTUATING MECHANISM. HOWARD F. FREDERICK, Detroit, Mich. Filed May 29, 1922. Serial No. 564,541. 2 Claims. (Cl. 74—14.)

1. In a pump actuating mechanism, the combination with a base of a pair of posts rigidly rising from said base, a drive shaft horizontally mounted upon said posts, a transverse horizontal shaft journaled between said posts, a step-down gearing from the first-mentioned to the last-mentioned shaft, a pair of guide rods rising from said base, a head slidably upon said guide rods, a crank-arm carried upon the driven shaft and actuating the sliding head from said shaft, a brace connection between the upper ends of said posts and the slide rods, and means carried by said head for actuating a pump rod thereupon.



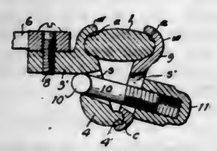
1,451,692. CLAMP. HENRY W. FRENCH, Chicago, Ill. Filed May 16, 1921. Serial No. 469,812. 6 Claims. (Cl. 296—84.)

1. A device of the character described comprising a base member; a clamping jaw longitudinally and perpendicularly adjustable with respect to said base member; and a second jaw adjustably connected to said first jaw and cooperating with said base member to form a clamp.



1,451,693. DIRIGIBLE HEADLIGHT. CARL GLAHOLT, Union, N. Dak. Filed Feb. 14, 1922. Serial No. 536,489. 1 Claim. (Cl. 240—62.)

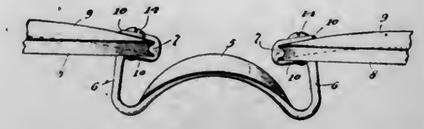
A dirigible headlight mechanism for automobiles, said mechanism comprising vertically disposed pivoted headlight standards mounted in bearings, forwardly extending arms carried by said standards, a connecting rod connecting said arms together, forwardly extending arms carried by the steering knuckles of the vehicle, transversely disposed downwardly and outwardly extending chains carried by the arms of the standards, hooks carried by the outer ends of the chains and attached to



the outer ends of the arms carried by the steering knuckles and adjusting means carried by said chains whereby the same may be lengthened or shortened.

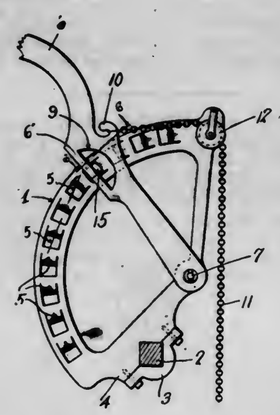
1,451,694. WICKET-GATE-ADJUSTING MEANS. MAX HAEBERLEIN, Maplewood, N. J., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Oct. 17, 1921. Serial No. 508,079. 5 Claims. (Cl. 253—122.)

1. The combination, with a shaft, an arm having one end in contact with said shaft and arranged for angular movement in a plane at right angles to the shaft axis, of a yoke arranged to engage the shaft on the side opposite the arm, said yoke being fixed relative to the shaft, said yoke and arm being separated by a clearance space, and a pair of adjustable tension devices located one at each side of the shaft and arranged to hold the arm in adjustable fixed relation to the shaft.



1,451,695. SUPPORTING BRACKET FOR AUTOMOBILE VISORS. FREDERICK HOENER, St. Louis, Mo., assignor to William Modra, St. Louis, Mo. Filed Dec. 19, 1921. Serial No. 523,463. 3 Claims. (Cl. 296—95.)

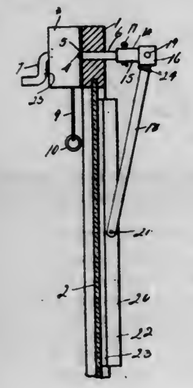
1. A supporting bracket for automobile visors in combination with a fixed support, said bracket being provided with a clamp for securing it to said support, said



clamp comprising a member fixed to the bracket, and a member detachable therefrom, the detachable member being fulcrumed at one end of the fixed member, a T-bolt adapted to pass through slots in said members and oscillatable therein, and a nut adapted to be passed over the free end of said T-bolt.

1,451,696. OPHTHALMIC MOUNTING. THOMAS MITCHELL HOWE, Louisville, Ky., assignor to F. A. Hardy & Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 4, 1922. Serial No. 579,608. 3 Claims. (Cl. 88—42.)

2. In ophthalmic mountings, means for receiving a lens including parallel ears engaging opposite faces of the lens, a clamping screw passing through said ears and lens, and a bridge having a shank in alinement with the axis of said screw.



1,451,697. CULTIVATOR ATTACHMENT. LYNN JEFFRES, Greeley, Nebr. Filed Aug. 17, 1921. Serial No. 492,942. 3 Claims. (Cl. 74—39.)

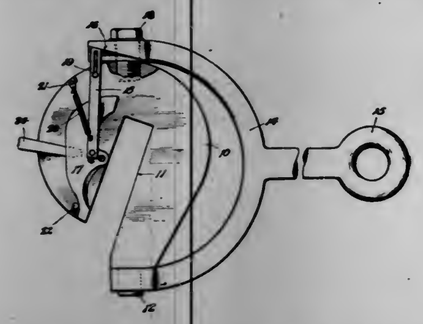
1. The combination with a segment consisting of a metal plate having an arcuate portion, said arcuate portion being provided with radially disposed inclined ribs forming ratchet teeth, a lever pivoted concentric to the arcuate portion, and a fork member carried by said lever and positioned to straddle and engage the ribs selectively.

1,451,698. WINDSHIELD CLEANER. EDWARD KELBER, Harriman, Pa. Filed Mar. 2, 1922. Serial No. 540,398. 2 Claims. (Cl. 15—255.)

1. A wind shield cleaner comprising in combination, a casing or housing, lugs formed therewith through which fastening devices are adapted to pass for attaching said casing to a window frame, a shaft passing through said housing and through the window frame to which said housing is secured, a helical spring coiled about a portion of the shaft within the housing having one end fixed to said shaft and the other end fixed to the housing, a drum fixed to a portion of the shaft within the housing, a pull cord wound about said drum with one end passing through the housing whereby it may be pulled upon by an operator, a stop on the exterior of said housing, a crank carried by the inner end of the shaft for rotating said shaft and coacting with the above mentioned stop to limit the rotation of

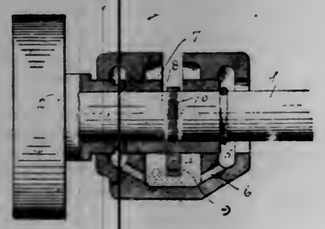
the shaft in one direction, a connector attached to the outer end of the shaft, said connector having a pair of spaced ears, an arm having bifurcated ends, one of the bifurcated ends of said arm being located between the spaced ears of the connector, means passing through the spaced ears and the arm for journalling the same to the connector, a spring coiled about said means for normally holding the outer end of said arm rearwardly, and a pivoted squeegee within the outer bifurcated end of said arm.

1,451,699. MANDREL. ORION EUGENE KENT, Reed City, Mich. Filed Mar. 22, 1921. Serial No. 454,519. 1 Claim. (Cl. 82—44.)



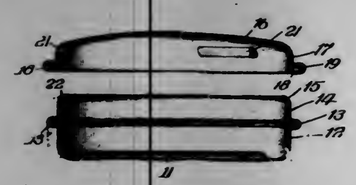
A mandrel comprising an arbor, frustoconically shaped sleeves slidably mounted on said said arbor, one end of the arbor being provided with a cylindrical enlargement integral therewith, an inwardly extending radially disposed lug carried by the inner end of the cylindrical enlargement and disposed in a radially disposed notch in the outer end of one of the frustoconically shaped sleeves and a nut threaded on the other end of the arbor and adapted to cooperate with the outer end of one of the frustoconically shaped members.

1,451,700. SUCKER-ROD-ELEVATING DEVICE. PICKETT G. KILDOW, Iowa Park, Tex. Filed Apr. 27, 1921. Serial No. 465,013. 4 Claims. (Cl. 294—91.)



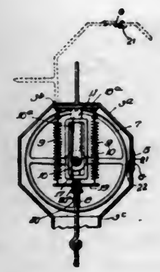
1. A sucker rod elevating device including a body member, a latch thereon movable to closed position locking a rod in engagment with the body member, a

ball connected with the body member, means whereby movement of the ball will shift the latch to closed



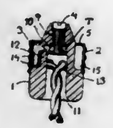
position, and means on the body member independent of the ball and shifting means to lock the latch in closed position.

1,451,701. LUBRICATING APPARATUS. EVERETT P. LARSH, Dayton, Ohio, assignor, by mesne assignments, to The Duro Pump and Manufacturing Company, Dayton, Ohio, a Corporation of Ohio. Original application filed Nov. 27, 1916, Serial No. 133,727. Divided and this application filed July 5, 1921. Serial No. 482,419. 3 Claims. (Cl. 64—31.)



1. In a construction of the character described, a revoluble shaft, an oil reservoir, and an oiling ring suspended upon the shaft, and extending within the oil reservoir, the ring path about said shaft being knurled and the interior periphery of the ring bearing also knurled, substantially as specified.

1,451,702. BLACKING-BOX COVER. GEORGE A. LEIGHTON, Roslindale, Mass., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 15, 1920. Serial No. 417,151. 1 Claim. (Cl. 220—2.)

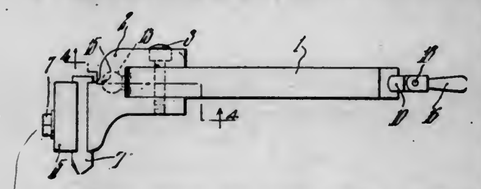


A container for shoe blacking and the like, comprising a body having a circumferential rib and a cover having a depending outwardly turned flange, a plurality of separate indentations being located in said cover spaced at intervals from each other without reducing the height of the cover in such manner that the portions so indented will rest against the upper portion of the body wall, thereby separating said cover flange and body rib sufficiently to permit the insertion of an instrument to remove said cover.

1,451,703. COMPUTING SCALE WITH INTERCHANGEABLE CHARTS. GEORGE M. LUDLOW, Chicago, Ill., assignor to Sanitary Scale Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 10, 1921. Serial No. 451,205. 17 Claims. (Cl. 265—39.)

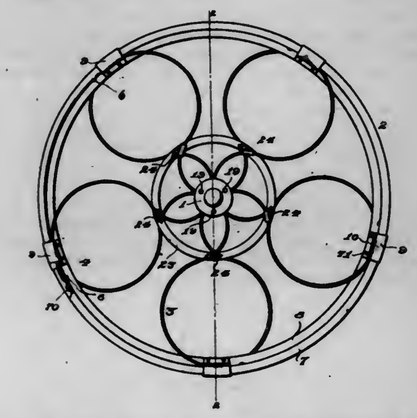
1. In a scale, a rotary cylindrical chart, axial bearings in which said chart is releasably mounted, and a casing for said chart having a movable wall corresponding in position to the geometrical projection of the chart in a direction transverse to the axis of the chart, and providing by its movement an opening that permits removal of the chart bodily in the direction of such projection.

1,451,704. ATTACHMENT PLUG. STANLEY MCCLATCHIE, Cambridge, Mass., assignor to The Connecticut Electric Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Sept. 2, 1919. Serial No. 321,086. 5 Claims. (Cl. 173—359.)



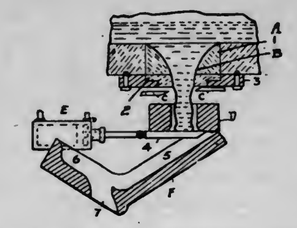
1. An attachment plug comprising a unitary insulating body provided with a center contact, a shoulder, a side contact comprising a screw shell having an inwardly extending flange adapted to engage over said shoulder, wire terminals, one of which is adapted to rest freely on said shoulder beneath said flange, a threaded member seated in said shoulder, and a screw adapted to be received in said member to bind said flange against said wire terminal and secure said shell on the body.

1,451,705. TOOL HOLDER. FRANK JAMES MARTIN, Turners Falls, Mass., assignor to Martin Machine Company, Inc., a Corporation of Massachusetts. Filed Nov. 3, 1921. Serial No. 512,505. 7 Claims. (Cl. 29—98.)



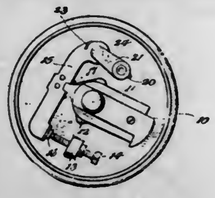
1. A tool-holder, comprising in combination, a shank, a tool-carrying member pivoted thereto for swinging

movement in a direction at right angles to that in which the tool is disposed, and means carried by the shank for



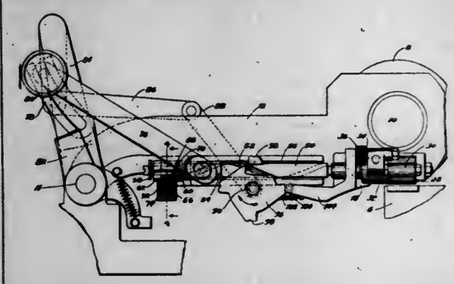
swinging said member into various positions of adjustment.

1,451,706. RESILIENT WHEEL. JAMES F. MILLER, Minden, La. Filed Oct. 22, 1921. Serial No. 509,536. 6 Claims. (Cl. 152—50.)



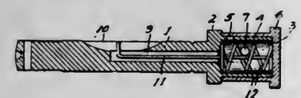
1. A resilient wheel comprising a hub, resilient spokes having their inner ends secured by the hub and their outer ends fitted against the inner surface of the rim with their extremities engaging in the rim, and clips fitted transversely upon the rim and having at their ends re-entrant angles fitting around the flanges of the rim and having their intermediate portions passing over the ends of the spokes whereby to hold them flat against the inner surface of the rim.

1,451,707. PROCESS AND APPARATUS FOR FEEDING GLASS. WILLIAM J. MILLER, Swissvale, Pa. Filed Jan. 7, 1921. Serial No. 435,668. 8 Claims. (Cl. 49—5.)



2. The method of feeding molten glass from a container provided with a discharge orifice through which the glass is caused to protrude which consists in accumulating the glass beneath the discharge orifice to form gathers, detaching said gathers from the glass protruding from said orifice, discharging said detached gathers, and reversing the gathers after they are discharged, for the purpose described.

1,451,708. ASSEMBLING TOOL FOR INTERRUPTER ARMS. HOWARD B. MITCHELL, Tacoma, Wash. Filed Sept. 17, 1921. Serial No. 501,491. 5 Claims. (Cl. 29—87.1.)

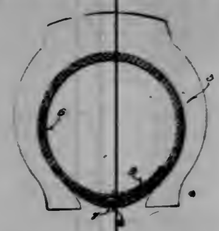


1. A tool of the character described including a stock formed to accommodate an interrupter arm and provided with means for holding said arm against swinging movement and with additional means to engage a spring upon the arm tensioned to swing the arm.

1,451,709. MARKING MACHINE. DENYS WARWICK MORLEY, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 15, 1922. Serial No. 561,094. 17 Claims. (Cl. 41—7.)

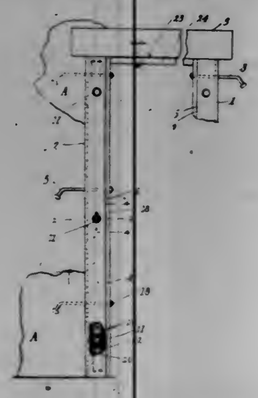
1. In a marking machine having an impression member, means for intermittently feeding a strip of marking medium to the impression member, and mechanism for automatically causing a relative movement of the strip and the impression member widthwise of the strip to utilize different lateral portions of the latter.

1,451,710. LUBRICATOR. NAPOLEON PAQUETTE, Detroit, Mich., assignor of one-fourth to May C. Sampson, Ottawa, Kans. Filed Apr. 10, 1922. Serial No. 551,235. 2 Claims. (Cl. 184—92.)



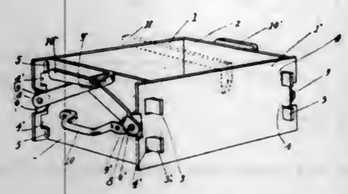
1. A lubricator comprising an oil cup having an outlet passage, a closure for said cup movable longitudinally thereof, a wire prod extending at one end through said passage and resiliently formed at its opposite end and stressed between said cup and closure, and means retaining said closure movably engaged with said cup.

1,451,711. VULCANIZED RUBBER SOLUTION AND PROCESS OF PRODUCING IT. WILLIAM BEACH PRATT, Wellesley, Mass., assignor to E. H. Clapp Rubber Company, Boston, Mass., a Corporation of Massachusetts. Filed May 24, 1918, Serial No. 236,462. Renewed Sept. 19, 1922. Serial No. 589,198. 7 Claims. (Cl. 18—53.)



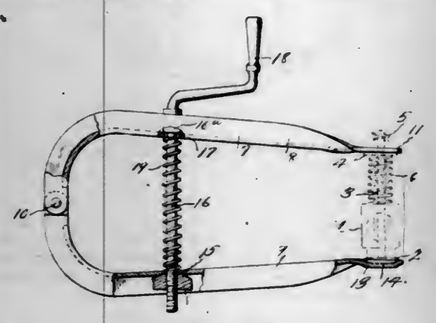
1. A process of making a solution capable of passing through parchment which consists in digesting a mixture of crude rubber and sulphur and a solvent thereof at an elevated temperature.

1,451,712. TIRE BOOT. LLOYD T. PEFFER and THOMAS E. PEFFER, Waukesha, Wis. Filed Feb. 10, 1922. Serial No. 535,552. 1 Claim. (Cl. 152—24.)



A tire boot comprising a plurality of layers of flexible material adapted to encircle a tire with the edges of the boot juxtaposed, a plurality of looped strips having their ends secured between the layers and having their looped portions projecting outwardly from said juxtaposed edges with the loops projecting alternately from opposite edges to provide a staggered arrangement of alining loops when the boot is in position upon a tire, a substantially rigid member insertable through the alined loops, and an inner protecting flap extending across the juxtaposed edges, said layers and loops being vulcanized to form a substantially unitary structure.

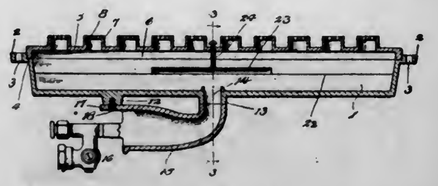
1,451,713. CONCRETE DOOR-FRAME CONSTRUCTION. GEORGE J. SAFFERT, New Ulm, Minn. Filed May 8, 1922. Serial No. 559,240. 6 Claims. (Cl. 72—98.)



1. A portable article of manufacture comprising an elongated body portion of molded concrete, formed rectangular in cross section, and tubes open at both ends and being vertically spaced and vertically alined and embedded in parallelism in the concrete, the open ends thereof being approximately flush respectively with opposite faces of said body portion, and being located approximately midway of said faces relative to the long edges thereof.

1,451,714. MEANS FOR MOLDING CONCRETE BLOCKS. GEORGE J. SAFFERT, New Ulm, Minn. Filed June 16, 1922. Serial No. 568,856. 7 Claims. (Cl. 25—121.)

1. A concrete block mold, comprising in combination, a side wall, an end wall rigidly joined to said side wall, a tenon extending outwardly from the free end of said end wall, a mortise in said side wall adjacent the free end thereof, a movable wall arranged parallel with said end wall each end thereof being formed with an outwardly extending tenon, one of said tenons extending through said mortise and being slidable in a horizontal plane therein, a side wall parallel with the aforesaid side wall and formed with openings adjacent its ends adapted to slidably receive, respectively, the tenons at the free ends of said end walls, and toggle levers connecting respectively adjacent ends of said side walls for the purpose set forth.



1,451,715. VALVE CAGE VISE AND SPRING REMOVER. ALFRED BRUNO SEPPMANN, Lake Crystal, Minn. Filed May 5, 1921. Serial No. 467,164. 1 Claim. (Cl. 29—86.3.)
